No; I am no housing expert such as are most of you at these tables. I have brought you no scientific facts in regard to the results of overcrowding. You have enough of these. Whatever I bring you today is the result of all that grew out of that winter when I went to the University of Stark Reality. Through the years following, when most of my time and energy went into my small family, until now, I have tried in many different ways to become increasingly aware of and useful to the battle that must constantly be waged in this great Republic of ours ultimately to eradicate the lack of decent shelter that continues to be the lot of all too many of our people. Whatever I bring you today is from the deep conviction that has become mine that we who have decent homes in decent areas have an inescapable responsibility to find ways to make adequate shelter and wholesome environment possible to others.

You who are members of the National Association of Housing Officials have a vital part to play. Of that there can be no doubt. I hope you are all as eager to play if from the depth of your human understanding as is your Chairman Ernie Bohn, to whom Clevelanders look with the constant assurance that he strives for justice seeking always to do his full duty to humanity in the light of his understanding. Whether one agrees with him or not, no one who has had continuing contact with him down the years as I have had, could fail to credit him with loyalty to his dream of seeing greater Cleveland and the whole United States, a better place to live in.

For myself, I have never been able to set aside my sense of personal obligation as a free citizen of this great Republic, as a representative of a large and varied constituency and as a woman deeply concerned with the future. I have never been able to believe that our concentration upon machines has made us so material-minded that we fail to see our responsibility in the matter of assuring our people adequate homes in which children can grow into honorable and healthy citizens. The future is deeply my concern—and where is our future unless it be in our children? Am I wrong, friends, in believing that they have the right to expect us, as intelligent Americans, to see to it that they be born into homes where love will be their portion, set in decent surroundings where they may grow straight and strong in body, mind, and soul?

We have a wonderful heritage of freedom, we Americans, one which we must guard well if these same children are to bless our generation.

It is both important and necessary that adequate shelter be possible for all. But,

unless the sun of liberty and freedom rise with every new day, darkness will be our portion and shelter, will imprison our people.

Am I wrong, Mr. Chairman, in believing that no thoughtful American today can fail to recognize a growing need to protect this liberty, this freedom from the intrusions of centralized power, that no one may shirk the responsibility of assuring the future such justice as will protect the individual against the encroachment of Government upon his inherent right to choose his particular path. Surely that is the fundamental tenet of the American way of life.

Yes, I am opposed to Federal authority as against State responsibility. I am aggressively for local and individual action rather than the inaction which will inevitably force the acceptance of Federal domination. At the same time—and I see no conflict between these points of view—I believe that because the States united for common protection and mutual well-being, there rests upon the resultant Federal Government a definite responsibility toward these States and through them to those individuals unable to carry their part of the load. This responsibility is of several parts, not the least of which is that whatever is done by the Federal Government to help the individual must not encroach upon his responsibility to himself and to his fellow man.

Although my sons are grown and their sons and daughters are beginning to reach towards the realities of today's living, I have not forgotten lessons I learned from my need as a mother to see that they should grow strong in character—that they should learn to do their part and to do for themselves. All mothers know how much easier it is to pick up the toy themselves, to hang the coat away, than to insist on the child doing this for himself. So much faster to do the buttoning and the shoelace tying than to wait while the little fellow learns laboriously to do it alone.

So much easier, friends, for a local government to let the State give it funds for schools and such and so easy for the State to give over to the central government. But just as a child is retarded and often made tragically helpless by too much parent help, so is a State and a community weakened by overmuch leaning on the greater power.

Does the child realize that when the disciplines of self-help are not imposed, insecurity and fear is built up? Have we appreciated that we have been building insecurity and fear amongst us in much the same fashion?

Am I wrong in believing that our children have the right to expect us, as wise parents and responsible citizens of a nation born to give a pattern of freedom under law to mankind, to keep their homes free from the autocratic controls of centralized power and so continuing the basic concept of this great Republic?

I am strongly of the opinion that those of us who are gathered here today have but one object—to do our best for America, to learn from her past and the past of other less fortunate countries, and to build the framework for a future which will give to men everywhere a new sense of what life can mean to all.

I believe that if we cannot find ways to make our concept of freedom function within the American pattern, we are but poor exponents of the formula upon which we as a Nation set ourselves up.

There have always been those who believe that the people as such cannot govern themselves. But here in our Republic the power was given to the people and they were charged to watch vigilantly lest it slip from them.

We are poor stewards if we fail to find ways to protect the basic tenets of our faith and so permit those who want to divert us from the straight road of responsibility for our own freedoms by using the needs of cer-

tain groups, dramatic as they may be, for their own ends because of our default.

As I pointed out in relation to the housing bill (H. R. 1883) which I originally introduced on January 27, 1949, with nine of my Republican colleagues, the needs of our people for adequate shelter are very real. No one act of omission or commission has created the present situation. No one method will solve the problem. The fact that industry has not demonstrated a capacity to cope with it does not mean that private enterprise can be held responsible for the tragic needs of our low-income group. Nor does this mean that the only solution rests in Federal housing projects. The answer is as complex as the causes are manifold, and the solution rests upon the intelligent action of an enlightened and responsible public.

To cry aloud that the cost of Federal housing is beyond all reason, makes little sense to those who, like myself, believe that (as I said on the House floor in June of 1949) "public housing may be a losing venture from the money angle, but it cannot help being an abundant dividend-paying venture insofar as health, good citizenship, and a stable society is concerned."

Add up the cost of crime, hospitals, mental institutions, etc., subtract as large a percentage as is reasonable for other basic causes, and you will still have left a tidy sum to apply against the savings we could make in physical, mental, and moral value through decent homes and wholesome environment for our children.

For those who do not look only through a financial eyeglass, it would seem to be indicated that we dare not neglect these human returns, that in order to build strength within our own frontiers, our own body politic, we dare not refuse to use every possible means which will insure to oncoming generations health, honorable living, and opportunity to forward the ideals of unity and freedom which is their rightful heritage.

But we must use these elements intelligently, always alert to and aware of the implications of what we are doing.

To this end, those who, like yourselves, are working on one phase of the picture, and those who, like my distinguished colleague, Mr. RAINS, and I are charged with the responsibility of recognizing all sides of the larger picture, must do our utmost to see to it that the people of this great and wonderful country of ours are thoroughly informed, that they know something at least of the various problems involved in what we oversimplify when we just say "housing."

The partially informed layman is apt to blame the municipality entirely for slum conditions—saying broadly "the area should be condemned." Unfortunately, you know and I know it is not as simple as that. The limit to condemnation proceedings is soon apparent although they do often serve to bring a desirable pressure to bear upon the owners of properties where human beings live under conditions unfit for any animal—paying high rents—and exposed to every deteriorating influence.

The battle against this deterioration must be waged relentlessly. We shall need to use all our weapons, not the least of which is the fundamental American belief of the individual in doing for himself—asking help only when he has exhausted all his own resources.

In all too many instances men have lost confidence in their own capacities. In our slum areas life itself has become devoid of all hope of betterment. What must be achieved is an aroused public opinion which will bring into action all individual and local elements, with an intelligent use of the available Federal assistance to fill in the gaps. Part of the battle is to increase the sense of personal responsibility in every individual. We must find ways to make positive personal action a mark of patriotism and an object of popular admiration. We must bring to all our people a new sense of

self-dependence, a "let's do it ourselves" attitude such as the rural health program which the American Medical Association has begun to build so very successfully. But, at the same time, we must remember that when the States joined together to form the Union, there was created a Federal Government with capacities which no single State could develop alone. To use these capacities wisely is one of our great responsibilities as citizens of a country whose people accepted the responsibilities for their own freedom placed upon them by those who gave us our Constitution and our Bill of Rights.

I am one of those who believes that we can circumscribe Federal authority sufficiently to preserve our freedoms if we are alert to all possible dangers and if those in authority determine and intend that they shall be preserved. I believe that we can set up a percentage of Federal housing units where individual and local elements are unable to meet an evident need without endangering our free way of life. And I believe the end result of intelligent use of the necessary Federal funds to fill in the gaps in local programs for adequate shelter for all people will be a stronger Nation.

In closing, I would urge upon you who carry a real responsibility to protect oncoming generations from the heavy hand of Government control in this vital area of our national life, to be alert to danger, aware of the subtly covered pitfall on every path your feet must tread, serving the best interests of the America of today and tomorrow.

When all is said and done, America, with her belief in the capacity of the people to protect their freedoms and to govern themselves with her trust in Almighty God, has a duty to Him in the preservation of the right of the individual to choose what he will do with his life.

Each of us has a vital part to play in carrying forward these freedoms that have been our heritage. Together we can build an ever stronger, ever greater America.

How Tough Is the Red Army?

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, we often think here in America that the Soviet Army is a rough, tough fighting force of immense power. But is this really the case, or is this idea another example of how Communist propaganda has been subtly filtered into the minds of us Americans? Remember the millions of people of the Soviet Union who surrendered to the Germans in World War II rather than fight for Stalin. Father Leopold Braun was the only American Catholic priest in the U. S. S. R. during the war and he had an inside view of the might of the Red army. I include herewith his views on the Red army which appeared in the October 1951 issue of the American Legion magazine:

THE MYTH OF THE MIGHTY RED ARMY

(By Leopold Braun, A. A.)

World War II finished in the minds of distant observers outside Russia in a fanfare of universal praise for the Red army. Invincibility, discipline, toughness, and superiority are but few of the attributes dimmed

into the ears of the public concerning the Red forces. The Soviet Union was proposed to world admiration as the savior of civilization. Even Stalin was adulated as the redeemer of democratic liberties. People now look upon the Red army with awe and bewilderment.

What are the facts? What did really happen in Russia during World War II? Why did the Soviet regime not finish crumbling to pieces as it had unmistakably started to do within 4 months of the German attack? This article will attempt to throw some light on these questions.

This first-hand information is based on 12 years of uninterrupted experience in the U S S R as chaplain to American Catholics from 1934 to 1945. A fluent knowledge of the language enabled me to deal directly with Russians of every possible walk of life from Vladivostok to Moscow and from Leningrad to Baku. I was one of the few foreigners who lived through the Moscow panic of 1941 when commissars were frantically paying as much as 20,000 rubles to be driven away from the besieged capital.

Six years after VJ-day the American public is only beginning to recover from the dose of political anesthesia administered by Soviet propaganda. The biggest injection of mental morphine lulling the world to unawareness was the announced suppression of the Comintern. The time has come to reveal a few startling facts.

On Sunday morning of June 22, 1941, there were signs of extraordinary excitement in Moscow. Narkomindel (foreign office) cars, along with those of the NKVD (secret police) were darting in and out of streets at more than the customary speed. Something of unusual importance was going on, but the proletarian masses, supposedly ruling the country, were being kept in utter ignorance. Exactly at 4.30 a. m. of that day the Wehrmacht launched its drang nach Osten (drive toward the east) on a front 280 miles long. The impact was so terrific that Soviet frontier garrisons were immediately swept inland. Such was the case with the Red army troops in the cities of Minsk, Bobruisk, Zhitomir and other points along that line. The western border had been secretly replenished with additional divisions from the Mongolian and Manchurian borders at least one month before the attack. Pravda had denied these troop movements as reported abroad. Fleeing Red officers and soldiers were instantly accused of treason. Back in Moscow the families of these officers lost overnight the privileges attached to their military rank. The prestige of the Red army had been shattered. Treason was the only convenient excuse that could be resorted to by the narkomoboron (defense commissariat) to hide its shame.

Hush-hush details were reaching Moscow or mass desertions at the front. One had to live with the people to learn these facts. The Sovinformburo, of course, concealed this from its communiques. Throughout the war one single brain imagined the cock-and-bull stories of Red army feats appearing in the Allied press. This was Comrade S. A. Lozovsky alias Commissar Dridzo, boss of the Prointern and Tito's friend, who prepared the daily volennaya svodka (war communique) handed to the press.

As early as July 1941, Red army resistance was so ineffective that narkoms (departmental chiefs) had hastily flown out. Bigwigs who later tried to leave by car were mauled to death by infuriated Russians. The retreat was certainly anything but a planned affair.

The Luftwaffe established an air base in Smolensk within a few weeks. Press reports from Kouibyshev, the temporary capital, boasted that anti-aircraft fire over Moscow was so effective that German planes couldn't fly over the city. This is utterly false. I was under the bombs myself all through the war. Heinkels, Messerschmitts and Stukas flew

over Moscow at will taking the precaution of scare-bombing only. The city was deliberately not destroyed because von Bock, the German commanding officer, wanted to use it to garrison his troops for the winter. The thermometer that year dropped to 46 degrees below zero centigrade in Moscow, let alone the surrounding countryside, where it was still colder. Those who lived in the city at the time cannot explain why the Germans, only nine miles away, did not enter the capital. Perhaps it was because the troops were exhausted, far away from their bases and most of all, totally unprepared to withstand the bitter cold weather. All that was left of the Red army in the capital were the demolition squads waiting for the signal to blow up the bridges and main buildings. Explosive charges had been prepared all over the city.

By October of 1941 the Red army had retreated so deeply inland that Moscow commissars became very restless. The Government decided to "evacuate." Secretly it had done so 2 months previously. Diplomats and foreign correspondents were ordered to leave. On October 14, I too, was summoned by the American Embassy to follow them with all I could carry in two suitcases. I flatly refused to leave while I was still in charge of that last-remaining Catholic church in all of the U. S. S. R. It was being attended also by hundreds of Russians. That evacuation train in five sections was not bombed only because it was snowing that night. Otherwise all such trains were regularly hit by the Luftwaffe and reduced to tchelovitcheskaya kasha (human porridge) as the Russians called it.

On the day of the German attack the Politburo deliberated for all of 8 hours before revealing the news. Finally about noon, Molotov in a radioed proclamation spoke of an unprovoked and unexpected attack. Documents later seized in Germany by the American Army prove beyond doubt that Molotov had actually provoked the Germans by demanding more Rumanian territory. Molotov did not tell the Russian people that away deep inside Poland occupied by the Red army since September 17, 1939, the Soviets had built fortifications extending back 40 kilometers from the border, in expectation of the German thrust. This information was obtained without my asking for it, from the evacuated Polish population brought into Russia against their will at the time. The Wehrmacht swept through these pillboxes, blockhouses, and tank traps with ease and speed. Shortly after Molotov's proclamation the Kremlin confiscated all radio receivers belonging to Russian nationals for the duration of the war.

General confusion was so great along the western border, that 2 weeks after the invasion, supply trains in accordance with the Molotov-Ribbentrop pact of August 23, 1939, were still leaving the U. S. S. R. headed for Germany. In the initial stages of the war, a general sentiment of apathy and lack of enthusiasm prevailed in the population, barring some elements of Soviet youth. Marshals Tukhachevsky and Blucher, idols of the troops, had been shot just prior to the war, accused of having plotted the overthrow of the régime. Added to this the shooting of several hundred other officers of the Red army for similar reasons had depressed the entire nation. Three chiefs were left to lead the hesitant Red army: Voroshilov, Edenny, and Timoshenko. Klim Voroshilov, Commissar of Defense, had boasted that the Red army would not allow Soviet soil to be trodden to the extent of 1 foot by an invading army. The Wehrmacht later occupied 4,000,000 square miles of the U. S. S. R. and made this statement look silly.

When the fighting began in Russia, there was hardly a family which did not have one member or relative in a concentration camp or under political arrest. The Kremlin, suddenly seized with terror because of the Red,

army instability and the surging sentiments of its demoralized population, reintroduced the word "patriotism" deleted from the Comintern vocabulary. It also placed each Red army officer under the immediate control of the hated political supervisors—all NKVD spies. Most of the Red army is conscripted from the peasantry violently dispossessed during collectivization. In the late thirties several million Russians, intellectuals, engineers, and technicians had been shot in the purges of two successive NKVD chiefs: Iagoda and Iezhov. The population remembered these massacres. Thousands upon thousands of males of military age from the Asiatic republics fled into the mountains from the start of the war to escape conscription. In the much-better policed RSFSR, mobilization was less difficult.

The U S S R has 2,000,000 conscripts per annum but these men are not all willing fighters. Red army men in several instances had to be pushed into battle by the bayonets of the NKVD troops. When there was no danger of being shot in the back by NKVD troops they surrendered in droves to the Germans. Soviet press bulletins never made mention of the 2,500,000 to 3,000,000 Red prisoners who handed themselves over to the Germans without firing a shot. As prisoners of war working on German farms and in armament plants, their life was heaven compared to their peacetime existence in sovkhoses and kolkhozes. After Normandy the liberating Bolsheviks fell upon half a million Ukrainians fighting communism in the south of Russia under General Vlasov, later hanged as a war criminal. Hundreds of thousands of civilians followed the retreating German and Rumanian Armies. This mass exodus was so important that at Potsdam the Soviets demanded and obtained American, English, and French assistance in repatriating these political refugees against their will.

It was common practice during the early stages of the war for Red soldiers to wound or maim themselves in a desperate effort to stay away from the front. The demand for cannon fodder was so great that 16-year-olds were sent to battle following a bare 2 weeks' training. Even this couldn't satisfy the ruthless demand for more and more men. Bandits were released from jails provided they went to the front lines. Such desperadoes dressed in Red army uniforms are responsible for some of the outrages attributed to the Red army. Indignant parents with relatives under political arrest showed me certificates notifying them that their sons had died a glorious death in defense of the socialistic fatherland. To raise its prestige, the party enlisted unwilling Red army men into its ranks, sending them membership cards at the front as a reward for their valor. After the war, purges brought the party back to normal, i. e., one-twentieth of the population.

In the heat and haste of the Soviet retreat the Reds finished off captured Germans, plus their own wounded and those Russians who, from sheer exhaustion, could not keep up the pace. Stragglers from the front testified to me about these horrible practices. The debacle of the hot-footed Red army racing for the Caucasus is only one of the unwritten chapters of the last war. Press correspondents a thousand kilometers away could not and never did report this military marathon won hands down by the Red army.

I constantly ran across Red army men who fled from the front with absolutely no desire to fight the Germans or any other invader. What they did want to do was fight the NKVD troops, fully equipped and fed with American lend-lease. It was this secret-police army that prevented global insurrections from taking place in unoccupied Russia. How often Russians asked me what kind of men our American leaders were to

be sending so much materiel to the torturers of their people.

With the Wehrmacht fighting on two fronts, the Red army triumphantly reoccupied its territory, proudly riding on Dodge, Ford, and 10-wheeler Studebaker trucks. Close to half a million vehicles from the United States of America alone reached the U S S R. In the endless columns I watched there was scarcely any Soviet-made equipment after 1942.

As the liberating Red forces approached cities and villages only recently evacuated by the Germans, the people got after the officers of the Red army, pleading with them to seize power. "We want to live like normal people," they said. "Get rid of that man in the Kremlin and abolish this organized slavery of collective farming." That was the general chorus throughout Russia in 1944-45.

Gen. N. F. Vatulín, of the Red army, was suspected of being favorable to this move. While ill in a Kiev hospital, he was surgically assassinated in the quiet manner known to the Kremlin potentates. On the day of his death, April 15, 1944, he was promptly proclaimed a true son of the Bolshevik Party, one of the best military leaders of the Red army.

Readers will object that the Red army fought well. This is absolutely undeniable. Red army men fought like blazes and were models of bravery, endurance, and self-sacrifice in circumstances of hardship that defy description. How is this explained? The good muzhik (peasant) who carried the brunt of this war began to give his all and fought like mad, from the moment he saw the possibility of a change of regime. This is of extreme importance for a true understanding of this about-face. Every Russian from then on really thought he was fighting for himself and his family. This also explains the widespread type of partisan guerrilla warfare that then became so popular. Moreover, they had expected the Allies to bring them liberation. This was especially so when the now-forgotten Atlantic Charter was proclaimed. While millions of Russians have learned the hard way to distrust Stalin's signature, they believed the western leaders heralding the four freedoms. Also when the Kremlin for a time was forced to withdraw its Politruki (political administrators) from the ranks of the Red army because of the resulting disorders, mutinies, killings, denunciations and desertions, then the Red army did fight. But no sooner had the military begun to feel their power than the Politruki reappeared reinforced by the karáélni riadi (punitive squads) of the NKVD troops. They did such a fine job of keeping the Red army in check that these NKVD chiefs were decorated at the war's end. The indignation of the Russian people then knew no bounds.

Similarly when victory salutes were fired on the Red Square just as the NKVD troops were resuming their stranglehold of the "liberated" population, repressed anger was apparent on all the faces. All this happened during the critical period of flux when Russians were led to think they were heading for a much-dreamed-of democracy. People then said: "Why did these British and Americans come over here to pour oil on our fire?" Disenchantment is a mild word to translate the feelings of Red army men who went abroad and compared standards of life undreamed of. Moreover, prisoners of war forcibly repatriated were never allowed to go back to their families. Branded in a body as predateľi naróda (traitors to the country) they were herded into boxcars or put on barges and sent deep inland for their perevospítání (reeducation). They had seen too much. To this day they are at forced labor under MVD-MGB armed guards.

The NKVD during the war dealt both with the military and civilian population. There is no arguing with these perfected Tchékists.

This explains to a great extent the perfect "discipline" of a Red soldier. Quivering submission is a far better expression. The Russian nevertheless is tough and can endure a great deal more than any ordinary western soldier, because he is born in poverty inconceivable to the west, and accustomed to extraordinary privations from early childhood. Outsiders are prone to confuse "discipline" with the results of mental fear and physical intimidation. Upon the slightest act of insubordination a Red soldier may be shot dead on the spot by a superior officer. Is it any wonder that casual observers should marvel at Soviet "discipline"? General pass-partoutization in the U. S. S. R. makes escape virtually impossible. Should a Red soldier get away, he knows that his next of kin will immediately be arrested. This is a simple application of the Penal Code (art. 58 in 12 subdivisions) protecting the Bolshevik régime.

In the light of these details, the might of the Red army becomes a myth, its strength a weakness—because all is based on systematized fear and bullying. Stalin and the Politburo know this better than anyone else. Never will they risk sending the Red army into world conflict, because of its inherent instability. Besides this, the Russians have been severely weakened in manpower—a fact so far carefully concealed. Stalin admitted 7,000,000 killed in World War II. But Red army men never hesitated to tell me that 10 of theirs at least died for every German killed. To say that 20,000,000 Russians died in this last war is an understatement. And what about the invalids, the maimed and the helpless veterans? Their number is far greater than the killed. In the U. S. S. R. it is an act of counterrevolution even to mention this.

While Voroshilov, Budénny, and Timoshenko in the initial campaign lost entire armies of 400,000 men apiece, it is also true that they had as many more men to throw into battle. Our own GI's bravely fighting in Korea with organized handicaps know what this means with the Red Chinese "volunteers" descending upon them in wave after wave.

It is also true that such generals as Zhukov, Rokossovsky, and Manilovsky, to name but a few, acquired glory. Leningrad never fell to the Germans and von Bock was stopped at the outskirts of Moscow. Stalin-grad did change the course of the war and Simferopolis in the Crimea held out nobly. No one denies these accomplishments. Americans, on the other hand, omit throwing into this balance other important considerations: In the face of an invasion Russia, not the Red army, has three natural advantages: (1) Fourteen and one-half million square miles of territory to run on; (2) almost inexhaustible manpower; (3) insurmountable winter conditions. Added to this, two other important factors in World War II pumped and puffed the Red army to a degree of glory far in excess of its real worth. Who knows, for example, that two entire Soviet fronts were exclusively supplied, fed, and equipped with United States of America lend-lease? Red army officers admitted to me that but for this they could not have held out. The Allies in general and the Americans in particular are held responsible by the Russian people for abetting NKVD ruthlessness at a time when it should have been wiped out. The true factor in the Soviet "victory" is not the overstated Red army so much as the NKVD-MVD-MGB type of perfected Gestapo the Russian people hoped to get rid of. Since when are we to look upon this as a symbol and proof of Red army might?

The real story of Red military weakness remains to this day little known. No allied military, naval, or air attaché accredited to the U. S. S. R. was ever permitted to observe the Red army or any other Red military unit in combat throughout the entire war. Their weaknesses had at all costs to be concealed. I know that occasionally allied

officers were conducted to the front. Similar excursions were organized for foreign newspapermen, including the impudent farce of the Katyn massacre investigation elaborately staged by the Soviets. Participants used to call these trips vodka circuits.

When our GI's stretched a hand of friendship to greet the Red army on the Elbe, they were offering perfect sincerity but the Americans quickly noticed the "disciplinary" restraint of the Red army men cowed by the NKVD. Every single American officer and GI who ever dealt with the Soviets experienced the same embarrassment.

Toward the end of the war an American correspondent in Moscow showed me a cablegram just received from his home office which approximately read: "We sent you to Russia to get the news. Since you can't do that, come back home." Much less starry-eyed admiration of the nonexistent Red army superman would have resulted in the American public mind had other agencies acted likewise. The survival of our God-given liberties and the safeguard of our constitutional heritage are too precious to be disturbed by unfounded belief in Soviet superexcellence.

Veterans' Insurance

EXTENSION OF REMARKS OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. MARTIN of Iowa. Mr. Speaker, my office has been flooded with inquiries from Members of Congress and veterans protesting the action in preventing veterans from applying for Government insurance. Some of the cases are most distressing. Certainly it could not have been intended to deprive millions of veterans of their rights to apply for Government insurance without any previous notice. Many veterans through circumstances beyond their control failed to renew or convert their existing insurance which they had kept in force for a period of 8 years since their discharge from World War II. There is no remedy for these individuals unless the provisions of my bill, H. R. 4412, become law.

I was very much pleased to note a press release made on September 28 by the national commanders of six major veterans' organizations from which the following is quoted:

The national commanders of six major veterans' organizations agreed today to call on American consumers to buy only goods and services produced by the free nations and to refrain from purchasing products of Russia and Communist countries under Russian domination.

The veteran leaders who met in Washington today were Erle Cocke, Jr., Dawson, Ga., national commander of the American Legion; Frank C. Hilton, Reading, Pa., commander in chief, Veterans of Foreign Wars; John L. Smith, Barberton, Ohio, national commander of the American Veterans of World War II (AMVETS); Donald J. McQuade, Toledo, Ohio, national commander, Catholic War Veterans; Paul Ginsberg, Atlanta, Ga., national commander, Jewish War Veterans of the United States of America; and Charles W. Bernhardt, Atlanta, Ga., national commander of the United Spanish War Veterans. The Disabled American War

Veterans was represented by Cicero F. Hogan, Washington, D. C., national director of claims.

The group in reaching agreement on the need for an educational campaign aimed at the American buying public, pointed out that the imminence of the Christmas shopping season underscores the urgency of self-discipline on the part of consumers here to insure against a flow of American dollars to Russia and Russian-controlled manufacturers and sellers. At the same time, the veteran leaders agreed to press this campaign against Communist products on a year-round basis when the Christmas holidays have ended.

The veterans' commanders also agreed to seek closer coordination of their organizations' efforts to work for adoption of universal military training and service legislation; to join in urging enactment of a measure to extend GI bill of rights benefits to veterans of the Korean fighting, and to seek extension of the present grace period for reinstatement of veterans' insurance. The group advocated that veterans whose premium payments have lapsed be given an opportunity to reinstate insurance policies by the payment of back premiums.

Mr. Speaker, it is unusual and unique to find all major service organizations seeking to open the rights to these millions of deserving veterans.

Although my bill was introduced many weeks ago it has not as yet received a hearing before the Veterans' Affairs Committee. A significant factor is the statement of Deputy Administrator Clark, of the Veterans' Administration, to the chairman of the Committee on Veterans' Affairs under date of September 6, 1951, that "the enactment of the bill (H. R. 4412) would result in some cost to the Government, but it is estimated that such cost would not be large." That being the case I hope the Veterans' Committee will schedule this bill for immediate action to do justice to these millions of veterans.

Withholding of Information by Government Departments

EXTENSION OF REMARKS OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, it often is necessary for me, as a Member of Congress representing the people of Wyoming, to request information from the several departments of our Federal Government. It often is necessary for me to obtain information on a variety of problems, in connection with my duties in serving the people of Wyoming as their representative here in Washington.

All of you, no doubt, have occasion to make similar requests, and probably many of you have experienced difficulties identical to those which I am about to relate.

I wish to protest, Mr. Speaker, against the withholding of information requested by Members of Congress, requests made in an honest effort to serve

the people we represent. I have had two experiences recently which I want to bring to the attention of Congress, as shining examples of what I believe to be deliberate attempts to withhold information from Members of Congress. Perhaps such laxity in answering departmental mail is dictated by political reasons, perhaps not. I will not attempt to make such distinctions here and at this time.

It so happens that both instances I am about to detail involved the Department of the Interior, but I do not intend to infer that this department is the only one guilty of similar maneuvering.

On September 28, I wrote to Secretary of the Interior Oscar Chapman, asking for a definite statement on the Department's plan for development of synthetic fuels and for construction of such a plant in Wyoming. It has been rumored in Wyoming, particularly in northern Wyoming, for many months that a synthetic fuels plant is planned by the Department in that area. I asked Secretary Chapman specifically what the Department's plans are in this regard.

I wrote this letter to Secretary Chapman for the express purpose of obtaining a definite statement from him, because I believe the people of Wyoming have a right to know where they stand in this matter.

This letter was written on September 28, and despite another letter to Secretary Chapman, written on October 8, I have yet to receive a reply from him. I have had, only a few days ago, telephonic acknowledgment of my letters. This telephonic acknowledgment came not from Secretary Chapman, but from one of his assistant secretaries.

Meanwhile, an Assistant Secretary was in Wyoming and spoke at a public meeting in the northern part of the State, where the interest in development of synthetic fuels is most intense. News reports of this address shed little light on definite plans of the department for the area, and I have yet to receive a reply from Secretary Chapman.

The second incident got under way last August 16, when I wrote to Mr. T. W. Mermel, Assistant Commissioner, Engineering, of the Bureau of Reclamation. This letter was in response to an appeal from the community of Mills, Wyo., relative to the transfer of a sewerage system constructed by the United States to the town of Mills. I asked Mr. Mermel for information concerning the transfer, effected by a law passed by the Eighty-first Congress. So far, I have not heard from Mr. Mermel.

Instead, I have received a brief letter of transmittal signed by another assistant commissioner, Mr. G. W. Lineweaver, enclosing a copy of a letter written to a Casper, Wyo., attorney by an assistant secretary of the Department of the Interior.

This assistant secretary is assigned to mineral resources—not reclamation. I received the copy of his letter on October 11; his letter to the Casper attorney was dated October 2—9 days earlier.

Mr. Speaker, this appears to be a deliberate attempt on the part of the Department of the Interior to obstruct me

in my duties of serving some of the people I am here to represent. I never have received any information from the party to whom I addressed my request on August 16.

Nearly 2 months later, I received a copy of a letter written by an assistant secretary whose duties are supposed to deal with mineral resources—not the transfer of a sewerage system constructed by the Bureau of Reclamation.

In other words, Mr. Speaker, I was denied the information I requested, while an assistant secretary of the department went far afield of his official duties, on the same problem.

I protest such activities by the Department of the Interior or by any other Federal department, bureau, or agency. I believe that Members of Congress should be shown the courtesy of at least being advised whether the requested information is available. If they cannot supply the necessary information, let them say so frankly.

In both of the instances I have described, I believe that the information I sought could have been provided me directly and without delay. Such should have been the case, but was not, in either instance.

In the latter case, particularly, I would like to know if it is the usual procedure in the Department of the Interior for an assistant secretary to step outside his own specific assignment and to supplant a Member of Congress in his duties.

On the Roman Road to Ruin

EXTENSION OF REMARKS OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. MARTIN of Iowa. Mr. Speaker, under permission to extend my remarks, I include a discussion by H. Ralph Burton, of Washington, D. C. Mr. Burton served as special investigator for the Committee on Military Affairs for many years during my service on that committee. During that time I found his knowledge of history most interesting and informative.

The quotation below consists of some extracts from *On the Roman Road to Ruin*, a presentation of the startling analogies between Rome of ancient times, first as a republic and then as a totalitarian state under emperors, and the United States and England of today.

This is a historically factual account of disaster befalling Rome, resulting from the effects of corruption, confiscatory taxation, and government spending, startlingly comparable to the trend of the times today in the United States of America.

It is based throughout upon facts of history drawn from authentic sources and supported by authors of standing in the field of historical research.

Mr. Burton's discussion is copyrighted, but he has extended me permission to

insert the following in the CONGRESSIONAL RECORD:

ON THE ROMAN ROAD TO RUIN
DEMOCRACIES AND REPUBLICS

For years there have been statements in public and private spheres regarding the exact meaning of democracy and republic in which frequently the use of the two terms indicated belief that one was inconsistent with the other. This is definitely not true for Republic connotes a particular procedure in the exercise of democratic rights of free people in the form of government known from the earliest times as a democracy.

Government then existed as city states and legislation could be readily enacted in the public square by the people's direct vote and the cities of that day such as Athens, Sparta, Thebes, Corinth, and others were so governed. As time passed, however, cities extended to enlarged territories thus making impossible the personal attendance of the citizens which, therefore, necessitated employing the system of government by representatives of the people within an existing democracy, and the United States is as Rome was, a democracy using the system of representatives elected by the people of a democracy exercising their rights as its citizens.

Democracy is a word of Greek origin meaning "the rule of the people," and the Greeks were the first people of the ancient world to gain it.

There were, of course, political parties in such ancient democracies such as the oligarchs and democrats, conservatives and radicals, a peace party and a war party, according to the burning questions of the day, but party systems were never developed and whatever may have been the evils incident to the ancient form of democracy the boss, the caucus, and the spoils system were not among them. These came with modernization of politics.

CORRUPT PRACTICES ACT—(FIRST AND SECOND CENTURIES B. C.)

National festivities gradually increased, selfishly promoted, at Government expense, by politicians seeking favor through pleasing the less discriminating voters, later supplemented by the vying of candidates in giving gladiatorial contests and other spectacles at their own expenses. The splendor of the games eventually became the standard by which the voters estimated the fitness of the candidates for consulship, which was then the highest office in Rome.

To check the growth of such methods of getting votes, Cicero, in his consulship, brought in a corrupt practices act which forbade citizens to give gladiatorial exhibitions within 2 years of any election in which they were candidates.

It proved no more effective, probably, than modern corrupt practices acts because the Romans were as clever as some politicians of the United States in obeying the letter but not the spirit of the law.

Apropos of campaign tactics it is of interest to note some of the early political philosophy expressed by Quintus Tullius Cicero in the effort to persuade his brother, the great Roman Senator, to become more practical in seeking election to the office of consul.

He urged promising favors to voters.

"Human nature being what it is," said Quintus in his Handbook of Politics, "all men prefer a false promise to a flat refusal. At the worst the man to whom you have lied may be angry. That risk, if you make a promise, is uncertain and deferred, and it affects only a few. But if you refuse you are sure to offend many, and that at once."

Quintus could have then little realized that he fathered a political philosophy in the first century B. C. which would steadily develop until the zenith of perfection in the art of political promising would be reached by the middle of the twentieth century, 2,000 years later.

ROMAN REPUBLIC ENDS

Mommsen says of this period: "But in order to such elections and such decrees there was needed some special stimulus, in general the mass having no will of its own followed the first impulse, and folly or accident dictated the decision. . . . But the weakening of the government and the weakening of the community itself were among the lesser dangers that sprang from this demagogism. . . . That which formally issued forth as the will of the supreme authority in the state was in reality very often the mere personal pleasure of the mover, and what was to be the fate of a commonwealth in which war and peace, the nomination and depolition of the general and his officers, the public chest and the public property, were dependent on the caprices of the multitude and its accidental leaders. The thunderstorm had not yet burst; but the clouds were gathering in denser masses, and occasional peals of thunder were already rolling through the sultry air. . . . It was in reality the calm before the storm and the epoch of political mediocrities, an age like of the government of Walpole in England; and no Chatham was found in Rome to infuse energy into the stagnant life of the nation."

Irresponsibility in voting by those seeking to profit by gratuities, always at the expense of the taxpayer, to which class few of the ones who so voted belonged, portended the end of the Republic. Receivers of benefits now outvoted taxpayers.

It was the "grave train" of that day.

TAXES REACH DESTRUCTIVE STAGE—(ROMAN EMPIRE, THIRD CENTURY A. D.)

Administration of government business was conducted by a large number of local officials in many successive ranks and classes, from high to low, and the financial burden of government under Diocletian was enormous. Taxes grew steadily greater and eventually nothing possessed by the citizen was free from taxation. The penalty for wealth seemed to be ruin and there was no longer an incentive for progress in business when the holding of property meant ruinous over-taxation.

The Roman Empire lost the enterprising and successful businessmen of the middle class, never to be regained. Liberty for which its people had so long striven was lost and the once free Roman citizen had no independent life of his own, decrees by the head of government taking the place of laws. Citizens' earnings and prices paid for food fell under the Emperor's edicts fixing the amounts.

Staggering under what became a burden of confiscatory taxation, practically without hope in a bankrupt state, its citizens could toll only for the state, barely able to survive on what was left. Creative ability in all cultural arts and commercial affairs could not survive the hopeless situation. That remarkable civilization, so comparable in innumerable ways with ours of today, ended, not to be equaled for centuries to come.

Bolshevism

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. MARTIN of Iowa. Mr. Speaker, under permission to extend my remarks, I include an amazing statement regarding Russia by H. Ralph Burton, of Washington, D. C., that appeared in the Manufacturers Record dated June 12, 1919.

For many years Mr. Burton served as special investigator for the Committee on Military Affairs.

The article follows:

BOLSHEVISM

(By H. Ralph Burton)

The Bolsheviks are members of a political machine. They are not a political party; they are merely a plot. The two outstanding leaders are Nicholas Lenin and Leon Trotsky, both of which names are aliases. It is interesting to note that these men, by their agitation of the masses and their extravagant demands, during the revolution following the Japanese War lost to the people of Russia a constitutional form of government which was just within their reach. A close associate of Lenin, a personal friend, made such radical speeches in the Duma as to cause the real democratic, real patriotic men of standing to cease their support of the liberals, knowing that such a program as some of these fanatics were trying to force through would mean anarchy and ruin of the nation. It was found later that this intimate of Lenin's was a paid agent of the reactionaries, who wrote his speeches for him, knowing that such speeches would result in the withdrawal of the support of all of the sane elements in the liberal movement.

To these violent extremists the world is but a laboratory in which to try out their theories. They are class internationalists, bent upon a world-wide revolution, which would merely turn things upside down and place the power of government in the hands of the most ignorant of the working classes after using them to get into power. There is nothing socialistic about their program. They would merely exchange one privileged class for a much larger, more avaricious, more brutal, more merciless body than the one overthrown. They have from the first been the avowed enemies not only of the propertied classes, but of everyone who has prospered, or who, because of education, is in any way allied with this class, as, for instance, being dependent upon them, for a salaried position. Judges, lawyers, clergy, doctors, professional men of every description, clerks, foremen, experts of all sorts, are of the bourgeoisie, the enemies of the people. Under this regime law is administered by the revolutionary tribunals, the members of which know nothing of law; schools and hospitals were turned over to committees of janitors, kitchen servants and scrubwomen, physicians, and professors being forced to take their orders from them. They destroyed the morale of the Russian Army, retaining only a uniformed mob of criminals, who supported them because they could now be privileged to break all Ten Commandments with impunity.

They sold to Germany tons of American ammunition, which was used against our soldiers.

They demolished the Russian munition factories before they began negotiations for peace, deliberately rendering the Russian people helpless so that they would be compelled to make a shameful separate peace, and would be unable to defend themselves when Germany should choose to break the peace agreements. They murdered in cold blood thousands of patriotic officers, some of them while they were in hospitals recovering from their wounds. In many Soviets they have even gone so far as to make all women between certain ages the property of the state, to be used by any man, however notorious his character, provided he will contribute money to the Bolshevik revolutionary cause. They have done unspeakable things against God and man. Of what use to go further or to discuss the point as to whether they have accepted German money for personal gain? They accepted enough of it to finance their propaganda, and are now spending millions of the Russian money in the United States, as well as every other country,

the burden of which will again fall upon the poor peasant. They have bolstered up their power by creating a new privileged class of criminals, Red guards, and government officials, a group bureaucracy infinitely worse and more numerous than the old. With the threat of bombardment, bayonets, and machine guns they broke up the Constituent Assembly, the only real democratic institution ever convened in Russia, which was legally to adopt a constitutional form of government. This outrage was perpetrated because, in spite of every means known to a criminal political machine, they had been able to muster but 30 percent of the votes. They then put all power into the hands of the Soviets and disenfranchised everyone opposed to their program. Anyone now elected to a Soviet who is opposed to the Bolsheviks is either murdered or imprisoned as a "counter-revolutionary." Lenin himself says of his aggregation that of 100 of them, 60 are fools, 39 are criminals, and 1 is a true believer in bolshevism. He is more frank than one of his admirers, an English newspaperman, who says: "These men who have made the Soviet Government of Russia, if they must fail, will fall with clean shields and clean hearts."

Lenin and Trotsky always found time to issue orders and to talk about raising an army to fight against Japan in the East and the English, Americans, French, and Serbians in the West, but could not raise an army to fight against the Germans in their midst. Why? Because Germany put them in power and was keeping them there. Now it is seen that bolshevism, nurtured and fostered in Russia by Germans, has turned upon Germany and threatens to envelop that country.

The German policy toward Russia has always been and is still far-reaching, ever looking well into the future. With the access to such a wealth of raw materials, and with a people subjugated again working for slavery wages, the materials could, as before, be brought to Germany and manufactured into finished products. With such cheap source of labor and materials, Germany could overcome all competition in the world's markets, forcing hard times, low wages and labor unrest in the democratic nations of the world. Possessed of an unequaled storehouse of everything needed in warfare, with the exception of rubber, she could quickly recuperate her finances and prepare for another war of aggression, surpassing all possible rivals in armament and wealth. The advantages to Germany in the exploitation of Russia were recognized when the recent Brest-Litovsk treaty gave Germany full preference of trade in Russia for a term of 20 years. Immediate steps should be taken to stop the advancement by the Germans of their own economic interests in Russia, and the border states, Poland, Lithuania and Rumania should be so strengthened as to prevent further encroachment by Germany.

Russia is the keystone of the whole question of whether or not we are to have peace and prosperity, or a season of continued intrigue and treachery and expenditure of enormous sums in the race for supremacy in the production of engines of death and destruction. That is why, fearing American capital and the granting of opportunities for American aid in developing Russia, the German propaganda has been directed so bitterly against America and the American Government and other institutions. Our financial institutions especially have come in for German-Bolshevik criticism of the most perfidious sort.

Many millions of the uneducated masses of Russian people believe that Wall Street forced the American people into an unpopular war to safeguard the loans made by private American bankers to the Allied governments. They believe that our President is a tool of the capitalistic classes. They are taught that his words of encouragement are insincere and hypocritical.

They have as yet had no word or evidence to the contrary.

Russian patriots, men of education and discernment, are fully alive to the destruction which has been going on in their country under the direction of the Hun plunderers. They have always looked across the seas to America for our aid in developing their rich resources. From the point of view of temperament, we are best fitted to deal with the Russian people. Because of geographical separation we need never be feared by the Russian nation. Because we have the capital and the experience gained by developing similar resources, our cooperation is eagerly sought. They look to us, also, to build railways and highways, and to improve their inland waterway transportation. We can save Russia much in time and money by introducing more modern and perfected methods.

The former Empire of Russia was nearly three times as large as the 48 States of the Union, or just a trifle larger than all of the continent of South America and all of Mexico in addition. Its arable lands, if fully cultivated, are capable of supplying food for the entire population of the world. Its pastures and grazing ranges are sufficient in extent to support livestock enough to supply the world with beef and beasts of burden; its standing timber and mineral wealth are of similar proportion. Oil, coal, lead, copper, manganese, asbestos, gold, silver, and platinum are especially abundant.

Reconstruction of Europe absolutely demands the exploitation of Russia's resources—her agricultural, mineral, and timber wealth. The Russian people cannot possibly develop these resources to a sufficient degree perhaps even to supply their own demands, without foreign assistance. They have not sufficient capital, a sufficient number of engineers and executives, sufficient machinery and facilities for producing the machinery and tools necessary for so great a development.

Foreign assistance must come, either from the Central Powers or from the Allies. Germany has been proceeding with economic penetration in every possible way. Banks, industries, mines, and forests have been bought with German money at from 10 to 20 percent of their value. They take what gold they can get and buy up Russian properties at a small fraction of their values, demanding concessions for the balance when the gold is exhausted. They can well afford to support the Bolshevik political machine which controls the Central Soviet with paper money, which the poor peasants must eventually make good.

Students of the Russian question from an unprejudiced standpoint, who have not fallen under the spell of the political charlatans now in power in Russia, have been emphatic in their advice that the basis of the solution of the Russian problem rests upon the foundation of personal contact with the Russian people. An effort along this line would undoubtedly have momentous results for good. By a propaganda of truth and kindly deeds the Russian people would have a better understanding of our real attitude. Such an effort properly directed would drive the Soviet Government into either cooperating or showing itself to be the despicable organization that it is.

There is great need for definite knowledge on the part of a majority of the American people because of confusion in the public mind as to the real issues at stake, and with regard to what attitude they should take with respect to revolutionary Russia at the present time. The importance of the Russian problem is apparent from any one of several viewpoints among which are humanitarian, political and economic. The humanitarian side of the issue, involving the lives of millions who are destined to starve, freeze, or die of preventable epidemic diseases, is too obvious to require plea or argument. Relief has already been so long withheld that mil-

lions will surely be lost, and if it is not promptly applied to such a measure as can be given, millions more will be lost. As the result of unsanitary conditions and lack of nourishment, terrible scourges of cholera and typhus have been sweeping the country. Thousands of babies have died in the cities and throughout the land through lack of milk. This is the sort of condition existing after the Bolsheviks have come into power, the only thing they think of being their own control of Government affairs.

The United States Government was the first to recognize the Provisional Revolutionary Government and to welcome it to the family of democratic nations. Soon afterward we added to our moral responsibility the very definite obligation of a partnership in arms. As confusion increased in Russia and enemy-promoted misrule came into power, we lost contact entirely with the real democratic elements in Russia.

This contact should be reestablished in such a way as to confirm the several expressions of our President regarding the friendship of the American people for Russia.

The whole purpose of the Bolsheviks is to trade upon the sorrow and miseries of others in order to place themselves in power. Those whom they have used for their base purposes are afterward mocked and are compelled by violence to do the bidding of the Bolsheviks. Their political policy may be said to strive to create ferment, dissension, and animosities throughout Europe, and later, when Europe has been swept by the flame of radicalism, to use the most cunning rascals in Europe to sow the seeds of discontent in other continents. They figure that there is a double usefulness in this. First, that they will gain the respect and awe of all countries by this method, bringing such countries to the realization that they have the power to create disorder or restore order at will; secondly they will by intrigue reach their hands into the management of government functions by the simple use of politics, mob psychology and top-heavy government indebtedness through government ownership of railroads and other public utilities. The governments of Europe will be shackled by an all-embracing terrorism. As their tools they are using the doctrines and the followers of all opinions, such as reactionaries, monarchists, demagogues, Socialists, Communists, and other utopians. The Bolsheviks have put all of these at work for them. It is the boast of Lenin that the world will not have peace until Lenin's supergovernment is recognized openly and with submission.

Bolshevism is an insidious, subtle, and destructive force which feeds upon the bestial passions of mankind. It is a thing which is very little understood by the average person. As a matter of fact, there seems to be a tendency on the part of most people to treat it very lightly, as if there were not the slightest danger of their ever having to come into contact with it. To the unthinking, ignorant person, it appears as a panacea for every social ill. It promises a remedy for all of their sufferings. There is not a want in all the category of their desires that it does not offer to fulfill. When stripped of all its superficial covering so carefully constructed it is shown to be an anarchistic policy backed by cunning schemers whose sole purpose is to obtain control of all the world by creating between the classes a hatred which must result in disastrous controversies, leaving the plotters an opportunity to take advantage of those whom they have succeeded in embroiling in a meaningless, useless, terrible war. They are not content to stop where they are at present. It is merely the beginning of what they conceive to be an international revolution. They follow the principle of first destroying, by the germ of bolshevism, the social fabric of a nation in order that they may have the opportunity to go among the masses and preach their doctrines. There is a policy of absolute destruction, without an iota of constructive

ambition. It is a return to the days of the cave dwellers, retrogression in the extreme, and an absolute destruction of competition, which science recognizes as the main force of progress. The stability of the world would, by the elimination of all border lines, become completely unbalanced.

There is a tremendous influence for bolshevism, not only in Europe, where the condition hourly grows more menacing, but in the United States, where the Bolsheviks are preaching their devilish theories with amazing freedom.

Until the people of the United States not only realize that their safety, both for the immediate and for the future, lies in controlling Bolshevik forces wherever they exist, but also voice that feeling publicly so that the officials of our own Government may know that they desire immediate, forceful, and determined action to accomplish this purpose, we may expect chaos to reign supreme in the affected nations, with the ever-constant danger of its spreading in every direction.

Everybody Wants Government "Freebies"; What Has Become of the Self-Reliant Citizens of Yesteryear?

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WOOD of Idaho. Mr. Speaker, most people seem to be totally unaware of the fact that our Government cannot give anything to our own people or to foreign nations that it does not first take away from the American people, either in taxes or in unsound monetary and fiscal policies of government.

The New Deal-Fair Deal has won elections chiefly by appealing to the larceny of the people who hope to get something "for free" at the expense of the other fellow. But it simply cannot be done for long. Everybody must pay for waste and extravagance in government, either directly or indirectly, as anyone who has been to the grocery store lately knows. "Each ounce of dross costs its ounce of gold."

I am indebted to my good friend Paul O. Peters, editor of the Washington News Bulletin, for the following observation:

EVERYBODY SEEMS TO WANT MORE FREE SERVICES FROM THE FEDERAL GOVERNMENT

The huge tax burden which bears heavily on the competitive free-enterprise system under which the United States grew and prospered for more than 150 years appears to be caused principally by the desire on the part of many citizens (and some foreigners as well) to get something for free out of the Government of the United States, no matter whether they need it or not, and seldom without regard to the sources from which the gratuities or services originate.

Basically everything the Government does and every dollar that is spent by Government stems from the productive effort of the American people. Those who work and produce carry the burden of supporting the drones and the nitwits who think up new schemes to saddle on the backs of the producers.

Last year we warned that taking money and power from the Government has

become fashionable. To review the situation we said:

Businessmen denounce waste and extravagance in Government, but when the line is formed and contracts are being let, they seek either subsidies for their own industries or loans from the public till on terms no commercial institution could afford to consider.

The union man deplores the rise in living costs, but he wants his wages increased, and his leaders favor Government subsidized housing, rent control, subsidized medical care and hospitalization, and complete insurance coverage for himself and family from the cradle to the grave.

The farmer, being right in the middle of the inflation, wants subsidized tools, subsidized fertilizer, subsidized electricity, and a subsidized telephone, guaranteed prices for his crops, and Federal insurance against crop failures no matter what the cost with the Federal Treasury advancing the premiums.

The old people want either the Townsend plan or some equally acceptable substitute which will provide the aged with the comforts and necessities of life with spending money thrown in.

The bureaucrats claim an unalienable right to their jobs and shudder at the thought the time may come when the Federal payrollers provide the straw that breaks the camel's back.

The internationalists and free traders go all out for one-world ideas, a federation of bankrupt nations joined to the United States, with Uncle Sam footing most of the bills. They want our sovereignty and independence mingled with that of some fifty-odd nations, the Constitution and Declaration of Independence to the contrary notwithstanding.

That's the picture as we see it.

A Vote for Our Security

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. SMITH of Virginia. Mr. Speaker, last week we passed the foreign aid appropriation bill in the House. My colleague, the gentlemen from Virginia, Representative J. VAUGHAN GARY, as chairman of the subcommittee, presented the bill and guided it through to passage. His handling of the bill on the floor was a brilliant performance and incited the approbation of his colleagues in the House. In that connection, under unanimous consent, I extend my remarks in the RECORD and include an editorial on the subject which appeared in the Sunday Star, Washington, D. C., on October 14, 1951:

A VOTE FOR OUR SECURITY

The House has acted with admirable dispatch and good judgment in approving an appropriation of \$7,500,000,000 for the mutual-security program.

A Republican attempt to make a further deep cut in the already shorn funds for economic aid was beaten down, and that is something that should be welcomed by all who believe that our own security is linked to the security of Western Europe and that General Eisenhower is doing an honest, competent and intelligent job of directing the rearming of Europe.

Most of the argument in favor of a cut was aimed at the so-called economic funds. But, as Representative GARY, of Virginia, properly pointed out, the economic aid contemplated in the bill has been completely integrated with the military program. And when Republicans raised the question as to how, in view of our own fiscal problems, such a large appropriation can be justified, Mr. GARY replied, "Only in one way, and that is by the consequences we may face if we do not embark upon this program. I believe from the bottom of my heart that we are dealing today with the security of America, the very existence of America. If I did not think so I would not be here arguing for this bill."

That is a view that is supported by the reports which have reached this country of the recent maneuvers by the forces under General Eisenhower's command. Participating in these maneuvers were troops from the major North Atlantic nations—some 450,000 ground troops plus perhaps an additional 100,000 men in the several air forces. Divisional and corps maneuvers were not attempted—the troops are not yet ready for that. But in the judgment of professional observers, including our own military men, the force that was on display was at least twice as strong as any force that could have been put in the field a year ago. Even more encouraging was the attitude of participating troops—an attitude of enthusiasm and determination to fight if aggression should come.

This report from the maneuvers can be discounted as one sees fit. Certainly it is true that there does not yet exist in Western Europe a military force that would be capable of effectively opposing a determined Russian attack.

That, however, misses the real point. The important thing is that progress—real progress—is being made. And that progress, in the judgment of every competent military adviser, is a highly significant element in maintaining the security of the United States. This is why it is gratifying that the House resisted attempts to cut the appropriation to a level that would have gravely threatened the whole Eisenhower program. And this is why it is so important that the Senate should follow the example which has been set in the House.

The Brannan Farm Plan

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, final reports from the field were supposed to have been received Monday, October 15, by Secretary of Agriculture Brannan, relative to a Nation-wide series of meetings conducted by farm groups.

Officially, the meetings were described as "sampling sentiment" on the Brannan farm plan and allied subjects. Actually, I suspect, they were designed to drum up support for those projects by sending in federally remunerated individuals to extol the virtues of Brannan's socialistically inclined schemes.

As evidence that these manipulations are not fooling all of the agriculturalists, I include herewith a portion of a news story published in the Lusk (Wyo.) Free

Lance, following one of those meetings late in September:

Niobrara County farmers and ranchers Monday evening may have started something that could sweep the entire Nation, when, at a meeting attended by representatives of several Government agencies and 56 farmers and ranchers, the Brannan farm plan and the cash payout by the Production and Marketing Administration to farmers and ranchers, both received telling blow:

The attenders for the most part referred to the Brannan plan as a long step toward socialism, and pointed out that too much was being spent for administrative costs in comparison to that returned to the producing agricultural groups.

The meeting, it appears, was a "feel-out" on the Government programs which have been in force for a number of years, and which are now somewhat in the process of being extended as to scope and benefits to the farmers and ranchers.

Briefed down, the majority consensus of the meeting attenders means something like this:

That the United States Congress be asked to furnish more research in the various departments of agriculture, more help for the Extension Service, and that the Bureau report be disregarded.

That opposition is unanimous against the Brannan plan or any variation thereof.

That immediate discontinuance of any cash payments to farmers and ranchers through PMA is unanimously agreed upon.

That all congressional appropriations for soil-conservation work be discontinued.

That the setting up of any more Federal bureaus or departments is unanimously opposed.

That it be recommended to Wyoming's representatives in Congress that hereafter the FHA committeemen be specifically instructed to proceed in a most conservative and cautious manner, scrutinizing most carefully their prospective clients.

From the minutes of the gathering, much may be learned by the general public, which foreshadows the bill for all these programs. The expressions of the speakers, backed by vote in most cases unanimously, tend to give the average taxpayer at least a peep into the reasons for the present national debt. More can be said on this matter, and more will be said as time proceeds. Should the attitude in evidence here start rolling, the present farm program will certainly experience reverberating results. It is something worth watching.

The Extension Service, operation of which in this country has resulted in outstanding achievements, was given an all-out boost at the meeting. This service, under the supervision of County Agent "Si" West and Home Demonstration Agent Ruth Harris, was declared to have too much to do, especially tasks not relating to its specific objectives. After explanation of the work being done by the local agents, the motion to include more assistance to the extension program received unanimous support of the meeting in one of its motions.

The remainder of the news story dealt with the identities of those present, including representatives of the county PMA committee, Soil Conservation Service, Farmers Home Administration, and the Extension Service, and named the speakers who addressed the meeting.

I believe, Mr. Speaker, that this news story points up very clearly a contention I have made here in Congress on previous occasions: That the American people, generally, still are a self-reliant Nation, and that, for the most part, they would much rather live their own lives

as free citizens than be regimented by a bureaucratic Federal Government making every effort to live their lives for them.

I am proud that it was this particular segment of the American public, the agricultural people of Niobrara County, Wyo., who have expressed themselves so forcefully on this issue. I compliment them highly, and commend this news story for study by every Member of Congress.

Proposed Formula for Use in Establishing Rates

EXTENSION OF REMARKS OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. McFARLAND. Mr. President, pursuant to the permission granted me during the course of my remarks in the Senate today, I submit for publication in the Record the address delivered by Commissioner Paul A. Walker, Vice Chairman, of the Federal Communications Commission, before the 1951 annual convention of the National Association of Railroad and Utilities Commissioners at Charleston, S. C., on October 17, 1951.

The address is as follows:

All of us who are charged by statute with the duty of regulating utility rates and services recognize the importance and value of gatherings, such as these, wherein we may exchange information and ideas regarding our problems in an effort to solve them in a spirit of cooperation. I believe that among the most valuable aids to effective regulation of telephone toll rates, in particular, are collaboration among regulatory authorities in the treatment of the many problems which are of common concern and the availability of adequate information. In view of the complexities of the telephone industry from both the technical and economic standpoints, we cannot overemphasize the importance of being fully informed on all matters pertaining to the operations of the industry. A long step forward toward bringing to light such essential data in this regard was, of course, the special telephone investigation of the FCC back in 1935-38. It is to be regretted that it was not possible to continue the process begun by this investigation so that all of us could keep more closely in step with the rapid and overhanging growth and complexities of the telephone industry. It was, therefore, with a great deal of gratification and appreciation that I recently received a copy of the report of the Joint NARUC-FCC Subcommittee on Toll Rate Disparities. This report in my opinion represents a comprehensive, constructive and useful work on the matter of toll rates and should be of substantial value to more enlightened toll-rate regulation. It is a testimony to the fruitful results that can be produced by co-operative action among State and Federal regulatory authorities. The staff members of the various commissions who participated in this project are to be complimented for their work. The report speaks for itself. It obviously required a great deal of work and thought in its compilation.

This association, at its convention held in November of last year at Phoenix, Ariz.,

adopted a resolution endorsing a suggested change in the telephone separations procedures which would have effected a transfer from State to interstate telephone operations of substantial amounts of toll plant investment and related expenses. It was indicated in the resolution that such a transfer would reduce the disparity between State and interstate toll costs and would thereby constitute a means of alleviating existing disparities between State and interstate toll rates. The resolution called upon the FCC to agree to the separations change in a spirit of cooperation. However, as you know, the Commission, upon consideration of the plan, was unable to find a basis upon which it could approve the plan as a reasonable method of telephone separations.

Now, when I was asked by this association just a few weeks ago whether I would be willing to discuss at this convention the matter of toll rates, I frankly hesitated to accept the invitation. I wondered whether there was anything I could say which would help in the solution of the toll rate problems before us. I, nevertheless, accepted with the hope that by the time the convention took place, something would come to my mind. Fortunately, events have been kind. I think we have found an effective solution to these problems. Let me give you a brief summary of the events leading up to this development.

As you know, in view of the high level of interstate earnings which obtained during 1950, and the questions posed thereby as to the reasonableness of interstate rates, the Commission in January 1951 instituted proceedings in Docket No. 9889, looking in the direction of reductions in earnings from interstate telephone service, through appropriate rate adjustments. Subsequently, the Commission in February 1951 postponed the hearings which were scheduled to commence in April, and invited representatives of the States to participate with us in further informal efforts to resolve the questions which had been raised concerning the reasonableness and fairness of the existing separations procedures. This action was taken by the FCC with the hope that further exploration of the procedures might produce acceptable modifications therein. It was recognized that changes in separations might assist in alleviating the toll rate disparity problem, or, at least, in relieving intrastate operations of the additional revenue requirement burdens presented by pending requests of the Bell System companies for intrastate rate increases.

Technical experts of the staffs of both the State commissions and the FCC met in March 1951 to consider possible changes in separations as well as other suggestions, apart from separations, which would make possible the establishment and maintenance of substantial uniformity in State and interstate toll rates. As a result of these meetings, the Joint NARUC-FCC Separations Subcommittee was instructed to give special attention to the development of possible separation changes affecting the allocation of costs associated with the exchange component. There was also established, as a result of a meeting of the Commissioners' Committee held last May, the Toll Settlement Plan Subcommittee, which was assigned the task of formulating a comprehensive plan for making possible uniform State and interstate toll rates, including consideration of necessary legislation. Although the work of these two committees has not yet been completed, the members of the Separations Subcommittee have reached tentative agreement on certain simplification changes in the separations manual which, though not of a substantial or fundamental nature, will have the effect of shifting some amounts of plant investment and expenses from State to interstate telephone operations.

More recently, in connection with the interstate rate investigation in Docket No. 9889 the Commission has been reviewing, with representatives of the Bell System, the existing separations procedures, particularly those affecting the allocation of exchange plant investment and expenses, in order to determine whether changes in the procedures are necessary or desirable before proceeding further in that docket. As a result, we have developed certain modifications of the separations procedures applicable to the exchange component, which we are willing to propose and accept on an interim basis. I say "interim basis" because, as you know, the Federal Communications Commission has not, as yet, formally prescribed separations procedures. The Federal Communications Commission believes that these proposed modifications represent reasonable separations procedures, and that they will produce results which are fair and equitable to both State and Federal jurisdictions. These revised procedures did not mature until just about a week ago. As soon as the Federal Communications Commission concluded that the plan merited approval, I contacted my good friend Matt McWhorter, chairman of your Committee on Telephone Regulatory Problems, and advised him of the plan. Last Thursday, State representatives of the Separations Subcommittee met with our staff to discuss the plan. Since our arrival at Charleston, there have been further discussions of the plan. We have been advised by representatives of the Bell System that they consider the plan reasonable and are prepared to put it into effect if the NARUC and the Federal Communications Commission agree on it. We feel confident that the NARUC will also look with favor on this plan and that it will be promptly incorporated in the existing procedures.

An explanation of the details of this proposed change, together with the rationale in support thereof, is available for distribution to those of you who do not already have copies.

Now, what would be the effects of this plan? It will have the effect of shifting from State to interstate operations approximately \$82,000,000 of exchange plant gross investment and \$17,000,000 of related annual expenses. This is in addition to the transfer to interstate of over \$1,000,000 gross plant investment and almost \$4,000,000 of annual expenses, which will result from the previously mentioned simplification changes worked out by the Separations Subcommittee last May. The States will also be relieved of additional amounts of book costs and expenses if, as is anticipated by the Federal Communications Commission, the 5-cent rate applicable to certain interstate toll routes is eliminated in connection with possible adjustments in the interstate schedule which I will discuss more fully in a moment. Under separations methods used in most State rate cases, interstate operations not included in the interstate division of revenue arrangements, such as the 5-cent traffic, are lumped in the intrastate operating results. Thus, elimination of the 5-cent exception rate will bring into the interstate division of revenue arrangements the larger part of about \$6,500,000 book costs and \$2,000,000 excess of annual expenses over related revenues, with corresponding relief to the States. To summarize, the changes which I have discussed would have the effect of shifting from State to interstate operations about \$90,000,000 in gross plant and about \$22,000,000 in annual expenses.

In view of the large number of State commissions which are currently engaged in considering requests for third or fourth rounds of intrastate rate increases, I should like to point out that from a revenue requirement standpoint, these changes will increase the total interstate requirement and reduce the

total requirement applicable to State operations by substantial amounts. At this point, I should also like to remind you of a revision made in the early part of the year by the Bell System companies with respect to the development of toll coefficients related to the allocation of operator work time between State and interstate services. On the basis of current estimates, it appears that this change has had the effect of shifting to interstate operations about \$20,000,000 of gross plant investment and \$15,000,000 of annual expenses. Thus, in effect, since our last meeting in Phoenix, changes in the separations procedures, or in the methods of applying them, have resulted or will result in a transfer of about \$110,000,000 of gross plant and about \$37,000,000 of annual expenses from intrastate to interstate operations.

I realize that each State commission representative is speculating as to the extent to which his individual State will benefit from these proposed revisions in separations procedures. Although, at this time, we do not have data by States, it is obvious that every State will benefit. I am confident that every State will look after its interests in this regard, and that the Bell System companies and State commissions will see to it that the benefits to the States resulting from these changes in separations, if placed in effect, will be appropriately reflected in each jurisdiction.

Another question which, no doubt, has aroused more than just idle curiosity in your minds relates to the effects of these various changes upon interstate operating results and, particularly, the Commission's rate proceedings in docket No. 9889. Obviously, transfers to interstate operations of plant and expenses of the magnitude which I have outlined will have a substantial impact upon the level of earnings and revenue requirements in the interstate field. Accordingly, the Commission is reviewing the entire picture in this light, and is exploring the nature and extent of interstate rate adjustments that may be necessary. It appears that these explorations may afford the opportunity for effecting substantial adjustments in the interstate toll rate schedule by way of increases at the short hauls, together with possible reductions in other parts of the schedule. In approaching this matter, and having in mind the cost data reflected in the report of the subcommittee on toll rates, the Commission considers increases in short-haul toll rates to be desirable in the interest of bringing such rates into closer alignment with the costs of rendering interstate service at those hauls. This will also serve materially to mitigate the disparities between State and interstate toll rates. These are matters which will receive the attention of the Commission upon our return to Washington at the close of the convention.

In closing this brief discussion, I think it not inappropriate to add a personal word. In point of years of attendance, if not in years of age, I am perhaps one of the oldest members of this association. Interstate Commerce Commissioner Clyde Aitchison will tell you about his long years of connection with this association. Let me say, in all modesty, that while I do not antedate him, I can almost equal his years in attendance and in interest in this association. My first connection with his career, if I may so put it, occurred in the year 1917. At that time a movement was under way among the State commissioners for the establishment of a national office for the association of State commissioners and the hiring of a general counsel or general solicitor. This antedated the national career of the late beloved General Solicitor John E. Benton. I was then attorney for the State Corporation Commission of Oklahoma. The Honorable George A. Henshaw, a former assistant attorney general for the State of Okla-

homa, had been elected a member of that commission and he was quite ambitious to assist in carrying on the work of the State commissioners as a national officer. Knowing that a movement was under way to select a general solicitor, he asked me to go to Washington and to suggest to those in power his availability for the office. This I did to the best of my ability, but was politely advised that older and more experienced heads were available and among them was a brilliant and wise commissioner from the State of Oregon named Clyde B. Aitchison. No argument on my part availed for Mr. Henshaw, and Mr. Clyde B. Aitchison was chosen. I can say truthfully that his is one of the most brilliant minds which have graced the office of general solicitor.

In coming into the family of Federal commissions, I have perhaps carried more of the "brand" of States rights than most of those who have been appointed to Federal commissions. In fact, I believe it was the frustration which I encountered in connection with my activities in State regulation of the telephone industry which brought me to Washington. Otherwise, I state to you frankly, that I very much doubt if I would ever have been a Federal Commissioner. Suffice it to say that from the year 1917 to the year 1934, I was keenly active in the work of this association. At the Phoenix convention of 1924, I presented one of the first reports on cooperation between State and Federal authorities, on behalf of a State commission. I was keenly, perhaps aggressively, active, on behalf of the States in cooperation with the Federal commissions, while I was with the State commission, and have been interested in and have participated in cooperative efforts since my incumbency as a Federal Communications Commissioner.

So I say to you, my brother Federal and State commissioners, that I hope this effort in telephone-rate making which I have outlined today may be concluded as an example of a constructive effort at cooperation between the States and the Federal Communications Commission.

The Tragedy of the Ukrainian Nation

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. SMATHERS. Mr. President, on October 13 I had the privilege of attending the United Ukrainian American Relief Committee convention at Philadelphia, Pa., where it was my pleasure to hear a most informative and interesting speech by Hon. Edward M. O'Connor, Commissioner, Displaced Persons Commission.

The information contained in the Commissioner's speech about the Ukrainian people came as a pleasant surprise to me, for I had no idea there was such a large group of people within the borders of the Soviet Union who loved democracy and personal freedom with the same passion and fervency that we here in the United States do.

Mr. O'Connor pictured in eloquent terms the unfortunate plight of these brave, Christian people who have been caught up in the mad ambitions of the Nazis on one side and the equally sinister evil of communism on the other.

The speech was not mere flattery of a brave and honorable people, but it pointed out factually that a majority of all persons imprisoned behind the iron curtain are non-Russians and unsympathetic with the Soviet Union's ambitions. Mr. O'Connor made it clear that there is great hope for the future in those many millions of people who will not for long submit to the domination and oppression of the foreign Soviet tyranny. He pointed out that we people here in the United States, and people elsewhere in the world who believe in personal freedom and democracy, must be ready to assist the Ukrainians and all those like them in their efforts to throw off the chains of slavery.

Many of these people have found their way to our friendly shores. They are encouraged by what they find. They are imbued with the determination to see their homeland, where the spirit of individual independence has existed for over 1,000 years, freed from the yoke of dictatorship and once again enjoying the blessings of freedom.

I ask unanimous consent to have printed in the Appendix of the Record Commissioner O'Connor's speech.

There being no objection, the address was ordered to be printed in the Record, as follows:

THE TRAGEDY OF THE UKRAINIAN NATION

(Address by Hon. Edward M. O'Connor)

As we gather in this great hall to pay tribute to the Ukrainian patriots who down through the centuries made the good fight for national independence, we are more than ever conscious of the fuller meaning of the great American birthright of independence. A little more than a stone's throw from where we now meet, the courageous American patriots signed into action a declaration of independence which gave birth to our great Nation. This declaration set forth the basic rights and freedoms to which all men are entitled, and made clear that to deny men these rights was just cause for revolt. Thus, the principles set forth in the Declaration of Independence became the battle cry of the American patriots and has served ever since as an inspiration to freedom-loving people everywhere.

Today, our Nation is faced with the gravest threat to its survival since the glorious days of its inception. The United States is the citadel of human freedom and individual opportunity—a bright beacon of liberty shining out upon a world endangered by the engulfing black smoke of a new imperial tyranny, and the masters behind this conspiracy make it clear their appetite will not be satisfied until they have devoured the world. They are absorbing nations and people at an alarming rate, but their record of digestion is not at all satisfactory. It is not an easy task to stamp out the natural cravings of man for freedom, the spontaneous rise of the patriot under conditions of oppression, nor the moral codes of human conduct which have guided mankind through the centuries.

In the conspiracy to enslave all mankind, we find the Soviet Union the announced and admitted leader. The Soviet Union is the result and embodiment of the false teachings of Karl Marx, Lenin, and now Stalin. Even a cursory reading of the writings of these men will dispel any doubts as to the actual and final aims of that regime. But we shall commit a fatal error if we believe the majority of the people within the Soviet Union are sympathetic to the notions of Marx, Lenin, or Stalin, or that they are in support of the conspiracy of the Kremlin.

The Soviet Union has been posed by some experts as a mysterious power, strange and unfathomable to the western mind, and presenting a problem which only the expert is equipped to understand. It is unfortunate that this peculiar notion has gained some recognition and, worse still, it will present a real danger to our future security if it is not exploded. There are many things about the Soviet Union which are as simple as the A B C's and these are the very things which can lead to the defeat of its past and present objectives.

The most common understanding about the Soviet Union is that it is a nation of Russian people. This is, of course, completely untrue. According to the 1939 Soviet census, and reasonable projections on those figures to bring them up to date, we find that of the total population of approximately 202,000,000, 91,500,000 are Russian and 110,500,000 are non-Russian. Thus the majority peoples of the Soviet Union are not Russians, on the contrary, over 54 percent are non-Russians.

To carry this point even further, only two of the Soviet Republics, the Russian Soviet Federated Socialist Republic, and the Karelo-Finnish Soviet Republic are predominantly Russian. The other 14 Soviet Republics are overwhelmingly non-Russian in complexion. Now let us look at the complexion of the other Soviet Republics:

Ukrainian Soviet Republic, population 42,272,000, approximately 91 percent non-Russian.

Byelorussian Soviet Socialist Republic, population 10,525,000, approximately 93 percent non-Russian.

Estonian Soviet Socialist Republic, population 1,120,000, approximately 92 percent non-Russian.

Latvian Soviet Socialist Republic, population 1,950,000, approximately 88 percent non-Russian.

Lithuanian Soviet Socialist Republic, population 3,134,000, approximately 98 percent non-Russian.

Moldavian Soviet Socialist Republic, population 2,321,000, approximately 100 percent non-Russian.

Georgian Soviet Socialist Republic, population 3,721,000, approximately 100 percent non-Russian.

Armenian Soviet Socialist Republic, population 1,316,000, approximately 100 percent non-Russian.

Azerbaijani Soviet Socialist Republic, population 3,372,000, approximately 90 percent non-Russian.

Lazak Soviet Socialist Republic, population 645,000, approximately 60 percent non-Russian.

Uzbek Soviet Socialist Republic, population 6,601,000, approximately 94 percent non-Russian.

Turkmen Soviet Socialist Republic, population 1,317,000, approximately 93 percent non-Russian.

Tadzhik Soviet Socialist Republic, population 1,563,000, approximately 100 percent non-Russian.

Khazak Soviet Socialist Republic, population 1,533,000, approximately 88 percent non-Russian.

I need not remind you that the Government of the United States does not recognize the absorption of Estonia, Latvia, or Lithuania into the Soviet Union.

Now you may ask, "What is the special significance of this well-documented point on the non-Russian peoples of the Soviet Union?" There is a great deal of special significance to this point, and to demonstrate the most significant point I wish to review with you briefly the tragedy of the Ukrainian nation—the most numerous non-Russian people in the Soviet Union.

The land of the Ukrainian people runs from the Carpathian Mountains in the west to the Don River in the east along the north

shore of the Black Sea and includes the valleys of the great rivers which come down from the north and empty into the Black Sea. In the north there are no distinct natural boundaries, but the ethnological history of the people has well provided for this oversight by nature.

In the heart of this great land is the ancient city of Kiev, capital city of Ukrainian affairs throughout all of recorded history. The equally ancient trade routes linking west with east and north with south meet and cross in this capital city. Over 1,000 years ago the State of Kiev was founded and prospered in an era when powerful and warlike tribes of nomads were pushing westward and armies of western states were pushing eastward in search of new lands.

The Kingdom of Kiev came into being in the second half of the eighth century and with Volodimir at its head. Thus an empire was created which soon adopted Christianity, and then began efforts at consolidation of a peaceful state which exploited the culture of the west among the people. Strong ties were made with the rulers of other Christian states, trade and commerce flourished with the city of Kiev as its hub. This kingdom fell in the early part of the thirteenth century under the unrelenting attacks of the Tartars at a time when there was dissension among the ruling princes. This era is best remembered through the Song of the Legion of Ihors.

Then followed an era of domination of the Ukraine by the rulers of other kingdoms and states. It was in these circumstances that the Kozak movement was born. It was a resistance movement, and one which aimed at restoring a free State of Ukraine. The exploits of the Kozaks, their reckless daring, their unquestioned bravery, has become legend throughout all of Europe and central Asia. They became highly organized for military purposes, but then social and political system was simple—expressing the natural cravings of man to be free of any and all oppressors.

In 1648 the Kozak movement rose in revolt against the Polish domination of the Ukraine—led by Hetman Khmelintsky. It was impossible for him to win a decisive victory and complete independence, so he turned to the Muscovite rulers for an alliance which he hoped would aid his cause. This alliance turned out disastrously for the cause of Ukrainian liberation, because the prince of Moscow eventually turned it into an instrument to dominate the Ukraine. Thus opened another era of Ukrainian life, under the domination of Moscow, which has continued uninterrupted except for a brief period following World War I.

Before the outbreak of World War I, the Ukrainian nationalist movement was much stronger in the cultural than in the political field. The Kozak movement of liberation had, in the passing centuries, been completely broken and disseminated by the Tsars. The liberation movement of necessity was forced to the cultural field to keep the national spirit alive. With the breakdown of the Russian Empire in March 1917, and the later fall of the Austro-Hungarian Empire, the stage was set for another supreme effort at Ukrainian national independence.

The Central Rada, organized along nationalist rather than class lines, set up a provisional government. On November 20, 1917, the provisional government proclaimed a "peoples republic" and all state authority was vested in the Rada pending the meeting of a Ukrainian Constituent Assembly. This same proclamation announced freedom of speech, press, faith, assembly, unions, and strikes, together with freedom of national and cultural development for the Russian, Polish, and Jewish minorities. The Bolshevik authority then getting established in Moscow denounced the proclamation of Ukrainian independence, accusing the new

state of carrying out a two-faced bourgeois policy, concealing itself behind nationalist phrases. This young Government had a short and stormy life, appealing to the Paris Peace Conference for recognition and assistance in driving the Bolshevik out of Ukraine. These pleas fell upon unsympathetic and to some extent uninformed ears, and thus closed another chapter in the tragedy of a great people.

The fate of the Ukraine under domination of the Bolshevik, now known as the Politburo, is one of the saddest in all of history. The program to communize the Ukraine ran counter to the distinct national culture, the Christian faith, the spirit of individual independence which has kept this nation alive for over 1,000 years. The Soviets used the most brutal tactics in an effort to break this spirit. Mass killings and deportations were the first techniques used. When these methods failed, the Politburo established the system of collective farming to liquidate the Kulaks as a class and to bring about the famine of 1932-33, which resulted in the planned extermination of close to 3,000,000 innocent people.

But nothing was to stand in the way of Bolshevik complete control of Ukraine. There could be no strong Soviet Union until the Ukraine was conquered. When we understand that this nation before World War II supplied the Soviets with 25 percent of their grain, two thirds of their sugar requirements, three fifths of their pig iron, half the coal, half the salt, and one fifth of its chemicals, we can see its true economic importance. When we understand that the possibilities for development of hydroelectric power, in addition to what is already established there, are greater in Ukraine than anywhere else in the Soviet Union, we can better realize the importance of this region to the Red plans for world conquest.

With the outbreak of World War II, the masters of the Kremlin and the forces of Hitler were as one—joined together in a common conspiracy to absorb all of the smaller and weaker nations. This union was, of course, aimed at defeating the defenders of Western culture and traditions. It was inevitable that this alliance would fall apart and that the two international gangsters would fight it out among themselves to see who would take all the spoils. Nazi Germany invaded the Soviet Union and history records the unusual and unprecedented rapidity with which the German armies penetrated to the gates of Moscow and Leningrad, swept across the Ukraine to the Black Sea and beyond. The uninformed masses of the West had the feeling that the Nazi war machine could not be stopped, and that it was most likely the Soviet Union would be conquered within an unbelievably short time. It was only during the closing days of the war that we learned the real reason for this rapid, almost unresisted advance across the reaches of the Soviet Union. We learned that the people of the Soviet Union, particularly the Ukrainians, first looked upon the German invaders as their liberators—as another historical opportunity for them to regain national independence. They had expected that the opportunity would be theirs to take up arms and drive the Bolsheviks completely out of the Ukraine, and that after the war was over, somehow they could reconstruct the Ukrainian nation. But here they were deceived; their hopes were dashed upon the rocks of despair when the Nazi invaders treated them as inferiors and little better than animals. When the Ukrainian people realized that their hopes for independence were in vain and that the Nazi invaders were as evil as the Communist oppressors, they then turned upon the new invader. The resistance movement then had to fight two oppressors, the Communists and the Nazis. These same circumstances apply to many

other Soviet Republics which were overrun by the Nazi armies.

One important fact has been clearly established since the end of World War II—that the masters of the Kremlin did not have the support of the masses of the people in the early stages of the war. On the contrary there was no real resistance until the German forces reached the gates of Moscow and Stalingrad. By that time, the masses of people were outraged by the treatment accorded them by the Nazis and fought back, not for the survival of communism but for their own personal survival. It was then possible for Stalin to declare the "Fatherland Front," which led the people to hope for better days after the war was over.

With the end of World War II, the Ukrainian nation found itself in an even heavier hand of the Communist oppression. They were further separated from the Western World by the addition of new captive states—the states which Stalin used to form his cordon sanitaire. One would be led to think that these drastic events would lead to the complete crushing of the national spirit of the Ukraine. We know, however, that this has not occurred, because even today the resistance movement in the Ukraine is of such a character and magnitude as to cause the masters of the Kremlin grave concern—has caused them to engage in new extermination programs in their efforts to break the national spirit of independence.

The tragic story of the Ukraine, together with its many heroic epics, is a story that applies to all the captive nations held within the iron grip of the Kremlin. We can rightfully look upon this story of the Ukraine as a symbol and a guidepost for understanding the other peoples who make up the various republics of the Soviet Union. There is one great lesson we can learn from these historical facts. That lesson is that the non-Russian peoples, who are the majority peoples of the Soviet Union, are the weakest link in the Soviet plan for world conquest. They are the weakest link because for centuries they have despised and have suffered under Russian imperialism; they have nothing in common with either the old princes of Moscow or the new princes of the Kremlin, and can be counted upon—once given an opportunity—to make a heroic effort to throw off the yoke of their oppressors. This is the greatest weakness in the plan of the enemies of all mankind which must be recognized and fully exploited. We must be outspoken and firm in our commitment to the universal principle of self-determination, and we must make our stand in this matter known to the peoples of all these captive nations. If we get our story across and stand firmly by it, we will then

have created great possibilities for averting a war and establishing a peace with justice and freedom for all.

I have noted with interest and great pleasure that there has been formed in the United States an organization known as the Free Russia Fund, Inc. It is encouraging to know that some good Americans have recognized the plight of the Russian people and are planning to do something to bring about their well-deserved freedom from the tyranny of communism. On the other hand, I find myself seriously disturbed that no one appears to have done anything about the cause of the non-Russian people of the Soviet Union who make up the majority, and who clearly comprise a group of nations who want their freedom and liberties just as much as any other people. To the best of my knowledge, no American organization has been formed to advocate the cause of these captive nations nor to encourage them to keep alive the spirit of national culture and independence nor to provide a practical means whereby their hopes for a better life will some day be realized. I therefore strongly commend to your consideration—and to the consideration of all freedom-loving Americans—the need for the immediate formation of an organization to be known as the American Committee for the Liberation of the Non-Russian Peoples in the Soviet Union. I am confident that when the American people are given the facts that have been presented to you this evening, they will gladly support such a worthy and necessary undertaking. When it is made clear that such an organization can make a major contribution to the removal of the menace which endangers free men everywhere, its success will be assured.

The spirit of the patriot which brought forth in this city of Philadelphia the historic Declaration of Independence is very much alive in the hearts and minds of those patriots of today who reside in the captive nations. The hopes and ambitions, the yearnings and struggles of the Ukrainian patriots parallel those of our founding fathers. If we are to continue to enjoy the God-given liberties which have come to us through the application of this Declaration, we must see to it that all those who struggle for these same principles attain them at the earliest possible moment. This clearly is our historic mission. The ranks of free men must be multiplied many times before we can expect to attain that great objective of a universal peace toward which we now devote our wholehearted efforts.

May God speed the happy day when all men will be free and all nations, founded on the natural principle of self-determination, are formed into a world community of nations dedicated to permanent peace.

Estimates

Republic, region, or district	Total	Russian	Non-Russian	Percent of non-Russians of total in republic, region, or district
Estimated population	202,067,877	91,520,472	110,547,405	54.7
Russian Soviet Federated Socialist Republic (RSFSR)	114,237,428	83,923,672	30,313,756	26.6
Ukrainian Soviet Socialist Republic	42,272,943	3,889,111	38,383,832	90.8

Even Infants Are Legal Prisoners in U. S. S. R.

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, even though you are an infant 1 month old in the Soviet Union, you may be subject to the same punishment as that received by the political prisoners. The fate that befalls these innocent babes is described in stark language in an article which appeared in the June 1951 issue of the Challenge. The Challenge is a bulletin published by the Association of Former Political Prisoners of Soviet Labor Camps, 112 West Seventy-second Street, New York, N. Y.

I include herewith the article from the Challenge:

ANGEL FACTORY

(By E. Z.-n.)

In the Rostov province, near Olginsk, there is a somewhat unusual camp. In appearance it does not differ from all the other camps scattered through the Soviet Union. Fenced in by a triple row of barbed wire, with wooden guard towers in the corners, the camp is thickly clustered with wooden barnlike barracks. Each barrack is occupied by up to 200 women with infants. The Soviet Government has long been sending thousands of women to concentration camps. Many of these women fall into the hands of the MVD with small babies. Often they are pregnant, and give birth in prison or camp. Since the separation of mothers and children would lead to the additional expense of setting up nurseries, the whole problem in such cases is solved much more simply; the nursing babies are entered into the record as prisoners and go to special camps together with their mothers.

The camp at Olginsk has been nicknamed "Angel factory." This nickname, originated by the prisoners themselves and later taken over by the people outside, derives from the popular belief that when innocent babies die their souls become angels.

The entire furnishings of each barrack consist of two rows of double-tiered wooden bunks, with a passage between them. At the end of the barrack there is an unheated common toilet and washroom. On the bunks are scattered some sacks filled with straw. These serve as mattresses. But there are never enough mattresses for all the prisoners. Two dim electric bulbs are suspended from the ceiling.

The prisoners call these barracks "musical," since even outside one always hear the ceaseless wailing of hundreds of sickly and wretched babies.

The camp regime is strict. There is no pampering of the nursing mothers. Every one is wakened at 5 o'clock in the morning, lined up in the yard and let out to heavy road-construction work. The working day lasts till 6 in the evening. After work, the women must spend another hour cleaning the camp and the barracks.

The sole privilege accorded to the prisoner-mothers is the right to leave work three times a day to feed their babies. The nursing mothers are led to the barracks in formation. They may spend not more than a half-hour with the babies.

All the women are driven to work. Illness is recognized only when the temperature is

over 38° C. (over 100° F.). With a temperature of 37.9° a woman is considered fully well and capable of work.

The daily food ration consists of 500 grams of gray bread and balanda—a watery soup made of potatoes or some cereal. Those who overfulfill the daily output norm receive an additional 100 grams of bread and a lump of sugar (6-8 grams).

The medical facilities consist of one nurse for every four barracks (800 nursing babies and 800 mothers), and one doctor for the entire camp. The "medpunkt" (medical center) is a tiny office-reception room. The entire pharmacy is in the doctor's bag. Bandages and cotton are chronically absent.

The children are bathed in two or three common wooden troughs provided for the purpose in the cold washroom. The stove is heated only once a week.

The mothers take turns in "home" duty. Every day 10 of them remain in the barrack to take care of the 200 infants—1 for every 20. The prisoners regard their day of barrack duty as the most difficult of all. There are frequent cases of fainting. Road construction is considered easier work.

After a period of mass deaths from colds, the camp administration issued a half of an old army blanket for each baby. Everything for the infants—from diapers to clothing—is made by the mothers from their own skirts or from clothes of those who have died, which the authorities are generous enough to leave at the disposal of the prisoners.

Within a few months, the nursing mother reaches a state of total exhaustion, physically and nervously. The constant running from work to the barrack to feed the sickly babies, the ceaseless suffering around of young and old, the crying of the feeble and dying infants and their wretched mothers often lead to complete breakdowns. To the overwrought mind the screaming, sucking, demanding, never-satisfied baby becomes a symbol of all these misfortunes, the cause of all this grief, and crimes are committed in insane desperation.

When the nursing mother has no more milk, the infant is assigned to another nursing mother by order of the administration. Neither woman is consulted about it.

Babies who reach the age of 10 months are taken from their mothers and sent away to an unknown destination determined by administrative order. The mother, who is never told the whereabouts of her child, is transferred to some other camp. (From Golos Naroda—The Voice of the People.)

Short Summary of Differences Between the House and Senate Bills With Respect to Railroad Retirement Amendments

EXTENSION OF REMARKS OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. WOLVERTON. Mr. Speaker, I am confident that the action taken by the House yesterday in approving amendments to the Railroad Retirement Act increasing the monthly allotments to pensioners, annuitants, and survivors will be greatly appreciated by those who are now so greatly in need.

I am including as part of my remarks a short summary showing the differences

between the House and Senate bills with respect to the amendments to the Railroad Retirement Act adopted in the respective bodies, as follows:

RAILROAD RETIREMENT AMENDMENTS—DIFFERENCES BETWEEN THE HOUSE AND SENATE BILLS

1 The Senate bill provides that an individual to be qualified for benefits under the Railroad Retirement Act must have at least 10 years of service, and those with less than 10 years of service will be transferred to the social-security agency for the payment of benefits.

The House bill retains the employee under the Railroad Retirement Act as provided in the present law.

2 The Senate bill provides to increase the taxable monthly compensation from \$300 to \$350 a month.

The House bill retains the \$300 limitation on taxable compensation.

3 The Senate bill in section 9 guarantees that the retirement annuity and survivor annuity paid to an individual with 10 or more years of service under the Railroad Retirement Act will at least be equal to those which would have been payable by the social-security agency, provided the railroad service was creditable under the Social Security Act.

The House bill retains the same provision except it provides that the employee must have had a current connection with the railroad industry in addition to having the 10 years of railroad service.

4 The Senate bill provides for an adjustment between the railroad retirement and social-security funds because of a proposed transferring of less-than-10-year employees to social security and other proposed correlation of the two agencies.

The House bill contains no such provision, except as provided in the present law.

5 The Senate bill provides that a railroad-retirement annuity will be reduced any month in which an individual is entitled to receive an old-age insurance benefit under the Social Security Act, in an amount which would be equal to that portion of his annuity which was based on his years of service and compensation before 1937, or by the amount of the old-age insurance benefit whichever is less.

The House bill does not provide any such provision.

The House bill and the Senate bill are identical with the exception of the above. In brief the House bill provides:

1 Increase of pensions and annuities 15 percent.

2 Increase in survivor annuities 33 1/3 percent.

3 Increase in lump-sum benefits 25 percent.

4 A spouse's annuity with a maximum of \$40.

5 Credit for service after 65.

6 Increase in annuity benefits for the individual who elected a joint-and-survivor annuity and whose spouse has died.

7 Increase in time limit for filing application for annuities from 60 days to 6 months.

The above seven items are also included in the Senate (Douglas) bill, and the language used in the two bills is the same.

Mr. Speaker, I am hopeful that the Senate will accept the amendments proposed by the House to the end that the benefits provided for can be payable at the earliest possible day.

It is also gratifying that both the Senate and the House have adopted a resolution for a study of the entire act, and it is hoped that the result of this study will mean additional benefits without an increase of the tax now being paid by employees and employers.

United States Navy Should Have a Cruiser "Brooklyn"

EXTENSION OF REMARKS

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. HELLER. Mr. Speaker, there is a movement afoot that the United States Navy should name one of its cruisers *Brooklyn*, in honor of the Borough of Brooklyn. Officials of Brooklyn, the press of our borough, and its citizens support this idea. As one of the Representatives of Brooklyn in Congress, I urge our Department of the Navy to give serious consideration to this request and to name one of its cruisers *Brooklyn* in honor of the second largest community in this country.

At a recent meeting of the Society of Old Brooklynites a resolution was unanimously adopted regarding this matter. I am pleased to insert this resolution in the Record in order to bring to the attention of my colleagues the historical facts pertaining to other ships named after our borough in the past and the role they have played in American history. The resolution is as follows:

"Whereas there is under way a movement to have a United States Navy cruiser, under consideration christened the *Brooklyn*; and

"Whereas it is the Navy's custom to name its cruisers after large communities, the borough of Brooklyn is the country's second largest community in the United States, and that it has been the custom of the United States Navy to have a capital ship named *Brooklyn*; and

"Whereas there have been three Navy ships named *Brooklyn* in the last 100 years, the latest of them a light cruiser launched from the Brooklyn Navy Yard in 1936. She saw 15 months of combat in European waters in World War II, including four landings and four major engagements. She returned unscathed to the United States in December 1944 and a little more than a year later she donned a plastic coat and joined the moth-ball fleet; and

"Whereas the first U S S *Brooklyn* was launched in 1858 and took part in Commodore Farragut's capture of New Orleans, Galveston, and Mobile and participated in the bombardment of Vicksburg, the capture of which brought Gen U S Grant into spotlight during the Civil War and led to his advancement to commanding general of the Union Armies and later President of the United States; and

"Whereas the second *Brooklyn*, launched in 1895, was the flagship of Commodore Winfield Scott Schley in the battle of Santiago during the Spanish-America War, 1898, and in that engagement the Spanish Fleet was completely wiped out, all ships being captured or sunk; and

"Whereas the last ship bearing the name *Brooklyn* was sold to Chile a few months ago; and

"Whereas both Borough President Cashmore and the Brooklyn Eagle and other organizations here in the borough have pressed for another U S S *Brooklyn* to carry on; Therefore be it

"Resolved, That the Society of Old Brooklynites heartily endorse such movement and urge the borough president, Hon. John Cashmore and each and every one of the nine

Representatives in Congress and the two United States Senators from the State of New York, Hon. HERBERT H. LEXMAN and Hon. JAMES M. IVES, to continue to press the propriety and desirability of giving the next United States cruiser to be constructed the name of *Brooklyn*; and be it further

"Resolved, That copies of this resolution be forwarded to the Honorable John Cashmore, president of the borough of Brooklyn; the immediate nine Representatives in the Congress of the United States; the two United States Senators from New York; Hon. Dan A. Kimball, Secretary of the Navy; and the editor of the Brooklyn Eagle; and be it further

"Resolved, That the Society of Old Brooklynites pledges its aid and assistance in attaining the objective hereinabove indorsed"

Respectfully submitted,

WILLIAM A. DAWKINS,
Past President

Attest: I hereby certify that the above resolution was unanimously adopted at a meeting of the Society of Old Brooklynites on Wednesday, October 3, 1951.

ARTHUR HOFFMAN,
Secretary

In These Days of Ruinous Taxation There Seems To Be No Slacking of Interest in the Erection of Monuments to Adminis- trations That Seem To Have Forgotten That Taxes Fall Most Heavily Upon Those Who Labor for Their Daily Bread

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. VAN ZANDT. Mr. Speaker, the following thought-provoking editorial from the October 13, 1951, issue of the Altoona (Pa.) Mirror is a timely discussion of the subject of economy in Government which is necessary if we are to receive any relief from the ruinous tax policies now in effect:

CASTLES ON THE RHINE

There are many Americans alive today who were fortunate enough to be born in this country because their ancestors fled from the types of government that made "castles on the Rhine" a possibility. We are thinking of "castles on the Rhine" as a symbol rather than as specific castles in this instance.

The theories of government that made the Sphinx in Egypt, the Coliseum in Rome, the grand Athenian temples of early Greece, and numerous other historic relics possible are as archaic as the ruins that now offer mute testimony to the slavery of common men and as modern as power-drunk men can make them. We are afraid that some of our American men of power have forgotten the lessons they teach.

In these days of ruinous taxation there seems to be no slacking of interest in the erection of monuments to administrations that seem to have forgotten that taxes fall most heavily upon those who labor for their daily bread. Fine buildings are highly desirable, and all of us get a thrill of pride when we see a splendid public building that offers service to all mankind.

There are, however, times when the erection of fine buildings at public expense must stop. We believe that we are now in one of

those periods of time. Taxes have reached an all-time high in this country. Men and women who work day after day have the right to enjoy the fruits of their labor. It is wrong to take away the great portion of those fruits that are now being consumed by government at all levels. If the tendency persists men will become the slaves and not the masters of government.

There seems to be a scarcity of building materials for the homes of men and for the industrial establishments where men work and earn the money with which to pay their taxes. Judging from the number and character of public buildings erected and under course of construction at the present time a shortage of materials or money for public buildings does not exist. It seems to us this is a distortion of priorities. Under the American system of government the people should have the first priority. It is time for a tax reduction not a tax increase and if we must stop for a few years this building of "castles on the Rhine" we believe that most of us will be better satisfied.

There are now more than 150,000,000 Americans. We doubt if one-third that number will ever see the Pentagon. Certainly there are few of us who will ever use it and if recent military prowess has been engendered by it there seems to be little evidence of it in the daily accounts from the battle-fronts.

Big and elaborate public buildings are a continual drain on the tax resources of the Nation. It costs a great deal of money to staff and maintain them. It has been jokingly remarked that it takes a man holding the rank of colonel to serve as custodian at the Pentagon. Perhaps he also is entitled to some medals for being able to keep track of what goes on there as most folks seem to have trouble just finding their way around.

"Castles on the Rhine" always seem to link themselves up with cottages and huts in the villages and reasoning folks can easily discover that the men and women in ordinary walks of life who must pay the bills for them have little left to build and maintain a comfortable home.

To our way of thinking it is about time that you and I have some straight-from-the-shoulder talks with those who legislate taxes against us.

We have heard enough of this talk about the necessity for higher and higher taxes. Isn't it about time some of those who legislate taxes explain in detail how those taxes are to be used? Isn't it time for those of us who elect them to demand that they reduce taxes or make way in public life for men who will?

Today there are many gloomy castles in England, and the people shiver as they approach another austere winter without enough coal to keep even one room of their home comfortable at all times. In many other European nations where the system of government that makes men the slaves rather than the masters of the state similar conditions exist. It could come to that here.

At Harrisburg the other day the Governor of this Commonwealth told newspaper editors and publishers that they were not fulfilling their duty to the citizens of this State until they educated them to the need for more State taxes. Unfortunately for the Governor, newspapermen have good memories, and they also maintain adequate files to supplement their memories. Can this be the same man who last year told us that he did not believe that new taxes were necessary?

We think that we would be remiss in our duty if we did not tell our people that it is to their best interest to resist every increase in taxation and to insist that economy be instituted in all levels of government.

The time has come for us to insist that every branch in every level of government

ask itself. "Is this expenditure of public funds really necessary?" The time has come to tell every taxing authority in the entire system of government to economize or to make room for men who will. The time has come to select and elect men who will cut down on governmental costs so that the cottages and the homes of America can be repainted and repaired, and the industries of America retain enough of their earnings to replace worn-out capital tools and buy new ones so that the economy which makes us the strongest Nation on earth shall not be impaired.

The time has come to halt for a time at least the building of "castles on the Rhine."

Businessman Writes From Triple Cities Jungle

EXTENSION OF REMARKS OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter:

Hon. EDWIN ARTHUR HALL,
House of Representatives,
Washington, D. C.

DEAR ED: As I am a businessman who has to make a living in the Triple Cities "jungle" as you call it, I am asking you to keep this letter in confidence.

Even though the local political overlords seem to have it in for you, I want you to know that some of us here are in your corner and admire the fight you've put up against the Hill-Kress snipers for so many years.

The press is saying that your fellow Republicans from New York State are ganging up on you. I should think each one of them would have all he could do to take care of his own district, that is, if he's honestly representing his people. I can't imagine what business it is of theirs who gets elected from our part of the country, especially an outstanding gentleman like yourself.

Did Charley Kress have anything to do with this? If the other Congressmen were aware of his background and past history I don't believe they'd be so anxious to listen to him talk against you. Who finances his trips down to Washington? Who sends him around on such dirty errands?

I've always been one to read between the lines. There isn't anything this crowd in Binghamton wouldn't do to get rid of you, Ed. That's why I've always pulled for you. Here's wishing you luck.

Count on me for a lot of quiet campaigning in your behalf. Enclosed you will find a little of the right kind of support.

Cordially yours,

BUSINESSMAN.

Taft Statements

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BENDER. Mr. Speaker, under leave previously granted me, I should

like to insert in the RECORD the three statements issued yesterday by Senator ROBERT A. TART, of Ohio, in formally announcing his candidacy for the nomination on the Republican ticket for President. The complete text of the three statements follows:

I have decided to accept the invitation of Thomas E. Coleman and other leading Republicans of Wisconsin to enter the Wisconsin primary as a Republican candidate for President of the United States. I have also agreed to the use of my name as first choice by the delegates of Ohio. I have taken this action because I am convinced that a majority of the Republicans in those States, and also throughout the Nation really desire me to be the candidate for the party. That majority is especially pronounced among those most interested in the Republican Party and most determined to restore Republican principles of liberty integrity, and sound judgment to the councils of the Nation.

I have been deeply concerned that in this campaign the Republicans present an affirmative program based on the principles of government which that party has always supported—a program of progress within the principles of liberty of the individual, of State, and local self-government, and of economic freedom and not based on the New Deal philosophy of constant increase in Federal Government power and Federal Government spending. A vigorous presentation of such principles to the people of this country will assure the election of a Republican President and will restore integrity and honesty and sound judgment in the administration of domestic and foreign affairs. It will insure a determined foreign policy against the spread of communism by military aggression or propaganda, including the establishment of Korea as a free country and the completion of the arming of Western Europe to enable it to defend itself against Russian aggression.

I am going to run because I believe I can conduct the only kind of campaign which will elect a Republican to office. I believe we can extend to the entire Nation the methods which we used in Ohio—a forthright presentation of our case to the people of this country, to the farmers and the workmen, to the businessmen and to all of those who accept American principles. A determined organization of every enthusiastic supporter to interest the voters who have stayed at home in such large numbers, but who can be interested and persuaded to vote if there is enough enthusiasm on the part of Republican supporters. I do not underestimate the difficulties of electing a Republican President against the automatic propaganda of a great administration machine supported by taxpayers' money, but I am convinced that a great majority of the American people today believe fundamentally in those principles which the Republican Party can present to them.

I feel confident, therefore, that I will be nominated and elected.

DECISION BASED ON TALKS WITH REPUBLICAN LEADERS

(Second statement)

My conclusion has been reached after conversations with hundreds of Republican leaders throughout the United States from the Pacific to the Atlantic. It has been reached after studying the report submitted by my friends, David S. Ingalls and E. Tate, who talked with hundreds of other leaders as well as representatives of union workmen and of farmers. I have had more than 2,000 letters, telegrams, telephone calls, urging me to run from numerous State chairmen, national committeemen, Senators, Congressmen, publishers, and other party lead-

ers. Furthermore, I have had many indications that the rank and file of Republicans desire me to be the candidate, particularly those who vote on election day. In a number of States the promises of support are so general that delegates from those States are assured. In a sufficient number of other States to constitute a majority at the convention the prospect appears to me to be strongly in my favor.

I have asked a committee consisting of David S. Ingalls, of Cleveland, chairman; John D. M. Hamilton, of Philadelphia, and Thomas E. Coleman, of Wisconsin, to recommend to me an organization set-up to keep in touch with the developments in various States. I anticipate that there will be associated in the management of the campaign many who have loyally supported me in the past, as well as many new adherents.

TECHNICAL SMEAR TACTICS OF CALIFORNIA PARTISANS

(Third statement)

I do not intend to comment on other possible candidates for the Republican nomination. My campaign will be conducted solely on a presentation of the reasons why we need a Republican President to replace the present administration. My attention has been called to smearing tactics of certain irresponsible organizations calling themselves Republican. As a matter of fact, they have no right to such a designation. I was particularly disgusted with a pamphlet issued by people calling themselves the partisan Republicans of California, making wholly unjustified attacks on Governor Warren and General Eisenhower. That kind of slander can only hurt the Republican Party and only serves to prove, therefore, that these people are not interested in the Republican Party.

EXPLAINS LETTER IN FORRESTAL DIARIES

My attention has been called to a statement in the Forrestal diaries that I wrote a congratulatory letter to President Truman after the 1948 election and said at the end of the letter that neither I nor my wife were particularly disappointed in the result of the election.

Mr. Forrestal was mistaken. I wrote a congratulatory letter to President Truman and offered to cooperate with him in the coming session of Congress. The letter contained nothing which remotely resembled the statement quoted above. As a matter of fact, I do not remember an election in which I was so very much disappointed after the strenuous speaking campaign which I had conducted in behalf of Governor Dewey. I can only assume that when President Truman told Mr. Forrestal of the letter someone present made a humorous comment of his own which Mr. Forrestal understood incorrectly to have been part of the letter.

Throw Out the Time Clocks

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, I suggest that any business firm in the United States could take a major step forward in bringing about greater employer-employee cooperation by taking a tip from the Parker Pen Co., of Janesville, Wis.

Earlier this year Parker Pen threw out all their time clocks and substituted an honor system. The success of this change is well described in the October 18, 1951, issue of the *Machinist*, which I include herewith

HONOR SYSTEM REPLACES TIME CLOCKS AT PARKER PEN

Six months ago, the Parker Pen Co., removed the time clocks from its Janesville, Wis., plant. In half a year, Parker employees have almost forgotten what it was like to punch out. Since April 2, they have just walked out of work when the 4 o'clock bell sounds, instead of waiting in line to have the mechanical watchdog record their time. Everyone at Parker is on his honor as his own timekeeper.

Last week, the *Machinist* asked Oliver W. Fleming, business representative for IAM, district 48, to find out what life was like in a shop without time clocks. We asked him to talk to both the members of IAM Lodge 1266 who work at Parker and with management. Here is Fleming's report.

The company and the unions, IAM Lodge 1266 and A. F. of L. Pen and Pencil Workers Federal Local agree that the unprecedented decision to abandon the archaic time clocks was a forward step in employee relations.

Their opinion is substantiated by records of decreased tardiness and the whole-hearted approval of the employees. In a recent vote, 92 percent of the 1,050 production workers said they were glad to see the time clocks go. Here are the reasons they gave:

Time isn't wasted waiting in lines.
Enmities aren't created now by line buckers.

They feel happy that management has confidence in them.

The emotional irritant of this form of regimentation is removed.

The company, similarly, reports that it has reaped benefits in improved morale, increased loyalty, and a fuller day's work.

To some, however, the removal of the time clocks was a trifle sad. For instance, Brother William O'Connell, tool and die maker, had built up a personal relationship with the clock after punching it for 27 years. He took pride in his ability to punch in on the last tick before the bell rang. O'Connell says, "It's no contest any more."

What method has replaced the clock for keeping time according to the requirements of the wage-and-hour law? That's what several other firms have asked Parker management. The answer is, an honor system under which each individual is responsible for keeping a handwritten record of his time.

First of all, the honor system was thoroughly tested. Supervisors have not been punching the clock at Parker since September 1950. When that worked out so well, two production departments ignored the time clocks and kept their own time for a test period. The previous experience of the supervisors helped a great deal.

Trouing out difficulties that arose during these test runs, the honor system was set up throughout the entire factory. Time cards are placed in racks at convenient spots within the various departments. Each person fills in his card during the day, merely writing down the number of hours worked.

At the end of the week the cards are signed by the employee and his supervisor and sent to the payroll department where the hours are totaled. If the employee is more than 6 minutes late he puts down the time of arrival and fills out a tardiness slip. The company reports that tardiness has virtually disappeared in the 6 months since the new system's introduction.

IAM members at Parker spend their 8 hours a day making and repairing tools, dies, and machines used in the precision manufacture of pens, pencils, ink, and Flaminale butane lighters. Lodge 1266 was first organized in May 1934 and its first agreement drawn up by Al Hayes, now international president of the IAM. Good relations have existed between labor and management ever since, Paul L. Delly, recording secretary of lodge 1266, reports.

American Legion, Department of California, Urges More Study of Veterans' Public Housing

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. PHILLIPS. Mr. Speaker, I have received from the American Legion, Department of California, a copy of an article from the Long Beach Press-Telegram, together with copies of two resolutions adopted by the Echo Park Post, No. 414, and the American Legion, Department of California. Under leave to extend my remarks in the Appendix of the RECORD, I include the article and the two resolutions:

[From the Long Beach (Calif.) Press-Telegram of September 23, 1951]

Proposals to set up local committees of American Legionnaires to investigate the effect of public housing on veterans' interests and to continue efforts to eliminate unnecessarily costly building requirements from local, State, and Federal codes have been approved by the Legion's Department of California.

"Insufficient study has been given to the effect of such public housing (urged as a solution to veterans' housing problems) upon veterans' rights and interests in affected areas," the Legion declared in its public-housing resolution.

The document was adopted following acrimonious debate on the convention floor between Rollins MacFadyen, seventeenth district housing chairman and department housing technical adviser on housing, and Al Weinberg, an official of the Los Angeles Housing Authority.

MacFadyen emphasized that socialized housing gave preference for occupancy only to the small segment of veterans having low incomes. The majority of veterans, he continued, are taxed to subsidize public housing, regardless of occupancy. Weinberg reportedly was booed from the platform after resorting to personal attack on MacFadyen.

The second resolution, aimed at making lower rentals available through reduced costs, was based on Legion-sponsored experiments in constructing apartment houses acceptable to local building authorities but not eligible for FHA insurance. Claiming that many of the FHA requirements were unnecessarily expensive, the California Legion obtained approval of the national organization for a countrywide study of the situation.

The San Diego resolution noted that successful results (of the campaign) are increasingly apparent especially in the average cost rental field and urged continuation of

the effort as in the best interests of the veterans.

The California department will urge the national convention at Miami, Fla., to take similar action.

Whereas, the American Legion is concerned with the proper housing of all veterans; and Whereas, the proponents of public housing have often urged such housing as a solution to the housing problems faced by veterans; and

Whereas, insufficient study has been given to the effect of such public housing upon veterans' rights and interests in affected areas: Now, therefore, be it

Resolved, That a fact-finding committee be established by the American Legion in each area affected by public housing to determine the effect of such housing on veterans' interest, and be it further

Resolved, That no endorsement of public housing be given until such fact-finding committee has submitted its report; and be it further

Resolved, That such fact-finding committees be set up in affected districts of the American Legion and that this resolution be referred to the seventeenth district and the Department of California for action.

Passed by Echo Park Post, No. 414, at their regular meeting August 16, 1951.

Whereas housing problem studies initiated by the seventeenth district have resulted in action directives by the two preceding department and national conventions, and

Whereas these directives mandated study and action by the respective department and national commanders through appropriate committees, the objectives being the elimination of excessive and unnecessary costs, by technical and administrative changes in Federal, State, and local building codes; and

Whereas successful results are increasingly apparent especially in the average cost rental field, in that building projects inspired by these studies are the object of intensive interest on local and national levels by legislative bodies, building officials, and private builder-investors; and

Whereas it is in the best interest of the veteran that these excessive and unnecessary costs be eliminated: Now, therefore, be it

Resolved, That the Department of California, through proper channels, continue the efforts to achieve the objectives as set out, namely, the elimination of excessive and unnecessary costs in local, State, and Federal building codes, be it further

Resolved, That this resolution be forwarded to the national convention at Miami, Fla., for action.

Still Flourishing

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 1, 1951

Mr. BROOKS. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert the following editorial appearing in the October 16, 1951, issue of the *Washington Post*:

STILL FLOURISHING

The fact that 1,935 persons were victims of aggravated assault in Washington in the

first 6 months of this year is shocking whether it stands alone or is compared with similar crimes in other cities. Uniform Crime Reports, published by the FBI, indicates that only five cities, New York excluded, have records in any way comparable, and Washington tops them all, even Chicago. The FBI points out that many different factors influence the crime rates for different cities. When allowance has been made for all those factors, however, the District has ample reason for concern over its lawlessness.

In some other crime categories Washington's standing is relatively good, as in the number of automobile thefts. In robberies and larcenies it is also far behind Los Angeles, Chicago, and Detroit, although that is to be expected because they are much larger cities. Still it is a disgraceful fact that 352 robberies and 1,854 burglaries should be committed in the Nation's Capital in 6 months. And the reflection is not alone upon the police department, but also upon the community and upon Congress, which tolerate conditions that lead to so much crime.

One foremost reason for this prevalence of lawlessness here and elsewhere is clearly evident from the FBI report. For every 100 crimes reported to the police in 1950 only 28 were cleared by the arrest of 22 offenders, some of whom were accused of more than one crime. Of the murder cases 93.8 percent were cleared, but clearance is recorded in only 29 percent of the burglaries, 25.6 percent of the auto thefts, and 22.1 percent of the larcenies. Even after arrests have been made a considerable number of the accused persons are found to be not guilty. In other words, the criminal still has a good chance of escaping punishment for his crime. So long as this is true crime is likely to flourish, and small crimes will lead to greater crimes. That is why it is so important to strike at all lawlessness and not merely at the major crimes that arouse public indignation.

God and the Koch Treatment

EXTENSION OF REMARKS OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "God and the Koch Treatment," delivered by Rev. Gerald B. Winrod, D. D., before the 1951 annual convention of the Christian Medical Research League, at Detroit, Mich., on September 25, 1951, together with a brief summary description of the speaker.

There being no objection, the summary and address were ordered to be printed in the Record, as follows.

REV. GERALD B. WINROD, D. D.

Rev. Gerald B. Winrod, D. D., is well-known as a minister, editor, author, radio speaker, and president of Defenders of the Christian Faith. His humanitarian service in contributing to the relief of pain through the dissemination of information regarding the Koch therapy is well-known. The commanding position which he enjoys before the public today, results in part from his ability to stand firm in the face of stern persecution.

As a fluent and forceful speaker, he will have something important to say to this convention.

GOD AND THE KOCH TREATMENT

Mr. Chairman, ladies, and gentlemen, I have brought my Bible with me to the rostrum this evening. With your permission, I shall preface my remarks by reading one sentence, James 1: 17.

"Every good gift and every perfect gift is from above, and cometh down from the Father of lights."

The Koch treatment belongs to this category. It is a gift from God to man for the relief of pain and suffering.

When I was in South America something over a year ago Dr. Koch told me one day of an early spiritual experience which he had here in Detroit.

It seems that he had attended a Sunday afternoon evangelistic service in the local YMCA. I believe he said the meeting had been addressed by Dr. Stidger. He was deeply moved. Returning to his room he dropped to his knees and made a covenant with God.

New knowledge was then breaking upon his consciousness. He was thinking thoughts that had never before registered in a human brain on this planet.

He prayed. He told the Heavenly Father that if these thoughts which he was thinking had substance in them, that if a beneficent providence was entrusting new knowledge to him for the relief of human suffering, he would be careful to give God the glory. He would dedicate the undertaking to Him.

The new knowledge was imparted. His mind was impregnated with thoughts from a source above ordinary human levels. It seemed as though his path was illuminated. He could always see and understand the next step to take. He told me about several mystical experiences that crossed his life—experiences which baffled human understanding and vindicated the hand of a guiding providence.

I believe the Koch therapy to be a gift of God to our day and generation.

I received a letter a while back from a lady in Oklahoma. She told me that her son had developed a growth on his right cheek. Surgery had been recommended but she and the local doctor feared the outcome. The family had been praying. A copy of the Defender magazine fell into their hands containing an article about Dr. Koch's discoveries.

I gave them the name of a well-known doctor in their State. The treatment was administered. I received another letter a short time later saying that the boy's right cheek was as clean as his left cheek with all signs of the growth gone. It was a Christian family and they thanked God.

"Every good gift and perfect gift is from above."

Mrs. R. C. Long and her daughter called at my office a few weeks ago. They are longtime residents of Wichita. On the religious side they are of Dunkard denominational persuasion.

The daughter's name is Rita. She is a fine young lady 19 years old, a graduate of East High in Wichita and now a student in Kansas University. I wish you could hear their story as I heard it during the afternoon of the visit to our office.

When Rita was 2 years old, in May 1934, she was examined by Dr. J. O. Chaney of our city, an eye specialist, and Dr. Harold W. Palmer, a pathologist.

The diagnosis made at the Wichita hospital showed that the child had cancer of the left eye in a most virulent and treacher-

ous form. The eye was removed. Rita is today blind in her left eye.

Mr. and Mrs. Long took Rita back to the same doctors a little more than a year later. They found that the cancer had spread to the right eye and they advocated its removal. It showed exactly the same symptoms as had been previously observed in the left.

In the meantime the parents had heard about the Koch treatment. They brought the child to Detroit.

Dr. Koch's examination confirmed that of the Wichita specialists. Glyoxylide was administered on November 25, 1935. The reaction cycles were perfect. Progress was noted from the beginning.

A second dose was given almost a year later on August 18, 1936. Rita enjoys perfect sight today through the right eye. Had Mr. and Mrs. Long learned about the Koch treatment in time, there is every reason to suppose that the left eye could have been saved. And the Federal Trade Commission can find no therapeutic value in the Koch treatment.

"Every good gift and perfect gift is from above."

Mr. and Mrs. Long testified for Dr. Koch in both of his trials, held in this city. If I understood Mrs. Long correctly, no effort was made by the prosecution to refute their testimony.

But here is the sequel to the story. The pathologist who worked on the case, now an aged man, was later called into the Federal building in Wichita to testify that he must have made an erroneous diagnosis back in 1934 before they took the child's eye out.

Ralph Hinman is the head of the Better Business Bureau in Wichita. A week ago last Sunday night he delivered a tirade over the radio denouncing Dr. Koch and the treatment as quackery. Mr. Long, Rita's father, was so outraged that he called Hinman on the telephone and received a polite brush-off.

We may be seeing in Wichita a pattern for future attacks in other parts of the country. Fortunately, truth is on the side of those who espouse the cause of the Christian Medical Research League and the American Association of Physicians. And truth has a way of triumphing in the end.

Some people think the Better Business Bureau is a public service organization like the chamber of commerce or other businessmen's organizations. This is not the case. Morris Bealle has exposed its true character in some of his writings. Granted that it often succeeds in camouflaging its true nature and real purposes, the fact remains that the name "Better Business Bureau" is a misnomer.

I rang my friend, Rev. D. E. Young, of Winfield, Kans., on the telephone last Sunday afternoon. Mr. Young has been pastor of the United Brethren Church of that city for the last 17 years. It is no exaggeration to say that he is one of the outstanding religious leaders of the State of Kansas.

I told him on long distance that I was coming to the Detroit convention and asked him for some message to deliver to the assembled delegates. This is what he said: "Tell them I was opened up in July 1949 and found to have cancer. Tell them that the doctors sewed me up and gave me only a short time to live. Tell them that I knew about the Koch treatment through reading the Defender magazine. I was given the injection a few days after the operation."

"Today I have no pain. I preach every Sunday and carry on heavy pastoral duties, feeling as good as I have ever felt in my life. I am a living, walking, talking testimony to the efficacy of the Koch therapy. And if anybody wants my testimony under oath they can have it. Send my greetings to the convention."

"Every good gift and perfect gift is from above."

I could go on at great length. We have voluminous files containing such testimonials, supported by hospital records, clinical findings, and other documentation.

I was preaching in Georgia last summer, at Dr. Watson's North Georgia Camp Meeting and Bible Conference. A lady came to me. She said, "I am from Florida. We know Dr. Baldor of Tampa and think he is a wonderful man."

This is what she told me:

"My nephew Tommy Bates, was found last year to have leukemia. He is my sister's boy and they live in Belleview, Fla. They were told that there was no hope. Through reading the Defender they learned about the Koch treatment. Discovering that Dr. Baldor was a user, they took Tommy to Tampa. From every indication he is today sound and well, the picture of health. He has been back to the hospital for several check-ups and his condition pronounced satisfactory in every respect."

"Every good gift and perfect gift is from above."

What shall I say about little Marie DuVall, of Newport, Ark? She was stricken with polio in July 1949 at the age of 7. She was taken to the University Hospital of Little Rock and her case so diagnosed, polio. She was taken to the Children's Hospital, of Jacksonville, Ark., where the diagnosis was confirmed.

Three months later her parents heard a Defender Hour broadcast and took their little crippled girl to the Corning Hospital, of Corning, Ark. On November 18, 1949, Dr. J. S. Schirmer administered glyoxylide. A perfect recovery followed. Today Marie runs and jumps and plays and rides her bicycle like other children.

"Every good gift and perfect gift is from above."

As your convention assembles this year, there are indications of a storm gathering on the horizon. Persecution appears to be in the offing. One of the major tragedies of the twentieth century is the fact that forces have been set in motion which would deny mankind the blessing of Dr. Koch's discoveries.

This fact—the fact of organized opposition—should impress the assembled delegates and all other friends of the treatment, with the necessity of standing together. Hang together, ladies and gentlemen, or you may hang separately.

The old adage never applied with greater pertinency than here: "In union there is strength."

Dr. H. H. Jones, a Negro medical missionary from Liberia, is present this evening. He is connected with the Defenders' organization. We support him on the field. This good man was our guest in Wichita week before last. He told me a story which I wish to pass on to you at this time:

One day Dr. Jones was in conversation with the native chief of a large tribe who gave the following illustration of strength through cooperation:

Hold one small stick in your hand, explained the chief, and it can be easily broken. Put two sticks together and they are stronger. Place a third with the other two and you cannot break either one of them. In union there is strength.

Millions of people know nebulously that there is a cure for the so-called incurable diseases which today curse mankind. There are others, and their number is legion, who have the facts concretely fixed in mind regarding the Koch therapy. Multitudes want more information. They are reaching for the truth.

Their cry will not be silenced. They will receive the light because they are demand-

ing it. Those who think to keep this knowledge from mankind underestimate the power, the potency, the irresistible force of the popular will.

May I refresh your memory regarding an event that took place in the life of Christ in the days of His flesh?

He entered Jerusalem in great triumph, riding on the back of a colt. Crowds thronged about Him. Shouts of glad Hosanna pierced the air.

"Hosanna, Hosanna; blessed is He that cometh in the name of the Lord; Hosanna in the highest."

There was a great tumult. Artists have visualized the incident as the triumphal entry. Throngs greeted the Christ. People threw down their garments for the beast that carried the Master to walk upon. Palm branches were strewn along the way.

But the negative crowd was also present. This is always the case when something constructive is being done. The negative element must always be taken into account. Its representatives are always on hand. The Pharisees demanded a stop to all this noise.

What did Jesus say? How did He answer those who demanded that the celebration be brought to an end? This is what He said: "I tell you, if these should hold their peace, the stones would immediately cry out."

A similar situation exists here. If enemies of humanity should succeed in silencing the cry for knowledge on the part of those who are seeking relief from pain through the discoveries of Dr. William Frederick Koch, they would find other ways.

The demand is so great that the very stones would cry out.

Security Risks in Government Personnel

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release from the office of the junior Senator from Nevada, dated October 17, 1951, on the subject of security risks in Government personnel.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

[Press release from office of United States Senator GEORGE W. MALONE, October 17, 1951]

WASHINGTON, D. C.—United States Senator GEORGE W. MALONE, Republican, Nevada, today issued a statement in which he said that "the rank and file of the American people are deeply grateful to Senator McCARTHY and others for their service to the Nation in exposing the 'security risks' in Government personnel." The Nevada Senator said that McCARRAN's subcommittee is doing a great service in following through on leads and ferretting out the facts.

Referring to the charges against Philip Jessup, whose appointment to the U. N. General Assembly is being considered by a Senate subcommittee, Senator MALONE said that he would oppose the appointment, "on the ground that Jessup had contributed to the loss of China as a free nation, thus adding to our troubles in Asia," and that Jessup's

usefulness as an American diplomat had been destroyed "because of his poor judgment concerning international affairs, entirely apart from his association with questionable organizations and individuals."

Continuing, Senator MALONE said: "There was a time when a breath of suspicion about a man's loyalty to his country would cause him to be ostracized in his community, now it seems such a man is rewarded with a highly confidential Government job."

"Just when did we cross the line? I do not believe that the American people have crossed it, they want no part of compromise with loyalty, particularly when their sons are dying in isolated parts of the world and their hard-earned tax money is being squandered."

"The rank and file of the American people are wondering why, out of the millions of veterans whose loyalty has never been questioned, there cannot be found a sufficient number qualified to fill the responsible and confidential posts of our Government. Why must we choose incompetent camp followers for such positions, they ask."

"It is any wonder that we are continually in trouble internationally? This can be laid to the tolerance of weakness in our State Department."

"When one surveys our losses internationally and the loss of lives on a distant battlefield, where our boys are fighting a war they are not allowed to win and do not dare lose, one is inclined to ask: What part did 'poor security risks,' frustrated individuals, homosexuals (91 of whom have been dismissed from the State Department), and other weak administration camp followers play in the formulation and conduct of our Government's policies which led to our present sad state?"

Address by Paul G. Hoffman on Receiving Freedom Award

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the brief but classic address given by Paul Hoffman, the director of the Ford Foundation, on the evening of October 7 when Mr. Hoffman received the tenth annual "Freedom Award" of Freedom House at the Waldorf-Astoria Hotel in New York. My wife and I were among the 1,400 people who came to pay tribute to Mr. Hoffman, and to watch General Marshall make the presentation: General Marshall, himself, along with the late Senator Vandenberg, Bernard Baruch, Secretary Acheson, and General Eisenhower, has been among the previous recipients of this distinguished award.

Those of us in the audience were rewarded with a statement of the character and goals of the American people, as contrasted with the nature of totalitarian governments, which in my opinion, is unmatched in recent times for its simplicity and profundity. I suggest it might well be taken as a charter for our times here at home, and as the

philosophical basis for our Voice of America abroad

Mr. Hoffman saw fit to place his greatest emphasis on fear as the enemy of freedom. I want the Senate to hear just four of his paragraphs:

The thought control of dictatorships is imposed by force, but discussion, criticism and debate can be stifled by fear as well as by force. Persecution by public opinion can be as powerful as purges and pogroms. School teachers, Government clerks, Government officials and even businessmen can be frightened out of their rights under the first amendment as effectively as if that amendment were repealed, and frightened men are at best irresponsible in their actions and at worst dangerous. Of all the forms of tyranny over the mind of men, none is more terrible than fear.

Of late, some of our people—often good people—have been blindly spreading just this kind of fear. In their zeal to combat communism they have been betrayed into using methods and measures which impair the sources of our strength and thus play directly into the hands of the Kremlin. They are making criticism socially dangerous. They are forcing conformity through fear. They are ready to pillory anyone who holds an unpopular view or supports an unpopular cause. As a result, too many of our fellow citizens have been afraid to speak out. In far too many cases, decisions, often decisions in high places, have been influenced by fear. In short, the danger of Communist penetration and disruption has been compounded by the spread of panic. All of this in a Nation which has grown to greatness and glory because it has recognized the rights of nonconformists and dissenters.

If we want to assert the free nature of man and strengthen our free society, we must insist that within the law of libel and slander, the unlimited right to criticize must be maintained. This right is meaningless unless it extends to the thoughts with which we disagree—in the words of a great chief justice of the United States, freedom for the thought we hate. I, for example, disagree most intensely with the Daily Worker's tagging of every opponent as a Fascist. I also disagree intensely with those who make reckless charges of Communist sympathies. But I would not for a moment suppress these irresponsible critics. They must not be suppressed. They must be answered.

We must remember, too, that a free society is a just society. Everybody concerned about freedom in America must be concerned about justice, too. One reason why we must encourage criticism is that we must encourage people to point out such injustices as remain in America and to fight for their elimination. An unjust society cannot long endure. An injustice against one puts all justice in danger. Only by safeguarding the rights of minorities do we safeguard the rights of majorities. Racial and religious discrimination, special privilege, and inequality of opportunity for growth are on the wane in this country, but, where they still exist, these and other injustices must be discovered and rooted out.

I submit that Mr. Hoffman has summarized one of the great dangers of our time, and our greatest internal danger, in what he calls the process of "forcing conformity through fear."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Freedom House is concerned with maintenance of freedom and with the maintenance and perfection of a free society. There

never has been a time in our history when there was more need for such concern than now. The liberties which our forefathers called the inalienable rights of men are under attack everywhere.

I shall not take up your time by emphasizing the most obvious danger to our freedoms—the determination of the Kremlin to force its tyrannical way of life on the rest of the world. Rather, I propose to speak of a more subtle danger—the danger which stems from our failure to understand as well as we should the true nature of our free society, and the deep sources of its strength. As a result of that failure, we have outside of America too much neutralism and inside America activities, often carried on in the name of freedom, which are putting our freedoms in jeopardy.

The contention of the neutralists is that this free society of ours and the totalitarian society of the Soviets have one basic weakness in common: both are materialistic; neither meets the inner needs of man. They see the present world conflict as one between these two great powers, each intent on forcing upon the rest of the world its way of life. Undoubtedly we in the United States have contributed to this misunderstanding by our constant droning of statistics about the number of automobiles, telephones, radios, washing machines, and television sets that are owned by our 150,000,000 people. We have every right to take pride in the extraordinary capacity of our economy to create wealth and a right to even more pride because that wealth is distributed equitably. But it is a mistake to overstress these accomplishments. Their real significance lies in their relationship to the sources from which they derive. For they reflect the creative strength of a free society. In and of themselves, they are a bright spot, but they themselves are not the glory of America.

The glory of our American free society, the underlying fact which totally justifies it, is that here men have had a constantly expanding opportunity to realize on their capacities intellectually and spiritually as well as materially—that here conditions have encouraged the growth and development of the individual. Our goal must be not only equality but certainty of opportunity for full growth for every citizen. We are some distance from that goal. America is still unfinished business but we are on the way.

Particularly during the past 50 years there has been a spectacular growth of intellectual opportunities for the individual. At the end of the last century only 7 percent of all children in the United States of high-school age were still in school. By 1950 this figure had increased to 80 percent. In 1900 we had 7,200 college and university professors. Today we have more than 10 times that number—more than 72,000. Since the turn of the century the number of our college graduates has increased six times as fast as the population.

In terms of spiritual progress it seems clear to me that on balance we have during the past 50 years gone forward. We need not confuse the reality of spiritual growth with certain external indicators, but we may point to these indicators as the only practical means to suggest a measure of something which by its nature cannot be measured. We have seen a notable abatement in hypocrisy and a lessening of prejudice and intolerance in American life. It seems to me that the widening spiritual outlook of our country is nowhere better exemplified than in our constant concern for social justice. This is the Christian quest that has led to new and better relationships between large groups of our citizens, to the development of new codes of behavior and freshened insights into the interdependence of all Americans.

This growth and development in opportunity for intellectual and spiritual progress has been made possible because our free society squares with the nature of man. Man is by nature free; man is by nature social. This fact of a dual nature of man was much in the minds of our forefathers as they laid down the principles of our free Government. They spoke again and again of "the laws of nature; and of nature's God."

That man is by nature free can be supported by scientifically established evidence and philosophically disciplined reasoning. I have with great profit heard that evidence and listened to that reasoning. However, I do not believe it is necessary to present the proofs to this audience. Most of you are familiar with them. Furthermore, we Americans know instinctively that men who are enslaved cannot fulfill their nature. We Americans also accept as self-evident the fact that man is by nature social. "No man is an island—an island entire of itself." He cannot forsake society for the sake of liberty any more than he can satisfy his natural need for social life by forswearing his natural right to freedom.

Posing our major argument for a free society on the fact that it accords with the nature of man makes all the difference in the world to the character of our cause. Any support of our system that is based upon our ability to outgadget, to outproduce, and to outfight any other nation is fundamentally weak. It overlooks the vicissitudes of history. It means that if some other nation at some time should for a period outgadget, outproduce or outfight us that their system will have proven itself better for men. It could also be taken to mean that our system acquired its validity only in the last 25 or 50 years, which witnessed our rise to material supremacy. It unconsciously mocks the America of the founding fathers when, in the material sense, we were relatively small and weak alongside the France of Napoleon and the Russia of Alexander I.

In contrast, when we rest our case for a free society on its capacity to fulfill the deepest needs of man, we are saying that a free society is right and good for all men everywhere because their nature as men demand freedom, and we are proclaiming to the whole world that we want it not just for ourselves but for all mankind.

In stressing the moral basis of a free society, I do not wish to ignore or minimize its practical basis. From this standpoint, it is the strongest of societies, for it is the only form of social organization which makes it possible fully to draw upon the chief resource of any society—the character and talent of its people. The authoritarian society in suppressing the free thought and action of its people and forcing them all into a mold prescribed by a handful of men, automatically squanders and nullifies that most precious resource. Such a result is certain, even under wise leaders, but wise leaders are a rare phenomenon in a totalitarian society which is by nature sick with two corrosive forms of corruption—the corruption of unlimited power, and the corruption of unlimited submission.

But it is not enough to know that a free society is best for all men. Certainly, if freedom is to be defended and extended, it must be understood. We must be able clearly to identify those elements in a free society that are principally responsible for its capacity to meet the needs of the free and social nature of man.

Since each man in the exercise of his free nature directs himself to the attainment of his own ends, he cannot be rightly treated as a means to the end of another man or of the state. The essential point of the dignity of man can best be expressed in terms of the

basic natural right of every man to be respected as an end. Upon this turns the distinction between the free man and the slave. A free society must therefore grant rights and privileges which leave men as far as possible free to decide for themselves all matters affecting their own development—rights and privileges which provide security from arbitrary actions by other men or capricious intervention on the part of the state.

If a society is to meet man's social needs, it must provide conditions under which he can live and work together with his fellow-men in mutual respect and confidence.

These goals of a free society can be quickly and easily stated but can be reached only through complex arrangements. Our Constitution, our Bill of Rights, our Federal and State laws, our customs, our mores, and our voluntary organizations are all a part of these arrangements. That is why a free society has been called the most signal achievement of mankind.

A totalitarian society differs sharply from a free society in almost every particular. I shall mention only two.

First, a totalitarian society cannot by its very nature accord to its citizens as individuals the right to determine for themselves what they should think, what they should discuss, or what they should do. To accord such freedoms is contrary to the basic totalitarian concept that man is a means only, not an end—a means for serving the end of the state.

The extent to which thought, discussion, and action are controlled in the totalitarian state was brought home to me on the occasion of a recent visit to East Berlin. The city was crowded with young people who had been brought together from Eastern Europe to a Communist youth rally. They were marching in unison, singing in unison, and thinking in unison. A few thousand dissenters slipped across the line of West Berlin, but let no one be deceived by that circumstance. For everyone who slipped away there were 10,000 who remained, and the content in the minds of those 10,000 was identical. They sang with enthusiasm the chants of praise for Stalin and of hate for the United States of America. Boys and girls alike were wearing bright blue shirts. It is terrible what modern dictators have done to children. Mussolini put them in black shirts, Hitler put them in brown shirts, and now Stalin is putting more and more millions of them into blue shirts, as part of a studied program to dwarf and warp their minds.

The second element of difference between a totalitarian and a free society has to do with its impact upon the social nature of man. If man is to live and work with his fellowmen happily, he must live and work in an atmosphere of confidence. Such a condition cannot exist under a totalitarian society because the thoughts and words and actions of men can be controlled only by complete police surveillance. No man in Russia today can be sure that a fellow worker—or even a member of his family—is not an agent of the secret police. As a consequence, instead of living and working happily, life goes on under a cloud of pervasive and corroding fear.

My purpose in calling attention to these particular differences between the elements of a totalitarian and a free society is twofold. These differences which dramatize the failure of a totalitarian society to meet the inner needs of man, provide a complete answer to the neutralist. In addition, they point up both the need to sharpen our determination to keep our society free from any taint of totalitarianism and the manner in which this must be done. We must be on guard against any and every activity which puts in jeopardy our rights as individuals to determine for ourselves what we

should think, what we should discuss, and with proper regard to the rights of others, what we should do. Freedom of thought is a basic human right, from which flow freedom of religion, freedom of press, and freedom of assembly and association. But freedom of thought is a sterile and meaningless right, unless we are free to discuss, to criticize, and to debate. Criticism, discussion, and debate are the only means to peaceful progress. All history shows that without them, a society must stagnate and die.

The thought-control of dictatorship is imposed by force, but discussion, criticism and debate can be stifled by fear as well as by force. Persecution by public opinion can be powerful as purges and pogroms. School teachers, Government clerks, Government officials, and even businessmen can be frightened out of their rights under the first amendment as effectively as if that amendment were repealed, and frightened men are at best irresponsible in their actions and at worst dangerous. Of all the forms of tyranny over the mind of man, none is more terrible than fear.

Of late, some of our people—often good people—have been blindly spreading just this kind of fear. In their zeal to combat communism they have been betrayed into using methods and measures which impair the sources of our strength and thus play directly into the hands of the Kremlin. They are making criticism socially dangerous. They are forcing conformity through fear. They are ready to pillory anyone who holds an unpopular view or supports an unpopular cause. As a result, too many of our fellow citizens have been afraid to speak out. In far too many cases, decisions, often decisions in high places, have been influenced by fear. In short, the danger of Communist penetration and disruption has been compounded by the spread of panic. All of this in a nation which has grown to greatness and glory because it has recognized the rights of nonconformists and dissenters.

If we want to assert the free nature of man and strengthen our free society, we must insist that within the law of libel and slander, the unlimited right to criticize must be maintained. This right is meaningless unless it extends to the thoughts with which we disagree—in the words of a great Chief Justice of the United States, freedom for the thought we hate. I, for example, disagree most intensely with the Daily Worker's tagging of every opponent as a Fascist. I also disagree intensely with those who make reckless charges of Communist sympathies. But I would not for a moment suppress these irresponsible critics. They must not be suppressed. They must be answered. We must remember too that a free society is a just society. Everybody concerned about freedom in America must be concerned about justice, too. One reason why we must encourage criticism is that we must encourage people to point out such injustices as remain in America and to fight for their elimination. An unjust society cannot long endure. An injustice against one puts all justice in danger. Only by safeguarding the rights of minorities do we safeguard the rights of majorities. Racial and religious discrimination, special privilege, and inequality of opportunity for growth are on the wane in this country; but, where they still exist, these and other injustices must be discovered and rooted out.

These convictions of mine are at best merely guidelines to a program of action. The forming of that program must be a task for our best minds—for men of great stature. But we must get on with the job, and Freedom House should play a leading role. The aggressive expansionism of the Kremlin has made the rebuilding of the military strength of America and the free world vital

to the maintenance of the peace. But something more is needed effectively to counter totalitarian plans for world domination. We must dedicate ourselves anew to making in America a demonstration of a free, just, and unafraid society at work. No police system could keep the news of this demonstration from reaching the peoples of the world, even those behind the iron curtain. Our forefathers projected this demonstration by framing a Constitution which firmly grounded on the nature of man combined freedom and justice. We must not let their aspirations escape us; we must push steadily forward toward the realization of the American dream.

Comments by George Dixon on Address Delivered by Hon. George W. Malone, of Nevada

EXTENSION OF REMARKS

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

MR. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by George Dixon, published in the Washington Times-Herald of October 15, 1951, commenting on the address of the junior Senator from Nevada before the 11 Western States Republican conference at Seattle, Wash., on Monday of this week.

There being no objection, the RECORD was ordered to be printed in the RECORD, as follows:

WASHINGTON SCENE

(By George Dixon)

There are times when I wish Senator GEORGE W. MALONE, the old sourdough from Nevada, would quit making blurt statements and bow to the old Washington tradition of talking all around the point. I can understand the old Malone ranger and he scares me.

Circumlocution is so much more comforting. As an accomplished head-in-the-sand-sticker I resent being whacked with anything as blunt as this:

"In 38 of the 48 States, the total assessed valuation of all the property is now less than the State's per capita share of the national debt."

"A goodly number of our hothouse economists and political one-worders want to modify the United States Constitution so as to join an Atlantic federation of nations. In this federation the other nations could tax us for their support by the simple expedient of basing taxation on ability to pay."

See what I mean? When the world planners discuss the same thing it doesn't sound nearly so alarming. They cover up the ultimate result in millions of misleading words.

Senator MALONE does another of his blunt-instrument jobs on the international dollar shortage. I guess I have heard 50 long tons of words on the shortage of dollars abroad, including beautiful explanations of why we should remedy this situation, but never anything as devastatingly straight to the point as this from the outspoken mining man from Nevada:

"The dollar shortage theory as an excuse for gift loans to foreign nations is the

greatest hoax by which a trusting public was ever deceived.

"Any nation fixing a fictitious dollar value on its own currency—demanding more dollars for its own currency than it is worth in the markets of the world—will certainly be short of dollars."

The Malone ranger has taken to the trail again. Hi, ho, Silver.

Anchors for the American Goal

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. MORSE. Mr. President, on June 3, 1951, a distinguished citizen of my State, Mr. Edward C. Sammons, president of the United States National Bank of Portland, Oreg., delivered what I consider to be a great commencement address at Lewis and Clark College, in Portland, Oreg. The title of the address is "Anchors for the American Goal." I wish to read just one paragraph of the address before I ask to have it printed in the RECORD. Mr. Sammons said:

Anchor yourself to the Constitution of the United States of America, the greatest document ever given from the brain or hand of man. A sound political situation is the bulwark of America. Sound homes, sound churches, inspiring colleges, and free political structures comprise the American goal. Thus equipped, no ideology on earth can ever grind us into the dirt, be it communism, socialism, or any other type of ism.

I ask unanimous consent to have the entire address published in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ANCHORS FOR THE AMERICAN GOAL

(Address by Edward C. Sammons)

Thank you, Dr. Odell, for your overgenerous words of introduction.

With your permission, Mr. President, members of the faculty, and members of the board of trustees, I am going to direct my remarks exclusively to the members of this graduating class. If the rest of you hear what I have to say, that will be coincidental.

Your graduation here today reminds me of a similar situation in which I participated. The scene was at the Presidio, San Francisco, in August, 1917, when I was graduating from the first officers' training camp in the First World War. General Barrows, former president of the University of California, was scheduled to make the commencement address, and the young graduate sitting at my left whispered in my ear, "I wonder what the 'old geezer' is going to talk about?" * * * I know you are wondering at this moment what I am going to say.

That reminds me of another experience when some years ago I was the commencement speaker at Oregon State College. My good friend the late Bishop Bruce Baxter, Methodist bishop of Oregon, was to preach the baccalaureate sermon, and he said to me, "Ed, remember that 'he who thinks by the inch but talks by the yard should be kicked by the foot'."

I am willing to risk your judgment as to whether I have talked by the inch, but I am unwilling to talk by the yard, for I do not want to be kicked by the foot of one of those

champion football players like Clarke Anderson, Stan Blair, or Rube Baisch. Consequently, my remarks are going to be brief and I hope very much to the point.

Since time immemorial it has been customary at graduation exercises for an older person to bring alleged words of wisdom to the members of the graduating class. Today is no exception. Thus, I am going to address my remarks to the 285 members of the graduating class, and, frankly, young men and women, I am going to talk in a very old-fashioned way about a very old-fashioned subject—no technical stuff about international relations or atomic energy; no soaring flights of fanciful oratory. I wish to talk about you, as individuals, and about our beloved country and the part you and I can play in it. This thought was prompted by an article I read recently wherein a Cleveland woman asked her employer this question:

"Why doesn't somebody talk about the United States?" She and her husband, both born in Europe, had gone back just before the war to share in what they had been promised was "the people's government—everything for the people!" When they got back there, they were painfully disillusioned—they did not like what they found. Her husband, having become accustomed to free speech in America, said whatever he wanted to say, so they shot him. Eventually this woman returned to her adopted home in Cleveland, and this is what she said: "If people here only knew what they have here, they would fight to save it—not tear it down by quarreling. It makes me ill to see groups talking for this greedy little group or that greedy little group. America will be ruined by it. Based on my experience, I wonder why somebody does not talk about the United States." And that is what I wish now to talk about to you members of this graduating class. I give you a great challenge.

Remember that it is to the United States that freemen look for light and hope in this vast and troubled world. America is the hope of hundreds of millions of hungry people who fear their neighbors more than they trust them and whose thoughts are warped with suspicion and disease. We have here in America a challenge from the rest of the world and an appeal from all mankind to save it from destruction. We Americans should dedicate ourselves completely to this struggle to have our own people realize what we have in America. We must be tireless in our efforts to destroy the falsehoods that are being told about everything American. These falsehoods are designed to create doubt and confusion regarding the value of our American free-opportunity system. And it really is the free-opportunity system—that is what we should call it—not a "capitalistic" system. We in America are truly free men and women. Our freedoms are based upon the oldest Constitution in the world with its hard-earned Bill of Rights, and it is time for us to stop rapping and start clapping for the American way of life.

Do you realize that in the United States 63.99 percent of the income is paid to the worker, while only 4.9 percent goes to the owners as dividends. The other 31.11 percent goes for materials and taxes. The free opportunity system might well be called the profit-and-loss system. As a matter of fact, 50 percent of all businesses, over a 10-year period, fail; yet the hope for profit keeps the others going—keeps them forming. Out of the few, success came to such as the General Electric, the General Motors, the Chrysler Motors, the United States Steels, and other great employers of labor.

Not so many years ago, some of the ill-informed were saying it was terrible for big corporations to make so much money. But let's look at the automobile business as an

example. Six hundred forty-seven different makes of automobiles have tried the job of pleasing the public. In the terrific battle of competition, less than 40 makes remain. Most of the men who ventured their capital lost it. A very few like Henry Ford, for instance, made millions and built up huge corporations out of profits, but the successful companies provide 8,000,000 jobs in America today for the highest-paid workers in the world. Those 8,000,000 jobs would not exist had it not been possible to make and keep profits. Please remember that.

It will be well to remember, also, that our American economy is like a milking stool. It has three legs—capital, labor, management. Without capital invested in tools and equipment, labor could make only the barest living. Without labor, which is the human energy and skill to use the tools and equipment that capital provides, capital would be useless. Management brings the two together and makes the best use of both. When any of these three legs—capital, labor, management—fails to function properly, our entire economy is upset and everyone suffers.

A jet fighter, for instance, like the one on display this afternoon in front of Hotel Portland, is a collection of profits. The fighters, bombers, guns—without which this country would be helpless—would never have existed if the enemies of business had had their way. Since the last war, American business has put \$70,000,000,000 into new machines and factories that are now building the planes, tanks, guns and everything else that makes this Nation strong.

If there had been no profits, these new machines and factories—and their defense production—could not have been built. Money for these machines and their output didn't come from taxes, which have stayed high. It didn't come out of wages, which have stayed high. It came from stockholders whose dividends have not gone up like taxes and wages—stockholders who could have had those dollars in dividends but invested them, instead, in America.

Government, labor, the public—everyone—is today drawing dividends of safety from that patriotic machine investment by American business.

Lewis and Clark, under the inspiring leadership of Dr. Morgan Odell, has just concluded another fine year, teaching students to think and to see what makes America tick. In Lewis and Clark's brochure entitled "Education for Competence," I find these challenging words:

"Whatever you do in this world, you've got to be good. Your satisfaction, your earnings, your advancement, your place in a community depend upon your ability to do your chosen job well. Society expects you to be competent, to stand on your own feet, to know where you are going and how to get there. Whether you want to be a doctor or a musician, a teacher or a journalist, a homemaker or a businessman, whether you plan to enter military or some other type of national service, competence and maturity will be required of you. In most occupational fields, competent performance can best be developed upon the basis of a good, general college education. Such education should prepare you mentally for the intelligent use of knowledge, physically for healthful living, socially for constructive human relations, and spiritually for devotion to the highest American and Christian ideals. Lewis and Clark seek to provide you for that kind of education."

Lewis and Clark College has brought that kind of education to you young men and women who are graduating here today, and I feel you are competent to meet the future. Probably one of the thoughts uppermost in your mind is "What are the opportunities for the future?"

In that regard I feel as does Dr. Arthur J. Brown, secretary emeritus of the Presbyterian board of foreign missions, who at age 94 (don't get the idea that I'm 94, though I have been around for a long time) said, "Old men are said to be cynical and pessimistic. I am not. I am an incorrigible optimist." Like Dr. Brown, I, too, am tremendously optimistic about the future of our Nation.

You may run up against people who think that opportunities are limited—well, don't you believe it. There are opportunities everywhere, and as proof I offer these facts.

Not long ago an analysis was made of management personnel in the 50 largest business enterprises in our country. The 143 men in absolute top management of these companies were asked to list their beginning jobs and to spell out their steps as they progressed. Of this group, 1 started to work at \$1.50 per week, 11 others for less than \$5 a week, 45 began their way up the ladder at jobs paying less than \$10 per week, 81 began with jobs paying \$10 to \$25 per week; only 7 of the group started at higher than \$25 per week. The average starting wage of those 143 leaders of the 50 largest enterprises in the country was \$13.40. America has always been the place where the plain man had a chance—and it still is.

Talk about opportunities. Five of our Presidents were born in log cabins; five were sons of farmers, including President Harry Truman; three were sons of mechanics or artisans, three were sons of country ministers. Here on American soil, rail splitters have turned into Presidents, privates into generals, gobs into admirals, shoemakers into Senators, newsboys into governors. Our own Governor McKay is one of the latter. He was a newsboy on the streets of Portland. He also acted as a delivery boy for a butcher shop, so he came up the hard way.

Last Monday the speaker at the Portland Chamber of Commerce forum was T. S. Peterson, president, Standard Oil Co. of California. He was a cigar-store clerk in Portland, then went to work for Standard Oil pumping gas and wiping windshields at a station at Fourth and Madison Streets. From there he went up the ladder to the presidency of one of the largest corporations in America. I will give you two other examples. F. B. MacNaughton, former president of that great institution, the First National Bank of Portland, now president of the Oregonian Publishing Co. and of Reed College, came to Portland with \$3 in his pocket. He spent part of that for a garret room in the Portland Hotel, went out early the next morning and got himself a job as a draftsman in an architect's office, and from that position he went on to become one of Portland's most successful and useful citizens. I could give you many examples, but I will give but one more. This afternoon at this very hour, John A. Zehnbauer, president of Jantzen Knitting Mills, is receiving an honorary doctor of laws degree from the University of Portland in recognition of his fine contribution to the business life of this State. He and his associates started in business with a very modest sum of money in a tiny room on Third Street between Morrison and Alder, and now his firm is internationally known.

America, you should always remember, is a worker's republic, but it has never been a lazy man's Republic. There are no titles of nobility, no inherited rank, no caste to buck against. Here we have free schools, free libraries, lots of scholarships and help for the poor boy on the make.

Where and when have workers ever had a better republic than this great republic of ours? Where on God's good earth have so many people for so many generations had a better chance? The Good Book says, "As ye sow, so also shall ye reap." If I leave with you no other thought than that, it will stand you in good stead.

Dr. Kirkland West, in his baccalaureate sermon this morning at the First Presbyterian Church, challenged you to align yourselves with the Christian movement, citing as he did the antigodliness of the Communist movement in China. That was sound advice.

I challenge each and every one of you to tie yourselves into a part of a good public cause. Good causes are the anchors of the American goal. The American goal is to dignify and glorify the individual. Abraham Lincoln summarized that goal as "government of the people, by the people, and for the people." In other words, freedom—freedom of speech, freedom of opportunity to change jobs, freedom to change ideas, freedom to do whatever one wishes to do so long as it does not harm his neighbor.

There are many good causes, local and national, into which I hope you will tie your intelligence and energies. It is not so important which cause is the first you align yourself with—whether Girl Scouts, Boy Scouts, Red Cross, Community Chest, alumni activities of Lewis and Clark College, the church of your choice, or whatever else—but it is important that you put your talents to work in behalf of one or more of these worthwhile causes. You will gain great satisfaction in serving any of these organizations efficiently. And, more important than any of these, is politics. Take an active interest in politics.

Again quoting that great Presbyterian, Dr. Arthur J. Brown—"It all comes down to this: whatever the number of years, to make life worth while one should have a useful purpose, seek it diligently; form alliance with others of like purpose; have unshaken faith that beneath the surface tumult of the world there runs deep and strong the mighty current of God's eternal purpose. In the glory of this conviction, though my clock of time at 94 points to an evening hour, morning is in my heart."

Stated another way, listen to what Jesus, the Master Teacher, said. "He that heareth my words and doeth them is likened unto a man who built his house upon a rock. The rains came and the floods descended and the winds beat upon the house, but it did not fall, because it was founded upon the rock; but he that heareth my words and doeth them not is likened unto the man who built his house upon the sand and when the rains came and the floods descended and the winds beat upon the house it fell and great was the fall thereof."

No nation on earth, regardless of its form of government, ever gave to human beings so much liberty and material prosperity as we have enjoyed under our own constitutional form of freedom. We started out as thirteen little States, ridden by poverty and threatened by savages. Fortunately we were blessed by God, and we represent the utmost in individual freedom and individual prosperity. Compare our United States with any other land on earth. The workingman here is a king compared to the workingman in any other country. Nearly all of us have modern homes—electric lights and power, gas cooking, telephones, automobiles, automatic refrigeration, electric washers and irons, radios, insurance policies. Most of us own bonds and have money in the bank, plus a thousand and one other conveniences and luxuries. Are we ready to exchange all this for the crazy promises of some foreign crackpot? Isn't it time for us to thank God for America and our many blessings? Isn't it time that we wake up and do a real job selling America as it is?

If capitalism is wrong, why don't people who hate it leave America? If socialism is desirable, why don't they go to England? If communism is what the so-called common man wants, why doesn't he move in droves to Russia or China?

Nobody wants to leave America—but tens of millions of men and women all over the world, in every country, plead for the chance to come to America. "Parlor pinks" here lip about the beauties of statism, where the government guarantees security. People in those countries know all about this business of government taking care of you from cradle to grave, particularly the grave. Do what you're told or you get hurried into it.

They vastly prefer America, with its chance for progress, its high living standard, its liberty, its dignity of the individual. They'd swap security for your liberty any time. Look out that you aren't talked into the trade. Back in the dark days of 1932, I heard William Randolph Hearst, the well-known newspaper publisher, deliver an address on Americanism. It was reprinted in the Hearst papers, and I wish to share his words with you at this point.

"I know of no finer title, and I want no higher position, than to be a citizen of the United States of America."

"In ancient days to be a Roman citizen meant to be the equal of princes and kings."

"Today the most envied honor in the world is to be an American citizen."

"And this is so, not merely because America is the greatest Nation in the world, but because it is the freest nation in the world, and the happiest Nation on account of its freedom."

"We cannot understand how much freedom means in this country until we come back from countries where freedom means nothing."

"Here we have freedom of thought, freedom of the press, freedom of speech."

"Here we can think and say and do what we please as long as we do not interfere with the rights and liberties of our fellow citizens."

"But the great honor and advantage of being an American citizen carries with it an obligation just as great, and that obligation is to preserve inviolate the rights and liberties and privileges which our forefathers won for us in blood and toil and travail, that we may hand this precious heritage of freedom and independence, of liberty and dignity, down to our children and our children's children, undiminished and unimpaired."

To you who are graduating today, I say hail to the commencement of your careers! You have been fortunate to have had the opportunity of association with fine men and women in your classes and to know and take knowledge and leadership from members of an outstandingly fine faculty. These are memories which will grow in luster as you view them from a distance. The beauties of this outstanding campus will be treasured, to be sure, but what is even more to be valued, I feel, is the connotation of those two names, "Lewis and Clark," which are so enshrined in the memory of this country as symbols of pioneering courage and patience, daring and usefulness.

May God give each and every one of you enough of the faith and the vision and the courage of such men, as may be needed to surmount the difficulties of the days immediately ahead and to bring America through whatever confronts us.

If I had one single gift for you, I'd give you courage—that quality of mind which enables one to encounter danger and difficulties with firmness, and without fear or faint heart. Shakespeare, in four words, wrote of "The King becoming graces—the needs of a king—devotion, fortitude, patience, courage." I bespeak in your behalf to a kind Providence for all of these.

During World War II we built or repaired hundreds of ships of various sizes and categories here in this harbor. Many of you in this audience worked on some of those ships. Every one of them, for safety purposes, was equipped with four anchors when it was sent to sea. I wish to suggest four anchors for

your ship of experience which you will launch at the conclusion of this commencement.

First. Anchor yourself to your home. The home is the greatest cooperative institution in the world, and if you do your share, your kinfolk will never let you down. Strong homes are the foundation of this or any other country.

Second. Anchor yourself to the church of your choice. It will constantly be a place of refuge and there again, as in the home, if you do your bit, your church will never let you down.

Third. Anchor yourself to this great college. Participate in its affairs through the alumni association. Return frequently to experience the wisdom and the friendships of the members of this fine faculty. A college is always an inspiration and a source of new ideas. Your college will never let you down.

Fourth (but by no means least). Anchor yourself to the Constitution of the United States of America—the greatest document ever given from the brain or hand of man. A sound political situation is the bulwark of America. Sound homes, sound churches, inspiring colleges, and free political structures comprise the American goal. Thus equipped, no ideology on earth can ever grind us into the dirt, be it communism, socialism, or any other type of ism.

May good luck attend you and may God bless you all is my sincere wish on this notable day.

The "Vested Interests"—Past Mistakes of the Administration

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a formal report from the board of directors of the American-Hungarian Federation of 1624 I Street NW, in Washington, detailing the reasons for their visit to President Truman at the White House last Friday.

I had the honor to receive this same distinguished group in my office immediately after their meeting with the President. I was impressed with the intense interest they are showing, as citizens of Hungarian descent, in our Government's efforts to pin point Communist brutalities behind the Iron curtain. They are acutely aware of the various economic and propaganda techniques we are utilizing in the cold war.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE "VESTED INTERESTS"

Senator GEORGE W. MALONE, Republican of Nevada, in a speech to Republicans of the 11 Western States, says, "We need a new administration with no vested rights in past mistakes."

His speech could hardly have been better timed. William M. Boyle, Democratic National Chairman, has just resigned under fire and so becomes a really top-drawer administration mistake in the very sense Senator MALONE intended.

President Truman has a clear vested right in Boyle. He, Boyle, has grown up in the same Fendergast soil. The President backed him for the Democratic National Chairmanship. When Boyle was accused of wrongdoing, the President investigated and promptly cleared him. If Boyle was wrong, then so was the President.

Fortunately, Truman's clearance made very little impression on Congress which proceeded to investigate on its own, and with considerably more vigor, Mr. Boyle's health just could not take it.

Mr. Truman's reaction was regret that Boyle had resigned.

The point, however, is that President Truman thought it necessary to clear his party chairman when any sort of sincere investigation would have disclosed the same facts Congress disclosed. But the President has done the same thing before, and for the very reason Senator MALONE points out—vested rights, vested interests in past mistakes.

It is hardly necessary to list these mistakes in any detail. They have occurred with sickening regularity ever since 1933.

Our foreign policy has led us to war after war. Our domestic policy has created a national debt in excess of \$256,000,000,000, unremitting tax increases, a radical and dangerous price-control system, an inflation which has stolen half our savings, insurance and wages, and severe losses in personal liberties.

Yet the administration has a vested right, a vested interest in all of this. There will be no true apology, no honest promises of reform, no retractions, in the appeal for reelection.

For if a single false card is removed the whole structure collapses. But that is Truman's problem. The problem of the American people is to abolish these vested interests in crime, folly, and betrayal.

The year of action is just ahead.

Prompt Action on Suez Problem

EXTENSION OF REMARKS

OF

HON. HAMILTON C. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. JONES of North Carolina. Mr. Speaker, under leave to extend my remarks, I insert the following able and timely editorial written by Mr. C. A. McKnight, editor of the Charlotte News, Charlotte, N. C., which appeared in the News on Friday, October 12, 1951:

PROMPT ACTION ON SUEZ PROBLEM

The State Department has responded to the crisis in Egypt with swiftness and decisiveness.

Egyptian nationalists want to control the Suez Canal. Control of Suez by persons not in accord with the Atlantic community—such as the Egyptians—would endanger western security. Therefore we and other western powers are proposing that Suez be placed under the control of NATO, and that the canal be guarded by an international contingent.

With the Ottawa decision to extend Atlantic Pact membership to Turkey and Greece, NATO is now responsible for the defense of the Middle East, and Suez therefore properly becomes a NATO responsibility.

When Britain was forced to withdraw from her Greek and Turkish spheres of influence, the United States promptly—and fortunately—moved in. The United States alone, of course, could have chosen unilaterally to back up Britain in the Suez crisis. However, since the pronouncement of the Truman doctrine regarding Greece and Turkey there have been significant changes in the relationship between Atlantic powers. The North Atlantic Treaty Organization, despite its many faults, has become the organization responsible for western defense. If the Suez problem is resolved through NATO, rather than by the United States alone, the true intent of the principle of collective security will be furthered and this

country will not be open to charges of imperialism which would be levied against unilateral action.

Furthermore, the Egyptians, like the Iranians, have a very proper desire to throw off the last vestiges of foreign control, and a solution which will be in tune with their legitimate aspirations is more likely of fulfillment if negotiations are conducted by NATO, which includes some of their neighbors, rather than solely by Britain and the United States.

The State Department deserves accolades for promptly backing a proposal which may well be workable.

Report of Board of Directors of the American-Hungarian Federation

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a formal report from the board of directors of the American-Hungarian Federation of 1624 I Street NW, in Washington, detailing the reasons for their visit to President Truman at the White House last Friday.

I had the honor to receive this same distinguished group in my office immediately after their meeting with the President. I was impressed with the intense interest they are showing, as citizens of Hungarian descent, in our Government's efforts to pin point Communist brutalities behind the Iron curtain. They are acutely aware of the various economic and propaganda techniques we are utilizing in the cold war.

Two members of their directorate, Mr. Stephen L. Segedy and Mr. Peter Suta, of Bridgeport, Conn., are from my State. Both are leading citizens in their community. I chatted with them of the valuable contributions our citizens of foreign descent can make and are making bringing freedom's truths to oppressed peoples. After leaving my office, for example, the board of directors of the American-Hungarian Federation made a broadcast for the Voice of America beamed directly at Hungary giving, among other things, the facts regarding mass deportation of Hungarians to Russian slave-labor camps.

Mr. President, I believe the following interesting statement warrants a wide reading.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

The President of the United States received last Friday members of the board of directors of the American Hungarian Federation, an American citizens' organization in existence since 1907. The national headquarters of the federation is Washington, D. C.

The federation consists of half a million loyal American citizens of Hungarian descent. Three hundred and fifty member churches of the three major faiths and about 2,000 fraternal civic and patriotic member groups are located in 288 major centers throughout 39 States.

The delegation requested this special audience for three reasons.

First Convey the gratitude of the Hungarians of America to President Truman for his statement of July 27, 1951.

The President's statement dealt with the current mass deportations, internments, and dislocations of the Hungarian citizens and charged the present Hungarian Communist Government with flagrant violation of the human-rights provisions of the treaty of peace. Following this statement, Secretary of State Dean Acheson, on August 1, 1951, branded the Hungarian Communist Government's inhuman practice of mass evictions and deportations the grossest brutality. Reliable information reaching the American citizens of Hungarian descent state that the sympathetic and firm stand of the President and our Government temporarily slowed down the forced expulsions of the Hungarian citizens.

In reflecting the true sentiment of the Hungarians of America, the group of directors paid tribute to President Truman for his personal concern in condemning the brutal acts against the liberty and justice of the people of Hungary.

(In Hungary, deportations began in 1950. Over 70,000 persons have been taken to Russian slave-labor camps until April 1951. The vast and general deportations began in the middle of May 1951. They rounded up the so-called undesirable and unreliable element; people who are not in sympathy with the Communist program. Substantiated facts indicate that about 165,000 are scheduled to be interned. The undesirable people include children separated from parents, pregnant mothers, pensioned, sick, and aged of both sex and of every religion or political affiliation.)

Second Express the appreciation of the Hungarians of America for the Mutual Security Act, recently passed by Congress, which provides assistance to friendly nations in the interest of mutual security and offers aid to those who escape to western Europe from countries behind the iron curtain.

(There are approximately 1,570,000 Hungarian-speaking citizens in the United States—1 percent of our total population. The first large group of Hungarian pioneers came to America in 1851 with Louis Kossuth, leader of the Hungarian War of Independence of 1848-49. Kossuth's countrymen settled along the Mississippi Valley (southern Illinois, Missouri, Iowa). There are a number of places in the United States (Pennsylvania, Georgia, Florida, etc.) which still preserve the name of Kossuth, i. e., the largest Iowa county is Kossuth County (Algona is the county seat). The largest group of Hungarian immigrants settled in the United States during the last decade of the nineteenth century and in the years preceding World War I. A considerable element of the American Hungarians are still first- and second-generation immigrants. Their ties and contacts are alive with their kinfolk and relatives subjected to Communist oppression in Hungary. Among the escapees from the Soviet satellite countries envisaged in the recently enacted Mutual Security Act, many Hungarians are anticipated who are to be integrated into the Western European armies. The Hungarians of America are deeply concerned with the liberation of Hungary—the country of their origin—from the bondage of Soviet yoke.)

Third, Request the President that the United States Government, as the most influential member nation of the United Nations Assembly, scheduled to convene in November 1951, should accuse the Hungarian Communist government before the world as violators of the Universal Declaration of the Human Rights which was signed and adopted by them, too.

(The executive secretary of the American Hungarian Federation submitted series of

carefully checked evidences to the Office of Eastern European Affairs of the State Department about the tragedies of deported people of Hungary. Simultaneously, the members of this Federation expressed their just indignation toward the Soviet rulers of the present Hungarian Communist Government by staging orderly picketings against the Soviet delegation of the United States at New York, against the Soviet government officials and against the Soviet Embassy at Washington, D. C. Under the auspices of this Federation, mass-meetings and public demonstrations were organized throughout the United States in protest of the infamous conduct of the Communists of Hungary.)

Alphabetical list of directors, attending Friday's presidential audience:

Stephen E. Balogh, executive secretary, Washington, D. C.

John Benzene, president of the board of directors, Pittsburgh, Pa.

George E. K. Borshy, editor in chief of the American-Hungarian People's Voice, daily, Washington, D. C.

Rev. Mathias Daroczy, president of the American-Hungarian Protestant Ministerial Association, Cleveland, Ohio.

Aloysius Falussy, chairman, Hungarian division of the Democratic National Committee, New York, N. Y.

Rev. John Gaspar, cochairman Hungarian Roman and Greek Catholic Pastoral Union, Passaic, N. J.

Zoltan Gombos, publisher and editor of Liberty, daily, Cleveland, Ohio.

Emery Kiraly, treasurer of the Hungarian Reformed Federation of America, Washington, D. C.

Rev. Julius Kish, Roman Catholic priest, Trenton, N. J.

Dr. Albert B. Mark, representative of the American-Hungarian Jews, New York, N. Y.

Dr. Kalman Molnar, president of the Federation's New York Branch, New York, N. Y.

Stephen L. Segedy, executive secretary of the American Life Association, Bridgeport, Conn.

Peter Suta, president of the American Life Association, Bridgeport, Conn.

Louis Szanto, life-long director of the Federation, Richmond, Va.

Dr. Francis Ujlaky, president of the Hungarian Reformed Federation of America, Washington, D. C.

Edmund Vasvay, national treasurer of the American-Hungarian Federation, Washington, D. C.

George Weiler, director, American-Hungarian radio programs, Milwaukee, Wis. (attorney Aloysius Falussy acted as spokesman of the group).

Large Philip Jessup to be this country's delegate to the United Nations Assembly—if not upset by Mr. Jessup's speaking engagements—was salutary in every sense. Senator McCARRAN, the Nevada Democrat, and Senator HICKENLOOPER, the Iowa Republican, who demanded definite action at this session one way or another when it appeared that administration strategy might be to evade it so that Mr. Jessup would be eligible for a recess appointment, are not partisans of the State Department or the Ambassador; quite the contrary. But their demand served the interests of both, and also the influence of the United States in international conferences.

The Senate and its committees can do business very swiftly when they want to. The maximum length of time which might be consumed in debate on a motion to confirm or reject Mr. Jessup's nomination by the President can be spent by the Senate without greatly postponing adjournment. This is well known to the Foreign Relations Committee, which must vote before any recommendation by its subcommittee can reach the floor. Hence, if the full committee fails to act or deliberately delays action on the technical ground that a record bulging with essentials is "incomplete," it will be a reasonable conclusion that the administration strategy is what Senators McCARRAN and HICKENLOOPER suspected it to be: after the majority leader, Senator MCFARLAND dwelt on other items as having greater priority in the brief time remaining of this session.

THE CURRENT TACTICS

If the Senate is given no chance to vote on Mr. Jessup, and the President gives him a recess appointment, he can perform and complete the duties of the office before the Senate meets again. Of course, he would have to agree to serve in such unsatisfactory circumstances. For the deplorable suspicion that this is the administration's plan and that Mr. Jessup would cooperate, the tactics of the State Department are largely responsible.

These tactics have been to go underground in the presence of an attack on its far eastern policy, and attempt by silence, concealment or ex parte revelations to weather each political storm. When it has been put to the question on past words and performances which have become unpopular, the State Department has not stood to its guns. Its frequent course, as with the testimony of Harold E. Stassen about a 1949 conference on China, has been to gloss over or to lock up the facts instead of coming out with them boldly. Because sections of the past record have become unpopular, or seem to be, does not mean they could not be well defended when placed in their context. By often failing to do this the State Department has invited much of the public distrust it has to contend with, when prompt, clear and complete statements would have the opposite effect.

TWO PERFECT EXHIBITS

The two replies to Mr. Stassen's account of the 1949 White House conference on military aid to Chiang Kai-shek are perfect exhibits of this tactic. By placing the conference "early in 1950 or more probably late in 1949," Mr. Stassen misled the departmental searchers of the files. But this did not justify the hasty announcement that the search had been "exhaustive" and disclosed no such meeting; that it was not "exhaustive" was proved next day when the conference was disclosed in the amended reply to have taken place in February 1949.

Also, Secretary of State Acheson was revealed as easily accessible to the searchers in the first statement. He had, it said, "no recollection" of such a meeting. But when the record was found the Secretary became suddenly inaccessible. He was away resting

More on Mr. Jessup and State Department Evasiveness

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of October 16, 1951:

IN THE NATION

(By Arthur Krock)

A GOOD SERVICE TO ALL CONCERNED

WASHINGTON, October 15.—The decision of the Subcommittee on Foreign Relations to give the Senate tomorrow an opportunity to vote on the nomination of Ambassador at

and could not be disturbed for days, according to a State Department spokesman who had reached him so readily the previous day. Because of this, the perfectly defensible fact that Mr. Acheson, at the conference, supported the proposal of the military authorities that no more military aid be given to Chiang appeared as an item which had to be dragged out of the State Department and it preferred to conceal

THE RECOGNITION DISPUTE

The same flaw is to be found in the dispute over whether "serious consideration" was ever given by Mr. Jessup, Mr. Acheson and the State Department to the question of recognizing the Communist Government in China. This only became important as a test of the Ambassador's fitness and the State Department's candor because of hot denials that the question had been "seriously considered." For if it had not, in the period before the aggression in Korea, all policymakers who failed to do so would have written themselves down as irresponsible and incompetent, or both. But instead of saying, "Certainly we did," the effort has been to obscure or slant a wholly sensible record.

These maneuvers, plus a review of Mr. Jessup's past judgments that raises fair and grave doubt that he should continue to be Mr. Acheson's foremost adviser on foreign policy, have stimulated the fight against his latest nomination. If it is evaded, and Mr. Jessup is given and accepts a recess appointment, he will serve without the influence abroad he should have and only a successful Senate show-down can give. And once again a United States envoy will be sent to an international gathering without the constitutional mandate his errand requires.

Record of Chester Bowles as Governor of Connecticut

EXTENSION OF REMARKS OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES
Wednesday, October 17, 1951

Mr. BENTON. Mr. President, I like the following editorial from the Hartford Courant. And thinking it may also interest my colleagues, I wish to waive my right to any technical advantage I may have—which this great newspaper, the oldest in the United States, has been generous enough to concede—and, in fact correct the record by asking unanimous consent to have the editorial printed in the Appendix.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. BENTON HAS A CHANCE TO CORRECT THE RECORD

Because of his vigorous campaign against Senator McCarthy and the latter's alleged misrepresentations of the truth, Senator BENTON should be especially careful about his own assertions. During the Senate debate last week on the appointment of Chester Bowles as Ambassador to India, Senator BENTON made the statement that Mr. Bowles was one of only three Governors who had balanced the State budget. Here are his words taken verbatim from the CONGRESSIONAL RECORD: "Does the Senator from Alabama know that in addition to having balanced the budget of the State of Connecticut during his 2-year term of office, as

Governor, Governor Bowles was one of only three Governors in the United States who achieved that distinction without raising taxes?"

The implications of that statement are clear enough. But the facts are slightly different. Mr. Bowles took office in January 1949. On July 1, 1949, about 6 months later, the sales tax went from 1 to 2 percent. Thus, for almost the entire period of his incumbency and during two fiscal years, Mr. Bowles had the benefit of an increased sales tax to help him balance the budget. Without that increase in taxes balancing the budget might not have been possible.

To be sure, the increase became effective under the provisions of Public Act 1, Special Session of February 1948. If Mr. BENTON wished to, he could claim technical correctness so far as the actual passage of the law is concerned. But a man as sensitive to the truth as is Mr. BENTON surely is more interested in the substance of tax increase, and not in the technicalities.

We mention this because of Mr. BENTON's zeal in keeping the record straight. He now has the opportunity to correct the false impression he has created about balanced budgets and no increases in taxes.

Ladies May Have To Turn Rough in Political Scrap

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, October 17, 1951

Mr. SCHWABE. Mr. Speaker, Mrs. Walter Ferguson, of Tulsa, Okla., is one of our great lady writers or woman columnists. She writes exceptionally realistic and factual views. One of them recently appearing in the Tulsa Tribune of Tulsa, Okla., appealed to me. By unanimous consent, I am quoting the entire article. It is entitled "Ladies May Have To Turn Rough in Political Scrap."

LADIES MAY HAVE TO TURN ROUGH IN POLITICAL SCRAP

October sees the start of a new campaign urging women to political action. Under the heading, "Political Pilgrims Progress," the editors of the Ladies Home Journal issued the following challenge:

"The problem of each citizen is to see that politics in his locality draws the best brains and the efforts of the most responsible men and women of the community. There is no way that national politics can be more intelligent, ethical or courageous than the local groups in which it has its roots."

Certainly the time is ripe for such a crusade. And there seems to be a surge of feminine concern over the corrupt conditions which prevail. But we shall have to forget about being ladies while we go at our political housecleaning. Some of the old suffragette spirit that got us the franchise must take hold of our souls. Perhaps we may be forced to make ourselves obnoxious to the professional politicians. There have been many instances in our history when women did that and great things were done.

Work on the local level must be a major part of any cleanup program and it's a hard task. We hate to get mixed up in bickerings with fellow townsmen. And how much safer it seems to argue about the point 4 program, or the human rights charter, or any other big subject to which distance lends enchantment. And we know that the man

who is a demagogue, trickster, and grafter in the city hall, will be the same kind of a public servant in Washington.

One dreadful fact confronts the American people now. We have often chosen those we believed to be our best, our most ethical and courageous, to serve at national levels only to find that they became polluted after they had held high positions for a while.

Housecleaning on national levels is now in order. The truth is that we have installed Fendergast graduates in the National Capital and their political methods have contaminated the entire country. It isn't always the individuals who are to blame for our shameful records. It's the evil system which so many of our leaders now proclaim to be good.

It Is Imperative That the Railroad Retirement Act Be Amended Immediately

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. VAN ZANDT. Mr. Speaker, when the House passed the Harris bill yesterday it took a step in the right direction by liberalizing the existing provisions of the Railroad Retirement Act.

In supporting the Harris bill, which was offered as a substitute for the Hall bill, I made the following remarks on the floor of the House during the debate:

Mr. VAN ZANDT. Mr. Chairman, when this legislation was under consideration on October 4, I stated very frankly why I could not support the Crosser bill at this time, but would support the Hall bill, which is stop-gap legislation. I also said in my remarks at that time that I would favor the House resolution which provides that a study of the Railroad Retirement Act be made immediately and that by next February 15 a bill be introduced incorporating the recommended changes resulting from the study.

Since October 4, I have talked to many railroaders back in my congressional district and have heard from many others by mail. I am not being critical of any of the railway labor organizations when I say that those railroad men to whom I talked—both active and retired—confessed that to them the debate on the Crosser and Hall bills is too technical and they are bewildered and confused.

When I talked to officials of the various railway unions I found that they knew the good points of both bills but they were reluctant to discuss the controversial features. Regardless of what bill these union officials supported they joined active and retired railroaders in agreeing that the solvency of the railroad-retirement fund is the paramount issue. They were also in complete agreement on the fact that immediate relief must be given to present recipients of railroad retirement benefits.

It was unanimously agreed that the Railroad Retirement Act should be examined with the thought in mind of reducing the retirement age, the years of mandatory service, and liberalizing other provisions of the existing law.

In addition to talking to active and retired railroaders several retired men canvassed members of the railroad fraternity in my congressional district and here is the report I received regarding their interviews:

"We can see nothing wrong by having both Houses of Congress accept the Hall bill as an emergency plank for the bridge, thus

permitting the Railroad Retirement Act to receive a general overhauling next February. Meanwhile, we old-timers will receive a much-needed increase as well as the widows and children of deceased employees."

As I said during the debate on this legislation on October 4, I am in favor of many of the provisions of the Crosser bill, if it can be shown after further study that these new benefits will not endanger the financial condition of the railroad-retirement fund.

It is freely said that these new benefits are sugar-coated pills and include the increase of benefits to annuitants and pensioners and the widows and surviving children together with the new monthly benefit to the spouse. These benefits are said to be sugar-coated because they require the acceptance of bitter pills in order to obtain them.

Taking the bitter with the sweet means that in order to obtain these new benefits certain savings to the railroad-retirement fund must be effected and in addition new sources of income must be found in order to provide \$230,000,000 estimated to be the annual cost of these new benefits under the Crosser bill.

To raise the \$230,000,000 it is proposed that the following changes be made in the existing law:

Recipients of railroad retirement benefits would be prohibited from earning in excess of \$50 monthly except if retired on disability. This prohibition means that a retired railroader cannot earn more than \$50 monthly in outside employment without forfeiting his monthly railroad-retirement check.

This provision in the Crosser bill is designed to force railroad employees to work beyond their retirement age of 65. It is said that such a provision will effect a saving of \$50,000,000 annually.

Railroaders in my district resent Congress or anyone else restricting their earnings after they retire under the provisions of the Railroad Retirement Act. They feel that with their employer they have paid for their retirement and that it is rank discrimination if not unconstitutional to apply such a restriction. In my opinion such a restriction is punitive legislation and would force retired railroaders and their families to exist on a fixed income.

The idea of forcing railroaders to work beyond the age of 65 is equally repugnant because the majority of us know that a determined effort is being made in railroad circles to reduce the age of retirement from 65 to 60 years with the option of retiring at age 60 or upon completion of 30 years' service regardless of age.

I have petitions from more than 3,400 railroaders in my district urging that the age of retirement be reduced to age 60 and that the Railroad Retirement Act be amended to permit retirement upon completion of 30 years of service regardless of age.

Then, too, we must not forget that in times of depression in the railroad industry it is the young man at the bottom of the roster who is furloughed and who urges the retirement of older employees. These young employees will suffer greatly if older employees are forced to work beyond the age of retirement.

Another objection to the Crosser bill is the increase in payroll taxes brought about by taxing earnings up to \$400. Under existing law earnings up to \$300 are taxable.

This increase which will amount to \$625 monthly on the additional \$100 is estimated to produce \$80,000,000 annually after January 1, 1952. While I recognize that the increase of payroll tax will provide additional benefits to the individual upon retirement, yet the average railroad man in my district is opposed to any increase in taxes on his earnings. He knows that to increase payroll taxes will shrink further his take-home pay and he states he fails

to see the necessity for an increase since he now pays four times the tax imposed under social security, yet, upon retirement receives less benefits.

It has been said that there is only a small percentage of railroad labor to be affected by this payroll increase under the Crosser bill. According to information furnished the House Committee on Interstate and Foreign Commerce as a result of a check of the 10 largest railroads in the United States 46 percent of their 1,490,000 employees receive wages less than \$300 monthly. That means that 54 percent of the employees earn in excess of \$300 a month and on their shoulders will fall the burden of paying for these sugar-coated pills.

Objection is also voiced to the Crosser bill over the proposal to transfer over 5,030,000 persons with less than 10 years of service to the social security rolls, on the assumption that such action will effect a saving to the railroad retirement fund of \$40,000,000.

For the Congress of the United States to arbitrarily transfer these people without any idea of their feelings on the subject and to reduce their benefits at the same time is in my opinion a violation of their rights. I have hundreds of people in my district who would be adversely affected by this provision and those who are aware of it are vigorously opposed to it. Over a period of years railroad brotherhoods have indoctrinated the railroad man and his family with the idea that the social security system is intent on taking over the railroad retirement system. With all the sincerity at my command I can tell you that the people in my district feel that the Crosser bill is the first step in that direction and they want nothing to do with it.

According to the testimony in the Senate of Mr. Robert J. Myers, Chief Actuary, Social Security Administration, I look with suspicion upon the provision in the Crosser bill whereby the Railroad Retirement Board and the Federal Security Administrator will, by June 1, 1956, recommend legislation that they hope will make a further estimated annual saving of \$60,000,000 in the railroad retirement fund.

Mr. Chairman, as I said on October 4, and I repeat it again today, there is general agreement among all who are interested in amending the Railroad Retirement Act that present recipients of benefits under the Railroad Retirement Act must be granted immediate relief through an increase in benefits. This cannot be accomplished under the Crosser bill, because the Railroad Retirement Board will have to hire and train hundreds of new employees to administer its provisions.

For example, the spouse's provision alone will require the filing of an application with supporting evidence in the form of a marriage certificate together with a birth certificate. In addition the files of more than 5,000,000 employees will have to be examined preparatory to the transfer to social security of those with less than 10 years of service.

Let us not forget the policing job that will have to be done to ferret out retired people earning in excess of \$50 monthly so that their retirement check could be stopped as provided by the Crosser bill.

May I remind you that under the 1946 amendments to the Railroad Retirement Act 200,000 claims had to be reexamined in order to determine if and how much increased benefits would be payable on each claim. It required over 1 year to complete the job and that meant considerable delay in paying the increased benefits.

All of us should give particular attention to the division of opinion on the Crosser bill. It starts in the Federal Security Agency, it exists with Railroad Retirement Board, is found among actuarial experts, prevails in the ranks of railway labor and among the

members of the House Committee on Interstate and Foreign Commerce, while active and retired railroad employees are equally bewildered and confused.

Nor can we ignore the opinion of experts who are opposed to the Crosser bill, including Mr. Murray W. Latimer, formerly Chairman of the Railroad Retirement Board, and who should know whereof he speaks, for he is a recognized authority on the Railroad Retirement Act. When testifying on Senate bill 1347, which is identical to the Crosser bill, Mr. Latimer said:

"Either the railroad retirement system will collapse or there will be a Government subsidy."

He continued by saying that the bill, from the standpoint of financial soundness, represents extreme recklessness."

In conclusion, after detailed study and serious reflection I am convinced that there is only one position that I can take to guarantee the solvency of the railroad retirement fund and to grant immediate relief to retired employees, and that is to support the Harris bill which will be offered by the gentleman from Arkansas [Mr. HARRIS] as a substitute for the Hall bill. If the Harris bill is approved by both branches of Congress before adjournment it will mean that the check that all retired employees and survivors receive immediately after December 1, will include an across-the-board increase of 15 percent to all annuitants and pensioners and 33 1/3-percent increase to widows and surviving children, with a 25-percent increase in lump-sum death benefits.

In addition, the Harris bill includes the provision passed yesterday by the Senate to pay \$40 monthly to the spouse. It also provides that those with less than 10 years service will remain on the railroad retirement rolls with the guaranty of a minimum annuity equal to what they would have received if they had been transferred to the social-security rolls.

It is my intention to support the House resolution which will be considered in conjunction with this legislation and which provides for a thorough study of the Railroad Retirement Act by the House Committee on Interstate and Foreign Commerce in order to determine the extent to which it may be liberalized without jeopardizing the railroad retirement fund.

The House resolution provides that the recommendations of the House Committee on Interstate and Foreign Commerce be submitted to Congress in the form of a legislative proposal following the completion of the study and that such legislation be introduced not later than February 15, 1952. Therefore, Congress will be given the opportunity of liberalizing the Railroad Retirement Act after careful study of the recommendations made, and will not be proceeding in a blind manner.

Housing at Camp Polk

REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mrs. BOLTON. Mr. Speaker, the Ohio National Guard is to be ordered out immediately after the first of the year. It is understood that the training area is to be Camp Polk. We hear from every hand that the situation there from the housing standpoint is exceedingly bad and we are deeply troubled. I, for one,

have been doing everything possible to call the attention of the Department to the situation. It appears that Camp Polk and the nearby towns have not even now been declared a defense area, although my correspondence with the Assistant Secretary of the Army indicates that after certain investigations have been made such designation will be made.

It was a satisfaction to me to find that the Army was thoroughly aware that a difficult problem exists and has moved in to do all possible. I shall follow this as assiduously as possible, whether the Congress is in recess or not.

Ignorance in the State Department

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. SHEEHAN. Mr. Speaker, the Polish-American Journal in their issue of September 29, and of which Mr. Leopold Dende is national news editor, contains an editorial entitled "Ignorance in the State Department."

It seems to me that our State Department's Mr. Sandifer's contention that the term "satellite" is fitting to the Polish Nation because of their pro-Soviet record of performance in the United Nations and elsewhere, is a sad commentary on the State Department's way of thinking. After all, it was Mr. Roosevelt and the Democratic Party who went along with Stalin in giving over the Polish Nation to Russia; now by some strange quirk of illogical reasoning we blame the Polish Nation for going along with Russia when our own Government without protest acceded to Stalin's demands.

President Truman and our Democratic leaders, such as Harriman, former Secretary of State Byrnes, and others, knew immediately after Yalta that Stalin had no intention of honoring his agreements at Yalta. And yet, months later, President Truman and his followers at Potsdam O. K.'d the Russian grab of Poland.

If our national administration had protested the Yalta and Potsdam agreements before they were ever signed, then the State Department certainly would have some basis for criticizing Poland's present course of going along with the Russians but as James Farley, a former member of President Roosevelt's Cabinet, said on June 8, that it is his "solemn conviction that many of the problems besetting the world would not be with us if we had a vigorous, alert, and forceful leader at Tehran and Yalta." The editorial is as follows:

IGNORANCE IN THE STATE DEPARTMENT

Last week an amazing example of high-level ignorance in the State Department regarding Poland was discovered by us during a conversation with Durward V. Sandifer, Deputy Assistant Secretary for United Nations Affairs.

Here is the evidence:

We have told Mr. Sandifer that it is an injustice to Poland and to other iron curtain countries to brand them as satellites of Rus-

sia and that it would be much better to refer to them as captive countries.

Mr. Sandifer disagreed, contending that the term "satellite" is fitting on the basis of their pro-Soviet record of performance in the United Nations and elsewhere.

A discussion ensued during which we have tried to explain to Mr. Sandifer that 99 percent or at least an overwhelming majority of the Polish people are against the Communist Government of Poland, and that they cannot be held responsible for the doings of that Government, etc.

Mr. Sandifer again disagreed, arguing that if the majority of the Polish people would not be behind the Government—it could not exist, and moreover the Polish people do not manifest their disapproval of the Government, etc.

Of course, we did our best to explain that the Polish people did not elect their Government but that it was imposed upon them and that to resist that Government openly, under the present circumstances, would be foolish and disastrous. However, not having experience in dealing with the diplomats, we wonder if we were able to dispel the clouds of doubt and confusion in the matter.

Be that as it may, we believe that some action should be taken to remove such ignorance from the State Department, as it is harmful to our international interests.

P. S. We were informed by several exile leaders from behind the iron curtain that they have encountered similar ignorance in the State Department regarding their countries. All of them also object to the term "satellite" and favor the term "captive." One of them, Carlos Davila, former Rumanian Ambassador in Washington, recently stressed this point in a letter to the New York Times.

Broomcorn Pullers Treated Unfairly, Oklahoma Farm Bureau Asserts

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. SCHWABE. Mr. Speaker, I am just in receipt of a letter from the President of the Oklahoma Farm Bureau, in which he attaches a letter from the Cimarron County Farm Bureau of Boise City, Okla. The Cimarron County Farm Bureau letter contains statements criticizing very severely the method that has been employed with reference to the shifting of farm labor in Oklahoma. Among other things, it is stated that broomcorn pullers who came to this area of their own free will, stated that they had contacted certain employment offices in the eastern part of the State—Oklahoma—and these offices told them that work was not available in this area. This happened at the time when our need was greatest. It appears that an effort was being made to hold laborers in that area for the cotton harvest that was to start at some future date.

Hence, the broomcorn pullers were treated unfairly, according to the assertion of the Oklahoma Farm Bureau.

It will be noted in the letter of the president of the Oklahoma Farm Bureau to me, dated October 9, that he states:

Mr. FOGARTY and his staff have been very cooperative but the program seems to lack coordination and cooperation.

I am a member of the Subcommittee on Labor and Federal Security Agencies, of which Congressman FOGARTY, of Rhode Island, is the chairman. Our committee has attempted in every possible way to cooperate with these organizations to the end that the farmers may have available labor at the time they need to harvest their respective crops, and I know of no good reason why the situation complained of should exist. I hope we may be able to look into this further and correct the situation by the time our committee meets next year.

The letter of October 9 to me and the enclosure from the Cimarron County Farm Bureau are as follows:

THE OKLAHOMA FARM BUREAU,
Oklahoma City, October 9, 1951.
The Honorable GEORGE SCHWABE,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN. Your attention is respectfully called to a situation in our State which we believe needs readjustment. It refers to the State employment office. Recently we have been hard pressed for farm labor and doubtless this condition will continue for from 30 to 60 days.

Mr. FOGARTY and his staff have been very cooperative but the program seems to lack coordination and cooperation. I enclose herewith a copy of a letter from Mr. William L. Dlake, secretary-treasurer of the Cimarron County Farm Bureau which will emphasize that point. Further, we find that in many counties the recruiting officer appears once a week with no established office and co-operating with no one in the county.

We believe this condition will be materially improved if the recruiting officer would establish a local connection in each of the counties which has surplus labor, such as county agent's office, or some other.

There is another item in the law which certainly should be eliminated. That is the provision, with a severe penalty against employers, of hiring children when school is in session. Historically, whole families work in the cotton patch and many families working together can supplement their incomes materially by such labor. Certainly we believe children should be in school and in most cases, school is dismissed for this purpose. However, in some towns it is not and therefore a child cannot work where that happens. This phase of the law should be repealed.

These matters are called to your attention for what they are worth and we hope that this program can be more effective and in case it cannot, possibly then we can offer further suggestions for a change in the program.

Very truly yours,

JOHN I. TAYLOR,
President, Oklahoma Farm Bureau.

CIMARRON COUNTY FARM BUREAU,
Boise City, Okla., September 28, 1951.
Mr. DAN ARNOLD,
Oklahoma Farm Bureau,
Oklahoma City, Okla.

DEAR SIR: This is to verify our telephone conversation of Monday, September 24, relative to our broomcorn labor problems of this fall.

Our county farm bureau sent two representatives to your office and together with your representatives they contacted the State employment office. They outlined our labor needs as to the number of men needed, the date on which we needed the men and the wages to be paid.

The State employment office at Oklahoma City told our representatives that they had a man with a bus to haul the needed laborers to our county. They asked for an advance

notice of 48 to 72 hours prior to the date the men would be needed. This notice was supplied by telephone by the labor office here.

Mr. Elswick, a representative of the State employment department, contacted the local broomcorn growers to determine their needs and passed this information along to the State employment office. At this time he received assurance that the men would be delivered.

However, at about 5 p. m. on Friday, September 14, word was received that transportation was not available for the men that were to be here on Sunday morning, September 16. This failure to deliver men left the local growers holding the bag as they were depending on the employment department to deliver the men as they had promised.

It appears to us that the State employment department made promises that they knew they could not fulfill. Further observation indicated that they did not want to deliver the men.

Broomcorn pullers who came to this area of their own free will stated that they had contacted certain employment offices in the eastern part of the State and these offices told them that work was not available in this area. This happened at the time when our need was the greatest. It appears that an effort was being made to hold the laborers in that area for the cotton harvest that was to start at some future date.

We feel that Mr. Elswick did his job the best he could with the facilities he had to work with.

I sincerely hope that you will be able to do something about this matter as it has left a very unfavorable impression of both the farm bureau and the State employment service in the minds of the Cimarron County farmers.

If this employment service could be properly handled it would be of great service to us from year to year.

Yours very truly,

WILLIAM L. DRAKE,

Secretary-Treasurer, Cimarron County
Farm Bureau

Destruction of Food Crops

EXTENSION OF REMARKS OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. FORD. Mr. Speaker, the following editorial from the Christian Century Magazine is well worth reading. I recommend that there is some excellent advice which the Congress might do well to follow:

Paging through the September 10 issue of Life, we came on an arresting full-page picture in reds, yellows, purples and blues. It showed a bulldozer pushing 3,200 carloads of apples—the purples were the wrappers—into a 7-acre hole at the city dump in Yakima, Wash. Well, you say, haven't we all seen similar pictures—oranges rotting in great heaps in Florida and California, wheat piled in the streets of Kansas and Nebraska towns, potatoes being dyed and fed to pigs or doused with kerosene and burned? Yes, we have. And, that's the point. This sort of thing goes on every year, and it is wrong. It is a despoiling of the goodness of God and a mockery of the needs of our fellow men. Yes, we know about the law of supply and demand, about labor costs

and transportation costs and dollar shortages and currency blockades. With all these factors operating, we don't criticize the growers who destroy their gluts. But if there were enough true statesmanship at Washington and the headquarters of the United Nations, they wouldn't have to do so. If this Nation can spend \$60,000,000 a year to cope with world unrest by methods that come straight out of our cave-man past, we can spend a hundredth part of that sum to cope with the same unrest by methods which come out of the New Testament. And we can find in the United Nations an agency to see that the food we have and don't need gets to those who need it so desperately. Church peace commissions and interchurch committees on international affairs have been having a hard time finding where to take hold of the problem of world concord in such a way as to make their efforts count. May not these gluts of unwanted and unwanted food offer one place to take hold? It might surprise some Government leaders to learn that there is a Christian conscience about destroying food while millions are hungry. But if the church representatives pushed hard enough, their servants in Government would do something about it.

More Butterfly Statistics

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. SCHWABE. Mr. Speaker, the following editorial appeared in the September 12, 1951, issue of the Tulsa Daily Tribune, entitled "More Butterfly Statistics":

MORE BUTTERFLY STATISTICS

In what sounded remarkably like another campaign speech President Truman yesterday lashed out at persons who with "malice aforethought" use "butterfly statistics" to convince voters that the Truman administration is spending the Government into bankruptcy.

Do not be afraid, said the President. Everything is fine. The country is healthier than ever before.

The President specifically denied that non-defense expenditures had doubled since the war. He said they had only gone up 67 percent. He did not delineate what he considered defense and non-defense spending. There are a number of items, the expenditures of the Army engineers, for example, that could be thrown into either classification. But, using the President's own figure, he claims that the value of the dollar has dropped enough so that in real nondefense spending the Government is putting out no more than it did 10 years ago.

This is an interesting view of the Truman psychology. To help halt inflation he demands that citizens tighten their belts. That means that citizens should spend less money for their own uses. But Government is to be commended for only spending 67 percent more.

Maybe the following are butterfly statistics but they come from the United States Treasury:

From 1789 to July 1, 1941, 31 American Presidents, including Franklin D. Roosevelt, managed to spend a little less than \$180,000,000,000. In 4 years from July 1, 1945, to

July 1, 1949, President Truman succeeded in spending a little more than \$180,000,000,000.

Including the period of War War II Franklin Roosevelt, who until his death proved to be the gaudiest spender in American history, succeeded in spending an average of \$31,000,000,000 for each of his 12 years in office. Mr. Truman has spent 45 billions a year—one and one-half times as much.

The gross national product is now running at about \$280,000,000,000 a year. National product is the value in current prices of all the crops, minerals, farm produce, building material, manufactured goods, and handicraft produced by all Americans in a single year. The value is so high because prices are so high and prices are high because of the inflation that the President deplores. Yet the national debt is now so great that even at these inflated prices it would take the full labors of all Americans an entire year to equal it.

Federal expenditures now absorb more than a quarter of the national income. For every \$4 you make Mr. Truman and his employees spend \$1. This, of course, doesn't count the expenditures of State, county, and municipal governments.

Last year every man, woman and child in America paid an average of \$258 in Federal taxes alone. Mr. Truman's new tax bills would raise this total to \$432, which is 38 percent more than the highest per capita tax collected during World War II.

In terms of dollars (not in purchasing power) national income has increased threefold since 1940. But Federal taxes have increased tenfold.

It's comforting to have Mr. Truman tell us that we have nothing to fear from a new record wave of public spending that, by coincidence, will be launched in an election year. But we hope he is talking through some better experience than that which caused him to go broke in the haberdashery business and to dare his creditors to garnish his nongarnishable public paycheck from the Pendergast machine.

If a nation cannot collapse through lavish public spending then historians are going to have to rewrite history. Something else must have happened to those wrecked kingdoms that cheered for the bread and circuses without regard to cost and that now litter the road behind us.

Vincennes Flood Wall

EXTENSION OF REMARKS

OF

HON. WILLIAM C. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. BRAY. Mr. Speaker, on behalf of the citizens of Vincennes, Ind., I wish to extend to the Congress our heartfelt thanks and gratitude for the inclusion in the civil functions appropriations bill of an appropriation for the Vincennes flood wall.

The fight to obtain this wall has been long and hard. Never has a community worked more loyally as a team for this most necessary protection.

The fight to save the city from flood destruction in 1950 was an epic of the tenacity and fortitude of the great Midwest. It reflected the courage of the pioneer ancestors of these people.

We fervently trust that this project, of which this appropriation provides the beginning, can be completed in time to save Vincennes with all its homes, industries, culture, and illustrious history from destruction.

Again we humbly thank you.

China's Oatis Cases

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of October 2, 1951:

CHINA'S OATIS CASES

(By Marguerite Higgins)

AMERICANS JUST VANISHED

HONG KONG, October 1.—Anguished Americans, waiting here for news of friends and relatives in China's jails, wonder whether the United States has not adopted an international double standard regarding the Chinese Communists. There are at least 30 "Vogeler" or "Oatis" cases in China today. They are cases which would undoubtedly cause the greatest indignation if they had been perpetrated in Eastern Europe. But the sufferings of the Americans in China seem to cause comparatively hardly a stir.

In one sense, the Chinese treatment is far more cruel than the mock trials of Eastern Europe. Oatis and Vogeler, at least in theory, knew the charges against them. Their families had an approximate idea of their fate. But since January, when the number of arrests began to mount in Communist China, most Americans have just vanished. Their families have no means of knowing where they are or whether they are dead or alive.

A tragic example is the case in Shanghai of Robert T. Bryan, lawyer, former municipal advocate, and certainly one of the best known and beloved Americans in the Far East. He was literally yanked out of his bath in his Shanghai home on the morning of February 12. The Chinese secret police gave him enough time to get dressed and put together a bundle, then marched him off, ignoring the pleas of his wife to tell her where he was being taken.

Mrs. Bryan has remained in Shanghai, a lonely figure in her rapidly shrinking foreign colony. A foreign diplomat, who came out of the city last month, said she has borne up well. The only crack in her morale came one day several months ago. On that occasion she left home for a few hours and returned to find a Chinese policeman at the door, bearing the message that during her unusually long absence of her husband had tried to reach her. Mrs. Bryan was never able to confirm whether the policeman's message was the truth or mere psychological warfare.

EUROPEANS SHARE FATE

The arrested Americans are divided just about equally between missionaries, Catholics and Protestants, and businessmen. The total of 30 represents those positively known to be in prison or under house arrest. There may be more.

Although the Americans seem to be the most numerous victims, their fate is shared to a degree by all nationalities as a result

of the violent antiforeign campaign being whipped up by the government which clearly would prefer to operate its own public trials and liquidation campaigns without having to worry about observation of foreigners. It is generally conceded that the Chinese Communists aim at nothing less than the elimination of all foreign-sponsored educational, church, and medical activities. They are also moving slowly to bring about the gradual shut-down of consulates and the forcing out of foreign businesses.

The antimissionary campaign is carried out mainly by inciting Chinese to indulge in public denunciations of foreign churchmen who are then imprisoned or expelled.

The Resist United States Aid Korea Journal, published in Peiping on September 12, states that "according to incomplete figures for this area in May, June, July, and August the number of imperialist elements denounced in the accusation campaign reached 113, most of whom belong to the Catholic Church and are mainly American, French, Spanish, Italian, Belgian, Dutch, and German. The number of persons expelled from China, as requested by the patriotic Chinese religious followers and the people of all circles reached 33. Some others have been put under control, arrested, ordered to apologize and repent, or sentenced to prison terms."

The Communist Journal added: "The foreign imperialist missionaries with a saintly mask asserted that they singly devoted themselves conscientiously to the work on the propagation of religion and relief and that they were above politics. But irrefutable evidence exposed in various places has proven that these imperialists under the cloak of religion are out-and-out counterrevolutionaries. According to figures checked by the Peiping Government the number of children murdered by the foreign missionaries throughout the nation reached more than 100,000."

By resorting to such flamboyant and absurd charges, it is no wonder that a certain amount of mass feeling has been whipped up against foreigners.

The greatest scandal in China is the death in Woochow jail of Dr. William Wallace, Southern Baptist. American authorities here have been sufficiently satisfied by the evidence to report to Washington that his death was most likely the result of Communist mis-handling.

Justice Department Impedes Probe of Tax Cases

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. CURTIS of Missouri. Mr. Speaker, on the front page of the Washington Post for today, Wednesday, October 17, 1951, there appears a copyrighted story by George T. Draper, reporter for that paper, entitled "Justice Department Impeded Probe of Tax Cases, Says United States Judge; McGrath Denies It." This story ties in very closely with my remarks made on the floor recently and the extension of remarks of the Honorable PATRICK HILLINGS, appearing in the CONGRESSIONAL RECORD of October 11, 1951, on page A6354, wherein there is

reported a similar attempt to impede the investigations of a grand jury sitting in San Francisco. Today the Honorable CLAUDE I. BAKEWELL and I issued press releases commenting upon the laxity of law enforcement as the result of the failure of Attorney General McGrath to act, and suggesting his resignation or ouster.

The article from this morning's Post states that Federal District Judge George H. Moore, of St. Louis, stated that he had suggested to Attorney General J. Howard McGrath that Justice Department channels for obtaining aid in a grand jury were "dammed up and blocked up." Mr. McGrath is reported as having stated that George Moore's statements "if he actually said them" are "damnable and contemptible lies."

It is almost inconceivable to me that the head of the Department of Justice who must work so closely with the Federal courts of this country would issue such a statement or would refer to the statements of a Federal judge as "damnable and contemptible lies." Judge Moore enjoys the highest reputation. His statements and assertions cannot be lightly cast aside. This further emphasizes the absolute necessity for a thorough and complete investigation by the Committee on the Judiciary. Such an investigation must be undertaken promptly.

I am also including an editorial from the St. Louis Globe-Democrat entitled "Cover-Up Pattern," which clearly states the serious problem which confronts this Nation on this subject.

The article and editorial follow:

[From the Washington Post of October 17, 1951]

JUSTICE DEPARTMENT IMPEDED PROBE OF TAX CASES, SAYS UNITED STATES JUDGE, McGRATH DENIES IT

(By George T. Draper)

Federal District Judge George H. Moore, of St. Louis, told the Washington Post by telephone yesterday that he had suggested to Attorney General J. Howard McGrath that Justice Department channels for obtaining aid in a grand jury investigation were dammed up and blocked up.

McGrath retorted last night that Judge Moore's statements—if he actually said them—are damnable and contemptible lies.

The Attorney General said categorically in a statement to the Washington Post that he does not know the St. Louis judge, that he never met with him and that to the best of his recollection he never talked with me over the telephone.

McGrath called for any inquiry, by congressional committees or otherwise, to determine the motives of the slanderers that are behind the present campaign to discredit the Department of Justice.

It was the grand jury convened by Judge Moore which last week indicted James P. Finnegan, collector of internal revenue at St. Louis.

Judge Moore said he called McGrath last March after United States District Attorney Drake Watson complained he could not get authority from the Department for the grand jury investigation.

Watson, the judge said, claimed the Department wanted the names of cases about to be presented to the grand jury before authorizing an investigation.

"I refused to give the names and said they would be made available to the grand jury," the judge continued.

When he telephoned McGrath, the Attorney General said he preferred having such matters go through channels, the judge told the Post.

"I understand that," Judge Moore said he replied, "but what do you do when the channels are dammed up and blocked up?"

Judge Moore said he explained to the Attorney General that the statute of limitations was about to run on some of the cases involved and that he would like a definite answer from McGrath within 2 days.

McGrath did not call him back, the judge said, so he told District Attorney Watson to get in touch with the Attorney General. Watson came back in an hour or two, the judge said, and announced he had the go signal.

In his statement last night, McGrath asserted that the "Department of Justice has never acted with more conscientious concern toward its obligations than it has done in the St. Louis inquiry."

Secretary of Treasury John W. Snyder yesterday issued a statement explaining a telephone call he made to Judge Moore on March 23.

"The purpose of the call," Snyder said, "was, among other things, to request that Judge Moore talk with investigators from the Bureau of Internal Revenue who were engaged in an investigation of the office of the St. Louis collector of internal revenue."

Snyder added that "reference to the resignation of James P. Finnegan, then collector, was incidental." Snyder also reported that the then Commissioner, George J. Schoeneman, had called the judge "subsequently" to give him the names of the investigators.

Judge Moore said, when informed of Snyder's statement, that both Snyder and Schoeneman had informed him Finnegan had resigned and that the resignation would be announced very soon.

Judge Moore, 73, himself served as collector of internal revenue in St. Louis from 1914 to 1922. He is a Democrat and was appointed to the bench in 1935.

[From the St. Louis Globe-Democrat]

COVER-UP PATTERN

Mounting evidence sharply indicates that Federal officials, reaching up to Cabinet rank, used their influence to clamp a hush on the investigation of the St. Louis internal revenue collector's office.

Federal Judge Moore blocked the efforts and militantly pursued the inquiry, which has now resulted in the indictment of James P. Finnegan on charges of bribery and other statute violations.

The administration's high officials apparently consider scandal or the threat of scandal should be made top-secret. The backstage maneuvers of these influential figures reveal a shocking cover-up routine, a political cynicism that had no compunction over attempts to sway the United States court.

(Ironically, while this and other administration scandals were being front-paged yesterday, President Truman made an address at ground-breaking ceremonies for Wake Forest College at Winston-Salem, N. C., and his theme, of all things, was—"Know the truth, and the truth shall make you free." Perhaps it was in a moment of contrition that he told his audience: "God forbid that I should claim for our country the mantle of perfect righteousness. We have committed sins of omission and sins of commission, for which we stand in need of the mercy of the Lord." This was doubtless in reference to foreign affairs, but it is peculiarly applicable to recent developments on the home front.)

Former Collector Finnegan seems to have had many friends in Washington, including the President and Secretary of the Treasury Snyder. When Finnegan's activities as col-

lector and counsel for delinquent taxpayers got beyond the gossip stage, and Judge Moore demanded a hard-boiled investigation, some of these friends began to pull wires.

They were not successful, but that is not the point. They tried to smother a legitimate probe of a Federal official's activities, because it would embarrass their party and administration.

After Judge Moore had instructed a grand jury to investigate Finnegan's office, George J. Schoeneman, then Internal Revenue Commissioner, telephoned the judge that Finnegan had submitted his resignation and he (Schoeneman) would see that the collector's office was cleaned up. Schoeneman himself resigned June 28.

On March 1 Judge Moore had instructed the jury to look into tax case fixing. About the middle of March, Secretary of the Treasury Snyder telephoned Judge Moore, informing him that it was understood Finnegan would resign. Finnegan did not resign until April 4.

On March 21, after the grand jury had made its original report, frequently called a whitewash of the collector's office, Judge Moore bluntly told the jurors he was not satisfied and they had not thoroughly examined the case.

It has now been learned the report was prepared apparently at the direction of a Department of Justice assistant, Ellis N. Slack. After the report was drafted, it is said District Attorney Watson read the document over the telephone to Slack. This Slack denies, the district attorney refuses to deny or confirm.

It is further reported Attorney General McGrath was loath to cooperate with the grand jury in the Finnegan investigation, though he later gave full assistance.

No wonder then that Judge Moore told the jury it had not received "the support and guidance you should have received from some quarters." No wonder the judge bitterly scored tax evaders and fixers in Government and legal circles. No wonder he denounced to the jury on April 30 the "damnable, gnawing viper of special privilege."

The unfolding mosaic of the Finnegan case, and top-level pressures involved, adds up to a disgusting design for a hush-up of a grand jury and the Federal bench. That it failed is no fault of political influence artisans.

Kansas-Missouri Flood Victims

EXTENSION OF REMARKS OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. BOLLING. Mr. Speaker, included herewith is the letter sent by the distinguished American artist, Thomas H. Benton, to each Member of the House and Senate. Enclosed with the letter was an equally forceful lithograph vividly depicting the suffering of the tens of thousands of victims of the Kansas-Missouri floods. Mr. Benton lives in my district in Kansas City, Mo., and not only is he an artist of world renown but also a conscientious and public-spirited citizen.

KANSAS CITY, MO.

October 13, 1951.

DEAR CONGRESSMAN: "The Foxes," you will remember from your Sunday School days, "have holes, and the birds of the air have nests, but the Son of Man hath not where to lay his head."

It is now more than 90 days since the floodwaters hit the valleys out here. Ninety days of wrack, ruin, muck, and stink.

The attached lithograph shows what things are like, as of this day, for thousands of poor, hopeless "Sons of Man" in the Kaw River Basin. It was made for you and your fellow Members of the Eighty-second Congress. It is not for sale.

It is given you in the hope that you'll forget the academics of precedent and get out a new bill which will relieve the human side of this rotting catastrophe.

Truly yours,

THOMAS H. BENTON.

Collapse of Law Enforcement

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. CURTIS of Missouri. Mr. Speaker, these closing days are busy days. I am putting in the Record, and I hope everyone will read it, the answer I received from the Attorney General in answer to my letter calling his attention to what appears to be a serious violation by the Solicitor General of the criminal statute against lobbying with appropriated moneys.

I am also making an extensive statement calling attention to the collapse of law enforcement against violations by persons in the executive branch of Government on the part of the Justice Department. Not only has law enforcement collapsed but the Justice Department affirmatively acts to prevent others from trying to clean up the messes.

The House Judiciary Committee should immediately investigate the Justice Department from stem to stern. The Attorney General should resign. The final remedy available is a terrible thing, but I suggest if something is not done by the time Congress reconvenes for its second session in January, the first order on the agenda should be the impeachment of the Attorney General of the United States, Mr. McGrath.

On October 1 I called to the attention of the House, through a speech on the floor under special order, what appeared to be a criminal violation of 18 U. S. C., 1913, by the the Solicitor General of the United States. I read a letter which I had written to the Attorney General asking for an explanation of this action. I will read the answer I received from the Attorney General:

MY DEAR MR. CONGRESSMAN: I have your letter of October 1, 1951, in reference to the letter sent by the Solicitor General to Senator JOSEPH C. O'MAHONEY, copies of which were sent to the Members of both branches of Congress. The letter related to statements appearing in a pamphlet distributed to Members of Congress by the National Association of Attorneys General, and was intended to correct misstatements which, if not disputed, would give Congress wrong impressions as to the position of the Government on a subject of interest to every taxpayer.

You will be interested in knowing that the idea for such a letter grew out of a conversation with Senator O'MAHONEY, and

that there were several requests for it before it was completed. As soon as it was delivered other Senators made requests for additional copies, and also requested, on the floor of the Senate, that it be printed in the *CONGRESSIONAL RECORD*. You will be interested in knowing that the letter, together with the attorney's general's pamphlet, was issued and distributed as a committee print by the Senate Committee on Interior and Insular Affairs, and that it was actually printed in the *CONGRESSIONAL RECORD* on Monday, October 1, 1951 (p. 12433) at Senator O'MAHONEY'S instance, on the very day that your remarks were made in the House, including the copy of the letter to me. The request that the letter be placed in the *RECORD* was made on September 10, 1951 (p. 11069). The committee print, issued some time before your letter to me, contains a foreword written by Senator O'MAHONEY. The letter sent by the Solicitor General gives the same information in a somewhat more readable form than the small print.

We think, upon reflection, you will agree that there has been no violation of any provision of law in attempting to do everything possible to give important information to Members of Congress.

I will now read the answer which I have today delivered to him.

MY DEAR ATTORNEY GENERAL: I wish to acknowledge receipt of your letter of October 4, 1951, in answer to mine of October 1, 1951.

I am very disturbed by your answer, which openly admits the violation by your Department of 18 United States Code, section 1913, entitled "Lobbying With Appropriated Moneys." The excuse you offer for the violation is that the information contained in the 49-page document your office sent to all Members of Congress without authority and without request had appeared in a Senate Committee on Interior and Insular Affairs print and was going to appear (and later did appear at the time I wrote my letter to you) in the *CONGRESSIONAL RECORD*.

These excuses, far from being valid, make the voluntary distribution of this material seeking to influence the thinking of the Members of Congress on a piece of pending legislation even more amazing.

I do not know whether you are being facetious when you say: "The letter (of 49 pages) . . . was intended to correct misstatements which, if not disputed, would give Congress wrong impressions as to the position of the Government on a subject of interest to every taxpayer." Surely you realize that this is solely a matter for the Congress to initiate and decide. If the Congress wishes the views of the executive department concerned, it has many means at hand to obtain these views. Any lobbyist could make the same case you attempt to make. Congress will take care of whether it has wrong impressions or not.

Any sensible interpretation of the criminal statute against lobbying with appropriated money reveals that it was written to prevent just such actions as your Department has taken. I know that your Department is fully aware of the lengthy hearings held in 1950 by the House Select Committee on Lobbying Activities, which hearings are printed, where in many alleged violations of this criminal statute by persons in the executive branch of Government were inquired into. It is quite clear now why your Department made no investigation by itself of these matters nor instituted actions against the violators. The pattern of inaction of your Department on other fields of law infractions by members of the executive branch of Government has become a public scandal.

I shall place your letter and my present answer to it in the *CONGRESSIONAL RECORD* and again call my colleagues' further attention to the developments of the situation which having been called to your personal attention

meets not with correction but arrogant disregard.

The legislative branch does have constitutional recourse in such matters. Such recourse is most serious and not to be undertaken lightly. At this time, having called this matter to the attention of the House and its leaders, I shall await whatever action they may deem is necessary. If the leadership sees fit to disregard what appears to me to be a serious attack upon the dignity and integrity of this House, I shall then feel called upon to initiate action myself.

Mr. Speaker, to the people of this country this may seem to be a technical violation. To many of my colleagues in Congress who may not be as jealous as I of the independence of the legislative branch of Government, it may seem to be of no consequence.

I might state that I am sorry the matter has come to a head on such a controversial issue as that of title to the tideland oils. The question before us has nothing to do with the merits or demerits of that issue. It means nothing in particular to the people of my district in land-locked Missouri; it is only of general interest. No one has ever solicited my vote, pro or con, on this matter and frankly I am not greatly concerned about the fate of the tideland oil bill one way or the other.

The issue, of course, is whether a statute of this country devised to protect the free deliberations of Congress is to be willfully and brazenly violated. Most of you are aware of the extensive hearings held by the House Select Committee of Lobbying Activities of the Eighty-first Congress. Many of you know that lobbying with appropriated moneys by various branches of the executive department was one of the main subjects under consideration. The committee called the officials of the Government Accounting Office to see what they could do through their organization to stop lobbying activities of the various executive bureaus. It is interesting to note that Mr. Weitzel, of the GAO, though recognizing that the GAO could be of considerable assistance, stated:

The criminal provision, of course, is within the province of the Department of Justice to enforce.

The issue then becomes one of what does the Congress do when the Justice Department itself violates a law and refuses to do anything about it? But then, is this any different than the question which has been before the country for the past 2 years: "What do we do when the department responsible for enforcing the laws fails to enforce the laws?"

In my opinion there is one basic reason why graft and corruption stink up the Federal Government today. It is not that men are any more dishonest as some suggest. It is no breakdown of morals. It is simply that when grafters and corrupters are caught, or could easily be caught and the department responsible for catching and prosecuting these people refuses to or fails to prosecute them, corruption runs rife. Those who are corrupt remain in a position to continue their nefarious schemes. Those who are not corrupt, simply from fear of being punished, find that punishment is not forthcoming, and so follow suit

and become corrupt. The longer a collapse of law enforcement continues, the more persons with weak convictions follow the route to easy money.

It is not just the failure to prosecute the RFC scandals, and the Attorney General may recall my letter to him of February 14, 1951, pointing out some 21 violations of criminal statutes revealed in the Senate investigations. It is the failure to prosecute the Kansas City thugs who stole the ballot box evidence some 5 years ago in Kansas City. It is the failure to prosecute those unfaithful servants revealed in the Maritime Commission investigations, the failure to follow through on the Federal Prison Industries investigation, the investigation of certain rural electrification agencies, of the Institute of Inter-American Affairs, of the national service life program, of the war housing disposal program—what are these? Merely investigations conducted by the Committee on Expenditures in the Executive Departments of the House in the Eighty-first Congress. What about the attempt of the Justice Department to call off the prosecution in the San Francisco tax collector scandal—or the same in my own home town of St. Louis. Who is bringing these things to light—the Justice Department or the Congress? Did the Justice Department either conduct or do anything about the Kefauver hearings? What interest does the Department have in the labor racketeering ex-convicts in the St. Louis area? Why is the FBI prevented from going ahead with these investigations, even though, in this matter, the Atomic Energy Commission and the Air Force were being hampered in their program for the defense of this country by these conditions?

I do not need to list the series of stinks and odors that have been seeping into the air for the past 2 and 3 years which remain stinks and cesspools in spite of congressional investigation—all for one reason. The Justice Department has fallen down on its job. How many cases lie buried, uninvestigated and unprosecuted, in the Department today? I know of many. Why are they not prosecuted?

Gentlemen, aside from the issue of the brazen disregard for the independence of Congress bound up in this seemingly technical issue is the corruption or criminal negligence which seems to be in the very heart of the Justice Department itself.

Let us see the problem for what it is. It is time that Congress quit compensating for the collapse of the Justice Department through its countless investigations. Surely it is apparent why this Congress has been the investigating Congress. We have been trying to do what the Justice Department should be doing, but will not. Congress cannot do the job; it is not designed to do the job. The Justice Department is so designed.

In my own heart I know the remedy. It is a terrible thing for the Congress to undertake, but I suggest that, if something is not done by the time Congress reconvenes for its second session in January, the first order on the agenda should be the impeachment of the Attorney General of the United States.

A Typical Letter From a Constituent**EXTENSION OF REMARKS**

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. SCHWABE Mr. Speaker, the following is a typical letter of the many I have received from constituents and of those which I understand other Members of Congress are receiving almost daily. Our people are alarmed and concerned. They are distressed beyond words. Read what this anxious and intelligent lady has to say.

BARTLESVILLE, OKLA., October 8, 1951
Representative GEORGE SCHWABE,
House of Representatives,
Washington, D. C.

DEAR MR. SCHWABE My friends and I are so alarmed and concerned over the fate of our country that it has driven me to writing not only my Congressman, but everyone who should know the viewpoint of most of us.

We are not satisfied with the progress of the war in Korea, which is really putting it mildly. To sacrifice thousands of men in a limited war is about as heartless a thing as I ever hoped to see in my lifetime. We demand that it be pursued to a rapid and successful conclusion with every weapon available to us.

We know from what we read and hear that the Government is indulging in wasteful and extravagant expenditures. We are anxious that every American Congressman get behind Mr. Hoover and Senator Byrd's recommendations and cut these expenditures to the bone. We are willing to make the sacrifices that are necessary under the circumstances, but the Government must set the example and be sincere in its effort toward economy.

There are books of Communist exposures by the hundreds, and newspaper items daily; the American people are well aware of the fact that the Government is not as militant in rooting out Communists and fellow travelers from important Government posts as it must be to save our country. We demand that a sincere and honest effort be made and that the job be done before it is too late.

No code of ethics will help these corrupt ones in our Government, but we demand that they all be exposed and punished.

We are against universal military training. We feel that selective service is adequate and the UMT would give subversives still an additional opportunity to reach our boys easily. As long as selective service does the job there is no reason to add another means of withdrawing some of our liberties.

I hope you will continue your fight for the American way. I hope you will not find it amiss when I say that I will remember you in my prayers so that you will continue to have the strength and courage which is demanded of you.

Address Before the Kern County Republican Central Committee

EXTENSION OF REMARKS

OF

HON. THOMAS H. WERDEL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. WERDEL Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following address by me before the Kern County Republican central committee on Saturday, October 13, 1951:

Fellow Republicans, I was in Washington when your resolution was passed on Wednesday, September 26, 1951, condemning "me-too-ism" and parts of creeping socialism in the Republican platform. Your resolution attracted considerable Nation-wide interest. In some of the eastern papers my name, as Congressman from this district, was associated with your action.

There has been considerable comment by the press and other people to the effect that the resolution was directed against the Governor of this State, Earl Warren. There has been other comment that it is designed as a pro-Taft move for the Republican nomination in the next presidential election. Due to the fact that I will only be privileged to remain at home during the illness of a member of my family and the House may not adjourn for several weeks, your chairman, Keith McCormac, asked me to say something in connection with the resolution to the central committee before I may be required to return to Washington.

Let me say at the outset that I believe the resolution is well drafted and timely. I agree with the principles that it recites in connection with the next national election. In thinking about the subject, I believe a distinction must be drawn in connection with State-wide elections in certain States and a national election. When that is done, I believe everyone will agree that the resolution sets forth what must be done by the Republican Party at its next convention for the continued welfare of our country and what must be done by the Republican Party if it is to ever again be a strong party contending for the election of a President and control of the Congress. In connection with my remarks, I will ask you to keep in mind that until recently, the word "liberty" in connection with politics has described a condition where the individual has more rights as against government than individuals have under a different type of government. In the United States, those rights have been withheld from government by the Constitution for the individual. It is also true that our National Constitution withheld rights to the respective States as against the National Government. For 20 years, the Congress has delegated its powers and responsibilities to the Executive, which in turn has assumed more powers than those delegated. It has usurped the rights of individuals and the respective States to the point where our President now claims the right in peacetime to grant a license or deny a license for our citizens to do business in any part of our country.

I have divided my remarks into two subjects. First, "The Condition of the Republican Party," and, second, "The Condition of Our Country."

**IN REGARD TO THE CONDITION OF THE
REPUBLICAN PARTY**

The number of men in political life who have felt that they were ahead of the voters probably is measured by thousands. They each had to individually discover that in our system of government, the people are always ahead of the men in executive and legislative office who purport to represent them. The voters demonstrate that on election day when politicians they dislike are thrown out of office. The voters have also demonstrated on several occasions that they will throw out of existence organized political parties. Theoretically, and from a practical standpoint, there would have been no Republican Party at the time of its creation had the minority party, organized and obligated to oppose those then in office, drawn the issues as the voters and citizens wanted them drawn.

It is perhaps unfortunate today that the issues of 1850 were drawn by the people on a sectional basis (North versus the South). It is unfortunate today because the new political party (Republican), required at that time, became a sectional party with great power north of Mason and Dixon's line and an absence of power south of that line. It is unfortunate today because in reality there appears to be a new alignment of those citizens living outside of metropolitan areas who believe in and demand individual liberty with individual responsibility. Such people are today opposing metropolitan areas where a large majority of the people believe in socialistic trends. The Republican Party has thus become a sectional party above Mason and Dixon's line and outside of metropolitan areas. To those in America who understand and realize that the party out of power must be the opposition and draw the issues, it is significant that many local Republican leaders are willing to give ground to creeping socialism in order to increase their minority strength in metropolitan areas.

For three-fourths of a century, Republican strength was overwhelming north of Mason and Dixon's line. Its strength was so great in that section that at all times it appeared to be a national majority party. In all of its political power, it only had one President who served two full terms. It never sought to continue its party control by reelecting its President through a hierarchy of politicians buying votes with taxpayers' money. Perhaps it is also worth noting that except for men originally elected as Vice Presidents successfully running for re-election to the Presidency, the Republican Party has never successfully nominated a presidential candidate from east of the Allegheny Mountains. Today, we have experienced a rise of big-city voters with the result that the Republican Party has become a sectional majority party unable to elect a national President and thus achieve national power.

So great was the Republican strength in the Northern States that for all the time between the election of McKinley to the election of Hoover, it did not need a single electoral vote from the Southern States, or from what we call the border States. During that period, the Republican candidate never received less than 84 percent of the northern electoral vote. The defeat of Hughes was close, but even he, running from east of the Alleghenies, received 73 percent of the electoral vote in the Northern States in 1916.

It is true that the 1932 Republican defeat might well be looked upon as the result of a depression and the 1912 Republican defeat was probably the result of a party split. There are those who say that Roosevelt's re-election in 1936 was the reelection of a popular President. However, the size of the vote by which the Republican Party was defeated should be alarming to its leadership. Thomas Jefferson, a Democrat idol, refused to accept a third term in the interest of freedom. Yet, the Republicans in 1940, with all of their ancient tradition, were unable to stop the political hierarchy growing on socialism and handouts and its third-term Democrat candidate. The Republican weakness had to be admitted in 1914, when they could not stop a fourth-term candidate who was even redefining the word "liberty" to hold political power and build socialism with its regimentation of free people. The Republicans, in 1948, seeking to unseat a weak majority party candidate, were aided by a strong diversionary new party in the South and were also aided by an effective third party movement (Wallace) in the North. Even then, the Republican Party refused to draw the issues for family life and responsibility, and with nothing to talk about to educated people and with candidates only offering a slower piece-meal movement toward socialism, they were unable to deny

an electoral majority to President Harry Truman.

The aspects of the sectional character of the Republican Party are numerous and important in the coming election.

It offers a real contest in less than 404 electoral votes in the States north of the Mason and Dixon's line and in the border States. This leaves to the Democrat Party, 127 electoral votes south of the Mason and Dixon's line without a real contest. To win national majority, the Republicans need 266 electoral votes. To accomplish that, it must win two-thirds of the 404 electoral votes outside of the South. To be successful without considering the border States, it must win three-fourths of the 352 electoral votes in the Northern States.

Two hundred and seven of the three hundred and fifty-two electoral votes belonging to the Northern States are in eight large States. Those eight large States have 11 cities with populations over 500,000. There are only 145 electoral votes in the remaining 24 States.

During the presidential elections of 1940, 1944, and 1948, there were 24 State-wide elections in the 8 Northern States mentioned hereinabove as having 11 cities over 500,000 population. The Republicans won only 6 of the 24 State-wide elections. Two of the six that they won, were in New York and Michigan in 1948. When the Wallace party took a substantial Democrat vote, those two elections were won by the Republicans by mere pluralities. During those 3 presidential elections in those 8 States, there was a total of 622 electoral votes at stake. In the 3 elections, the Republicans won only 157 of the 622 votes. Without the aid of Wallace, they would have won only 91. Those States are New York, Pennsylvania, Illinois, California, Ohio, Michigan, Massachusetts, and Wisconsin.

Under present party alignment, those States are crucial to Republican victory. It is true that prior to 1932, large Republican majorities outside the big cities overcame opposition majorities in the cities themselves.

If the eight crucial States were divided between the 15 counties that make up the large cities of over 500,000 population and the remaining counties of those States, a clear picture is presented as to what happened in the 10 years following 1930 to reduce Republican Party strength. This condition is best seen in the greatly increased volume of voters in the big-city counties as compared to the other counties, and when viewed in the light of a relatively comparable population change in those counties.

State	Big-city counties	Population increase, 1930-40, all other counties	Voter increase, 1932-40	
			Big-city counties	All other counties
	Percent	Percent	Percent	Percent
New York.....	7.3	6.7	45.5	22.0
Pennsylvania.....	2.6	4.0	37.9	33.8
Illinois.....	2.4	5.1	27.0	30.6
California.....	20.3	21.1	45.0	43.4
Ohio.....	1.3	4.5	50.1	23.4
Michigan.....	6.7	9.7	34.8	20.7
Massachusetts.....	1.9	2.5	29.8	27.9
Wisconsin.....	5.7	7.1	35.4	21.3
Together.....	2.6	9.5	41.6	26.4

It is also interesting to observe that since 1940, there has been a very minor variation in the total popular vote for presidential candidates of major parties in those eight States. Since 1940, the State-wide variation was only 377,000 in more than 26,000,000 votes. In those 8 States, since 1940, the total vote was 26,560,000 in 1940; 26,214,000 in 1944, and 26,183,000 in 1948. The most

important characteristic of this comparison, however, is that the Republican vote was more stable than the Democrat vote. The Republican vote varied only 46,000 out of more than 12,000,000. The Republican vote in the large 8 States was 12,562,000 for 1940; 12,538,000 in 1944; and 12,584,000 in 1948. Perhaps the most sound measure of Republican strength in those eight States is best found by comparing the effective Republican vote State-wide to that vote inside the big-city counties and outside the big-city counties. If that measure is used, voters will see revealed the ideological conflict in which we are engaged that has reduced the Republican Party in 75 years from its position of a majority national party, even though just a sectional party, to its present position of a sectional party above the Mason-Dixon line and outside of the big cities. However, it is now a minority national party.

Republican percentage of effective vote¹ in last 3 elections

State	Year	Entire State	Big-city counties	All other counties
New York.....	1948	46.3	36.6	60.4

¹ Vote for major presidential candidate.

We have heard many students of current political affairs say that there are many millions in the United States who do not exercise their franchise to vote. Those spokesmen leave the implication that if those citizens would vote, the Republicans could easily win. In the absence of the Republican Party drawing issues through competent candidates and an understandable platform, so that the average everyday American can understand that the present creeping socialism does not mean increased liberty and progress, but is, in fact, reaction, those spokesmen are utterly and completely wrong. If we look at the actual facts presently existing in the eight large States, we can best see what the Republican prospects, among known voters in those States, are, unless the real story is taken home in behalf of responsible family life.

There was slightly more than 60 percent of the total population of the United States that were citizens over 21 years of age in 1940. That 60 percent represents the maximum potential vote. However, it would be substantially reduced by the many legal qualifications of voters in many States and because of illness and other causes of absenteeism on election day. If we compare the big-city counties of the eight large States with the other counties of those States, it is apparent that in the geographical area, where the Republicans are weak (big-city counties) we also find the area where the largest reservoir of potential voters exists. This seems to explain why a low vote helps Republicans and why a general get-out-the-vote cam-

paign will not benefit them. It should also be noted in the following table that the voters in the counties outside of the big cities of five of our eight large States represent a higher proportion of the total population of those States than do the voters of the big-city counties of those States. Those five States are New York, Illinois, Ohio, Michigan, and Massachusetts.

Percentage of the total population voting for major presidential candidates

State	Big-city counties		All other counties		Point gains	
	1932 ¹	1940	1932 ¹	1940	Big-city counties	All other counties
New York.....	32.2	43.6	45.2	51.7	11.4	6.5
Pennsylvania.....	29.0	45.6	30.0	38.9	16.6	8.9
Illinois.....	41.8	52.0	47.8	51.9	10.2	7.1
California.....	41.9	50.5	37.0	44.2	8.6	6.3
Ohio.....	30.8	45.7	41.1	48.6	14.9	7.5
Michigan.....	28.8	36.3	38.0	41.8	7.5	3.8
Massachusetts.....	33.7	44.5	38.1	47.6	10.8	9.5
Wisconsin.....	35.8	45.8	38.6	44.5	10.0	5.9

¹ Calculated on 1930 population

When considering this subject, it should be remembered that these 8 large States together have 207 electoral votes—only 59 less than a majority of the electoral college. It should also be remembered that these States are crucial to the Republican Party as the parties are now aligned. These States are the source of Republican defeats at the hands of the big-city majorities. This condition cannot change, so long as those States do not draw the issues in statewide campaigns and so long as the Republicans of those States take the "me-too-ism" of creeping socialism among Republicans seeking national office.

It is to be assumed that Republicans believe their party will continue in existence. Yet, we find that many Republican leaders in local areas who display interest in politics only at election time, feel that we must win elections by offering a platform with sufficient "me-too" socialism to the people of metropolitan areas, in order to control the electoral votes of the eight large States. This is ridiculous, and from a political party standpoint, means party suicide. In this connection, it should be remembered that the House of Representatives has been conservative for the past 10 years on all vital issues. President Truman claimed a mandate as a result of the 1948 election. The Eighty-first Congress elected that year killed his program. Informal alliances of Republicans and Southern Democrats took negative control of both Houses of the Congress to stop New Deal and Fair Deal socialism. The fact that those alliances occurred frequently on all important issues, and the men who participated in those alliances were later not defeated at the polls, is evidence that this country is still a conservative country.

A majority of the people of the United States want family responsibility, they want to enjoy the results of thrift; they will demand that the issues be drawn by the opposition party (Republican) against this administration's socialism. That opposition throughout the Nation will cast off the Republican Party as useless if it elects a "me-too" President in 1952, who brings the Congress of the United States a substantial amount of Harry Truman's Socialist program in January of 1953. The Republican Party will be cast off as useless because it will have destroyed all organized opposition to Fabian socialism in the National Legislature. When that time occurs the Democratic Party of the House and Senate will be under the control of the intellectual social planners. The new Republican administration offering creeping

socialism will have control of the committee structure and the House structure of the Congress. Yet it is to be presumed that at least 100 Congressmen from South of the Mason and Dixon's line and the border States will be joined with over 150 Republicans in opposition to such a program. The economic state of the Nation under such circumstances will demand an organized political opposition to the new Republican Executive and the winning Democrat Socialists out of power but still controlling the Democratic Party. Such condition will no longer be able to operate through informal alliances. The

new structure will necessarily have to be formal, so that it may operate in a manner to control the Senate and the House of Representatives.

The foregoing thoughts prompt the question: What is the location of the conservative strength in the United States? It can be seen in the party division of House seats in the geopolitical sections of the Nation. The big-city majorities do not have the political strength by congressional districts which they wield in the electoral college. In the electoral college they (big-city majorities) wield a strength far beyond their numbers.

Party division of seats in House of Representatives with Republican losses in 1948 and gains in 1950 elections by sections of the United States and subsections of Northern States

Area	Total House seats	80th Cong		Republican gains		82d Cong	
		Democrat and other	Republican	1948	1950	Democrat and other	Republican
Entire United States	435	180	246	-75	28	236	199
41 Southern States	105	104	2			104	2
6 border States	42	22	20	-15	5	32	10
32 Northern States	288	64	224	-60	24	101	187
Subsections of the 32 Northern States							
In or partly in big cities of over 500,000 population	177	35	42	-22	8	50	28
Including all or part of cities of 250,000 to 500,000	21	7	14	-7	2	12	9
All other seats	190	22	168	-31	14	39	150

¹ 78 seats in 81st and 82d Congresses due to Illinois redistricting.

² 189 seats in 81st and 82d Congresses due to Illinois redistricting.

In discussing this subject, it must be remembered that the southern Democrats are also a sectional majority party. They are so strong in the 11 Southern States that they can and do defy a Democrat President. The elected Representatives from those areas defy the President of their party without any danger of defeat by Republican opponents or other Democrats on their own primary ticket. They are more conservative than many Republicans. It seems obvious that it is an understatement to say that this strong sectional majority in the South should be joined with the sectional majority of the North in order to give the majority of the American people what they want in free government. The fact is that either those majorities will be joined by a proper opposition from the Republican Party to creeping socialism, or one of three results will occur:

1 Multiple party government at the national level will occur, requiring a coalition of parties to control the Houses of Congress. This would give the Southern States terrific power because our Government would not fall if the coalition fell, as is the case when a Prime Minister is chosen in England and other countries;

2 The Republican Party will commit suicide by successfully nominating and electing a me-too candidate in 1952, or

3. The failure of organized opposition on the part of the Republican Party will result in the Executive acquiring so much power that government as we know it under our Constitution will no longer exist.

There are 22 Southern Senators and 47 Republican Senators (about 7 Republican Senators are accepting piece-meal socialism). It, therefore, appears that 62 Senators, out of 96, presently in office, are opposed to the present policies of the administration and past me-too Republican platforms. They, of course, lose much of their power because they are not bound as a party group operating under the rules of the Senate. They do not caucus together and establish a program.

There are 103 Members of the House of Representatives from the South. About 35 Republican Representatives, out of 199 presently in office, cave in on some of the Socialist program. It is thus seen that where

218 represents a majority of the House, 267 Members presently vote conservative. Their strength is also lost because they cannot operate as a party unit under the rules of the House.

Recently, polls taken indicated that a majority of Republicans favor some kind of formal tie-up between Republicans and southern Democrats in the Congress. A Gallup poll of January 21, 1950, on the question of a new party under a new name, showed that 50 percent of the Republicans and 40 percent of the southern Democrats having opinions, were in favor of so drastic a political change. It is, of course, true that a change of the rules under which the Houses of Congress operate, might provide a formal alliance and not require a change of party label. It has been suggested that the present two-party system by which the Congress is operated and responsibility placed on the party in power on election day should be changed. This seems utterly ridiculous because we need a responsible two-party system where our Government cannot go to the people except at a presidential election every 4 years. If the Republican Party will draw the issues in their platform and provide a candidate who believes in the American system of government and is respected for his ability, his honesty, his training, his integrity, and his belief in responsible family life, they will then offer to the Southern States the program for which the Southern States fought a Civil War and will also offer the opposition demanded in the South to the present administration. It is the writer's opinion that the Republican Party cannot enter into any such alliance without eventually destroying itself just as it will if it again fails to draw the issues in 1952. Any alliance with the elected representatives of the South by Republicans from the North, would either destroy the two-party system by which the Congress operates or would eventually destroy the Republican Party.

CONCLUSION

The Republican Party, in 1950, lost the tenth of the last 11 congressional campaigns in the sense that it failed to gain control of the House or Senate. The Republican Party lost five out of the last five presiden-

tial contests. It is, therefore, at the present time, a national minority party. It is a national minority party because it refuses to draw the issues for responsible family life against creeping socialism and regimentation even though its leaders know that a majority of the people of the Nation are demanding that those issues be drawn. The Republican Party confuses itself by looking to its unusually strong sectional power. In the section north of the Mason and Dixon's line and outside of metropolitan areas, it is a sectional majority party. If it is to again become a national majority party, it must stand for those issues desired below the Mason and Dixon's line and oppose the trends destructive of the individual liberties of workingmen. On November 7, 1950, the Grand Old Party won 187 seats in the House of Representatives, in the 32 Northern States, to 101 for the Democrats. However, in the five border States of Maryland, West Virginia, Kentucky, Missouri, and Oklahoma, they won only 10 out of a possible 42, all of which were anti-welfare State seats. In the 11 southern States violently opposed to the administration's program, the Republicans won only 2 out of 105. The Republicans have not drawn the issues since the campaign of Alf Landon. If they had been drawn for the last 12 years, it is reasonable to assume that the Southern States would now be joined with us against the carpetbaggers in the White House. This, of course, would require the Republican Party in its national platform to admit the realities of local control of police programs and race issues.

When this session of Congress commenced, Senate seats were divided 45 in favor of northern Republicans to 19 for their northern opponents. This, of course, is an overwhelming majority. However, in the border States, there are eight Democrat Senators to two Republicans, and in the Southern States, the Republicans do not hold a single seat. Twenty-two of those seats are now held by Democrats who must oppose this administration with the Republicans, if they are to be reelected in the South.

If the Republicans are to win a majority of the seats in the House of Representatives (218), they can only lose 70 seats in the Northern States. In the Northern States and the border States combined, they can only lose 112 of the 330 seats involved. If they fail to draw the issues and take the story of creeping socialism and demagogery to the everyday American workingman and his wife, the Republican Party is not strong enough to overcome such handicaps. Under such circumstances without third-party movements such as the Wallace movement and the Dixiecrat movement in 1948, there is no reason to believe that the Republican Party alone can ever again elect a President of the United States.

There are those who believe that the fact that Republican nominees have won gubernatorial elections in large States like New York, Pennsylvania, and California, while giving lip service to much of the welfare state of socialism, is evidence that they can win a Presidential election in 1952. It is submitted, however, that men are sometimes elected to office when a majority of the people are not voting for him but are voting against his opponent. It is also submitted that such actions by the opposition party (Republican) can be undertaken at the State level without disastrous consequences. However, if the American people elect a "me-too" candidate and a "me-too" platform at the national level in 1952, in order to avoid corruption, pervers in office, police action wars involving our whole economy without the consent of Congress, it may well represent the last bid of the Republican Party in a national Presidential campaign. If the American people have no choice but to throw out present corruption and socialistic philosophies, and accept as the only

alternative, 50 or 60 percent of the same program, they will have wiped out the present political party organization that is supposed to represent, and is obligated to represent, organized political opposition to creeping socialism. The vast majority of the American people that are electing a conservative Congress demonstrate that they still believe, as the English-speaking people have believed for several hundred years, a liberal political movement means more rights and responsibilities to the individual and his family with less interference by government. There will be no political miracles in the next election except for those Republican leaders who want the power and prestige of office. Even then, it will not be a miracle. The vast majority of the American people will be voting against our present Socialist administration. They will evidence their desire to vote against the welfare state that the Republican Party has offered them in the last three Presidential elections. A few people may gain power as Republicans, but the Republican Party and its grass-root workers will go out of power.

We have all heard many people say that there is a worldwide resurgence toward conservatism. Yet political history demonstrates that that resurgence is for individual responsibility and rights as against government. That movement has always been identified as liberalism in political history until the New Deal, Fair Deal, and Republican "me-too-ism" changed the definition. Those Republicans who believe that the world-wide resurgence just mentioned will lead to a successful Presidential campaign are wrong, when they assume that the United States will also display that conservatism. The fact is that those people have not studied the elections of the House of Representatives for the past 10 years hereinabove analyzed. The American people have voted conservative by a vast majority for that 10-year period and have been given piece-meal socialism by an Executive elected by the unit-vote system of many large States in the electoral college.

There are other Republicans who point to the last Presidential election to show that small shifts of popular votes in many States would have put the Republican column in control of the last election. By this arithmetic, they convey the impression that the Republicans lost by a very narrow margin. Thus, many point to the fact that Ohio was lost by only 7,107 votes in 1948, and California, by only 17,865. They completely overlook the fact that Henry Wallace was in that race as a third-party candidate. If Wallace had not run, Ohio would have been lost by at least 40,000 votes, and California by more than 200,000 votes.

There are others who believe a very glamorous candidate can give the Republicans victory in 1952 by winning votes in the large northern cities without losing any of the "out-city" votes. These people are again assuming that they can write a platform that will fool a sufficiently large part of the big-city votes part of the time and at the same time, fool all of the "out-city" votes part of the time. This attitude gives no consideration to the very strong group and class antagonism aroused in the big cities by Roosevelt in the thirties. It also gives no attention whatever to the tremendous increase of voters in those cities among people, who, even in 1932 had taken no part in the oldest political disputes between Republicans and Democrats in the conduct of national affairs. These people do not see that the old inter-party disputes between Republicans and Democrats have been completely swallowed up in the new intraparty ideological conflicts presently existing in the Republican Party. This intraparty ideological conflict is best described by the phrase of "Liberalism versus socialism."

Unless the opposition party (Republican), through a well-trained, and well-respected candidate, and a sincere, forthright and honest platform, carries the story to the voters of the metropolitan areas, the voters of those areas will be justified in believing the statements of other politicians, dignified by the cloak of public office, who tell them that it is all right to covet your neighbor's goods, so long as you do it in political groups called unions or political parties, and that is all right to steal your neighbor's goods so long as you use only economic force. Those of us in the Republican Party from the out-counties must insist that the Republican Party draw the issues against all of the demagogues' carpetbagful of bills for FEPC, socialized medicine, public housing, economy of scarcity, etc.

If these issues are drawn, the present condition of our Nation can be disclosed to the American citizens in metropolitan areas. The condition of our Nation will demonstrate to those citizens that the program of this administration is against the interest of the workingman and his family. It will demonstrate to them conclusively that it is the workingman that must protect individual liberty if it is to be saved. It will demonstrate to him that the average businessman will buy anything that he can mark up and sell for a profit, including regimentation and socialism. To fail to draw the issues in this eleventh hour is to shirk our responsibilities as the opposition party in free Government. It is no excuse to say that the economic questions are so complex that the workingman, being deceived by a left-wing press, is not qualified to understand. Such an attitude is an admission that Lord Macaulay, the New Deal, the Fair Deal, and our present labor barons are right when they assume that the vast majority of Americans are not fit to be free because they are poor.

IN REGARD TO THE PRESENT CONDITION OF OUR COUNTRY

We are completing about two decades of planned economy. Even though history records that movements and revolutions for liberty were to establish more rights in the individual as against government, liberalism today has been redefined. Many of our Republican leaders participate in this new liberalism which tolerates the usurpation of individual liberties and responsibilities by executive departments of government. Liberty means government according to laws passed by free legislatures, whose members are elected by free people and whose laws can be enforced in local courts by poor men. Under such circumstances, free government requires an opposition party in its legislature. It requires members of the legislature who desire to be defeated in supporting what they believe to be the true principles of individual freedom. Since our theory of government assumes that the States will determine who should represent them in the Houses of Congress, the policies and principles of the executive heads of the respective States greatly affect the position taken by Republican Members of Congress when the chief executive of their State is Republican. The fact is that many of the Republican governors of our larger States have assumed they are "Mr. Republican" in their State and have sought to stimulate left-wing support in their metropolitan areas by offering their version of creeping socialism and the welfare state. The result has been that Republican opposition to the congressional practice of delegating its powers and responsibilities to the executive and tolerating the usurpation of individual rights by the executive has been too feeble. It is not looked upon as the party in which the stalwarts of liberty can place confidence for opposition to regimentation.

The result is that we now have what is referred to as big government. It represents concentration of power over the 48 States and their local communities as well as all business, and even the individual citizens by bureaus in Washington. This transfer of power is accelerating at a startling pace. It is coming so fast it escapes notice and is being taken for granted by many people.

This trend, to those who read the lessons of history, constitutes a threat to our system and form of government and to the liberties of the individual citizen as great as any peril we may face from communism in foreign countries. Perhaps the difficulty is that our attention is so centered on the threat to the free world from world communism that this other insidious threat gets little attention.

The process was hastened by the device of the States matching Federal dollars on road-building programs. Those building power in Washington spread that device to cover social programs, the entire scope of security, pensions, and so forth. These Federal dollars, matched by the States, were not a gift from Washington, but were dollars from the standards of living of the people taken first to Washington and returned in part to the State or local levels. An average of 15 percent of such moneys are retained in Washington, for high bureaucrat salaries and political purposes. The big point is, however, that the Federal Government always insisted on retaining complete power over every fundamental principle involved in these matchings. Big Government or bureaucracy began interfering with and dictating almost everything that had been regarded as local responsibility. About the only field untouched today is education and the bureaucrats are reaching out to control education from Washington.

Thomas Jefferson is accepted as almost the patron saint of the Democratic Party. It was he who pointed out that in excessive taxation and more excessive spending lay the great threat to the individual citizens from the tyranny of government. It is the party that looks to Jefferson as its philosopher which has gone completely wild on big government, big bureaucracy, and which seeks to give Washington unrestrained power over the individual citizen. Recently, Dene Malott, president of Cornell University, pointed out that a new Federal Government employee was going on a payroll every 45 seconds, 24 hours a day, 365 days in the year. He also reminded us that as of today, one person in four received a check from the Washington Government in some form or other. We should bear in mind that hundreds of thousands of our citizens also receive checks from State and local governments. It goes without saying that with millions of jobholders and with more millions of check receivers, there follows the attendant concentration of political power in Washington, even though we must admit that many of the jobholders are necessary and many of the checks otherwise received are doubtless worthy. However, that was the whole strategy of the new deal, and it has been carried to excessive extreme by the so-called fair deal. It is the use of Federal spending and Federal payrolls to perpetuate the existing regime in power. Some Republicans say that explains much of the last three presidential elections when the Republican Party did not oppose them with forthright platforms and bold candidates willing to be defeated on the issues. They say the cards are stacked against a change in behalf of the Republican Party. However, the cards are not stacked for an opposition party drawing the issues for all of those people who elected an opposition House of Representatives for the past 10 years. It is not literally true that if you spend enough

and put enough people on the payroll, you start off with an advantage that is almost impossible to overturn. Such tactics breed corruption, which is seen even by those working for Government. That is the only reasonable explanation of why the Maryland counties and Virginia counties, where Washington employees reside, voted substantially against the President and his administration in 1948. Those people were alarmed. They did not have to rely on a deceptive press nor did they need a bolder stand by the "pushy-footing" Republican Party, because they saw with their own eyes and as Americans rose to the issue.

It is pretty generally agreed that had the President not declared war without the consent of Congress last year, we would have had a price collapse due to overproduction at the present time. Such a collapse would have been relatively certain before November 1952. His action in sending the boys to battle required the Congress to finance them. He has now issued the call for 3 more divisions in the Army, making a total of 21 divisions called to that service. He has successfully forced through Congress a budget which, together with power for contract authorizations, totals about \$97,000,000,000. This represents two times the amount of the total national income about 15 years ago. It probably represents more durable goods than the American industry could produce in 1 year if it did not produce anything else. Yet, it has been placed on top of our peacetime economy, so that the industrial East heretofore politically regimented at the expense of the consumers of the United States, may have wage increases and higher prices. Such industries will stay in black ink by virtue of this tactic until after November 1952. Even though we are supposed to be at peace, our people will pay to the Federal Government, when the new tax bill is added to the present one, more than twenty billions a year above the amount paid by this Nation at the height of World War II. That additional twenty billion represents about \$570 for every family in America. We have reached the point in Washington where even those writing the tax legislation believe that little more can be squeezed from the patient taxpayer short of confiscation.

It should be obvious to everyone that when business is drained so heavily to face the exactions of Washington, peacetime business cannot make the expansions and produce the broader economy this Nation must have to keep growing and absorbing in useful jobs the millions of people that come into the employment army every year. There is only one result. More borrowing by business is necessary, and if that is not possible, then borrowing from Government will be accepted. This increases again the Government's heavy hand in control of our business, our jobs, and our everyday life. To those Republicans in the opposition party who still believe that we must say "me too" but that we will do it better and for less money and for less taxes, the important question is: Why does this system keep going? They justified past "me-to-ism" as a means to tide our country over until its people are awakened. They overlook the fact that the average citizen will not be aware of these problems unless the opposition party draws the issues with respectable citizens and debates the merit of political measures in an open and free press.

The average everyday housewife must be given an opportunity to understand that there is \$500 in taxes in a workingman's automobile, together with about \$400 in wage differential paid to coal miners, auto workers, steel workers, and electrical appliance workers, and others where labor barons are supposed to turn over the vote. They must be made to understand that milk is 20 cents a quart because it is half taxes; the same is true of meat, clothing, ice boxes, refrigera-

tors, etc. As long as the opposition party seeks to fool the people part of the time on election day, this tactic will continue. As long as employment and high wages can be handed out by spending moneys to be earned by our children and grandchildren at a time in world's history when no other country will question the value of our bonds or currency, the smash can be avoided. However, it can be carried on only by continuously augmenting inflation. The Government heads in Washington have talked much about the dangers of inflation. They have talked more than anyone else in the United States. Yet it is the very policies laid down by those officials and carried forward by them that have brought on inflation. The only way they have been able to collect this tremendous increase in taxation and national income of the people is by cheapening the dollar. It is true that the Eighty-first Republican Congress took about 8,000,000 low-income earners off the income tax rolls by increasing allowances, etc. However, it is also true that this administration has put them back on the income tax rolls without the consent of Congress by cheapening the dollar, reflected in increased salaries, which put those people on the rolls as taxpayers, even though they receive no additional actual purchasing power.

The result of these Government policies, unopposed by Republican "me-too-ism" is obvious. Business tries to keep up by raising prices. However, the huge new taxes make that almost impossible at the present time. Organized labor tries to keep up by forcing another round of political wage increases in those areas where labor barons are supposed to turn over the vote. These efforts of business and labor are reflected in higher prices. The farmer has insisted on parity, which is determined by the cost of things to him, so we have the mad race of the big groups which produce necessities. They help themselves to keep apace with the cheapening dollar or to get ahead of the other groups on condition of political friendliness. This is at the expense of the consumers generally in the country, 45,000,000 of whom are not in organized labor and many millions of whom, even though in organized labor, do not get the political pay-off.

The sad part of the story is that someone has to foot the bill. At the present time, it includes those making 75 cents an hour or less. There were 12 million of those in interstate commerce alone last year. However, the people paying the heaviest today are those who in their youth felt that they had a contract with Government in that they would work hard, be thrifty, and provide for their old age and family security with Government protection. It is those on fixed incomes, the thrifty who laid away for their old age, the retired, those living on fixed salaries, who are the victims. Since 1939, and that's only 12 years ago, the dollar has dropped to where it is only about 53 cents of its 1939 purchasing value.

Is it too much to ask of the opposition party that they say boldly that the "welfare state" in United States has already confiscated nearly half the life savings of the thrifty people of this country and those who by individual excellence raise the standard of living for all of their neighbors, including incompetents. Even the millions that bought savings bonds have contributed their toll. This is the field where the first confiscation of the people's money has fallen. It is the field which history tell us always falls prey to Government tyranny. If we ask who will be next as the tax hand falls heavier and as spending increases, the answer is obvious. If Washington took every dollar that anyone in United States made over \$100,000, it would only acquire enough new money to operate our national Government for about three hours at last year's

cost. If it took every dollar earned by anyone over \$10,000, the additional revenue would run our country for about three and one-half months at last year's cost. If the President's request for an additional \$10 billion dollars is granted, it will require taking practically all of the money anyone earns over \$4,000. The absurdity of the whole program is that there are billions for spending abroad, but not enough to take care of flood victims at home. Can anyone in the Republican Party believe that many thousands of voters in metropolitan areas, understanding these facts, will not support the Republican Party when it is the only method by which individual citizens can save sufficient money to invest in private enterprise? From the foregoing, it should be obvious that when the President said, a year and a half ago, that he was going to increase the national income beyond \$300 billion dollars and the average person's income to a minimum of \$3,500 a year, he was going to cheapen the dollar so as to collect additional taxes in terms of dollars for his political machine.

There is no doubt but what Thomas Jefferson was right. The power of taxation thus used is the power to rule, unless the people rise up and smite the spenders. They have no opportunity to rise unless the opposition party draws the issues for them on election day. If the opposition does not draw those issues next November, the people will smite the opposition party and create an organization that will draw the issues for them, just as they did in 1850. Every nation in the world that has felt the heavy hand of tyranny, knows that unlimited taxation is the power to rule.

There are other phases of big government presently existing which are just as alarming to thoughtful people looking to the future. The keystone of liberty is free speech and free press. Under the Constitution, it is the States who determine who should represent them in the Congress. When the Constitution was drafted, the United States Senators from the States were looked upon as ambassadors of sovereign States. Yet, we see presently a strong movement in the United States Senate to throw out Senator Joe McCarthy of Wisconsin. Yet, he was sent to the United States Senate under the constitutional right of the people of Wisconsin to choose him as their representative. That is a decision that should be left to the people of Wisconsin in the American way. In World War I, President Wilson said we need no censorship even in military matters, in wartime. What we need is more information going to our free people. Even in World War II, the New Deal and Fair Deal would not ask for the imposition of censorship. The newspapers were called in and a voluntary censorship was worked out to protect the national security. Today, while we are in peace, the White House, by Executive decree, has ordered not merely that the Defense Departments classify material for security reasons, but every civilian branch of the Government. The express purpose of the order was that it was an endeavor to keep our secrets from the enemy. Yet, it gives every civilian branch of Government power to classify. It gives them power to withhold from the Un-American Activities Committee, from Joe McCarthy, from Sen. Pat McCarran, and other investigating executive personnel and policies corroborating governmental information establishing the truth of subversive and inefficiency in Government. It gives the dictatorial powers of Hitler, Napoleon, Mussolini, Stalin, and all other totalitarians, to the Administration. This is the power to lock up material they don't want the public to know about. Only a few hours after the Executive order came, a directive from the Office of Price Stabilization instructing its bureaus to give out

nothing that might embarrass the Administration, was issued. It was so raw that it was almost immediately countermanded.

However, the incident gives the tip-off as to how Government can use this new Executive order. The American people must be given the right to express themselves against the symptomatic order of the Office of Price Stabilization above-mentioned. They know that power breeds the lust for more power and more such orders. We are all rightly concerned about the power of world communism. By growing government creeping insidiously, encroachments of government made through taxation, through reaching out for more controls and powers, will affect the everyday citizen in his living and his future. It will not profit us if we should keep the world free and lose our own system of dignity of individual freedom and family life.

We have seen that the Republican Party is a majority party north of the Mason and Dixon's line and outside of metropolitan areas at the present time. We have also seen that the Republican Party is, in fact, a national minority party. If it is to win the next presidential election, it must in some manner become a national majority party on election day. That can only be done by gaining strength south of the Mason and Dixon's line and in the border States, or by gaining strength in the metropolitan areas of the North.

I believe it must be admitted that to gain strength in the northern metropolitan areas will be difficult for the reason that the economy of that region has now built itself around reciprocal trade agreements which give them metals below the cost of production in our Western States. They have also built their economy around a new system of banking and Government loans at the expense of all of the citizens of America, most of whom live outside of that area. It is, perhaps, for these reasons why the New York Times, New York Herald Tribune, Time magazine, Look, Life, Newsweek, and many other publications did so much to nominate Willkie and Governor Dewey twice in the last three elections. That probably explains why they are presently slanting the news for some new international-thinking Republican candidate. Such candidate must be willing to tax our people so that military budgets can be placed on top of the civilian demands in the durable-goods industries, in order to keep those industries in black ink and continue the policy of wage differentials in durable goods at the expense of the other consumers of our country. Surely no one in the Republican Party will now hesitate to take these facts to the workmen and their wives, including those in the metropolitan areas who do not get the political payoff and at whose expense the political payoff is made. There is much other unfairness to the workmen and women of our Nation which can be explained to them if the issues are drawn through a candidate that will speak out.

There is convincing evidence at the present time that the top minds in the Pentagon believe that they must control these Frankensteins created by the New Deal and Fair Deal in the interest of national security in time of emergency. They are planning the control of our industries, our unions, our press, and our whole economy. This is military socialism. You need only talk to a well-advised man on the street to learn that he, too, believes that it may be necessary to control our labor barons and others voicing the threat of minority revolution in order that our people may eat and be comfortable. If these things are true, why then do we still have "me-too" Republicans? Why do they not insist that the Congress and State legislatures define new equitable rights that are believed to exist, into laws enforceable in local courts by poor people? Why do they

hesitate to deny the existence of certain rights by which demagogues are building revolution? Why can't we stand up and say that we need no army to control our unions, if we give a generally secret ballot to union members to elect their union officials, vote on strikes, and give the power to local courts, supported by local public opinion, to enjoin the closing down of any industries necessary to national security?

It has been only a few years since the idea of old-age pensions was growing in our State of California. It, of course, is a responsibility of Government to take care of the destitute. However, it should now be demonstrated to the people, even in metropolitan areas, that poor men with families to raise are paying 8-cent taxes on a quart of milk, a similar tax on a loaf of bread, \$3.50 taxes on a pair of children's shoes, when they have no surplus money in the bank, in order to pay a stipend every month, through taxes, to people who have \$20,000 worth of salable assets. This is an example of how all of the welfare state programs generate unfairness unless they are opposed. The Republican Party can draw these issues successfully. They probably can never win a national election unless they do. They can gain strength in metropolitan areas by demonstrating to the people that many cities are now levying an average tax per family of \$600 per year for city government, a similar amount per year for county government, \$900 per year for State government, and \$1,285 per year for National Government. They must be told that the present requests in Washington will increase that family cost to about \$2,500 per year.

What the Republican Party should do immediately is to tell the people of the Southern States that most of its carpet-baggers have joined the so-called Democrat Party; that there are a few of them left in the Republican Party who cry "me too" and say they stand for the welfare state to be operated by some executive in such manner as he may deem charitable. The Republican Party should tell the South that it is ridding itself of all carpet-baggers and that it wants the help of the South in opposition to the regimentation now going on in metropolitan areas with the support of many of the newspapers of those areas.

I have not made this statement with the view of opposing any particular candidate for the Presidency or to support any such candidate. The response that has come to the resolution heretofore passed by your committee has prompted the feeling in me that I wanted to say something to your committee about it. I know that this committee is not opposed to our governor. However, I know that this committee, like many other Republicans and many members of the Democrat Party, believe that we must have our candidates speak out on these subjects and that we should not support a candidate who fails to speak and say what we desire to hear in regard to individual freedom maintained through law and order. Finally, it is the responsibility of the Republican Party to take the true story in regard to social security to the workmen of the Nation. Those who drafted the tax bills for our present administration admit that we have reached the point of diminishing returns. That means that if we raise the tax rate, we actually collect less money. The only field left is confiscation of accumulated wealth, which action could only supply us for a few years. It is now apparent that the social security laws passed by this administration and its predecessor was merely a new system of taxation. Over \$20,000,000,000 have been collected but have been spent in the general fund to help people in Europe or any place that might have been desirable. Therefore, the fact is apparent. We need a military budget to support our economy, which cannot pay more taxes. That is a temporary

condition which must lead to depression and unemployment. When that time comes, the tax drafters of our administration have now admitted that they cannot collect additional taxes to pay the obligations of unemployment insurance.

Williams Hits Jackpot

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. BOGGS of Delaware. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following editorial from the Washington Daily News of October 9, 1951.

This is another example of the tireless and courageous efforts in behalf of good government of the Honorable JOHN J. WILLIAMS, senior United States Senator from the State of Delaware.

WILLIAMS HITS JACKPOT

For 2 years, a smiling, soft-spoken Senator has been persistently prodding the Internal Revenue Bureau into a clean-up.

In his efforts to force results, Senator JOHN J. WILLIAMS, of Delaware, has been investigating. His investigations have paid off in a series of exposures.

More than any other man, Senator WILLIAMS has forced the whole sordid Internal Revenue scandal into the open.

He has just come up with the jackpot scandal of them all. It is chapter II in the story of Dan M. Nee, internal revenue collector in Kansas City from 1933 to 1948. Nee is a partner of Ardeis H. Myers, also of Kansas City.

In chapter I, Senator Williams revealed last month how Nee, Myers, and three others chartered a new company and within 7 days had leased public property from one Government agency and leased it back to another Government agency at a net difference of \$363,000 in 20 months.

Chapter II is even more fantastic.

Senator Williams now reveals that Nee also is attorney for Myers in a tax case. In this case, the Government has assessed \$675,000 against Myers for taxes he did not pay over a period of 5 years while Nee was the income-tax collector.

"This \$675,000 outstanding tax account," says Senator WILLIAMS, "has been allowed to gather dust, first in the Kansas City collector's office under Dan M. Nee, and now on the shelf here in Washington."

There is so much dust on this case that \$170,000 of it now is noncollectible, because the statute of limitations has run.

When Senator WILLIAMS exposed chapter I of this new Kansas City story, he said the taxpayers had been taken for a ride.

He can say that again.

Letter of Donald W. Smith

EXTENSION OF REMARKS

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following letter addressed to two Members of this body, copy of which was furnished me:

WASHINGTON, D. C., October 16, 1951.

HON. JOHN TABER,

House of Representatives,

Washington, D. C.

DEAR MR. TABER: My attention has recently been called to page 12880 of the CONGRESSIONAL RECORD of October 10, 1951, wherein the following appears:

"Mr. BENDER I find in the committee print the Federal Security Agency listed here. Is it not true that this Donald W. Smith, who I understand was relieved of his post, has been taken over by Oscar Ewing's Federal Security Agency? And what is his work if that be true?"

"Mr. TABER As I understand, Donald W. Smith was released from RFC when Mr. Symington went in after Mr. Smith's connections with very questionable performances had been exposed by a committee representing the other body. Mr. Oscar Ewing apparently figures that the release under those circumstances qualified Smith to be taken in at \$42.50 a day as a consultant for 60 days in the Federal Security Agency. That is all I know about it, but those seem to be the facts. I cannot give you the exact date that he was taken in, but it was some day in September."

I am confident that neither you nor Representative BENDER intended any unfair injury to me. Consequently I conclude that you must have been misinformed as to the facts and hope that this letter will serve to set the record straight.

The portion of the CONGRESSIONAL RECORD quoted above leaves the impression that I was discharged from my position at the RFC and that I was connected in some way with questionable activities at that agency. The fact is, that my position at the RFC was abolished as a result of the recent reorganization of that agency. Although by virtue of years of prior service and veteran's preference, I had rights to other positions in the agency, I chose voluntarily not to exercise those rights. Moreover, nowhere in any Senate report or in any Senate testimony or in any other proceedings have I at any time ever been charged with any irregular activities whatsoever in connection with my work with the Government or elsewhere, nor have I ever been connected with any questionable activities of any kind.

In order that you may have a better understanding of my qualifications, I would like to outline briefly my career in the Government covering the past 12 years.

I entered Government service in 1939 with the Federal Housing Agency, and shortly thereafter transferred to the RFC, Personnel Division. I remained there until my entry into the Armed Forces in 1942. Upon my return from military duty in 1945, I was appointed Assistant Chief Placement Officer for the Corporation. Later I was promoted to Chief Placement Officer. In 1949 the Board of Directors appointed me to the position of Director of Personnel. While I was in this position the Board recommended me for the Arthur S. Flemming Award for outstanding service in the field of personnel administration. In January 1951, at the request of the Board, I was appointed Assistant Manager to the Board. I remained in this position until it was abolished in April 1951.

I am sure that you are anxious, as I am, to correct any misimpressions which may have been caused, and I trust the above information will serve to do so.

I am sending a copy of this letter to Representative BENDER.

Very sincerely yours,

DONALD W. SMITH.

Dr. Cloyd H. Marvin

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. BETTS. Mr. Speaker, it is with a great deal of pride that I call attention to the fact that Dr. Cloyd H. Marvin, president of George Washington University here in the Nation's Capital, this fall commences his twenty-fifth year as president of that institution.

I am personally proud of Dr. Marvin and his achievements because he was born and reared in my home town of Findlay, Ohio.

During this 25-year period his record demonstrates his leadership both locally and nationally in educational, national, and community affairs.

Dr. Marvin was a captain in the Army aviation service during World War I and for his services during World War II has received the United States Army award for exceptional civilian service for "exceptionally meritorious and distinguished service" as deputy director and acting director of research and development, War Department general staff, from September 1946 to August 1947.

The Cosmopolitan Club of the Nation's Capital gave him its award for community service in 1946. The citation emphasized particularly his part in bringing to Washington city the new George Washington University Hospital.

In the realm of public service he also has served as chairman of the Advisory Committee to the Education Committee of the House of Representatives; chairman of the United States Delegation to the Pan American Scientific Congress; president of the National Parks Association; and chairman of the District of Columbia Bicentennial Commission.

His education contributions on a national scale have been likewise notable.

He promoted the development of theoretical physics in this country and his leadership led to the establishment of the Washington Conferences on Theoretical Physics, annual conferences sponsored jointly by the George Washington University and the Carnegie Institution of Washington to which the world's outstanding nuclear physicists were brought. It was during a meeting of one of these conferences, held in a university classroom, that Niels Bohr, Copenhagen scientist, made the first announcement in America of the fission of uranium with the release of atomic energy.

Dr. Marvin's contribution to education in the National Capital has been no less significant. He now begins his jubilee year as chief of an institution whose growth has been phenomenal during the past 25 years. No other American college president now in office has served so long in one position.

His direction has made it possible for young men and women from every State

in the Union and from most foreign countries to obtain a first-class education in what is perhaps the richest of centers as regards the materia of education, this Nation's Capital which contains at once rich record collections in virtually every field of knowledge and which is the seat of history in the making.

I know that everyone interested in the advancement of education throughout the country, together with the residents of the District of Columbia and Dr. Marvin's many friends in Ohio, are proud of his achievements and all join in congratulating him in this jubilee year of his presidency at George Washington University.

Pittsburgh's Example

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I include the following editorial titled "Pittsburgh's Example," which appeared in the Washington Post of Tuesday, October 16, 1951:

PITTSBURGH'S EXAMPLE

Pittsburgh is giving the country a practical demonstration in how to rebuild a slump-pocked and traffic-strangled city. Its mayor, David L. Lawrence, told the story the other day at the annual conference of the National Association of Housing Officials. We think it ought to be echoed and reechoed through every American city that has permitted itself to become afflicted with blight and stagnation, and that is most of them. Certainly the story should be read with eager interest in Washington, where urban redevelopment is still in its infancy in spite of much talk and years of planning.

Two large projects involving a combined investment of more than \$100,000,000 are under way in Pittsburgh. Both are being constructed through united community effort without Federal aid. One is the Gateway Center in Pittsburgh's downtown area. A 60-acre jumble of decaying warehouses, third-rate office buildings, parking lots, rooming houses, and a worn-out hotel has been cleared by the State of Pennsylvania. Part of the land will be used for modern office buildings in a garden setting and part for new highways, bridges, and parks. The developer is the Equitable Life Assurance Society.

Mayor Lawrence says of this project:

"The community gains are very great. There will be a substantial tax increment for local government. We eliminate an unproductive area of blight, and substitute a showplace. We retain in Pittsburgh the home offices of great business enterprises, with all that means in employment, civic leadership and prestige. We got a new traffic pattern. We create an area for future growth. We decentralize in our downtown, by making the land over.

"But above all, this Gateway Center project is valuable to us as a demonstration."

Pittsburgh's second project involves the expansion and modernization of the Jones & Laughlin Steel plant with accompanying smoke- and stream-pollution control, street

changes, and the elimination of a blighted residential area. Now the city is tackling a third project that will require Federal aid and that will clean out an overcrowded 105-acre slum in which the tuberculosis rate is three times the city-wide rate. Here space will now be found for a cross-town boulevard, a sports area and auditorium, and parking lots that are urgently needed.

Mayor Lawrence attributes the success of Pittsburgh in this pioneer work to cooperation among its civic groups and businessmen. The first necessity, he says, is for public bodies to work as brothers, not rivals. Here is a hint that the numerous agencies working in this field in Washington ought to heed. No less important, we surmise, is the enlistment of leading citizens and business interests in the undertaking. Pittsburgh has set an example that deserves wide emulation.

Radio Address by Wes Izzard

EXTENSION OF REMARKS OF

HON. WALTER E. ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. ROGERS of Texas. Mr. Speaker, I arise this morning to call to the attention of the House the contents of a radio address delivered by Mr. Wes Izzard over radio station KGNC, at Amarillo, Tex., on October 1, 1951. This address is being placed in the CONGRESSIONAL RECORD for your study. It follows:

The letter-writing crusade is beginning to take shape, but the shape is somewhat different from the original suggestion made through this program about a month ago by an Amarillo registered nurse. You may remember that the original idea was to prevail upon American people in all walks of life to write letters to their counterparts in towns behind the iron curtain. An American student would write to a student in, say, Prague, Czechoslovakia. A housewife would write to a housewife; a machinist to a machinist, and so on. The letters were to be nonpolitical, simply expressing friendship and telling something about the way we live in this country; about our homes and churches and schools and so on.

Several obstacles presented themselves. First, there was the matter of language—the difficulty of having the letters translated into the languages of the various iron curtain countries. Then there was the matter of censorship: Would the letters be delivered? And some question was raised as to whether such activity might not actually place the recipients of these letters in jeopardy from the secret police.

So we decided to get in touch with the staff of the Crusade for Freedom and ask for advice and suggestions. The Crusade for Freedom is the free-enterprise American organization that operates Radio Free Europe, and is planning to expand its operations to include a Radio Free Asia. Some members of the Crusade for Freedom staff are refugees from behind the iron curtain. They know conditions there. They know what the effect of such a letter-writing campaign as was proposed here would be. So we posed the problem to the New York office of the Crusade for Freedom.

We have just received a reply from Abbott Washburn, one of the organization's active directors. And here is what he says:

There would be danger in a widespread and uncontrolled letter-writing campaign. The recipients of such letters, if they should get by the censors, would be in grave jeopardy; because, although the letters might not be addressed personally to the people who would finally receive them, the mere possession of such a letter would be dangerous.

However, the Crusade for Freedom is delighted that the people of the Panhandle are so interested in the problem of contacting their counterparts behind the iron curtain. And Mr. Washburn has made this offer: Go ahead and write your letter. Address it in general terms to a student or a businessman or a postman or a cab driver or a person in any walk of life you choose. Write it in English. And send it, not direct to the iron curtain country, but to the Crusade for Freedom. Not only will Radio Free Europe broadcast the fact that these letters are being written, but the staff will select certain letters and read them over Radio Free Europe. These broadcasts are beamed to the iron curtain countries, and are listened to avidly by as many people as can manage to operate a receiving set secretly.

Thus the effect will be that thousands of these iron curtain people will be told the story of how the Panhandle of Texas launched this great letter-writing campaign to prove our friendship for the people under Communist domination. And as many letters as practicable will be read over the air, after being translated into the language of the country to which the broadcast is beamed. Thus the effect will be much the same as though the letters actually were delivered, yet the secret police will never be able to pin down any individual as the recipient of a letter, because the actual letter will never go behind the curtain.

It occurs to us that Mr. Washburn's offer removes all the obstacles that had been posed. The Crusade for Freedom staff will handle the translations. They will, in effect, "deliver" the letters by telling the story of the campaign over the air, and reading selected letters in full, and this will bypass the censor. If any letter writer should inadvertently include information in violation of our own security, the Crusade people will catch that, too.

So let's go to work. Pick out a town in one of the countries behind the iron curtain. Pick out the sort of person you would like to write. Sit down and write your letter in English. Tell about yourself; about your work, about your church; your clubs. Don't try to propagandize, the people of Europe are sick unto death of propaganda. Don't be political. Just be friendly, and informative.

Here is something to remember: The people of Europe, particularly in the Balkan countries, have a vast curiosity about Texas. When Mr. and Mrs. Arthur Garlinghouse, of Amarillo, visited Yugoslavia last summer, they took their car with its Texas license. They told us when they returned that nothing they had or did caused the excitement that the little yellow tag on the back of their car elicited. Children ran after them down the street calling, "Texas," "Texas."

So talk about Texas. It would be great if some of you people living on ranches would write letters. Tell about the cowboys and the round-ups.

Also, there are people of many religions represented in these iron-curtain countries of Eastern Europe. There are, for example, lots of Methodists in Hungary. In fact, if we recall correctly, Ferenc Nagy, the exiled premier of Hungary, who now lives on a farm on the east coast of this country, is a Methodist. There are, of course, many Catholics in most of these countries, and there are Baptists, too, and others. The Orthodox

Church is represented in many of these areas. But the thing is that, while there is usually a dominant religion in each country, other churches are represented too, and while the church is being persecuted, the people hug their religious convictions to them in spite of everything the secret police can do.

So mention your church and your Sunday school.

There used to be Boy Scouts, or their counterparts, in these nations before the Reds banned such organizations and turned them into Communist youth groups. So some boy might write about his Scout troop, and the 4-H Clubs—we hope some of you young people will tell about the work you are doing on the farms in your 4-H Clubs, and with the FFA—the Future Farmers of America.

Write your letters, and send them either to us, here in Amarillo, or direct to the New York office of the Crusade for Freedom. If you send them to us, address them to Wes Izzard, the Globe-News, Amarillo, Tex. If you send them direct to the Crusade for Freedom, address them at 308 Empire State Building, New York 1, N. Y. We'll repeat that address: The Crusade for Freedom, 308 Empire State Building, New York 1, N. Y., and address them in care of Mr. Abbott Washburn.

The letters should, of course, be varied. Here is a sample of what we mean:

"To a Farm Boy in Czechoslovakia"

"DEAR FRIEND I am a Texas boy 15 years old. I live on a ranch in the Panhandle of Texas. We have cowboys on our ranch. But they don't always ride on horses; sometimes they ride in jeeps. I have a horse of my own named Buster. He is black, and is a fine roping horse. I am a member of what we call the 4-H Clubs. They are farm and ranch boys and girls, and each year I choose a project to follow. This year I am raising a fine Hereford calf and plan to show him in the Amarillo fair stock show. Mr. Smith, our county agent, shows me how to feed and take care of this calf. When I take him to the show I will sell him at auction. Maybe if he wins a prize I will get a great deal of money for him. In this way, you see, I learn not only how to do things on the ranch the best way, but I learn how much it costs to raise livestock, and how to make a profit by doing these things. I keep books on how much it costs me to raise this calf, and then when I sell him I will know whether I made a profit or not. Some day I will have a ranch of my own and I want to know how to operate it successfully, and that is why I am learning how to feed a calf and make money on him.

"I wish it were possible for you to visit me and for me to visit you. We could learn a great deal from each other. Maybe some day thousands of young people from Europe can come to America and visit, and we American boys and girls can visit you in return.

"Your friend,

"DICK JOHNSON."

Now that is, of course, just a sample. And we must break down and admit that there is just a tiny bit of propaganda in there—that bit about making a profit on the calf. But it is not obvious—and it certainly is the truth.

This program of letter writing should not, of course, be confined to the young people. Anybody can get in on it.

And if you are in doubt about the addresses to which you can send your letters so they will get into the hands of the Crusade for Freedom people, just write for a copy of this script. Just drop me a card and a copy of this script will be sent to you.

And while we're at it, we'd like to tell you just a bit more about the Crusade for Freedom. Its principal activity, as we said, is operating Radio Free Europe. There are, as we understand it, now three transmitters

blanketing the Communist areas of Eastern Europe. One is in Berlin, another in Frankfurt and the third near Munich. Each day at noon the sound of the Freedom Bell, which hangs outside the station in Berlin, rolls through these transmitters across the Communist-enslaved areas. It is a distinctive signal, as famous today as the three dots and a dash—the V-for-victory—were during World War II. It reminds all that hear it that there are millions of Americans who have forgotten them—millions of Americans who believe in personal liberty as a God-given right for all men everywhere. And at the end of each program four notes of the bell are heard with the words: "That was the Freedom Bell to remind you that you are listening to Radio Free Europe."

This organization is not Government-sponsored. It is a free-enterprise undertaking, but has the blessing of the State Department, which cannot cut loose and do the thing on its Voice of America that a group of free Americans can do on Radio Free Europe. For example, Radio Free Europe is constantly calling names of traitors to freedom in the various slave countries—men and women who have thrown in with the Reds and are spying on, and selling out, their friends. Refugees who have escaped the Communies tell their stories over Radio Free Europe, speaking directly to their friends in a language their friends can understand.

There is a growing realization that the frame-up of William Oatis, the Associated Press bureau manager, in Czechoslovakia may have been a direct result of the effectiveness of the giant 135,000-watt Radio Free Europe transmitter at Munich, which is beamed directly at the Czechs. It is probable that the Czech Reds hoped to convict Oatis, then trade his freedom for the silencing of Radio Free Europe.

The Czechs, you know, are an essentially freedom-loving people having had strong ties with the United States. Their Communist bosses have ground them down until their hope of freedom has become pretty dim. And it is probable that Radio Free Europe is slowly, surely, and deliberately fanning that spark back to life, and the Red oppressors are becoming desperate.

Radio Free Europe is doing a magnificent job—a hard-hitting job that the Government can't do. It sends messages back in behind the curtain from escapees, it identifies quislings by name, it spikes Red propaganda lies. It is feared by the Reds and blessed by the people who manage to hear it. Some of those Polish sailors who escaped recently to Sweden credited Radio Free Europe with inspiring them to try the dash for freedom.

There is nothing questionable about this outfit. If you are asked to support it—in fact, whether you are asked or not you should. Here is a way you can do something. If there is one question that is asked us more than any other about this world mess it is, "But what can I do?"

You can get behind the Crusade for Freedom. A lot of fine people are supporting it. General Eisenhower says: "In the battle for truth, you and I have a definite part to play through the Crusade for Freedom." And President Truman has said: "I hope all Americans will dedicate themselves to this critical struggle for men's minds."

The only way the Crusade for Freedom can operate, and keep Radio Free Europe on the air, is through contributions from the free men and women of America. It doesn't take much, in these days of millions and billions; but it takes some. And this month, throughout the United States, the Crusade for Freedom is seeking funds to keep going another year—and to build more and more transmitters for Radio Free Europe, and to launch a Radio Free Asia. Here in Amarillo

the Crusade for Freedom chairman is Seldon Simpson, World War II hero and son of Col. E. A. Simpson, who had a similar record in the first World War. Mr. Simpson's office is in the First National Bank Building, in case you want to talk to him about it.

But the thing we are trying to get over is simply that the Crusade for Freedom is a sound organization, backed by the finest patriots in the land. Don't be afraid of it. It is not, like so many groups using such terms as "freedom" and "peace" in their titles, a Red front organization. It is one of the bitterest and most effective foes of communism, and you can support it to the hilt without any qualms.

Now let's take the few minutes we have left and look in on a couple of the world's trouble spots we discussed last week and see what the new developments have been.

We've had a new outbreak since we took our quick tour last Monday night—the revolt in Argentina. We're not going to say a lot about it, though, because we don't know a lot about it. This is a good example of what happens when a government controls the press and radio. Except for a little truth that might leak out, the only information that comes out of such a country is what the dictator wants to get out, and that can usually be discounted about 99 percent. All we know is that an army group in Argentina revolted against the Peron regime, and that the leaders apparently were two generals who have been in and out of politics down there for years—Generals Rawson and Menendez. Rawson seems to have escaped. Menendez is in jail. A purge is now going on. Hundreds of politicians in and out of the army are being rounded up; and there is suspicion that the whole affair might have been engineered by Dictator Peron to justify such a purge. Anyway we can't get excited over it. Peron will be elected President again in a few weeks, and that will be that.

Incidentally, the editor of the great South American newspaper, *La Prensa*, seized by Peron because it criticized his administration, is going to speak over NBC and this station from Chicago tonight, at 10:30 o'clock. Since this is National Newspaper Week, and Editor Gainza Paz is much in the limelight, both as one of the world's foremost newsmen and a former power in the country where the revolt broke out last week, his remarks should be worth hearing.

As for the oil squabble in Iran, it seems no nearer a solution tonight than ever. The Security Council of the United Nations is taking the case up at the insistence of Britain, but do we hear any bets that Russia won't toss in a veto and block the whole deal?

In this connection, Leroy Pope of the United Press offered an interesting comparison today between the prospect of Iran's running her own oil industry and what happened in Mexico in 1938 when the Mexican Government expropriated the oil down there. He writes:

"As in Iran, the foreign oil companies in Mexico had been having intermittent rows with the Government since the discovery of oil around the turn of the century. The companies were the favorite targets of Mexican politicians, who accused them of imperialism, of bleeding Mexico, and of exploiting labor.

"At the time of the expropriation, Mexico was a bigger figure in the world oil picture than Persia. The Mexican Government company proved utterly unable to operate the wells and refineries and had no tankers in which to ship the oil. As a result many of the wells were ruined and production dropped to a trickle. Mexico soon was importing oil. Even the critical world need for oil during

the war did not enable the Mexican fields to revive rapidly.

"And today, 13 years after the expropriation, Mexico still is only producing a little more than half as much oil as before the expropriation and most of that is being sold to and handled by the companies who developed the wells, and from whom they were seized.

"When the fields were taken, the companies claimed the properties were worth \$400,000,000. The Anglo-Iranian properties in Persia today are said to be worth \$500,000,000—but the dollar would buy a lot more in 1938.

"The Mexicans claimed the properties were worth only about \$35,000,000. After negotiations lasting years, the claims of 17 foreign countries finally were paid off by Mexico for a total of about \$80,000,000. Some of the claims were settled privately, but the biggest were settled by negotiations between Mexico and the American, British, French, and Dutch Governments. But the expropriation taught the American companies a lesson they haven't forgotten.

"The companies got more than cash out of the settlements, in the long run they got the right to serve as middlemen for the Mexican oil at a sure profit whereas the Mexican Government now has to shoulder the big prospecting and drilling costs, and biggest item of all—the labor headaches.

"For it was the demands of the 10,000 oil-field workers in a strike in 1937 that led to the expropriation. Before that the Mexican Supreme Court had blocked attempts in 1921 and 1925 by Mexican Presidents Carranza and Calles (Kal-yez) to get control of the oil industry.

"The court said that because the concessions antedated the 1917 Mexican constitution, which reserved oil and minerals to the Republic instead of private landowners, the constitution could not be retroactive and the industry couldn't be expropriated.

"But after the 1937 strike, the Mexican Labor Board awarded the oil-field workers a 40-hour 5-day week with pay for 56 hours, paid sick leave and vacations, pay while on strike, free insurances, and free pensions amounting to 85 percent of their wages at retirement.

"This would have cost the companies \$12,000,000 a year.

"That seems a small sum now, but the oil companies thought the principles involved were important and did not realize that World War II was just around the corner. Oil was plentiful and cheap in 1938.

"Also the companies thought the Roosevelt administration should force Mexico to back down. But President Roosevelt thought otherwise—that it was strictly a Mexican matter.

"The Mexican courts upheld the Labor Board and President Lazaro Cardenas warned the oil companies they would forfeit their concessions if they did not obey the decree. The companies again refused, saying they could not afford to meet the new labor conditions.

"So the oil fields were expropriated.

"It was a big political victory for the Cardenas administration, but a costly one economically. The Mexicans naturally had great difficulty in getting any foreign help in handling their oil fields or selling the oil and could not do it themselves.

"Only now that the administration of President Aleman is showing an eagerness to cooperate with big foreign oil companies is Mexican oil again becoming an important factor in the world.

"Expropriation in Iran could have the same costly result unless a peaceable solution is found.

"Even if the Iranians should turn to the Russians to handle and market their oil it

might take a long time to get pipelines built across Persia to handle the oil."

We began this discussion by talking about letter writing. If you are still in a letter-writing mood, we suggest you might write some to the people in Washington—your Senator or Congressman or any friends you might have in the State and Defense Departments—about the latest developments in Korea.

Here are some questions you might ask them.

Do you realize that the 86,000 American battle casualties in the 15 months of the Korean war exceed those of the first 15 months of World War II?

Are there any plans, beyond further appeasement of the Chinese Reds, for ending the war?

Where are all those fantastic weapons our leaders have been bragging about? Are they being made for some future war that may never come, or will they one day be made available to the slogging GIs, now entering another winter in Korea, so that they can get the police action over with a little sooner?

Why are hundreds of thousands of American fighting men being sent to areas where there is no war, and where there may never be another war, while American GIs are fighting and dying in a war of which nobody, even our leaders, can predict an end?

Why, as the editors of United States News and World Report ask, are the fears of people in Europe, who could defend themselves if they would, getting more attention from Washington than the needs of American boys now fighting a war?

Are our leaders going to keep the Korean war going as a testing ground for future wars that may never develop, or for political reasons, or out of sheer lack of leadership?

Is General Bradley in Korea with plans for more appeasement of the Reds?

In short, Mr. Senator, or Mr. Congressman, or Mr. President, has anybody in authority any idea how or when we can expect an end to the slaughter in Korea? Has anybody any plans for victory?

New England's Attitude Toward Federal Policies

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the New England News Letter of September 1951:

NEW ENGLAND'S ATTITUDE TOWARD FEDERAL POLICIES

Among the more controversial recommendations contained in the report on the New England economy, prepared for the President's Council of Economic Advisers, are those dealing with Federal contributions to improve the economy of the region. As discussion of this controversial report continues, it appears that the committee's statement regarding the attitude of New Englanders toward the acceptance of Federal aid is the core of the argument.

The text of the economy report covering these subjects follows:

"In recent years, the Federal Government's participation in the economic life of the country has grown rapidly. This has been costly to New England since the Federal Government takes much more cash out of New England than it puts in. The amount involved was about \$877,000,000 in 1948, or about 6 percent of the area's income.

"Federal policies also affect the area in other ways. Insofar as farm policies raise farm prices, New England pays more for its imports of food and raw materials. Since in the last 17 years Federal policies have tended to open New England's markets to foreign competition through tariff concessions and to raise farm prices, these Federal policies tend to favor farm against industrial interests. This tendency has worked against New England's interests. In still another field, Federal policies may injure New England's interests. The Wagner Act tended to advance unionization much more rapidly in the Northeast than in the South, and the Taft-Hartley Act tends to freeze that situation."

SHUN FEDERAL AID

"We do not mean to imply that there may not be strong arguments for these policies from a national viewpoint. In fact, we insist that some of these policies are in many ways indirectly beneficial to New England. But we would point out that a drain of resources from New England, which may have been justified as a national policy in an era when New England's per capita income was greatly in excess of that in many other regions, should now be reconsidered as the differences in per-capita income tend to diminish. New England is no longer outstandingly more prosperous than the country at large. Economic change in the last two decades has gone far toward reducing inter-regional differences in per capita income.

"One of the most perplexing problems facing New England however, is its attitude toward Federal activities. In general, influential people of New England with the important exception of many labor groups are critical of Federal policies and urge retrenchment. Moreover, they do not want to be bailed out by the Federal Government. One leading New England businessman told our committee that he regretted the publication of the study of the Boston Federal Reserve Bank which showed how much the Federal Government is draining out of this area since he feared the result would be agitation to spend more Federal money on hydroelectric and other enterprises. (In New England alone there is no Federal hydroelectric development, though there are 156 Federal hydro projects in the country.) Business leaders in New England almost universally insist that the Federal Government should not support the New England economy, and that it should not drain money out of New England.

"Here is the great issue which New Englanders will have to face. They must decide whether, as Federal operations continue to expand, New Englanders should stand idly by while their income is drained off to benefit other areas and should continue to shun Federal aid of all kinds. Or are New Englanders going to seek a larger share of the Federal outlays that increase markets, reduce costs, and bring other regional and national advantages? This is an important issue which should be understood and debated more fully by all groups in the region.

"In so far as national interest dictates farm support and tariff liberalization which may be harmful to the older industrial areas, Federal policies ought to compensate for these effects in other ways, for example, by reduction of tariffs or increased quotas on food, feed, and raw materials heavily con-

sumed in the region but not produced there in quantity; by increased slum clearance and urban redevelopment aid; by advanced legislation on working hours, minimum wages, and the like on a Federal level, and by aid to retrain and rehire older workers, possibly by remission of part of old-age pension to employers of workers over 65."

RECOMMENDATIONS

"We have shown that the net effect of Federal taxation, borrowing, and spending is a loss of about 6 percent of the area's income. Two constructive approaches to this problem are obvious. First, reduction of Federal spending, to curtail the outward drain and discourage outlays which improve the competitive position of other areas at New England's expense, second, an increase in New England's share of these outlays where such an increase is consistent with the objectives of national policy. In line with these approaches we make the following recommendations:

"1. We urge the Federal Government to be as economical as possible, given the important responsibilities thrust upon it. We do not urge an indiscriminate curtailment of Federal expenditures. But we do urge the need for careful consideration of the productiveness of various Federal expenditures and the need for efficiency in the conduct of the Federal Government.

"2. We urge the Federal Government to revise its tax structure so that the tax burden will impair incentives less and fall more on surpluses and less on costs. Thus, some shifts from business to income taxes might be helpful.

"3. We urge State and local governments to consider carefully all Federal programs which might contribute toward the improvement of the New England economy or toward a higher standard of living for its inhabitants.

"We are struck particularly by the large drains suffered by Connecticut and the relatively small outlays by the Federal Government in Connecticut. We realize, of course, that in some classes of expenditures—e.g., farm aid—New England is bound to come off badly. But we are not equally convinced of the inevitable outcome in other classes of Government expenditure—e.g., river development, housing aid, aids to recreation and to small business, and similar programs listed above.

"We take this position even though we are aware that a large segment of the New England business community on principle would not ask for Federal funds. Although this attitude is probably more prevalent in New England than in most regions, we are not convinced that this is the position of the majority of the citizens. For this reason we hope this issue will be widely discussed.

"4. We recommend that the Federal Government, in its outlays, pay more attention to the needs of the older industrial regions. For example, increased outlays on unemployment insurance via a reinsurance program or a federalization of unemployment compensation would divert a larger proportion of Federal outlays to States suffering disproportionately from unemployment. Liberalization of old-age insurance and programs for retaining older people in employment would also help New England because her proportion of older people is large.

"5. Finally, any outlays which promote mobility of workers would be especially beneficial to New England. Its history in the last generation shows that the injury done by structural maladjustment would be greatly relieved if mobility of its population were increased. For example, improved employment exchanges and financial assistance to aid in moving workers would help."

**Department of Justice Lax in Prosecuting
Administration Favorites**

**EXTENSION OF REMARKS
OF**

HON. CLAUDE I. BAKEWELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. BAKEWELL. Mr. Speaker, recently the former collector of internal revenue in St. Louis was indicted and charged with accepting money from persons who faced tax difficulties and possible prosecution. This indictment would never have been returned except for the courageous insistence of United States District Judge George H. Moore, of the eastern district in Missouri. On three occasions Judge Moore spurred the grand jury on when there appeared to be a reluctance on the part of the Justice Department and the United States district attorney to push the investigation. Judge Moore's charge to the grand jury, which he delivered on March 1, authorized the grand jurors to investigate prosecuting authorities themselves when he said:

If prosecution has not been brought in cases that have been investigated and prosecution recommended by investigating officers, it may become a proper matter on investigation by you to determine why there has been no prosecution.

A former Intelligence unit agent of the Department of Internal Revenue wrote a letter charging that cases involving tax violators represented by lawyers friendly with President Truman and Secretary of the Treasury, John W. Snyder, were not being prosecuted vigorously. Judge Moore charged that certain parties in official quarters did not show much zeal in giving the grand jurors all the assistance to which they were entitled. Judge Moore in his charge to the jury used strong language when he denounced the damnable, gnawing viper of special privilege. He referred to the fact that the law had not been applied impartially and scored tax evaders and fixers in Government circles. Judge Moore also charged that this grand jury had not received the "support and guidance which you should have received from some quarters, but failed to get."

This is another instance of the dual standard of morality applied by the Truman administration. Under this system there is one set of principles and one set of penalties for all average American citizens. Those with influence in the Truman administration, however, are subject to an entirely different set of rules and penalties. They, in truth, are the princes of privilege.

The present Attorney General of the United States, J. Howard McGrath, was chairman of the Democratic National Committee before he became Attorney General. Mr. McGrath, prior to that, was the dominant figure in Rhode Island Democratic politics. Mr. McGrath knows the efficacy of political favors in building

up a political machine. In view of the fact that there has been reluctance on behalf of the agents of the Department of Justice to enforce the law, as clearly demonstrated in Judge Moore's charge, it must be assumed that pressure was put on from the top to take it easy on administration favorites. If this is a fact, the Attorney General is directly responsible. The Attorney General, as the chief law enforcement officer of the United States, must be above suspicion. He should not be subject to the charge of tampering with justice for political motives. This St. Louis grand jury case has caused Attorney General McGrath to be put in such a light that his effectiveness has been destroyed. He should resign immediately. The position of chairman of the Democratic National Committee is vacant. If Mr. McGrath wants to play politics, he should once again become the chairman of the Democratic National Committee, but he should not play politics as the Attorney General of the United States.

Recent news releases state that Judge George H. Moore, senior Federal judge of the eastern district of Missouri, has charged that the Department of Justice refused to cooperate in the investigation by the grand jury which brought about the indictment of James P. Finnegan, collector of internal revenue in St. Louis. Judge Moore stated that the Justice Department channels for obtaining aid in this grand jury investigation were "dammed up and blocked up."

The Attorney General has now replied that Judge Moore's statements are "damnable and contemptible lies." Such mouthings from the Attorney General of the United States were "damnable and contemptible" themselves and proved beyond a doubt that McGrath should be ousted immediately.

This statement of the Attorney General of the United States proves beyond a doubt that he has outlived whatever usefulness he might have been as Attorney General of the United States. He has cast a reflection upon the character of the senior district judge of Missouri, who has a reputation of being a most able jurist as well as a man of impeccable character. Judge Moore is held in the highest esteem by all the members of the bar as well as the citizens of Missouri. He is a distinguished judge and a man of the highest character and ability.

It is a disgrace for a cheap politician like J. Howard McGrath, the former chairman of the Democratic National Committee, to cast such aspersions upon a very distinguished jurist such as Judge George H. Moore. It proves beyond a doubt that McGrath should resign or be ousted and return to the corrupt political field where he fills the necessary qualifications much better than as Attorney General of the United States.

The breakdown of law enforcement, particularly in the Bureau of Internal Revenue, must be attributable to the refusal, neglect, negligence, or connivance of the Justice Department under a discredited Attorney General.

The Late Karl Stefan

**EXTENSION OF REMARKS
OF**

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. CURTIS of Nebraska. Mr. Speaker, the following statement has been sent to me by Daniel Francis Clancy—Chief Big Writer—continental chief of the Continental Confederation of Adopted Indians. It pertains to the life and work of our late colleague, the Honorable Karl Stefan. I wish to extend my remarks by including this statement:

The recent death of Congressman Karl Stefan is greatly regretted by the Continental Confederation of Adopted Indians.

Representative Stefan, who was appointed a continental councilman in this confederation a few days before his death, was the most adopted Member of Congress. He had been inducted into four Indian tribes.

My regret is expressed in behalf of the State great chiefs of our confederation—Hon. James A. Farley, of New York; Gov. G. Menen Williams, of Michigan; Mgr. Nicholas Wegner, of Nebraska; Congressman E. Y. Berry, of South Dakota; Congressman Michael J. Kirwan, of Ohio; George H. Bechtel, of Kentucky; Rod Van Every, of Wisconsin; B. W. Jolly, of Oklahoma; William E. Grace, of California; and Charles L. Anderson, of Indiana—along with members of our national advisory board, which is headed by George M. Barmann, of Ohio.

America's adopted Indians mourn the loss of a fellow, and I am sure the Indians feel the loss of a friend.

DANIEL FRANCIS CLANCY,
Continental Chief, Continental Con-
federation of Adopted Indians.
SPRINGFIELD, OHIO.

The Rights of 14,000 Farmers

**EXTENSION OF REMARKS
OF**

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. POULSON. Mr. Speaker, this editorial from the Los Angeles Times of October 10 clearly expresses my sentiments in connection with this problem in southern California:

THE RIGHTS OF 14,000 FARMERS

Rarely has a Federal officeholder expressed such contempt for Congress and ordinary citizens as was voiced here Monday by United States Attorney General J. Howard McGrath in commenting upon his Federal suit to seize water rights in the Fallbrook-Camp Pendleton area.

McGrath bluntly inquired, in effect, what harm was being done by the suit and why all the fuss?

NOTHING UNUSUAL?

The mere fact that 14,000 farmers and their families are being summoned into Federal court to try to save their water from a Federal claim of "paramount" rights apparently was of no importance to him at all.

The fact that all must hire attorneys and fight the United States Government to try to rescue their farms and homes seemingly is of no consequence. The fact that established rights dating back almost a century are being challenged with all the power and might and money of the United States Government obviously does not impress him.

McGrath, in fact, stated that there is nothing "unusual" about the suit and that the Government is not claiming anything more than a private citizen might claim.

What private citizen could sue 14,000 defendants, send deputized United States marshals scurrying across the countryside serving complaints, dispatch helicopters over the homes of thousands of defendants to take pictures, set up an office inside a military base and man it with Marine officers and snap his fingers at aroused public opinion?

CALLOUS ATTITUDE

The callous attitude of the United States Attorney General, who should be concerned with the rights of American citizens rather than engaged in an attempt to destroy those rights and the amazing disclosures made Monday before a congressional investigating committee in Washington concerning the Fallbrook case combine to indicate the necessity for renewed efforts to repudiate the doctrines enunciated by McGrath's office.

The attempted brushing aside by McGrath of the congressional committees inquiring into the Fallbrook case may of course be mere bravado.

It bears every evidence, however, of a genuine feeling of contempt for the Congressmen attempting to remedy the situation he has created with the suit.

In addition, the complete lack of a reasonable or common-sense basis for the gigantic suit was evidenced again in Washington when an official spokesman for the Navy testified that Camp Pendleton needs only about 4,000 acre-feet (an acre-foot is about 325,000 gallons) a year maximum. Yet the Federal suit demands 35,000 acre-feet a year—and the average flow of the Santa Margarita River is only about 25,000 acre-feet.

Despite the attitude of the Federal officials one thing has been accomplished to lessen the hardship inflicted upon the Santa Margarita farmers. This is the delay granted them in the time required for filing answers to the Federal suit.

THE GRACE PERIOD

Originally any farmer who failed to hire counsel and file a formal answer in court within 20 days faced automatic forfeiture of his rights.

The Times and certain Congressmen protested so loudly over this that the United States Attorney General was compelled to ask the court to extend this period. The grace period was extended to November 1. Now, according to the United States Attorney General, a new extension will be sought.

Even this is merely temporary, however.

The basic question is whether the Attorney General should have embarked upon the suit in the first place or whether he should persist in it now.

Much evidence points to the fact that even though the suit has proved to be an enormous mistake McGrath does not dare give it up. Loss of face is involved.

So, according to his interview here, the suit will continue unless Congress by specific enactment causes its abandonment.

That of course is what Congress is working on right now. But time before adjournment is short. The legislation may not clear all the hurdles before the session ends. That would mean January or February before action can be taken to halt McGrath.

Meantime the battle must go on unabated. Great principles are involved.

Californians cannot surrender to Federal domination and confiscation of this character.

Appoint Cadets and Midshipmen From the Ranks

EXTENSION OF REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. RAMSAY. Mr. Speaker, a month or so ago, I introduced a bill, H. R. 5202, which provides that all cadets and midshipmen must, before their appointment to West Point or Annapolis, serve at least 1 year as enlisted men, and must successfully pass a competitive screening examination before nomination. My bill also provides that Reserve cadets and midshipmen shall not be appointed to the various Reserve Officer Training Corps college programs unless they shall first have served at least 1 year in the enlisted ranks of civilian components of the armed services. They, too, must pass a competitive, screening examination.

This bill, Mr. Speaker, has created a great deal of interest, and is being met with favor, almost universally. I fully realize that to be effective many details must be worked out, but the basic idea has met with little unfavorable comment.

Some comment has been made, however, that service in the enlisted ranks would retard a prospective officer; increase the average age of commissioning as ensign or second lieutenant. This delay, it has been suggested, would retard their careers.

I discount this suggestion, Mr. Speaker, because this Congress has already gone on record as favoring universal military service, and that program will retard the careers of all young men.

Mr. Speaker, in order to throw some light on the type of officer we may expect from the enlisted ranks I have asked the Army, Navy, Air Force, and Marine Corps to furnish me with a list of general and flag officers who had enlisted service. Some of these officers entered the academies from the ranks, others were commissioned through other channels. The armed services also sent me the official biographies of these men.

As a part of my remarks, I include a list of these officers, showing their ranks, the theaters of operation in which they served during World War II, and whether they have been in combat in the United Nations action in Korea. I also list the medals each has earned.

Mr. Speaker, I believe this list shows that these officers are some of the finest we have on duty today. I call particular attention to Major General Dean, who is still technically carried as on active duty, but whose heroism may have

cost him his life in Korea. His case is well known to us all. I noticed also the name of Gen "Chesty" Fuller, a real Marine Corps hero, whose exploits in Korea are also well known to us all. I could single out many more for comment, but the listing suffices.

Many Members of Congress, in both Houses, have seen military service. To indicate the type of man we could expect from the enlisted ranks, I have listed Senators and Representatives who have served as enlisted men. Many of these men served as both enlisted men and officers. It is interesting to note that each House has a man who served in all ranks from private to major general. They are the senior Senator from Pennsylvania [Mr. MARTIN] and the gentleman from New York [Mr. KEARNEY].

I have had the list of Congressmen and Senators compiled from information contained in the Congressional Directory. In many cases it was not clear whether a Member served as an enlisted man. If I have omitted any Members it was due to this.

The above-mentioned follows:

MEMBERS OF CONGRESS WHO HAVE SERVED AS ENLISTED MEN IN THE ARMED FORCES

ALABAMA

EDWARD DEGRAFFENRIFD, Member of Congress

LAURIE C. BATTLE, Member of Congress (commissioned from ranks).

ARKANSAS

BOYD TACKETT, Member of Congress

CALIFORNIA

WILLIAM F. KNOWLAND, United States Senate (commissioned from ranks)

JOHN J. ALLEN, JR., Member of Congress (commissioned from ranks)

DONALD L. JACKSON, Member of Congress.
CARL HINSHAW, Member of Congress (commissioned from ranks)

COLORADO

EUGENE D. MILLIKIN, United States Senate (commissioned from ranks).

WAYNE N. ASPINALL, Member of Congress (commissioned from ranks).

CONNECTICUT

JAMES T. PATTERSON, Member of Congress (commissioned from ranks).

GEORGIA

PRINCE H. PRESTON, JR., Member of Congress (commissioned from ranks).

E. L. FORRESTER, Member of Congress.
JAMES C. DAVIS, Member of Congress (commissioned from ranks)

W. M. (DON) WHITLER, Member of Congress (commissioned from ranks).

IDAHIO

HERMAN WELKER, United States Senate.

ILLINOIS

PAUL H. DOUGLAS, United States Senate (commissioned from ranks)

EVERETT M. DIRKSEN, United States Senate (commissioned from ranks)

FRED E. EUSDEY, Member of Congress.
LEO E. ALLIN, Member of Congress.
HAROLD H. VELDE, Member of Congress.
MELVIN PRICE, Member of Congress.

INDIANA

HOMER E. CAPEHART, United States Senate (commissioned from ranks).

SHEPARD J. CRUMPACKER, Member of Congress (commissioned from ranks).

WINFIELD K. BENJON, Member of Congress (commissioned from ranks).

IOWA

GUY M. GILLETTE, United States Senate (commissioned from ranks).
KARL M. LeCOMPTÉ, Member of Congress.

KANSAS

ERRETT P. SCRIVNER, Member of Congress.
MYRON V. GEORGE, Member of Congress.

KENTUCKY

EARLE C. CLEMENTS, United States Senator (commissioned from ranks).
CARL D. PERKINS, Member of Congress.

LOUISIANA

OVERTON BROOKS, Member of Congress.

MAINE

OWEN BREWSTER, United States Senator (commissioned from ranks).
ROBERT HALE, Member of Congress, (commissioned from ranks).

MARYLAND

J. GLENN BEALL, Member of Congress.

MICHIGAN

CHARLES E. POTTER, Member of Congress, (commissioned from ranks).
JOHN LEWINSKI, JR., Member of Congress.

MISSISSIPPI

FRANK E. SMITH, Member of Congress, (commissioned from ranks).

MISSOURI

CLAIRE MAGLE, Member of Congress, (commissioned from ranks).
O. K. ARMSTRONG, Member of Congress, (commissioned from ranks).

MONTANA

ZALF N. ETON, United States Senator.
MICHAEL J. MANSFIELD, Member of Congress.

NEVADA

GEORGE W. MALONE, United States Senator, (commissioned from ranks).

NEW JERSEY

ROBERT C. HENDRICKSON, United States Senator, (commissioned from ranks).
GORDON CANFIELD, Member of Congress.
PETER W. RODINO, Member of Congress, (commissioned from ranks).
HUGH J. ADDONIZIO, Member of Congress, (commissioned from ranks).
BERNARD W. KILARNEY, Member of Congress, (commissioned from ranks).
KENNETH B. KEATING, Member of Congress, (commissioned from ranks).
HAROLD C. OSTERTAG, Member of Congress.
WILLIAM E. MILLER, Member of Congress, (commissioned from ranks).

NORTH CAROLINA

HERBERT C. BONNER, Member of Congress.
THURMOND CHATHAM, Member of Congress (commissioned from ranks).

OHIO

WILLIAM H. AYRES, Member of Congress.

OKLAHOMA

CARL ALBERT, Member of Congress (commissioned from ranks).
TOM STELL, Member of Congress (commissioned from ranks).
JOHN JARMAN, Member of Congress.
TOBY MORRIS, Member of Congress.

PENNSYLVANIA

EDWARD MARTIN, United States Senator (commissioned from ranks).
WILLIAM J. GREEN, Jr., Member of Congress.
PAUL B. DAGUE, Member of Congress.
ALVIN R. BUSH, Member of Congress.
LEON H. GAVIN, Member of Congress.
JAMES F. LIND, Member of Congress (commissioned from ranks).
JAMES E. VAN ZANDT, Member of Congress (commissioned from ranks).
EDWARD L. SITTER, Jr., Member of Congress (commissioned from ranks).

SOUTH CAROLINA

OLIN D. JOHNSTON, United States Senate.
W. J. BRYAN DOWN, Member of Congress.
JOSEPH R. BRYSON, Member of Congress.
JAMES P. RICHARDS, Member of Congress (commissioned from ranks).
JOHN L. McMILLAN, Member of Congress.

TENNESSEE

JAMES B. FRAZIER, Member of Congress (commissioned from ranks).
JERR COOPER, Member of Congress (commissioned from ranks).

TEXAS

TOM CONNALLY, United States Senate (commissioned from ranks).
WRIGHT PATMAN, Member of Congress (commissioned from ranks).
OLIN E. TRAGUE, Member of Congress (commissioned from ranks).
CLARK W. THOMPSON, Member of Congress (commissioned from ranks).
WINGATE H. LUCAS, Member of Congress.
LLOYD M. BENTSEN, Jr., Member of Congress (commissioned from ranks).

UNITED STATES ARMY GENERAL OFFICERS WITH ENLISTED SERVICE

Lutes, Lt. Gen. Leroy, ETO, Pacific; Bronze Star, Legion of Merit; DSM; Honorary Commander, the Most Excellent Order of the British Empire.

Daniel, ETO, DSM, two Oak Leaf Clusters; Legion of Merit; Brazilian Order of Military Merit, Order of the Bath; Belgian Croix de Guerre and Order of the Crown; French Legion of Honor and Croix de Guerre, and from Italy the Order of the Crown of Italy, Medal of the Volunteers of Liberty, the Lateran Cross of the Vatican State, and the Polish Gold Cross of Merit with Swords.

Parks, Maj. Gen. Floyd L., ETO; DSM, Oak Leaf Cluster; Legion of Merit; Bronze Star; Air Medal; Commendation Ribbon; Abdon Calderon, Third Class (Equador); Companion of the Bath (Great Britain); Order of Kutuzov, First Class (Russia); Order of Polonia Restituta, Commanders Cross (Poland); Order of Dannabrog, Commander First Class (Denmark); Legion of Honor (France); Order of Orange-Nassau (Netherlands); Belgian Croix de Guerre.

O'Daniel, Maj. Gen. John W., ETO, Korea; DSC; DSM, Oak Leaf Cluster; Legion of Merit, Silver Star, one cluster, Air Medal; Bronze Star, two Clusters; French Croix de Guerre and Legion of Honor, Italian Silver Medal; Purple Heart.

Rice, Maj. Gen. John K., ETO, Pacific, Korea; Legion of Merit, Oak Leaf Cluster; Bronze Star, Oak Leaf Cluster; and the French Legion of Honor and Croix de Guerre with Palms.

Sawyer, Maj. Gen. Bickford E., Pacific; Legion of Merit; Army Commendation Ribbon, Oak Leaf Cluster.

Shea, Maj. Gen. George D., ETO; DSM; Silver Star, Oak Leaf Cluster; Legion of Merit, Oak Leaf Cluster; Bronze Star, Oak Leaf Cluster; French Legion of Honor and Croix de Guerre with Palm; Dutch Order of Orange-Nassau.

Shepard, Maj. Gen. Whitfield P., ETO; DSM; Legion of Merit

Thorson, Maj. Gen. Truman C., ETO, DSM; Legion of Merit.

Timberman, Maj. Gen. Thomas S., Far East; Legion of Merit, two Oak Leaf Clusters; DSM, Oak Leaf Cluster; Commander of the British Empire; Siamese Order of the White Elephant; and Chinese Special Collar Order of Yun-Hui Medal, Special Collar Order of the Precious Tripod, Special Breast Order of the Precious Tripod.

Weible, Maj. Gen. Walter L., Pacific; DSM; Legion of Merit; Army Commendation Ribbon

Whitlock, Maj. Gen. Lester J., Pacific; DSM, Oak Leaf Cluster, Legion of Merit; Honorary Commander of the British Empire; Distinguished Service Star of the Philippines. Young, Maj. Gen. Robert N., ETO, Silver Star; Bronze Star, Oak Leaf Cluster; Purple Heart, DSM

Balmer, Brig. Gen. Jeasmond D., ETO, DSM; Legion of Merit; Bronze Star.

Bell, Brig. Gen. Marcus B., Pacific, Silver Star; Legion of Merit, Oak Leaf Cluster

Brittingham, Brig. Gen. James F., ETO; DSM, Bronze Star; Legion of Merit; Purple Heart, Silver Star.

Brown, Brig. Gen. Robert W., Far East; Legion of Merit, Army Commendation Ribbon.

Campbell, Brig. Gen., Boniface, Pacific; Legion of Merit

Carter, Brig. Gen. Leslie D., ETO; Legion of Merit, Oak Leaf Cluster; Bronze Star, Oak Leaf Cluster

Clarke, Brig. Gen. Carter W., Pacific, DSM, Conley, Brig. Gen. Joseph P., ETO; DSM; Legion of Merit; Bronze Star; Army Commendation Ribbon, Oak Leaf Cluster

Crawford, Brig. Gen. David J., ETO; Legion of Merit

Cross, Brig. Gen. Thomas J., ETO, Legion of Merit, Oak Leaf Cluster, Silver Star; Bronze Star, two Clusters, Army Commendation Ribbon

Davis, Brig. Gen. Merle H., Pacific; Legion of Merit, two Oak Leaf Clusters; Bronze Star, Oak Leaf Cluster

Deitrick, Brig. Gen. Carroll H., ETO, Legion of Merit, Bronze Star

DeShazo, Brig. Gen. Thomas E., ETO, Korea; Legion of Merit; Bronze Star, two Oak Leaf Clusters, Air Medal.

Eastwood, Brig. Gen. Harold E., Pacific; DSM, Legion of Merit.

Elder, Brig. Gen. Eugene V., ETO; Legion of Merit; Army Commendation Ribbon

Feringa, Brig. Gen. Peter A., ETO, Silver Star Cluster, Legion of Merit, Oak Leaf Cluster, Bronze Star, three clusters, Purple Heart, British Military Medal

Ferrin, Brig. Gen. Charles S., Pacific, Legion of Merit, Bronze Star

Fitts, Brig. Gen. William T., ETO; DSC; Purple Heart, Legion of Merit; Silver Star; Bronze Star, two Oak Leaf Clusters; Army Commendation Ribbon.

Grice, Brig. Gen. Letcher O., Pacific; Legion of Merit, Army Commendation Ribbon, two Oak Leaf Clusters.

Guest, Brig. Gen. Wesley T., ETO; Legion of Merit, Oak Leaf Cluster; Bronze Star

Hammond, Brig. Gen. Elton F., ETO; DSM; Legion of Merit; Bronze Star, Oak Leaf Cluster.

Harrison, Brig. Gen. Eugene L., ETO; DSM; Legion of Merit; Bronze Star.

Hastings, Brig. Gen. Kester L.

Hendrix, Brig. Gen. Raleigh R., ETO; Legion of Merit, Oak Leaf Cluster; Bronze Star.

Hess, Brig. Gen. John B., ETO; Legion of Merit; Bronze Star.

Higgins, Brig. Gen. Gerald J., ETO; Silver Star, Legion of Merit; Bronze Star; Belgian Fourragere and Croix de Guerre with Palm; French Legion of Honor, Fourragere and

Croix de Guerre with Palm; Order of Leopold I and II; Order of Orange Nassau.

Honnen, Brig. Gen. George, Pacific; unknown.

Jacobs, Brig. Gen. Fenton S., ETO, Pacific; DSM; Legion of Merit, Oak Leaf Cluster; Bronze Star; French Legion of Honor and Croix de Guerre with Palm; Commander of the British Empire; Belgian Order of Leopold II

Kiefer, Brig. Gen. Homer W., Pacific; DSM; Silver Star; Legion of Merit, Bronze Star Medal; Air Medal.

Klein, Brig. Gen. John A., ETO; Legion of Merit; Bronze Star, Army Commendation Ribbon

Kurtz, Brig. Gen. Guy O., ETO; Legion of Merit; Silver Star, Bronze Star, Oak Leaf Cluster, Air Medal; Commander of the British Empire; French Croix de Guerre, Grand Officer Crown of Italy, Brazilian War Medal.

Lastayo, Brig. Gen. Edward H., ETO, DSM; Legion of Merit; Army Commendation Ribbon

Lieber, Brig. Gen. Albert C., ETO, Silver Star, Legion of Merit; Bronze Star, two Oak Leaf Clusters; Army Commendation Ribbon, French Legion of Honor and Croix de Guerre with Palm, and the Luxemburg and Belgian Croix de Guerre

Maglin, Brig. Gen. William H., ETO, Legion of Merit, Oak Leaf Cluster, Army Commendation Ribbon

McConnell, Brig. Gen. Frank C., Pacific; Legion of Merit, Bronze Star, Oak Leaf Cluster, Air Medal.

McFadyen, Brig. Gen. Bernice M., ETO; Legion of Merit, Silver Star, Bronze Star, Oak Leaf Cluster; Army Commendation Ribbon, Oak Leaf Cluster

Michaelis, Brig. Gen. John H., ETO, Korea; DSC; Air Medal, Silver Star; Legion of Merit, Oak Leaf Cluster, Bronze Star, Purple Heart, Oak Leaf Cluster, French Croix de Guerre with Palm; Belgian Fourragere and Croix de Guerre with Palm; Netherlands Bronze Lion.

Mood, Brig. Gen. Orlando C., ETO, Korea; Legion of Merit, two Oak Leaf Clusters, DSM; Army Commendation Ribbon, French Legion of Honor and Croix de Guerre with Palm, Belgian Order of Leopold with Palm and Croix de Guerre with Palm, Luxemburg Croix de Guerre.

North, Brig. Gen. Thomas, France; DSM; Purple Heart; French Order of University Palms, Brazilian Order of Knight of the National Order of the Southern Cross.

Pence, Brig. Gen. Charles W., ETO, DSM; Silver Star; Bronze Star, two Oak Leaf Clusters; Army Commendation Ribbon, Purple Heart

Peploe, Brig. Gen. George B., ETO, Korea; Legion of Merit, Silver Star, two Oak Leaf Clusters, Bronze Star, DSC.

Post, Brig. Gen. Elwyn D., Pacific, Korea; Legion of Merit; DSM, Army Commendation Ribbon.

Read, Brig. Gen. George W., Jr., ETO, DSM; Silver Star, Legion of Merit; Bronze Star, Oak Leaf Cluster, French Legion of Honor and Croix de Guerre with Palm; Chilean Order of Merit, Belgian Croix de Guerre with Palm; Luxembourg Couronne de Chene and Croix de Guerre with Palm.

Robert, Brig. Gen. Frank N., Far East; Navy Cross, DSM, two Oak Leaf Clusters

Sams, Brig. Gen. Crawford F., Pacific, Middle East; Legion of Merit, Oak Leaf Cluster; Army Commendation Ribbon; United States Typhus Commission Medal; Order of the British Empire and British African Star.

Smith, Brig. Gen. Wayne C., Pacific; Bronze Star; Legion of Merit; Soldiers Medal.

Smythe, Brig. Gen. George W., ETO; Purple Heart; DSC; Bronze Star; Silver Star; French Legion of Honor and Croix de Guerre; Russian Medal of Bravery; Most Excellent Order of the British Empire; Belgian Officer of Order of Leopold with Palm, Croix de Guerre

with Palm, and Fourragere with two Citations.

Standlee, Brig. Gen. Earle, ETO; Legion of Merit, Oak Leaf Cluster

Cooley, Brig Gen Albert D., Pacific; Navy Cross, Bronze Star, Air Medal, Presidential Unit Citation.
 Cushman, Maj Gen. Thomas J., Pacific; Bronze Star, Legion of Merit.
 Fellers, Brig. Gen William S., Pacific; Legion of Merit, one Gold Star, Presidential Unit Citation, one Star; Nicaraguan Medal of Distinction with Diploma
 Halla, Brig Gen John, Hawaii; Secretary of Navy Commendation
 Liversedge, Brig. Gen Harry B., Pacific; Navy Cross with Gold Star, Letter of Commendation with Ribbon; Presidential Unit Citation
 Meece, Maj Gen Vernon E., Pacific, Bronze Star, Legion of Merit; Navy and Marine Corps Medal; Peruvian Aviation Cross, First Class.
 McKittrick, Brig. Gen William L., Pacific; Legion of Merit, one Gold Star; Nicaraguan Cross of Valor with Diploma
 Pate, Brig Gen Randolph McCall, Pacific; Legion of Merit, Gold Star, Presidential Unit Citation with one Star
 Puller, Brig. Gen Lewis B., Pacific, Korea; Navy Cross with three Gold Stars; DSC; Silver Star, Bronze Star, Purple Heart; Presidential Unit Citation with two Bronze Stars; Legion of Merit, Haitian Military Medal; Nicaraguan Presidential Medal of Merit; Nicaraguan Cross of Valor; Korean Presidential Unit Citation.
 Rea, Brig. Gen. Leonard E., France, Pacific; Navy Cross; DSC; Silver Star Medal with Oak Leaf Cluster; Purple Heart; Legion of Merit; Nicaraguan Medal of Merit with Diploma, and the Netherlands Order of Commander of the Orange Nassau with Swords.
 Robillard, Brig. Gen. Fred S., France, Pacific; Navy Cross; Legion of Merit; Haitian Distinguished Service Medal; and from the Netherlands the Order of Orange Nassau with Swords, Commander.

Robinson, Maj Gen. Ray A., Pacific; Legion of Merit with Gold Star; Bronze Star; Presidential Unit Citation with two Stars, Navy Unit Commendation with Bronze Star.

Sanderson, Brig Gen Lawson H. M., Pacific; DFC, Presidential Unit Citation; Legion of Merit; Nicaraguan Medal of Merit with Silver Star

Schilt, Maj Gen. Christian F., Pacific; Congressional Medal of Honor; Bronze Star; Legion of Merit, Presidential Unit Citation; Nicaraguan Medal of Merit with Silver Star; Nicaraguan Cross of Valor with Diploma.

Selden, Maj Gen. John T., Pacific; Bronze Star; two Legions of Merit; Presidential Unit Citation with one Bronze Star, Navy Unit Citation with two Bronze Stars

Silverthorn, Lt Gen. Merwin H., Pacific; Navy Cross, DSC; DSM, Silver Star with Oak Leaf Cluster; Legion of Merit; Letter of Commendation with Ribbon, Purple Heart; French Croix de Guerre, French Fourragere; Presidential Unit Citation with one Star

Thomas, Maj. Gen Gerald C., Pacific; Korea; DSM; Silver Star, Purple Heart; Legion of Merit with Gold Star, Presidential Unit Citation with one Star; Commander in the Order of Orange Nassau with Crossed Swords, French Fourragere

Wensinger, Brig Gen. Walter W., Pacific; Navy Cross; Legion of Merit, Roi-Namur with Gold Star, Presidential Unit Citation with two Stars, Nicaraguan Medal of Merit with Diploma; and a special letter of commendation by the Secretary of Navy

Whaling, Big Gen. William J., Pacific; Navy Cross; Silver Star; Legion of Merit with Gold Star; Purple Heart; Haitian Order of Honor and Merit, Haitian Distinguished Service Medal; Bronze Star, Presidential Unit Citation with two Stars, Chinese Order of the Cloud and Banner

Williams, Brig Gen. Gregon A., Pacific; Korea, Navy Cross, Bronze Star, Legion of Merit, special letter of commendation by the Secretary of the Navy, Presidential Unit Citation, Dominican Medal of Merit, Nicaraguan Cross of Valor and Diploma.

UNITED STATES AIR FORCE GENERAL OFFICERS WITH ENLISTED SERVICE

Armstrong Maj Gen. Harry G., Eighth Air Force, England, Legion of Merit, one Oak Leaf Cluster, Order of the British Empire; French and Belgian Croix de Guerre and Palms

Banfill, Brig Gen Charles Y., ETO, Okinawa; Legion of Merit

Barker, Maj Gen John DeF., ETO, Legion of Merit, DSM

Beau, Maj Gen. Lucas V., Pacific, ETO; Legion of Merit

Bevans, Maj Gen James M., ETO, DSM; Legion of Merit, Bronze Star.

Bondley, Brig Gen Charles J., Jr., Africa, Italy, Far East, Legion of Merit, one Oak Leaf Cluster; DFC, Bronze Star.

Borum, Maj Gen Fred S., ETO; Legion of Merit, Commendation Ribbon, Grand Officer, Order of the Crown of Italy

Brandt, Maj Gen Carl A., ETO, Pacific; DSM, DFC, Air Medal, one Oak Leaf Cluster, Legion of Merit, one Oak Leaf Cluster; Army Commendation Ribbon

Carroll, Maj Gen. Franklin O., Far East; DSM

Carter, Maj Gen Warren R., Southwest Pacific, Far East; Legion of Merit; DSM

Chapman, Maj. Gen. Thomas H., Far East; Legion of Merit.

Chauncey, Maj Gen. Charles C., Eighth Air Force, England; Legion of Merit; DSM, one Oak Leaf Cluster; Bronze Star.

Cook, Lt. Gen. Orval R., Southwest Pacific; Legion of Merit; DSM.

Craig, Lt Gen Howard A., ETO, North Africa; Legion of Merit; DSM; one Oak Leaf Cluster.

Dillon, Maj. Gen. Joseph DeP., North Africa ETO; Legion of Merit; Bronze Star; French Legion of Honor and Croix de Guerre with Palm; Commander of the Most Excellent Order of the British Empire, C. B. E.; Italian Grand Commander, Crown of Italy; Imperial Capitol Military Order of St. George of Corinthia; Cavalier of the Grand Cross of Merit; Moroccan Oulssam Alouite, Grand Officer.

Douglass, Maj. Gen. Robert W., Jr., Pacific; Legion of Merit; D. F. C.; Bronze Star; Air Medal.

Eubank, Maj. Gen Eugene L., ETO, Pacific; D. S. M., Silver Star; D. F. C., one oak-leaf cluster.

Ferguson, Brig. Gen. James, ETO; Legion of Merit, one oak-leaf cluster; Bronze Star, one cluster; D. F. C.; and Air Medal, one cluster.

Gates, Brig Gen. Byron E., South Atlantic; Legion of Merit

Hayden, Brig. Gen. Gilbert, Pacific, Far East, Legion of Merit; Silver Star, Bronze Star.

Haynes, Maj. Gen. Caleb V., Burma, China; D. S. M.; Silver Star, one cluster, D. F. C., two clusters; Air Medal, one cluster; Commendation Ribbon, one cluster.

Hicks, Brig. Gen. Joseph H., Far East; Legion of Merit.

Hoag, Maj. Gen. Earl S., Africa, China, ETO, Legion of Merit; DSM, Air Medal, Commendation Ribbon; British Honorary Companion, Most Excellent Order of the Bath; Norwegian Order of St. Olav, Commander with Star, Chinese Special Collar Order of Yun-Hui; French Legion of Honor, Chevalier, and Croix de Guerre with palm.

Hodges, Major Gen. James P., Eight Air Force, England; D. S. M., one cluster; Silver Star; D. F. C.; Air Medal, Order of the British Empire, French National Order of the Legion of Honor, Belgian Croix de Guerre with palm; Chinese Special Necklet Cloud Banner.

Hovey, Brig Gen. Burton M., ETO; Legion of Merit, one cluster; Bronze Star.

Ignico, Brig. Gen. Robert V., Aleutians; Legion of Merit, one cluster, Air Medal, Army Commendation Ribbon.

Irvine, Maj Gen. Clarence S., Pacific; Legion of Merit; D. S. M., Silver Star, D. F. C., one cluster, Bronze Star; and Air Medal, one cluster.

Johnson, Brig. Gen. Bertrand E., China; Legion of Merit.

Johnson, Maj Gen. Harry A., England, Far East, Legion of Merit, one Cluster; DFC; Air Medal, one Cluster; Cruze de Boyaca from Republic of Colombia; and Commanders Cross of Orange Nassau with Swords from the Netherlands

Kane, Brig Gen. Clarence P., ETO; Legion of Merit, DSM, Bronze Star.

Kepner, Lt Gen. William E., ETO, Pacific, DSC; Purple Heart; DFC; DSM, Bronze Star; Air Medal; Legion of Merit, two Clusters; Commander of French Legion of Honor; British Order of Commander of the Bath; Polish Restitute; Belgian Order of Crown; French Croix de Guerre with Palm; Chinese Special Necklace, Paoting, Belgian Croix de Guerre with Palm; Individual Freedom of the City of Norwich, England.

Kiel, Brig. Gen. Emil C., ETO, DSM; Legion of Merit, Bronze Star, Air Medal; French Croix de Guerre, British Commander of the British Empire

Langmead, Brig. Gen. Edmund C., ETO; Legion of Merit; Bronze Star.

Martenstein, Brig. Gen. Austin W., ETO; Far East; Legion of Merit; Army Commendation Ribbon.

McDaniel, Brig. Gen. Carl B., Pacific.

McMullen, Maj. Gen. Clements, Pacific; DSM; Air Medal.

Partridge, Lt. Gen Earle E., Pacific, Korea; DSC, Silver Star; DSM; DFC, two Clusters;

Air Medal, ten Clusters; Bronze Star; Legion of Merit; Polish Legion of Honor; French Legion of Honor and Croix de Guerre with two Palms; British Companion of the Order of the Bath, Belgian Croix de Guerre with Palm.

Phillips, Maj. Gen. James F., Japan, Legion of Merit.

Rawlings, Lt. Gen. Edwin W., Hawaii; DFS; DSM, Commendation Ribbon, Degree of Honorary Commander of the Most Excellent Order of the British Empire.

Schneider, Brig. Gen. Max F., ETO; Legion of Merit.

Schreuder, Brig. Gen. Otis B., ETO, Army Commendation Ribbon, one Cluster.

Smith, Brig. Gen. Wallace G., Pacific, Legion of Merit; Army Commendation Ribbon; Most Excellent Order of the British Empire, Degree of Officer.

Spry, Maj. Gen. James W., India, Legion of Merit, Air Medal.

Street, Maj. Gen. St. Clair, Pacific, DSM, two clusters, Legion of Merit, DFC of Italy, grade of officer.

Thomas, Brig. Gen. Arthur, ETO, Italy, Pacific; Legion of Merit, one cluster; Bronze Star, Army commendation ribbon, commander Order of the British Empire, French Legion of Honor and Croix de Guerre with Palm, Italian Order of Sts. Marius and Lazarus.

Thomas, Maj. Gen. Charles E., Jr., Pacific; Legion of Merit, one cluster.

Twining, Gen. Nathan F., ETO, Pacific, I+C, DSM, Bronze Star, Air Medal, French Legion of Honor, British KBE, Polish Gold Cross of Swords, Yugoslavian Order of Patriotic Star, 1st class.

Vanaman, Maj. Gen. Arthur W., ETO, Legion of Merit, two clusters, Bronze Star, Purple Heart; Belgian Croix de Guerre with palms.

Wade, Brig. Gen. Leigh, Greece, DSM, Legion of Merit.

Webster, Maj. Gen. Robert M., ETO, Italy, north Africa; DSM, one cluster, Legion of Merit, Silver Star, Air Medal, one cluster.

Weikert, Maj. Gen. John M., Pacific, Legion of Merit, Bronze Star, Purple Heart.

Whitten, Maj. Gen. Lyman P., ETO, Pacific, Burma, DSM, Bronze Star; Legion of Merit, one cluster; Italian Order of Saints Maurizio and Lazzaro, French Legion d'Honneur and Croix de Guerre avec Palme; and Polish Order of Virtuti Militari, third class.

Wolfenbarger, Maj. Gen. Willard R., Egypt, Pacific; Legion of Merit, one cluster, Air Medal, Army commendation ribbon; Purple Heart.

The Four Pillars of Freedom

EXTENSION OF REMARKS OF

HON. PRINCE H. PRESTON, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following speech by W. G. Vollmer, president, the Texas & Pacific Railway Co.:

THE FOUR PILLARS OF FREEDOM

Most of us today are knee deep in confusion and uncertainty.

We are not quite sure which way to turn or what to do.

Within the Nation, we see and feel the effects of inflation upon our income and our savings.

We see communistic termites trying to destroy the very foundation of our free Government and our free economy.

We see the Nation's political leaders divided among themselves over what should be done to arrest inflation and to meet the challenge of communism.

We see more and more of our earnings being consumed by taxes.

We see all of these things, and more. It's enough to arouse fear, to cause confusion, and to create uncertainty.

In view of the turbulent present and the uncertain future which all of us face together, we need to examine the cause of our trouble.

If we turn back a few pages of history, we find that the threat to our free way of life is the root of our trouble.

Twice in one generation we have fought two World Wars in defense of freedom.

Today we stand on the threshold of a third world war. And again it is in defense of our freedom.

A considerable proportion of our public debt of approximately \$256,000,000,000 was created by wars fought to preserve freedom.

And a major portion of our 70-odd-billion-dollar national budget this year goes for the cost of wars—past, present and impending—all in behalf of freedom.

Yet, over the years, many of us have taken freedom for granted.

By now we should be acutely conscious of the fact that freedom, like everything else in life, comes at a price.

But no matter what that price may be, we must pay it, for nothing could be worse than to lose our God-given rights and our human dignity.

The outlook is not bright. We'd be deluding ourselves and betraying our children if we considered the present conflict a little international skirmish. It's nothing of the sort.

We're at war, whether we want to call it that or not. Approximately 60,000 casualties in the first 10 months of the war attest the fact.

When the smoke of the conflict clears away, either the free people of the world or the Communist will emerge victorious.

It now is self-evident, if it has not always been, that democracy and communism cannot exist side by side.

Democracy is founded upon faith in God, in the dignity of man and upon the concept that the government is the servant of the people, not their master.

Communism is founded upon atheism, strife, fear, tyranny and the philosophy that the government is the supreme master of the people.

Thus, the principles upon which democracy and communism are founded are as far apart as love and hate, or as good and evil.

Since the cause of freedom is founded upon justice and righteousness, we and the other free peoples of the world are invincible if we unite in purpose and in action.

I say this because we have the know-how and the productive capacity to turn out the goods and services essential to the preservation of freedom.

But it's going to take more than money and machines and know-how to win. It's going to take the will and the courage to work, to save, to vote, and to pray.

In the midst of our dilemma, here are four basic points upon which I feel all of us can unite.

I call these four points the four pillars of freedom because no matter how great our trials and tribulations may become, we can preserve our freedom if we have the will and courage to work, save, vote, and pray.

I realize there are other important pillars of freedom, but I have suggested these four

because they are basic, and because each of us can have a part in giving them life and meaning.

First, there is work.

There is no substitute for work. Ever since the dawn of history man has had to work in order to survive.

There is no way to supply our needs and protect our freedom except by work.

Nature has a way of balancing the books of life.

If we work wisely and efficiently, we produce abundantly the goods and services essential to better living.

If we work poorly, or not at all, we live poorly or not at all.

The reason we in America live better than any other people of the world is because we have developed to a high degree the tools of production and the technique of using them.

There are any number of countries in the world equally as rich in human and natural resources as the United States. The thing that makes the difference between abundance and poverty is the wise and the efficient use of tools.

Approximately 95 percent of our productive energy is provided by tools. Only 5 percent represents animal and human energy.

In the countries where famine and starvation stalk the people all the days of their lives, the energy percentage of productivity is just the reverse.

There's a vital relationship between the abundant life and these energy-producing percentages. The higher the percentage of tool energy, the better people live; the lower the percentage, the poorer they live.

In our fight against inflation, the only sound way to overcome it is to increase our production. The fundamental law of supply and demand cannot be changed by governmental decrees. Increased production is the real antidote to inflation.

This brings me to the next point of "The Four Pillars of Freedom."

Save. How did we come to have the great mass of energy-producing tools? By saving. Past thrift is one of the principal reasons why America is strong today. Millions of people, young and old, rich and poor, saved part of their income instead of spending it as they earned it. Then they invested their savings in factories, machines, mines, oil fields and, yes, in railroads.

These savings made possible our great productive capacity and thus the great outpouring of goods and services which we, in America, enjoy today.

These savings made possible the bulwark of our defense against communism.

Each American worker is now supported by machinery—that is, the tools of production—which cost an average of more than \$10,000 per worker.

In the railroad industry, the investment averages \$21,000 per worker.

What was it that encouraged the American people to save a portion of their earnings instead of spending all of it?

It was the freedom to enjoy the fruits of their labors. The right to have and to hold what they earned and saved.

If we should ever lose that right, then savings will dry up and there will be no private money to provide the tools of production.

Of course, our Government could provide the tools, as is done in communistic countries. But then the people would be ordered to "invest" a portion of their earnings in Government bonds. And that is one of the things we are fighting to prevent.

The need to save does not rest alone with the individual.

The Government should set an example of thrift by abandoning nonessential expenditures. The various so-called social programs,

benefits, bounties, and aids should be discontinued.

The Government does not owe anyone a living, unless it be a person injured in the service of the country.

When the Government undertakes to provide a living for any person or group of people, the cost of that living must come out of the work and the earnings of other people. And that sort of living cost comes high for the people who foot the bill through taxation.

The people of the cities and communities of the Nation should join in saving public funds. They can do this by ceasing to demand Federal funds for local pet projects—many of which are neither militarily essential nor economically sound.

To make America strong, the Federal, State and local governments should join with the individual in saving. Unless governments are thrifty, individuals have little opportunity to save.

Heavy taxation takes care of that.

The third point of our program is vote.

In recent years, there's been a good deal of conversation about getting out the vote. But like the weather, which provokes a great deal of talk, many of us merely talk instead of acting.

As evidence of this, only 26.7 percent of those eligible to vote in Texas cast their ballots in the 1948 national election.

Forty percent of the registered voters did not vote. And what happened here in Texas prevailed generally throughout the Nation.

It has been estimated that approximately 40,000,000 people in the United States failed to vote in the 1948 Presidential election.

Why? Different reasons—or rather, different excuses. Seldom is there a good reason why we should not register and vote. Most of the time, it's just too much trouble to register and then go to the polls on election day.

Some of us brush it off by saying that "our vote doesn't count, anyway." If every person did that, our Republic would collapse. And our freedom would be lost.

Every vote does count, no matter what the election.

Voting is one thing we must do for ourselves. We can't delegate it to someone else. That responsibility is ours, not the other fellow's.

It's our sacred obligation to protect our right to vote. And the only way we can do that is by voting.

Failure to vote at any time is dangerous, but with freedom at stake as it is today, failure to vote now can prove disastrous.

It could be that our failure in years gone by to do our full duty in this area of citizenship is responsible, in part at least, for our present predicament.

Perhaps unthinkingly we have shown too little pride in the priceless gift of personal liberty, thereby permitting others to trade off our personal opportunity and part of our freedom. If we have been negligent in this respect, we have been disloyal to our country and unfaithful to our children.

So next election, no matter what kind, nor how much it may inconvenience us, let's go to the polling place and cast our vote. And let's urge our friends and neighbors to do likewise.

If we do that as wisely and as well as we know how, then we have fulfilled that important part of our citizenship responsibilities.

In discussing the four-point program to help make our country strong, I have placed prayer fourth in an effort to give it additional emphasis.

It is, of course, the most important single thing we can do today.

We need to pray for an abiding faith in God and faith in ourselves.

We need to pray for faith in our fellow man.

We need to pray for guidance and wisdom.

We need to pray for the Americans who are suffering and dying on the battlefields of Korea that freedom—your freedom and mine—will be preserved.

We need to pray earnestly for the return of peace.

We need to pray for the courage to do those things which, in our heart, we conceive to be right and honorable.

We need to pray for the strength to bear whatever burden we may be called upon to carry.

We should ask God to make us good soldiers, whether it be on the battlefield or the home front.

The responsibility for freedom and for peace does not rest in Washington, London, Moscow, or Paris—or the other capitals of the world—but in the hearts of the people of the world.

We have at our command the tools to preserve freedom, and to aid in restoring peace to a tired and unhappy world.

Let's use these tools—work, save, and pray—patriotically and unselfishly.

Let's work hard and earnestly at the task of strengthening ourselves spiritually, morally, and economically.

Let's save our free American way of life, no matter what the sacrifices may be.

Let's vote at every election for people who place the welfare of their country above their personal political welfare.

Let's pray for the wisdom and the courage to do our duty as good Americans, faithful to God and to our country.

English Expert Points Out United States Lending Abroad Promotes Anti-Americanism

EXTENSION OF REMARKS OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. BUFFETT. Mr. Speaker, a few days ago the House passed a bill to increase the lending power of the Export-Import Bank. I opposed that increase because I am convinced that this lending is an evil policy.

Not only is this lending socialistic and inflationary at home; but also, in the long run, it will make enemies, not friends, abroad.

Mr. Paul Einzig has outlined the sobering logic of this situation in the following article:

INVESTMENT IN UNDERDEVELOPED AREAS NO CURB TO COMMUNISM

(By Paul Einzig)

LONDON, England.—In a recent article I pointed out the broader implications of the repudiation of the Anglo-Persian oil contract. The principle involved is of considerable interest to the American investor and the American taxpayer, and deserves consequently close attention. Nor are its implications confined to the purely financial sphere. A mistaken policy of lending to underdeveloped states is liable to entail grave political consequences. So far from strengthening resistance to Russian or Chinese Communist imperialism, such a policy may in given circumstances pave the way to a leftward orientation of the countries concerned.

Substantial investment of American, British or other western capital in under-de-

veloped countries tends to encourage anti-Western agitation, not only by Communists but, as the example of Persia clearly shows, also other unscrupulous and ambitious elements who seek to gain cheap popularity by advocating the confiscation of foreign enterprise and the repudiation of foreign debts. This assertion is not based on mere theory. We had ample practical experience in support of it. For example in Burma the fact that British investments run into many hundreds of millions of dollars has strengthened considerably the hands of left-wing politicians. The nationalization of British enterprise amounted to virtual confiscation, because no Burmese Government would have dared to pay anything like adequate compensation. In any case the amounts payable have been borrowed from the British Government, and, having pocketed the British loans and subsidies, the Burmese Government repeatedly defaulted on the agreements concerning the payment of the inadequate compensation agreed upon. No Burmese Government could have acted otherwise without risking to be overthrown and replaced by an even more left-wing government with a program of full repudiation.

The reason why in Burma and in Indonesia the existing near-Communist regimes are the only practicable alternatives to 100 percent communism is the large size of foreign capital invested in these countries. There is ample opportunity for unscrupulous politicians to gain popularity by agitating for repudiation and nationalization without compensation. Nationalists flirt with communism in pursuance of this game, or at any rate they play up communism against the sympathizers of the western investor and creditor nations. Nationalization has become a nationalist as well as Socialist device. The majority of the public opinion in such countries has completely lost its moral sense. While during the interwar period default on foreign obligation was generally considered something for which the defaulting nation had every reason to be ashamed of itself, the postwar generation glorifies in repudiation.

Unfortunately there seems to be very little to be done to save the capital already invested. A large number of British owners of enterprise in India sold out their investments to Indian interests at bargain prices while the going was good. Everybody is not in a fortunate position, however, to be able to save a relatively substantial portion of their capital invested abroad. Much of it may now be considered as a virtually total loss, or it will have to be so considered before very long. There is no reason, however, for throwing good money after bad by adding to the amount that is doomed to be written off eventually. Private investors are naturally reluctant to do so. But their place seems to have been taken by the governments, in particular as far as the United States and, to a much less extent, Britain, are concerned. This means that the loss will be borne by the taxpayer instead of the investor.

If this sacrifice of the taxpayers' billions resulted in at least the safeguarding of the countries concerned against Communist infiltration, the money would be considered to have been well spent. In reality the increase of the foreign indebtedness of the countries concerned tends to increase the temptation and opportunity for dishonest politicians to gain popularity by agitating in favor of repudiation. The larger the amount involved the more popular the idea of repudiation is likely to be. So far from achieving popularity in these countries by granting them loans, the United States tends to encourage anti-American agitation by increasing the financial and political advantages of an anti-American policy. The only way in which this could be avoided would be by continuing to lend more and more, in which case the advantages of obtaining fresh money would outweigh the advantages of repudiating the

existing loans. But even the United States could hardly afford to pour her billions into a bottomless sink in such manner.

It is high time for enthusiastic supporters of point 4 and other methods of financial assistance reconsidered their attitude in the light of the British experience in Persia and elsewhere. Admittedly in many instances it may appear to be a matter of political expediency to support certain countries financially. If and to the extent to which this is the case, it is much wiser to decide that the support should assume the form of outright grants or subsidies instead of loans or investments. Even if the support assumes the form of loans or investments the lender or investor will never see his money again. It is sheer self-deception to pretend in most instances that there is a chance of obtaining interest or dividends for any length of time, and of recovering the amounts lent or invested. Why not be realistic and write off the amounts granted?

In special circumstances this may be wise. In all circumstances it is wiser than indulging in self-deception that the amounts granted are investments. The United States, after the experience of the inter-Ally debts of 1914-18 and of lend-lease in 1941-45, should be well aware of this. And yet there seems to be a tendency toward self-deception.

The advantage of subsidies compared with loans and investments in the countries concerned is that the former would not tend to generate anti-American feelings. If the dollars received by these countries constitute outright grants the transactions would not provide Communists and unscrupulous politicians with opportunities for gaining popularity by advocating repudiation. From an American point of view the money will be a dead loss in any case. But if the form of subsidies is chosen the loss will be merely financial, while if the form of loans and investments is chosen then the loss will be political as well as financial.

Needless to say, in special circumstances it may be necessary and advantageous to assist underdeveloped countries in the development of their resources, in order to relieve world-wide scarcity in essential raw materials. Owing to the lack in native experts or to the corruption and inefficiency of the native governments, subsidies would not solve the problem. American capital and enterprise would have to take an active hand even at the risk of the ultimate loss of the capital invested. What matters is that those concerned should assume their commitments with open eyes. They must be fully aware of the risks arising from the present attitude of underdeveloped countries toward foreign capital and enterprise, and must make their calculations accordingly.

PAUL EINZIG

Why the Communists Approved the Wallace Report on China in 1944 Although He Says He Thought It Was Anti-Communist

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following from Human Events of October 17, 1951:

AND NOW THE SMEAR OF THE MCCARRAN COMMITTEE

(By Freda Utley)

The "revisionist" school, and others who have tried to lift the historical blackout, have reason to be grateful to the Eighty-second Congress. Both the hearings of the Senate joint committee which investigated General MacArthur's recall, and the present investigations of the McCarran Internal Security Committee, have revealed vital facts hitherto successfully hidden, or obscured by the professors, journalists, and politicians, who strive to justify the ways of Roosevelt and Truman to the world.

Bit by bit the missing pieces of the jigsaw puzzle which, when completed, will present the whole tragic story of United States policy during and after the war, are being found and fitted into place. Evidence is also piling up concerning the individuals mainly responsible for our having "snatched defeat out of the very jaws of victory." It is as yet impossible to distinguish the goats from the asses. We do not know, and may never know, who among our policy makers were Communist sympathizers, and who were just plain dumb and incompetent, or actuated by the ambition to make good in the era which it was profitable to be pink, and safe to be red. But there is no longer any doubt that the influence of the Chinese Communist cabal in Washington accounts for the policy which turned China into our enemy, and led to the Korean war.

The revelations made by Eugene Dooman, Harold Stassen, Louis Budenz, and Professors Colegrove and McGovern, of Northwestern University, to mention only a few of the witnesses who have appeared before the McCarran committee, are so damaging to the "men of Yalta," including General Marshall, that it was to be expected that an effort would be made to discredit them and the McCarran committee. Mr. Joseph Alsop, long an apologist for the Roosevelt and Truman foreign policy, led the attack.

Specifically, Alsop charged that the McCarran committee was taking false testimony, to wit: Budenz' statement that John Carter Vincent was a Communist is disproved, according to Alsop, by the anti-Communist recommendations made by Wallace in his cable to the President from New Delhi on June 28, 1944. Vincent accompanied and advised Mr. Wallace during his mission to China and Siberia in that year. As evidence of the anti-Communist advice given by Wallace after consultation with Vincent, Alsop cited the fact that he recommended the replacement of Stilwell by the anti-Communist General Wedemeyer.

II

For a few days it seemed that this thesis served to discredit the testimony of Budenz, and also the credibility of the case being built against the Far Eastern Division of the State Department and the Institute of Pacific

Relations. But on September 28, Prof. William M. McGovern who, during the war, served with the Joint Chiefs of Staff, and really knows the score, turned the tables. McGovern testified that in 1944 General Wedemeyer, far from having been known as an anti-Communist, "had never expressed his views on communism" and was regarded as a "Marshall man" who could be relied upon to "go along with the Communists." According to McGovern, Wedemeyer had served as spokesman for Marshall on several occasions in discussion with the British planners; so that some people wrongly thought that Wedemeyer would go along with the Communists because, with the Joint Chiefs, he thought we should not invade the Balkans or interfere with the Russian campaign in Eastern Europe.

Other well-informed persons, who cannot be quoted because they still work for the Government, have informed me that Wedemeyer's first appointment to the East was due to Winston Churchill's desire to remove from Washington the man whom Marshall relied upon to squash British plans for a strategy designed to delay invasion of Western Europe and to keep the Russians out of Eastern Europe.

From all the evidence available, it would seem that until he went to China, and had his eyes opened to the Communist menace, Wedemeyer had been a military planner whose sole aim was to win the war as quickly as possible with the least loss of American lives. Initially he rose from the rank of major at the beginning of the war to that of a three-star general, thanks to General Marshall. The latter, recognizing his brilliant talents, had selected him to draw up the plans for the cross-channel invasion of Europe. In short, Wedemeyer was everywhere regarded as a loyal adherent of Marshall's policies.

According to Budenz, who supported his assertions with copies of articles in the Daily Worker in 1944, Stilwell's recall and Wedemeyer's appointment to China were regarded by the Communists not merely as a useful compromise, but as potentially advantageous to their cause. In the first place, it eliminated any possibility that General Chennault might get the appointment—a contingency which the Reds had greatly feared because he was known to be strongly anti-Communist.

In the second place they hoped that Wedemeyer would succeed (where Stilwell with his rough approach had failed) in persuading Chiang Kai-shek to give way to Communist demands, and remove the blockade which had hitherto to some extent kept them in check while the Nationalists fought Japan. Wallace, in recommending Wedemeyer, cabled Roosevelt that he was persona grata to Chiang and suitable for the post because "it should go to a man who can establish himself in Chiang's confidence to a degree that the latter will accept his advice in regard to political as well as military actions." Specifically, Wallace hoped that Wedemeyer would persuade Chiang to establish at least a semblance of the united front and subordinate all other considerations to the necessity of reaching an understanding with Russia.

On October 5, 1951, in his second appearance as a witness before the McCarran committee, Budenz explained in detail what the Communist Party line had been in 1944 and how closely it resembled that of Wallace in the latter's recommendations to the President, while being guided into the right channels by Vincent and Lattimore. The Communists realized at this time that it was premature to try to sell the idea of a coalition government in America. It was first necessary completely to discredit Chiang Kai-shek by representing him as inefficient, incompetent, and reactionary. In Professor

McGovern's words, the Wallace recommendations "gave aid and comfort to the Communists, trying to disparage the National Government entirely, and trying to throw his weight behind support of a pro-Russian policy."

III

Since the attackers of the McCarran committee have shown acquaintance with the political and historical material on this phase of China's story, it is difficult to understand how they overlooked the above points. Surely, they could not have been ignorant that previously Wedemeyer had been regarded as one of the Marshall "Trust Stalin" school and one of the strategists who had placed winning the war above political consequences. It should have been easy to find out what the Communist line was on the matter, to note that the Daily Worker in 1944 pronounced itself as eminently satisfied with the result of Henry Wallace's mission. Indeed, that paper went so far as to compare the Vice President favorably with Browder—in a review of Wallace's pamphlet on the Pacific, published by the Institute of Pacific Relations, written for Wallace by Mrs. Lattimore.

We can expect more assaults by pro-administration columnists. The guns are being trained on Stassen, once deemed a liberal Republican, but already the subject of an abusive column by Lowell Mellett (Washington Star, October 6) for revealing the influence enjoyed in the State Department by Owen Lattimore and other admirers of the Chinese Communists.

Were it not for the fact that the reporting of the proceedings of the McCarran committee has for the most part been, to say the least, inadequate, the critics of the committee would have no chance of success in their efforts. Unfortunately, there has been what amounts to a conspiracy of silence concerning the most important facts revealed by the key witnesses before the McCarran committee. McGovern's important testimony about Wedemeyer has been practically ignored. Budenz's testimony has been only partially reported. Moreover, when Mr. Lattimore chooses to make a statement it is usually reproduced in extenso by the New York Times and by most other newspapers; whereas the Times failed to report McGovern's testimony that Lattimore wanted the Japanese Emperor and his family treated as war criminals.

The New York Times, which once did publish *All the News That's Fit to Print*, now ignores important testimony from Eugene Dooman, assistant to Secretary Grew. Dooman testified that General Marshall (in the spring of 1945) held up as premature a statement which Grew and the Secretaries of State and War had approved, assuring the Japanese that their Emperor would not be deposed if they surrendered. The effect of withholding this announcement was to help prolong the Pacific war until the Soviet Union was ready to come in to harvest the fruits of Yalta.

Most newspapers rely on the news agencies whose Washington correspondents tend to concentrate on a highly competitive battle to obtain spot news. Therefore, the public is being kept in ignorance concerning the highly important information which the McCarran committee is painstakingly accumulating, while refraining from pronouncing any judgments, or seeking publicity, until all available evidence is obtained.

IV

The present campaign to discredit the valuable congressional group, combined with unsatisfactory reporting by most of the press, give grounds for real apprehension. Have we entered the era which may end in the grim world depicted in George Orwell's *Nineteen Eighty-four* when knowledge of all facts which do not serve the interests of the ruling party are consigned to limbo?

Getting Politics Out of the Office of Internal Revenue

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. WILEY. Mr. President, pursuant to the permission granted me during the course of the debate today, I submit for printing in the Appendix the newspaper editorial and release to which reference was made by me.

The editorial and release are as follows:

CIVIL SERVICE FOR TAX COLLECTORS

In the last few months major scandals have developed in four of the Nation's largest Internal Revenue offices. Lesser scandals have come to light in some others.

The basic reason for the scandals is the fact that the top jobs in the Internal Revenue Bureau are politically filled. The President, with the approval of the Senate, appoints the collectors. The collectors appoint their deputies.

In most cases these jobs are handed out as political rewards to persons who have no expert knowledge of taxation. Frequently the collector has a business of his own, which he continues to operate. Usually he views his Federal job as the political thing it actually is. He knows his office would operate as well without him as with him.

Senator WILEY, concerned about the recent scandals, is now suggesting that collectors and their deputies be brought under civil service, as the actual workers in the Bureau long have been.

It is not a new idea but it is nonetheless worth while because it has not hitherto been acted upon. The whole Bureau should be in the hands of career men—of persons who have made tax work their specialty.

At present, no revenue worker, however qualified, can hope to rise to the top. Under the present system, the career man must always work under a politician boss, who knows little of the details of tax collection and who may take a soft attitude toward some tax debtors, as well as money contributions for the party in power.

It is a bad situation at best and has often proved to be an intolerable one.

The thing to do is to reorganize the Bureau so that the collectors will in fact be the heads of the offices, instead of useless adjuncts. The way to do that is to fill these top posts with men from the ranks who can qualify by examination for jobs that should be the most, rather than the least, important in the service.

WILEY URGES WAYS AND MEANS SUBCOMMITTEE TO REVIEW POLITICAL NATIONAL COMMITTEE INFLUENCE IN INTERNAL REVENUE BUREAU

Senator ALEXANDER WILEY, Republican, Wisconsin, former member of the Special Crime Investigating Committee has urged the House Ways and Means Subcommittee Investigating Internal Revenue Affairs, to make a complete investigation of any influence by the Democratic and "for that matter, though far less likely, the Republican National Committee in the affairs of the Bureau of Internal Revenue."

Senator WILEY stated that the stakes of exerting influence in Internal Revenue affairs "make the RFC stakes look almost like chicken feed. The Internal Revenue Bureau is a \$60,000,000,000 affair. The 64 collectors of internal revenue are politically chosen and they represent a happy hunting ground

for political influence. Such influence can be exerted by the breaking of the spirit if not the letter of the tax law."

WILEY recommended that the whole system of appointment of collectors of internal revenue be changed, "be removed completely from political patronage, and be set up instead on a 100-percent merit, competition basis."

In a supplementary statement, WILEY indicated that if the House subcommittee did not look into this problem, he would suggest that the Senate Executive Expenditures Permanent Subcommittee explore it fully.

NUMEROUS REPORTS OF FIXING TAX CASES

WILEY pointed out that the Internal Revenue Bureau is "the pipeline for sustaining the very fiscal life of the Nation. If that pipeline becomes muddled or blocked, it can result in terrific damage to the entire national solvency." He stated that he, like other Senators, has received word that "there is a considerable amount of political 'fixing' inside the Bureau, that is, fixing of tax assessments, fixing of recommendations to the Department of Justice for criminal prosecution, and so forth," but that he will state no more at the present time other than to urge the committee to investigate such charges.

The Senator pointed out that he believes, as most observers, that the number of employees in the Internal Revenue Bureau who are actually guilty of malpractice is comparatively small, but that "this minority can do and is doing considerable damage to the integrity of operations of the entire bureau."

TEXT OF THREE LETTERS

There follows excerpts from three letters:

1. WILEY's original letter to Commissioner John Dunlap of the Internal Revenue Bureau, dated October 3.

2. Dunlap's reply, dated October 9.

3. WILEY's letter to Congressman KING, dated October 10.

WILEY'S LETTER TO COMMISSIONER JOHN DUNLAP

"In November, 1950, it was my privilege to serve as a member of the Special Senate Crime Investigating Committee which visited the west coast for the purpose of analyzing problems of interstate crime and related activities. At that time, there was brought before us certain evidence with regard to irregularities and corruption in the Internal Revenue Bureau in that region.

"Unfortunately, it has taken all this while, from November 1950 to September 1951, for a major start to be made by the bureau toward cleansing of that situation.

"I do not state this by way of adverse comment insofar as you yourself are concerned, Mr. Commissioner, because I know that you have only just recently taken over the responsibility as Commissioner. I mention this, however, by way of background to the following question which I should like to submit:

"Have there been any contacts by an official or employee of the national committees of any party organization with the Bureau of Internal Revenue on behalf of any particular attorney and/or any client or clients or any other individual who had a tax case pending before the Bureau?

"By political national committee, I refer to either the Democratic or Republican National Committees. By contact, I refer to any phone call, visit, telegram, letter, directly or indirectly.

"According to information which I have received, there have indeed been such contacts and I feel that they should be brought out in the open, just as there should be fully presented to public view the nature and extent of all contacts between national committees and the Reconstruction Finance Corporation.

"I draw no implication at the present time from the report of such contacts, but I

merely feel that the public has a right to be informed of them.

"I would like to obtain from your office, therefore, a statement within the next week or 10 days describing all such contacts, the names and nature of the cases involved, and any other information which you might feel it possible to present in writing.

"I realize that the actions of Internal Revenue Bureau officials and employees, including your own, are bound by the statutory prohibition against revealing incoming tax data. However, I do feel that the minimum information which I am requesting in this letter would in no way be subject to that statutory prohibition and that it could and should be made available to me, or for that matter, to any other requesting legislator."

DUNLAP'S REPLY TO WILEY

"It is believed you will appreciate, for obvious reasons, that the pursuit of an inquiry into this matter would necessarily entail a Nation-wide survey which would require a considerable expenditure of time and effort. Accordingly, it is suggested alternatively that any specific cases concerning which you have information be referred to me for investigation. If this is done, you may rest assured that the facts will be ascertained and made available to you.

"In the event any duly constituted investigative committee of the Congress should decide to explore this matter, my office will cooperate fully in making available for inspection such files and records as may be required, both in Washington and in the field."

WILEY'S LETTER TO CONGRESSMAN KING

"I am willing to you respectfully to suggest that your subcommittee look into the matter of any contacts made by officials or employees of the Democratic and/or Republican National Committee with the Bureau of Internal Revenue on behalf of any particular attorney and/or client or clients or other individuals involved in tax cases considered by the Bureau.

"I am enclosing, herewith, correspondence which I have had with Commissioner Dunlap in which I have urged the review of such contacts and of the effects of such contacts.

"As you will note from the Commissioner's reply of October 9, he indicates that he would be happy to 'cooperate fully in making available for inspection such files and records as may be required, both in Washington and in the field'.

"He points out that in order to make a Nation-wide survey of any such contacts which have occurred, 'a considerable expenditure of time and effort' would be required. To my way of thinking, such an expenditure would well be justified because.

"I have received definite word to the effect that there have been substantial contacts made by an individual or individuals within the Democratic National Committee with the Internal Revenue Bureau (I cannot offer any information beyond that basic fact).

"2 The ultimate stakes of such political contacts in Bureau matters are infinitely larger than the stakes in, let us say, the RFC investigation. As you so well know, on the basis of your excellent investigation thus far, when a Bureau is looking through some \$60,000,000,000 of tax returns, it has an infinitely greater amount of discretion than does the RFC whose loans do not aggregate a fraction of that revenue total.

"We both know that wherever there is such an immense amount of discretion there is possibility of official favoritism and connivance.

"3. A third reason for such exploration is that the collector of internal revenue, being politically-appointed, have long been a 'happy hunting ground' for influence by party organizations. It is only reasonable to expect that so long as an official, let us say, the Democratic Party organization,

is responsible for helping to put a collector of internal revenue in that particular post in the first place, thus making that collector politically indebted to him, there will be opportunity for the collector to 'repay' that debt in a great many tax cases which may later come up.

"To my way of thinking, therefore, the appointment of the 64 collectors of internal revenue should be completely removed from political influence and should become 100 percent a matter of merit competition.

"I submit these views to you hoping that they may be of some use and hoping that your efficient subcommittee will be able to start the wheels rolling on this phase of investigation which I am recommending.

"My purpose in raising this question, I assure you, is not a partisan one, because I would equally deplore any contacts made by the Republican National Committee or its members or its officials, as I would deplore any contacts made by the Democratic National Committee. In view of the fact however that the latter has been in power for some 18 years, it is undoubtedly true that most such contacts which have been made have been made by the Democratic National Committee. What is really at stake here, however, is a principle and not a partisan question, as I know you agree.

"I do want to say that I think that when Congressman Dunlap asked me to name specific cases on which I had information, he was not quite justified, but was playing rather 'hard to get.' It is obvious that

"1 Staff assistants of the Commissioner could no doubt name a great number of cases right off hand without consulting any file cases in which they know quite well that such contacts have indeed been made.

"2 No matter how much information I personally or any other Senator-Congressman had, I could not possibly name all of the cases of which such contacts may have occurred.

"3 The Commissioner would have been on infinitely stronger ground if he had volunteered the information on major cases instead of asking me or anybody else to dig for it.

"The information is there, I feel sure. It is available to the Commissioner. It should be volunteered by the Commissioner so as to be of maximum help.

"Having served on the Senate Crime Committee for a year and a half, I know that when public officials say 'You name the case and I will tell you the facts,' it is not as reassuring an answer as when they say, 'Let me run down some of the cases which you probably have in mind. I will submit the facts, and you can ask me questions about them'.

"I do hope that I may be hearing from you on this issue."

CARE Packages for India

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a letter from India, which was sent from the Simpsons Medical Centre in Madras following the receipt of several institutional gift packages consisting of 700 pounds of dried skim milk, cheese, butter, and dried beans for feeding and agricultural retraining in one of that country's most stricken areas. The gift was forwarded

to India through the offices of CARE. The letter, which is one of the most inspiring and touching of all those I have ever seen, is addressed to a pseudonym covering the identity of the donor who desired to remain anonymous, but who is an outstanding humanitarian.

The letter deserves printing in the RECORD as a report of what happens to the food arriving in India and is an example of the importance of people reaching out to people even at so great a distance.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SIMPSON'S MEDICAL CENTRE,

Chintadripet, Madras, August 18, 1951.

E. DUKE, Esq.,

Dupont Circle Building,

Washington, D. C., U. S. A.

DEAR MR. DUKE: A very lucky star must, I think, hover over your undertakings. For your very overwhelming gift arrived on Tuesday, the day before Indian Independence Day. There had been small reason to celebrate it in Pudukkottai Village, which lies just over the back fence of our company farm on which I live and experiment. The villagers are illiterate for the most part. They only know that they are always hungry, and must now wait until mid-January for hope of enough to eat.

We have only one monsoon on the east coast, but may hope for "mango showers" in April, when the mango blossoms are set by rain. Then when the west-coast monsoon boils up in June, it should be strong enough to send some of its clouds high up over the 9,000-foot peaks which divide us. Meeting the scorching heat of the eastern plains the rain is dumped on us and farmers may plow and plant in late June a 3 months' crop of paddy and millets (ragi) which is harvested just before the monsoon floods us in mid-October.

This year both the April and June rains failed us. The countryside is a scorched desert, except for tiny fields about deep wells. The water table continues alarmingly to fall. Landowners cannot plow and plant and the huge group of casual farm labor has no work.

To the west and north of the farm, lies the Sonnallur Reserve Forest. It once stretched in dense growth from Madras for 300 miles to the south and over a mile in depth. South of us the two districts, North and South Arcot are a corruption of the Tamil aru Kadu (six forests). As an inducement to the railway, when it was built in the last generation, permission was given to cut timber, free of charge. Replanting was not required. On the farm we have magnificent manogany, teak, and jackwood trees, the latter being one of the loveliest golden woods grown anywhere. The tree is at its best when over 100 years old. The forest is now a knee-high scrubby growth. How it keeps alive is a mystery. As I drive the 30 miles to and from town each day, I see literally hundreds of people from the surrounding villages, chopping off branches, and worse still, digging out the roots, which they pound and eat as a sticky form of tapioca. The twigs are sold as firewood. Its price is so high, a family, by working hard, can earn about rupee 1 daily. If I had starving children, I would do the same, of course, but the effect upon our rainfall and climate is appalling to contemplate.

Every day we can keep people out of the forest is a day of victory. If, in mid-October, it rains, there will be field work for all, and they can manage somehow until the 6 months' crop of paddy is harvested.

There seemed no hope of this happy event, until your wonderful parcel came. The rail receipt arrived Tuesday morning, and at once we alerted our SRVS lorry service. In the

afternoon the great pile of boxes and the bags of beans arrived. It was one of our scorching afternoons, and we heavily anointed the beautiful cardboard boxes with floods of perspiration as we unpicked them for easier delivery to the farm. The metal strips which sealed the boxes will be sold, and cooking oil purchased. The boxes are flattened and transported to the farm for the villagers to use as fuel, and the ashes brought to us for the fields. The milk and butter tins are emptied and sold for 4 annas each, with which we purchase more cooking oil. The gunny sacks once filled with beans are sold for rupee 1 12 0 each.

Costly petrol is a problem, so each day I bring out in the jeep the day's ration. The beans must be soaked overnight, though when we gave them out, it was difficult to restrain the people from munching them raw. So, each day we give out milk powder and cheese and issued beans for 2 days until they were exhausted.

Arriving at the farm, Independence Day evening, word was sent to the village, of the celebration next day. At dawn, we put up the Indian flag in the center, and on its right the Stars and Stripes and the Union Jack on the left. Everyone arrived immediately, and set down in orderly rows. The flags were explained to them briefly, and the kindness of friends whom they will never see, far away in that mothers country as they call the United States of America. They have all seen my mother's picture, and some of them know the college which my husband founded and which was his daily joy until his death in 1943.

How can I explain to you the mystery of cheese for those who have never seen it? We opened one of the lovely golden, 4-pound parcels, and told them it was the United States of America form of curds, which all hope can be a part of the daily diet. All people here long to eat some form of sour milk daily so this could be understood. The lovely color was a special delight. In Madras I had been told that it would be a waste to issue cheese as the villagers would not enjoy its flavor. I wish you could see them gloating over it. Each 4-pound length is cut into 20 pieces, and the small children hold it in their hands, then up to the light to admire the color, and then with shining eyes, break off bits like grains of wheat and slowly consume all of it, beaming at me when I can summon courage to look at them. Usually, I find work elsewhere, as the one luxury we cannot afford these days is pity.

The truly joyful detail is that the 200 people who will have a ration of your food daily for the next 10 days, will for that time, stay out of the forest. When that precious possibility occurred to me, I was desperate over how to control the crowd arriving to share.

The story of the Pilgrim Fathers came handily to mind, so I told them of how hard people in the United States of America worked in order to earn the money to send such wonderful gifts, and we must do our part, so one day when God sends us rain we may grow enough food and then kind American friends may send their gifts to other countries. Then we went off to the compost piles, which must be turned. I gave them an easy stint, so they may rest as they feel the need. And so importantly, they are not now humbly taking charity, but working for what they get. I do wish that you could hear the chattering and the laughter, a happier tide of sound than I have heard since I moved here January 1, 1949. When the piles are finished, we shall pick up stones on the rocky hillside which will be reforested when it rains with thousands of trees the Forest Department gives me.

The beans are exhausted, and now we issue cheese and milk powder, and have not yet told them about the beautiful butter. I know what they will do with it. It will be adored, and then they will trade half of

each day's gift for grain, and make a porridge and add the butter, and how happy they will be.

So, you give hope to a village of wonderful people, and laughter for a little while. Before the food gift is finished, we shall be starting the 8-mile-long Famine Relief Road, which will travel from the highway, past the farm and on northward to villages isolated on a stony cart track, too difficult for hungry little cart bulls to manage now. The people will be paid in grain each day, so that will get them through the last desperate weeks before the monsoon permits work on the fields. Thus, your gift is doubly a gift, for it came at the one moment when it was most needed. The village will be writing to you. Meanwhile, for them and for myself, may I say thank you, from a depth of gratitude you will find it difficult to comprehend.

Sincerely yours,

MARIE BUCK.

The State of Our Mobilization Program

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to insert in the Appendix of The Record an address regarding the state of our mobilization program, delivered by the Honorable Donald C. Cook, Vice Chairman of the Securities and Exchange Commission, before the National Conference of Business Paper Editors, on October 4.

Mr. Cook is particularly well qualified to speak on this subject, as he has served as chief counsel for the Senate Armed Services Preparedness Subcommittee since its beginning. I ask unanimous consent that Mr. Cook's remarks be made a part of the record, as I am sure that the Members of the Senate will be vitally interested in this resumé of our mobilization program.

There being no objection, the address was ordered to be printed in the Record, as follows:

A LOOK AT THE MOBILIZATION PROGRAM

Mr. Chairman, ladies, and gentlemen, I am indeed happy to be with you this afternoon and to have this opportunity to speak on a subject which is close to us all—our preparation to meet aggression.

I prize your invitation to give you my views on the current mobilization program. The publishing profession has always had my profound respect and admiration—as have the men and women who give it vitality.

Your industry is the circulatory system of democracy. Through your papers, periodicals, and books flow the information and ideas which shape public opinion. Without an informed electorate democracy could not long survive. To enslave the populace Hitler first captured the press. Here the press contributed mightily to the preservation of democracy in time of war, and it continues to do so in the twilight peace which we now enjoy.

Today our democratic way of life faces a new test—perhaps the greatest in our history. An imperialistic and militant Soviet Russia can no longer hide behind a mask of innocence and peaceful intentions.

For many years you people have been countering the false Communist propaganda

of Soviet Russia with fact and logic. This is an important role in our struggle for survival, and one which you must vigorously continue. But with a gun in our backs, that is not sufficient. Exposure of the unsoundness of the Communist system will be of no avail if in the meantime we fall before the military force of the Soviets. The leaders of the free world have recognized this, and have begun to mobilize—to avert war if possible—but if it comes, to win it.

In this critical period of mobilization, the publishing field has added burdens and responsibilities. While you produce no weapons, your industry's contribution to the preparedness effort is nonetheless vital. From your efforts and through your presses flow technical manuals, trade and professional journals, textbooks, and general news periodicals. On your pages appear mobilization data of all kinds—historical, reportorial, analytical. Through your media of communications is funneled the vital exchange of information and ideas by which science advances, industry functions more powerfully and smoothly, and by which our mobilization program can be both guided and tested.

Not the least of the fundamental problems facing our mobilization effort results from the kind of mobilization it is—mobilization for defense. If we were an aggressor planning an attack, the whole program would be greatly simplified. We would then decide when, where, and how the hostilities would begin. Military and civilian requirements of all types could be predicted with much greater accuracy. The danger of producing quantities of weapons destined to become obsolete would be diminished. The likelihood of our country becoming a principal battlefield would be lessened. Obvious advantages appear all down the line.

But we are not mobilizing for attack. Our preparedness is for defense, and we must accept and solve the greater problems presented by a defensive rearmament program.

As I see it, there are three major objectives in our current mobilization effort. First, we must speedily build up our military machine to a level adequate to meet the present threats of Soviet aggression. So long as Russia remains aggressive and unwilling to cooperate in a realistic international disarmament program, we must constantly maintain our Military Establishment in a position of readiness. It must at all times be sufficiently strong to deter the Soviets from launching an attack.

This period of vigilance and preparedness may extend over many years. If so, it will inevitably result in waste—in maintaining large unformed forces; in producing weapons, tanks, and planes which certainly will become obsolete and require periodic replacement. And, such waste will be duplicated as we furnish similar military assistance to our friends in the free world. But this is an unavoidable concomitant of defensive mobilization. We can only hope by careful planning and watchfulness to keep such costs to a minimum, consistent with our primary objective of insuring that our Armed Forces are always capable of fighting a present and future war, not a past one. The Maginot line taught us what befalls a nation that prepares to refight the last war.

Obviously our second mobilization objective is to expand our industrial plant and maintain it in a healthy condition, capable of quick harnessing to the requirements of an all-out war. There is no assurance that a future war will be like World War II—a war of production. But we simply cannot gamble on the chance that it will be a short war, or the type of war which does not require a constant stream of enormous quantities of all types of military armaments and of essential civilian goods. Every indication we have is that modern warfare will put an even greater strain on our industrial plant than did World War II. One thing is cer-

tain. We cannot hope to win a modern war unless our industrial machine is capable of making our military force superior in power to that of our enemies.

Since we are mobilizing for defense, we must maintain industrial flexibility. While we must build a large military production potential, it must not be so heavily committed in any direction that it cannot quickly be diverted and readjusted to meet new developments and requirements. Because our enemy will initially determine the time and place of battle, we must keep our preparedness alert and pliant, ready to proceed swiftly along that course which, when the attack comes, seems to afford our greatest strategic opportunities.

In planning and building our industrial plant for wartime production we must anticipate that many of our production facilities may be knocked out by direct attack or sabotage. In our highly centralized mass production system it would not be too difficult for an enemy to cause substantial reductions in output. Still another factor to be taken into account is the large impact of civil defense requirements on our industrial potential in the event our great cities are bombed. Our survival may well depend upon how clearly we recognize the dangers to our industrial plant and how effective our planning is in organizing to avoid these risks or, if they materialize, to absorb their impact without serious interruptions to the vital flow of military supplies.

We are today producing at the phenomenal rate of almost \$330,000,000,000 annually. And it is estimated that in 1952 private corporations will spend \$25,000,000,000 to replace and expand plant facilities. This indeed is action in the right direction, and it must continue. For an indefinite period we must count on having to produce substantial quantities of military supplies in addition to normal civilian requirements. Because we do not and cannot know when, or even if, war will actually come, we must have a permanent expansion of our productive capacity if we are not to have a permanent reduction in our standard of living. Further, while the coin of inflation may have too much money on one side it certainly has too little goods on the other. And should production for total war finally become necessary, the burden will be less heavy and spirits much lighter if the sad event is not preceded by too much brown bread and austerity.

The third major objective of the mobilization program is to insure that industry has an adequate wartime supply of all strategic and critical materials. It is on this aspect of mobilization that the Senate Preparedness Committee has been devoting a substantial portion of its time and energy. Its importance is manifest. Having the largest and most efficient industrial plant in the world will give us cold comfort unless it has an ample supply of all, not most, but all, of the strategic raw materials required alike for peace or war. End products combine dozens of materials, and a shortage of any one can result in a fatal bottleneck and lost production.

On the strategic and critical list of materials being stockpiled under the National Stockpiling Act are 93 items. Domestic production of most of these raw materials is either nil or far below even normal industrial requirements. Moreover, the sources of many of these items are outside the area within the Western Hemisphere from which we could hope to maintain a reasonable flow of imports during wartime.

To achieve this third objective our Government is doing several things. It is stockpiling; it is encouraging and assisting in the development and expansion of domestic production of these raw materials; it is trying to induce friendly foreign countries to increase their output of raw materials; and, it is urging and sponsoring research and development of substitutes for materials which are

either in short supply now or which would be the minute war broke out.

The investigations of the Preparedness Committee have disclosed, unhappily that none of these courses was being pursued either with the warranted vigor or the needed results. Even after the match of Communist aggression kindled the flames in Korea, key portions of our defense effort reflected a dangerous lethargy and complacency. Through the reports of our investigations we have tried to eliminate this attitude by an unvarnished presentation of problems faced and solutions yet wanting. In each instance we have made recommendations which, for the most part, have been promptly implemented by the departments and agencies concerned. And, I should add, with good grace, too.

We found that in some cases our rate of stockpile acquisitions was too rapid, in others, too slow, some stockpile objectives were excessive, while others were inadequate. We found that the efforts to develop and expand domestic production of strategic materials and to induce foreign countries in the freedom bloc to expand their output were being pressed neither with the vigor demanded by the urgency nor the firmness necessary to insure success.

Perhaps the best way I can illustrate these raw-material problems is to give you a few specific details about some of the investigations conducted by the committee.

Immediately after war broke out in Korea, and even before the Preparedness Committee, of which he is chairman, was established, Senator LYNDON JOHNSON of Texas, took steps to improve our national rubber situation. Through his efforts the sale of several synthetic rubber facilities as surplus was prevented. It is largely to his credit that we have rehabilitated and reactivated the synthetic-rubber industry and achieved the present rates of production as fast as we have. Contrasted with a production rate of approximately 270,000 tons annually in January 1950, we are now turning out synthetic rubber at an annual rate of about 830,000 tons. In addition, plans to increase this production another 140,000 tons annually are under way.

Encouraging as is the progress made and planned in synthetic rubber, we have by no means solved our rubber problems. Even if synthetics were a complete substitute for all essential uses of natural rubber, we are not yet able to produce our total annual rubber requirements which last year amounted to about 1,250,000 tons. But more important is the fact that substantial and vital wartime rubber products, such as heavy truck and airplane tires, require certain minimum percentages of natural rubber. Coupled with this are the equally unhappy facts that we must import every pound of natural rubber we use—95 percent of it from southeast Asia, an area which undoubtedly can be foreclosed to us in any future war.

Our short-term rubber objective is to achieve preparedness through expanded synthetic production for use in the present and completion of the goal of our natural rubber stockpile for use in the future. The time schedule for accomplishing this latter goal is obviously affected by the impact of our first mobilization objective—the immediate buildup of our military forces to meet present threats of aggression. Current military and essential civilian requirements for rubber have been met without delays. But this, together with the necessity of continuing additions to our stockpile, has made it necessary to restrict the use of natural rubber in the manufacture of various civilian products.

These conservation measures have been at best mild and at worst inadequate. In order to increase the rate of additions to the stockpile they will have to be made more stringent. Increased purchases of natural rubber would probably drive an already ex-

cessive price still higher. Hence economical stockpiling can come only from conservation.

Still another aspect of our short-term rubber objective is the development of a domestic source of natural rubber from certain rubber-bearing plants, such as guayule and the saghyzes. The purpose of this program is to insure a supply of natural rubber in the event war should break out before our stockpile objective is filled. Although this project is still largely in the seed and seedling stage, sufficient progress has been made that we now can be sure of producing some natural rubber in the United States if the need arises. This program is one of insurance and we will not regret the premium paid if a kind providence makes it unnecessary for us to file a claim under the policy.

Our long-term rubber objective is to reduce our vulnerability by becoming self-sufficient in rubber. We can accomplish this in two ways. First, by perfecting synthetics so that complete substitution for natural rubber is possible. Second, by encouraging and assisting South American countries in the establishment of a substantial and commercially feasible hevea-tree rubber industry. Both courses must be vigorously pursued for, until we have ended our dependence upon southeast Asia for rubber, our national security will remain in serious jeopardy. The work of the committee, I believe, has hastened the day when our rubber security will be complete.

Another raw material which came under the committee's scrutiny was tin. There we found ourselves front-row spectators at a dramatic market spectacle. From a pre-Korea price of 76 cents, tin rose steadily on the world markets to almost \$2 per pound.

A number of factors combined to produce this result. Current consumer demand increased sharply; our Government was committed by contracts to substantial purchases for the stockpile at prices fixed in the Singapore market (regarded by some as susceptible to being rigged); speculators plunged into the market with a vengeance, and, tin production remained about constant, at a level far below the then existing demand.

As you know, tin, like rubber, has many essential uses, in peace, as well as war. As with natural rubber, there are no domestic sources of any consequence. It must literally all be imported. But fortunately, unlike natural rubber, its sources are not so heavily concentrated in distant southeast Asia. Substantial quantities are produced in Bolivia and Africa, areas which can reasonably be counted on as being accessible to us during any future war with any presently identified enemies.

The largest use for tin is in the manufacture of tin cans. Normally this use amounts to about one-third of the tin consumed in the United States, which, of course, has been for years the largest tin-consuming nation. A recent announcement that an aluminum and plastic-coated can has been developed to replace the tin can is important, encouraging news. But nevertheless tin will probably remain on the strategic and critical list for some time to come. Right now aluminum will probably do more for us in airplanes destined for the fighting fronts than in cans destined for the city dump.

In this investigation the committee discovered that the tin stockpile objective had been set unrealistically high; faulty calculations had been made. The Munitions Board thereupon revised it downward. But the amount of tin in the stockpile is still significantly short of the lower goal. While we still need tin, our need is happily not as desperate one. We have in the United States today more tin than we had when the Japanese struck at Pearl Harbor. And we ended World War II with large stocks left over.

As was the case with rubber, the Preparedness Committee recommended a program of action designed to eliminate the causes of the tin shortage. Our goal was to establish circumstances which would enable us to buy greater quantities of tin, but at reasonable rather than extortionate prices.

To accomplish this goal we proposed two courses of action. The first course was comprised of steps which the United States could take alone in order to terminate immediately the costly and entirely unnecessary purchase of tin at excessive prices. The committee recommended that the RFC be given exclusive authority to import and sell tin in the United States. It urged that all current stockpile purchases be suspended, and that at the earliest opportunity the tin metal contracts with the Belgian Congo and Indonesia be canceled. These measures were all promptly implemented by the executive agencies concerned.

The second course of action was designed to solve the remaining tin problems through the full cooperation of both tin producers and tin consumers. We recommended that an international tin conference be held at once to work out agreements to increase production and to make suitable allocations of world supply at stable, reasonable prices. The committee recommended that our Government furnish financial and technical assistance to the foreign tin producers to help them expand production, that tin-producing governments grant tax benefits and other aid to encourage production-increasing projects; that our stockpile figures be disclosed to the tin producers and that long-term, fixed-price contracts be offered to assure producers a known large and stable demand. In addition, assurances were to be given that our accumulated stockpile would not be used to control the tin markets.

The conference was held, in March of this year, but proved a complete failure. The tin producers are a fairly well-knit group. If they are not actually a cartel, the resemblance is startling. They have traditionally controlled world tin markets by establishing production levels and quotas. Their position at the conference was in accordance with this tradition. They refused to increase production and allocate supply. They demanded exorbitant prices. They wanted the United States to join with them in a formal cartel, on the theory I suppose, that the anti-trust laws do not apply to the United States. The producers were more concerned with the possibility of losing their monopolistic control over the tin markets, and with the fear of tin surpluses in the distant future, than they were about the terrifying dangers now facing the free world.

I suppose, too, that they thought the United States didn't have the courage to stop buying tin and that they could continue to sell at \$2 a pound. But we had the courage and today tin is about \$1.10 a pound. The producers have learned a lesson they will long remember.

We are now hopeful that they will recognize the soundness and fairness of our position and will cooperate in the formulation of a sensible tin program. But until they do, we will continue our present course of centralizing tin importing, suspending stockpile purchases, and imposing restrictions on the use of tin for nonessential goods.

Two other materials investigated by the committee, nickel and tungsten, serve to bring out still different problems facing our raw materials preparedness efforts. Both are of vital importance, having many essential industrial uses, and both are in critically short supply.

Eighty-five percent of the free world's nickel is produced by International Nickel Co. of Canada, which has an obvious and formidable monopoly in the field. Inco states that it is now producing at capacity

and, because of difficult mining and metallurgical problems, is unable substantially to increase its productive capacity.

As a result we have to look to the few smaller producers and other sources for additional production which will help narrow the wide gap between current supply and requirements.

In pursuing this approach we discovered that one obvious additional source of nickel was being dangerously neglected, even as much as 6 months after Korean hostilities commenced. The Government's Nicaro plant in Cuba, which ceased operations shortly after World War II, was still standing idle and steps to restore it to production were proceeding at a snail's pace. Under the prodding of the Preparedness Committee the rehabilitation and reactivation of Nicaro has been very substantially speeded up.

Nicar's output can increase the free world's supply of nickel about 10 percent. Its present capacity is 16,000 tons annually. Although during World War II actual production never reached capacity, we intend to make sure that it is attained now.

Because our major source of nickel is so close at hand, there is a constant danger of complacency in the way we handle this problem. The active gray market in nonessential-use nickel, recently exposed, is a reflection of this attitude. The military and essential civilian requirements for nickel are already so great, and constantly increasing, that it is apparent we must develop more effective allocation and conservation measures. Finally, unless new sources are discovered, other metals will have to be substituted for nickel.

The tungsten story is a preview of how total war could deprive us of our principal sources of strategic and critical raw materials. As you know, large quantities of this metal are required for high-speed steels and cutting tools, electronic equipment, and for cores in high velocity armor-piercing shells. China historically has been the world's largest producer of tungsten, and, of course, we have been unable to procure any tungsten from that source since well before its intervention in the Korean struggle. The United States is only capable of producing less than half of our wartime tungsten requirements. With a far from completed stockpile objective, and virtually no other substantial sources readily accessible, this is a far cry from real preparedness.

One of the most regrettable oversights of the Munitions Board in establishing stockpile objectives occurred with respect to tungsten. Until December 1948, its calculations failed to take into account the enormous military requirements for tungsten armor-piercing cores. In the meantime, the Communists were overrunning China and cutting us off from that vast source of supply.

In this situation we recommended measures to increase domestic and foreign tungsten production. We were successful in persuading the Army to test a process developed as long ago as 1948 by which cores from low-grade concentrates can be produced. If successful, this method will save both time, money, and tungsten. But it is clear that if we are to achieve anything approaching an adequate supply of tungsten for wartime requirements we must now pare its non-essential use to the bone.

Assuring adequate wartime supplies of strategic and critical materials like rubber, tin, nickel, and tungsten, while we are at the same time drawing heavily on current supplies for our immediate military build-up program, presents many challenging problems as does virtually every other part of our mobilization program. Those problems can and will be solved. But they will be solved neither by the releases of public relations officers nor by over-optimistic quarterly reports. They will be solved by hard work, by ingenuity, and by respect for the cold facts.

Together the free nations of the world must dedicate their hearts, their heads, and their hands to the task of becoming and remaining militarily and industrially strong. That and that alone can convince the Soviet imperialists that any war they start will result in their downfall. Complacency must be cast out. The business-as-usual attitude still prevalent in the country to a marked degree must end. The necessary sacrifices and hardships must be accepted. All of us in the free world must realize the grave character of the threats to our security, and how little time we may actually have in which to prepare. With imagination and vigor and above all with action now we will ensure that no future historian will write of us, "They mobilized, but too late, and with too little." In this task yours is a great role. It is for you to kindle the conscience of America. For America aroused is unconquerable.

The Fight for Justice for American Citizens—The Case of the Amendment to House Joint Resolution 289

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, October 17, 1951

Mr. WILEY. Mr. President, pursuant to the permission granted me during the course of the debate today, I submit, for printing in the Appendix, the statement prepared by me entitled "The Fight for Justice for American Citizens—The Case of the Amendment to House Joint Resolution 289," and a letter dated July 30, 1951, addressed to me by Leo T. Crowley, to which references were made.

The statement and letter are as follows:

A DEMAND THAT THE OFFICE OF ALIEN PROPERTY CUSTODIAN NOT PULL ANOTHER SHADY TRICK BEHIND CONGRESS' BACK

(Statement by Senator WILEY)

DO WE BELIEVE IN FAIR PLAY FOR EVERY AMERICAN?

Like a great many other Americans I had for a long time been comparatively unfamiliar with one of the lesser known Government agencies known as the Office of Alien Property Custodian. To be sure, I recalled the scandals which occurred in the administration of alien property after World War I.

Up until recent years, however, it had been my belief that the situation had been corrected and that legislation which Congress had enacted to forestall such scandals had begun to serve as an effective check and balance in that custodial operation. It has always been my opinion that checks and balances are essential against every Government agency, and for that matter, against every human instrumentality, lest there be abuses of power. Power corrupts and absolute power corrupts absolutely.

In recent years, in various contacts with that agency, which I shall hereafter refer to as the APC, I have noted a certain high-handedness, a certain apparent lust for power, a certain "We can do no wrong philosophy," a certain attitude of "We are the boss; we are the king, we shall not be interfered with by Congress or the courts," which is very unfortunate in this agency, or for that matter, any agency.

LITTLE DICTATORS IN THE APC

I recognize the right of men to differ with one another. I have never questioned another man's motives—his honesty, his integrity simply because he holds views differing from my own. But when individuals within or outside a Government agency approach subjects in the manner of little dictators, when they get the concept that they are the absolute boss, that they can defy every basic rule of fairness and justice, then I say that it is time to call a halt. It is time to blow the whistle. It is time to put the little dictators in their place.

Recently I offered, at the suggestion of a distinguished citizen of my State, a simple amendment to assure a fair judicial hearing in a case involving United States Government citizens. Government witnesses presented their views in opposition to the amendment. That is and was their right. The Senate Foreign Relations Committee defeated my amendment, drafted a new one, narrowed its scope, and reported it favorably to the Senate floor.

By then, however, the Office of Alien Property had begun to scream like a monster that had been wounded. "How dare the Congress tell us to go to the courts," it seemed to say. "The record is closed on this case. It must not be reopened."

The agency, or rather a group within it, yelled, ranted, howled. It raised all sorts of extraneous issues.

It started to paint horns on the sponsoring Senators as if by their act of fighting for justice they were defiling the American flag. What a base campaign. What a shocking effort to intimidate. What a tissue of mistruths it has spread to the unsuspecting. The Alien Property Office knows that it has been guilty of peddling sheer bunk to the public and to the press.

I HAVE FAITH IN THE PRESS; YES, EVEN IN MY CRITICS

Let us expose that bunk. Let's look at the record, as Al Smith used to say. Let the press—in whom I have a deep and abiding faith—see how it has in some instances unfortunately set off in defense of errant bureaucracy. Yes; let those folks in the press who have criticized the amendment read the affirmative case for it. I have faith in their ultimate judgment. They may not completely agree with the case for affirmative, but they will see that the sponsors have naught but elementary justice in mind.

I am going to present a review of this entire case, summarized to as great an extent as possible. I will present it in question-and-answer form. Although the bulk of these comments will be related to the past, and although I am intensely interested that there be a thorough review of that past, I am infinitely more concerned with the future.

THERE MUST BE NO QUICK-RIGGED SALE OF DISPUTED PROPERTY RIGHTS

I am going to state that, in my opinion, the United States Government has acted unfairly in a case involving American citizens. I am going to state that there must be a court examination of the record of the United States Government. But I am going to make an additional recommendation—a very strong recommendation—and that is, that the Alien Property Custodian Office not attempt to pull any more tricks on the United States Congress or on the courts of the United States. There is grave danger, according to well-informed observers, that in order to complicate this issue beyond possibility of unravelling, the Alien Property Custodian may force a quick sale of the General Dyestuff Corp. property. In that way, APC would bring into play title of a third party; thus, the possibility of assuring ultimate justice for the original owners of this property would be tremendously endangered.

PEOPLE WAKING UP TO APC

This concern as to this possible "trick" by the APC has a very definite foundation. On this very day, the newspapers of our Nation are carrying reports regarding the questionable history of the APC. There are "signs in the sky" that the days of the APC's relative immunity from investigation are fast drawing to a close. There are signs that the American people and the American press are starting to wake up to the realities of just how this agency has been operating in many respects.

As I shall point out later on, the work of the APC is difficult work, complicated work. A great many fine Americans have served in that agency as its head and on its staff. There cannot be and must never be a blanket accusation of those men. But there have been a comparatively small group of official connivers who, in the opinion of a great many qualified observers, must stand before the bar of public opinion and account for their, let us say, "most peculiar practices."

It is shocking indeed that this very same type of individual has, during recent days, been the type who has been screaming about an alleged "plot" and alleged "secrecy" in connection with the Congressional fight for justice in the Halbach-General Dyestuff Corp. case. Obviously these individuals are simply putting up a smoke screen, hoping to obscure their own guilt. Obviously, they are hurling the very same accusations which they know really describe their own activities, rather than the activities of anyone in Congress.

I WOULD WELCOME ANY INVESTIGATION WITH OPEN ARMS

Remember, Mr. President, it is unfair to yell "plot" against the Congress (or anyone) when there is no plot, "secrecy" when no secrecy is or was intended, "scandal" when a legislative situation, far from being a scandal, involves an elementary fight for justice. If anybody wants to investigate this or any other APC matter, I will welcome them with open arms. I would be perfectly delighted; the quicker the better, the more complete the better. Initially, however, it is the courts which should handle the review of this particular highly technical case.

But would APC want an investigation? Of course not. It would shrink from investigation; it fears investigation; there are too many skeletons rattling in too many APC closets.

Now, let us present the case in question-and-answer form.

First, let us look at this agency itself.

IS THERE THE POSSIBILITY OF ABUSE WITHIN THE OFFICE OF ALIEN PROPERTY CUSTODIAN?

In my opinion, the answer is a 1,000 percent yes! This agency has one of the most enormous areas of discretion of any Government agency. Even an administrator with the wisdom of Solomon could make mistakes—very big mistakes—in that office.

And if an individual who did not possess the wisdom of Solomon or the conscience of Solomon headed it and if unconscionable individuals staffed it, immense damage could be done.

I want to reiterate, however, in all fairness to the great many individuals who have worked in that agency that many fine Americans have indeed served there. The Honorable Leo Crowley, I believe, is one of them, and there are many others.

But just look at the fantastic financial empire controlled by this agency. Between March 1942 and June 1950, it "vested" property with a net equity of \$341,000,000. This included \$116,000,000 of interest in business enterprises, \$74,000,000 of interest in estates and trusts.

The office has in addition vested thousands of tremendously valuable German and Japanese patents.

Since the primary aim of the Office of Alien Property Custodian is to prepare those properties for liquidation or sale to nationals of the United States as soon as is practicable, there is obviously an immense opportunity to sell to a favored few sons and favored companies, thus possibly creating immense fortunes for the favored few.

Meanwhile, with the properties being managed under the Office of Alien Property Custodian, there is a tremendous opportunity to put favored sons in as officers and directors.

These facts are obvious to everyone.

I make no charges at the present time. Let all who read, draw their own implications. The possibilities for abuses by this agency, for misuse of assets, are literally fantastic.

Think for a moment of the General Audline & Film Corp., whose total assets in mid-1950 were \$112,000,000, or of the Shering Corp., with total assets of \$11,500,000, and so on down the line of companies controlled by OAPC.

Think of how relatively easy it would be for OAPC to (a) prevent rightful owners from resuming control of a corporation which might have been improperly seized initially.

(b) Sell that corporation to some favored sons before the courts or Congress or public opinion could catch up, so to speak. This is identically what is feared in the Halbach-GDC case.

WHAT IS THE HALBACH GDC CASE AND THE AMENDMENT TO HOUSE JOINT RESOLUTION 229 ALL ABOUT?

The case concerns the challenging of an unfair so-called compromise agreement under which rights to so-called enemy-owned stock were induced to be sold to the Government in effect for 20 cents on the dollar. The purpose of the amendment to House Joint Resolution 229, therefore, is to permit court review of the merits of that whole settlement (or some few similar settlements) in the interest of fair play and justice.

WHAT IS WRONG ABOUT SUCH COURT REVIEW?

Nothing. But, the Alien Property Office doesn't want it. It's scared of it. It is screaming against it. It fears a thorough judicial review.

DOES THIS MEAN THAT ALL FOLKS CONNECTED WITH THE OFFICE OF ALIEN PROPERTY CUSTODIAN NOW OR PREVIOUSLY ARE AGAINST THE AMENDMENT?

Definitely not. The Honorable Leo Crowley, formerly APC Administrator, is a prime force respectfully urging action on such an amendment. That is a matter of record which Mr. Crowley has been happy to make known repeatedly. Mr. Crowley had with considerable doubt, signed the vesting order on that stock. (The compromise agreement was, however, signed during the regime of Mr. Crowley's successor, Mr. James Markham.)

In a comprehensive letter of July 30 to me, Mr. Crowley stated "I would be willing myself to testify before your committee in support of such an amendment." (An original amendment broader than the present amendment.)

JUST HOW DID THIS CASE START?

The United States Government, through the Department of Justice and in turn the Office of Alien Property, vested stock of the General Dyestuff Corp. of New York. Almost all of the owners of the stock were native-born citizens of German heritage. Note that—native-born citizens (not enemy aliens).

The holders of more than half the stock at the time of vesting were American-born trustees holding the stock for the native-born daughters of Ernest Halbach of Short Hills, N. J.—as a result of a gift in trust made by Halbach prior to the war.

WHAT IS THE GENERAL PURPOSE OF VESTING PROPERTY?

As described in the annual report of the Office of Alien Property, United States Department of Justice for the fiscal year ending June 30, 1950:

"The Office of Alien Property is charged with the responsibility of elimination of enemy interest in property in the United States owned or controlled by the governments and nationals of Germany and Japan. The initial step in this program involves the identification and vesting of this property in the name of the Attorney General of the United States. Control is obtained through the issuance of a vesting order and vested property is administered by the Office in the national interest."

I invite attention to the fact that vesting theoretically only takes place in connection with "enemy" interest. Yet, as Mr Crowley pointed out in his comprehensive letter to me, while the stock of the Halbach children was identified as "enemy" in nature, Ernest Halbach himself, (who was for many years president and manager of the company and who was one of the outstanding dyestuff technicians in America), was continued by the Alien Property Custodian Office in actual charge of the company's operations during the entire war. Obviously, he was not an "enemy." Obviously, he was "cleared" to hold this post.

As a matter of fact, he was commended for his war work by the War Production Board and Gen Brehon Somervell

WAS THERE THUS CLEAR PROOF THAT THE OWNERSHIP OF THE STOCK WAS ENEMY IN NATURE?

Very definitely not. Mr. Crowley stated that there was serious doubt on that point. He commented, however, that as a general policy, "if any doubt existed as to the possible enemy character of the property and the property was essential to our war efforts and needs, I resolved that doubt in favor of the Government and issued vesting orders."

Mr Crowley stated further that his premise was that he expected normal judicial remedy would be available under which citizens would later reclaim their property, if it had been improperly vested.

Now, with regard to the doubt itself, Mr. Crowley stated, "Special investigations within my own office conducted after the vesting created substantial doubt within my office as to the basis for vesting, particularly a report by Judge John J. Burns of Boston, Mass., a highly respected judge and lawyer."

WERE THERE ANY UNIQUE CIRCUMSTANCES DURING THE WAR WHICH WOULD HAVE PRESSURED THE OWNERS OF THE STOCK TO SELL AT LESS THAN FAIR VALUE?

Of course there were. Everybody recognizes that during a period of war, there are tensions, hatreds, fears, subtle and overt pressures which very obviously tend to force individuals to make settlements which might be unfair.

To quote from Mr. Crowley: "From my own experiences of the atmosphere in which the Alien Property Custodian's Office operated, I agree with amendment and urge its adoption."

From Mr. Crowley, I quote further: "At some point during the proceedings, Mr. Halbach was induced by the Department (whether as a price of being permitted to retain his employment with the company and thus preserve his reputation before the public during the war, or otherwise) to cause the daughters' trustees, and former associates to compromise" and sell their stocks at less than book value.

WHAT THEN DOES THE ISSUE BOIL DOWN TO IN THE HALBACH-GENERAL DYESTUFF CORP. CASE?

The issue is whether the Halbach daughters and others in a similar situation shall be given an opportunity of a full trial on the merits in court in order to clear their reputations and their property.

To get such a trial, there must first be removed all procedural impediments.

DOES THE AMENDMENT PREJUDICE THE RIGHTS OF THE UNITED STATES GOVERNMENT?

Of course not. As stated by Mr. Crowley in connection with the original amendment, "the language of the amendment could not hurt the United States nor the rights of any third parties."

IS THERE A PRIMA FACIE CASE AGAINST THE UNITED STATES GOVERNMENT'S CONDUCT OF THE CASE?

Absolutely. To cite just one phase, the Alien Property Custodian Office bought the Halbach stock at \$118 a share when the book value of the stock, as publicly stated by the Attorney General at the time, was nearly five times that amount. What is fair about that sort of settlement?

Later, another block of stock was bought for \$365 a share. How could \$118 be fair if the same Office of Alien Property Custodian later bought another block of stock at over double the amount; which in turn was far less than the \$540 estimated by the Attorney General to be the book value of the stock?

RETURNING TO MR. CROWLEY, WHAT IS THE BACKGROUND OF HIS CONTACTS WITH SENATORS IN THIS CASE?

On July 17, Mr. Crowley came to my office accompanied by another good friend, a distinguished Republican Senator of the United States.

Mr. Crowley factually described the Halbach Dyestuff case. He stated that he felt that an injustice had been committed and that the United States Government should allow a full judicial review of the merits of that case.

I told Mr. Crowley that I was glad to get his expert judgment and I asked him to prepare a letter setting forth all the basic facts and enclosing an amendment which might be submitted to the Senate Foreign Relations Committee for review. This he did, and on July 30 he sent me the afore-mentioned letter which I am making a part of this record.

On Friday, August 17, we discussed this issue in the Senate Foreign Relations Committee. A representative from the Department of Justice appeared before us. He opposed the amendment. He stated, moreover, that the whole subject might better be handled if at all, by a special private bill and not as an amendment to the termination of war resolution.

Members of the committee like myself agreed that it might indeed for some reasons be preferable to have this amendment considered as a special bill, although it was not inappropriate, as I shall mention later on, to include it in House Joint Resolution 289. We stated that in view of the time factor involved and in view of other factors which militated against the passage of a private bill, we might just as well bring the issue up for debate in committee and on the Senate floor as an amendment to House Joint Resolution 289. It was quite clear that the same forces which opposed the amendment to House Joint Resolution 289 would also oppose the private bill.

After the committee debate, the amendment which I had introduced on behalf of Mr. Crowley, was defeated. That ended the matter so far as I was concerned. A number of Senators indicated, however, that if the amendment were redrawn so as to narrow its scope, they would favor it. Still others said they would support a private bill but not an amendment of this nature, however restricted, to House Joint Resolution 289.

I want to point out, however, that the defeat of this amendment did conclude the matter as far as I was concerned. I had pleaded the case as I saw the equities. The majority of the committee had not held with me. I felt that it was up to us to proceed to other business.

I subsequently left to attend the San Francisco Japanese Peace Conference as an official delegate of the United States Government. I left specific instructions on my departure that I did not want the over-all war-termination resolution held up on my account. Nevertheless, the resolution as a whole was held up in view of the opinion of a majority of the committee to the effect that this matter should be reconsidered.

When I returned, I found House Joint Resolution 289 pending before the committee once again. A leading Democratic Senator moved reconsideration of the whole subject. A new amendment identified as "the committee amendment" came up for review that Monday, October 1. This amendment was passed, 6 to 2, including both Republican and Democratic favorable votes. Let it be mentioned again that the committee amendment was more restrictive in the number of cases to which it pertained as compared with the original amendment. This then is the amendment now pending on the Senate floor. There we have a brief history of the background of my own interest in the amendment. There are no other basic facts, no other motives, no other interests to my knowledge which have entered into the situation at all. The amendment has been offered in good faith. It will be voted up or down in good faith.

IS IT INAPPROPRIATE TO HAVE IN THE TERMINATION OF THE WAR RESOLUTION AN AMENDMENT OF THIS NATURE?

No. In the first place, as stated in Senate Report 892

"Since the executive branch of the Government has deemed it appropriate to protect the operations of the Alien Property Custodian Office by the inclusion of a proviso in the present resolution (continuing the powers of the Alien Property Office—my addition) the committee believes that it is also appropriate and just to furnish those who allege injury an opportunity to be heard on the merits of the case."

A second reason why it is not inappropriate to include this matter as an amendment to the joint resolution is that by this amendment, we will be proving to the German people that in the United States of America, we believe in a system of impartial administration of justice.

We believe that every individual no matter who he is or what he is, whether he be a Nazi, Fascist, or Communist, or whether he or his heirs or relatives be alleged to have such associations or financial interests, is entitled to his day in court.

AMERICANS DESPISE LEGAL LYNCHING

In the United States of America we do not believe in legal lynching. We do not believe that a real or alleged Nazi, Fascist, or Communist can be deprived of his rights, if he is an American citizen.

This does not mean that we will allow any individual who does not believe in the American way of life to sabotage this country directly or indirectly. No one who is familiar with my record of opposing all totalitarian movements and individuals would doubt for one moment my steadfast fight against such individuals. However, we cannot throw the Consultation out of the window simply because it comes up in a case which does not particularly suit our political beliefs.

I have no brief for the infamous I. G. Farben Corp. or any cartel. I have always fought monopolies and trusts, domestic or foreign. But I do have a brief for the United States Constitution.

AMERICANS DESPISE COLD OR HYSTERICAL PERSECUTION

We all recall during World War I, the hysteria which prevailed against German-Americans. We recall that a great Senator of Wisconsin and of the United States, the Honorable Robert M. LaFollette, Sr., was hanged in effigy, reviled, smeared, because he would

not join in the hysteria against Germans or German-Americans.

To those who oppose this amendment, may I ask, Do you perhaps want us to don white robes and go out and lynch individuals who are alleged to be Nazis, Fascists, or Communists? Do you want us to confiscate outright their property? Do you want us to adopt the horrible tactics of nazism, fascism, and communism under the guise of fighting them?

What has happened to our American concept of civil liberties? What has happened to our concept of freedom for the thought we hate espoused by Justice Oliver Wendell Holmes?

I am sure that the very sources which have been critical of this amendment have splendid records of fighting for civil rights. Let them not forget their own fine records in this respect. Let them not violate their own inherent sense of fair play. Let them not endanger the rights of all minorities by this terrible precedent.

One million Americans have died during our history in various wars for freedom. Let their fight for civil rights not be lost.

CAN THE HALBACH DAUGHTERS SECURE REMEDY FOR THEIR ALLEGED INJURY AT PRESENT WITHOUT THIS AMENDMENT?

They can if they prove fraud and duress; but every lawyer recognizes how difficult it is to prove fraud and duress.

The Halbach daughters have instituted proceedings in the Federal courts in New Jersey. But they are being threatened with their compromise settlement of 1945 as a bar to their attempt to have a trial.

This compromise settlement on its face was an obvious farce.

What do I propose at the present time? First, I propose that the Senate debate this issue up or down. I repeat, I never for one moment have sought to delay action on the over-all resolution to terminate a state of war with Germany. Obviously, this resolution is of paramount importance with or without this amendment.

If the Senate does not agree with this amendment, let it defeat it; if it does, let it pass it. Let the issue be thoroughly debated.

Second, there is a possibility this issue may not be acted upon one way or the other because of Congress' adjournment. In that event, I propose, indeed I emphatically urge that the APC not indulge in any quick sale trick such as envisioned in the earlier part of this statement. The eyes of America are on you, APC, don't attempt to pull a fast one on the Congress or the people.

IN SUMMARY, IS THERE ANY BASIS FOR DEFAMING MR. LEO CROWLEY OR ANY SENATOR WHO HAS SPONSORED THIS AMENDMENT?

Of course not. There is no reason to doubt for one moment the integrity, the honesty, the efficiency of Leo Crowley. He has received a great many honors from his country and from his religious faith. He has won great distinction in private business life. He has prized his record and reputation. He has followed up on this Halbach matter because he has a deep and deserved pride in his Government and he feels that his Government—our Government—should not ban redress of a wrong. He has no personal interest, financial or otherwise, in this whole matter except as an issue of principle.

If a Senator of the United States cannot heed the judgment voiced by an expert of Mr. Crowley's stature and voiced by other Senators, then the question is: Whose judgment can be heeded?

We Senators who have backed this effort number both Republicans and Democrats. Party politics is not an issue. I congratulate those Democrats who by their support have signified that they dispute "the king can do no wrong" philosophy of the APC office. I am sure there are many present and past APC employees who disagree with the

tactics which we Senators have also condemned.

Remember, the original Wiley amendment was defeated. It died. A new amendment was drafted by administration Senators and took its place. That is the issue now pending before us. The case rests with the Congress and the people.

QUESTIONS FOR THE OPPOSITION TO ANSWER

Mr. President, I have thus presented a considerable number of questions on which I have offered what I feel to be accurate and fair answers.

Now let me present a series of questions which I ask the opposition to answer.

Is it not a fact that the newspaper criticisms which have been published against the amendment by their very text, betray the amazing contradictions in the Government's treatment of the General Dyestuff Corp.?

Is it not a fact the Government alternately accused Halbach of being a German, and at the same time in complete inconsistency kept him in control of one of the most essential wartime industries for 10 years?

Is it not a fact that the Government arranged what was obviously an illegal purchase of Halbach's daughters' stock when if the stocks were really tainted, it did not need to pay them a single dime?

Is it not a further fact that the files of the APC Office contain exhaustive reports on Ernest Halbach and his relations with German interests and that these reports refute the allegations made about Halbach?

Is it not a fact that one of the reports was written by a very well-trained former FBI investigator and that one was written by a reputable judge and attorney of the deepest moral convictions who possessed vast experience both inside and outside of Government?

Is it not a fact that both reports were completely in Mr. Halbach's favor, and stated that there existed not the slightest basis to justify seizure by the Government of his daughters' stock in the first place?

Is it not a fact that in one of those reports there is a strong recommendation that the stock be returned forthwith to its owners on the elemental principle that an act of injustice had been done by the United States Government?

Is it not a fact that the moneys paid out to General Dyestuff Corp stockholders came illegally out of their own pockets?

Is it not a fact that the APC Office did not have money to buy stock because the Congress of the United States had not appropriated any money for that purpose, so lacking cash with which to effect the compromise the APC simply declared a dividend out of the corporate surplus of the company and gave it back to the corporation stockholders?

Is it not a fact that the net cost to the United States Government was thus nothing, and the net gain to the corporate stockholders was nothing because they received their own money? And is it not a fact that this whole procedure was brazenly illegal?

Is it not a further fact that the whole compromise was legally questionable because many experts believe that the Attorney General does not have the power to deal with vested property with uncontrolled discretion?

Is it not a fact that the Congress set out very complete and rigid orders in the trading with the enemy law regarding the disposition of vested property?

Is it not a fact that there is a rumor going around Washington to the effect that the Department of Justice realizes that if it has to go to trial it cannot win the suit?

Is it not a fact that behind-the-scenes influences reportedly already have an inside track in purchasing this property and their plans would be smashed if the suit were lost?

Is it not a fact that in the postwar investigation conducted in Germany while our

occupation forces were there with all German files available to our investigating agents, there failed to be produced any evidence to support the original charges concerning General Dyestuff and Mr. Halbach?

Yes, Mr. President, is it not a fact that the reluctance of the Department of Justice to accept this amendment is because there are so many controversial issues, so many points of difference, so many substantial doubts as to the propriety of vesting this company in the first place that the whole situation cries to high heaven?

CHICAGO, ILL., July 30, 1951.

HON. ALEXANDER WILEY,

Foreign Relations Committee, United States Senate, Washington, D. C.

DEAR SENATOR WILEY: This will acknowledge your letter of July 25, concerning the proposed resolution for ending the state of war with Germany.

You ask me for my opinion, as former Alien Property Custodian, concerning an enclosed proposed amendment to the proviso continuing the powers of the Alien Property Custodian over German property.

As I read the proposed amendment, in substance it would insure American citizens their day in court in situations where their property was confiscated, during the existence of the state of war, under suspicion or accusation that the citizens represented or cloaked German interests.

Such citizens would have an opportunity to have a final determination by a Federal court of competent jurisdiction, after trial on the merits, as to whether they did or did not represent enemy interests without being barred in such suit by so-called compromises or purchases by the Government of such property already seized by the Government which the Government induced such citizens to sign during the stress and pressure of the war period.

From my own experience of the atmosphere in which the Alien Property Custodian's office had to operate, I agree with this amendment and urge its adoption. You may so represent my views to my friend Senator TOM CONNALLY, chairman of your committee, and the other members of the committee, and convey my willingness so to testify before the committee, if desired.

Fair opportunity through the courts to American citizens to clear their names, particularly to those citizens of German heritage who were accused of enemy affiliations during the war, is compelled by our own sense of American justice, as well as to insure us the full psychological benefit of ending the state of war with Germany.

I would judge that only a very few cases will be affected by this amendment and that in all such cases it will be found that the United States Government still holds the confiscated property concerned without any rights of third parties having intervened.

But I agree that the principle of fairness involved is fundamental. In respect of any affairs with which I dealt as a public official, I am as concerned that we should be as zealous to protect American citizens from abuse of power by their own government as I was concerned before the war by the deprivation of the liberties and properties of honest German citizens by the Hitler government—and as I am concerned over what other totalitarian regimes are doing to the liberty and property of their own citizens today.

With respect to the Halbach and General Dyestuff Corp. vestings to which you refer, these cases would undoubtedly fall within the intent of the amendment—and I feel most justly so. Nothing with which I dealt in my experience as a public official has more disturbed me, although I have not known any of the individuals involved except in my capacity as a public official.

The Halbach-Dyestuff situation involved the property rights in the stock of General Dyestuff Corp., a New York corporation hereinafter called "GDC" wholly owned by American citizens, almost all of whom were native-born and of German heritage. The holders of more than half the stock at the time of vesting were American-born trustees holding the stock for the native-born daughters of Ernest Halbach, of Short Hills, N. J., as a result of a gift in trust made by Halbach prior to the war.

Halbach himself—native-born in Philadelphia in the year 1883—had for many years been the president and manager of the company. He was and is recognized as one of the outstanding dyestuff technicians in the country. (One of the inexplicable contradictions in the situation is that although, under the circumstances, later detailed, the stock of the Halbach children was vested as "enemy," Halbach himself was continued by the Alien Property Custodian in actual charge of the company's operations during the entire war—and he continued in that capacity even up to a year ago. He was, in addition, an important member of the Dyestuff Committee of the War Production Board, and was commended for his war work by the War Production Board and by General Somervell.)

Prior to my taking office as Alien Property Custodian—as a matter of fact, almost immediately upon the declaration of war—the Treasury had vested General Anilino & Film Corp. (hereinafter called "GAF"), in which enemy interests undoubtedly exercised some control. GAF's chemical output was very important to the war effort. The seizure of GAF immediately created difficulties for GDC because of a contract between GAF and GDC, which had been in existence for many years prior to the war, whereunder GDC had the exclusive selling rights for certain but not all GAF products. Because of the existence of this selling arrangement which was made the most effective operation of the vested GAF difficult without concomitant control of GDC, I ordered the vesting of the GDC stock.

Throughout my term as Alien Property Custodian, I conceived it to be my duty to make the fullest use of property needful to the war effort. I also conceived it my duty to be restrained in dealing with property where ownership clearly appeared to be in United States citizens but if any doubt existed as to the nonenemy character of the property and the property was essential to our war effort and needs, I resolved that doubt in favor of the Government and issued vesting orders. In so doing, I always had in mind that the Trading with the Enemy Act provided a clear and adequate remedy to the citizen to reclaim his property, that when property was vested, it was in effect trustee property which would not be dissipated or lost, and that when and if a citizen recovered his property, no substantial damage would have happened to it. I refer particularly to the provisions of the Trading with the Enemy Act which accorded every citizen whose property was seized an opportunity to institute suit in the Federal courts to have a final determination, after trial on the merits, as to the enemy or nonenemy character of the property.

The foregoing brief statement of policy explains my attitude at the time of vesting of the GDC stock. In a very real sense, it was a protective vesting to secure to the United States the benefits of the continued operation of GAF in conjunction with GDC. On the other hand, I depended for ultimate justice to the individuals involved upon those provisions of the Trading with the Enemy Act which secured them the right of trial in the Federal courts for the return of their property. It was always my opinion that the fact of enemy interest was a jurisdictional requirement for vesting and reten-

tion of property; and that that question could only ultimately be determined within the four corners of the statute by a determination by a court after trial on the merits.

I left the stock vested when I left the APC's office, notwithstanding that special investigations within my own office, conducted after the vesting, had created substantial doubt within by office as to the basis for vesting—particularly a report by Judge John J. Burns, of Boston, Mass., a highly respected judge and lawyer. In not seeking to divest the stock in the face of such doubts, I was again relying on the expectation that the ultimate question of my right to vest and retain would, as a matter of law, have to be taken care of in the courts, and again relying upon my legal advisers and, in particular, Judge Burns, I felt that my earlier administrative determination was one which I could not then reverse.

In the course of these difficulties, the Foreign Relations Committee, or at least Senator CONNALLY, will remember that I appeared before the committee to justify my course of action in view of the anomaly that the president of the corporation, Mr. Ernest Halbach, a native-born American (whose family was the largest owner of the vested stock), was regarded so highly as a loyal American citizen that we not only maintained him in actual charge of the operations of the company for the duration of the entire war, but the War Production Board also made extensive use of his services as chief consultant of the War Production Board in the dyestuff section.

Meanwhile, the Halbach interests and others—undoubtedly to protect their personal reputations during the war excitement and to preserve their rights—had made protective filings of suits in the Federal courts pursuant to section 9 (a) of the Trading with the Enemy Act for a determination of the charges that they held their property for the enemy. They undoubtedly did not expect a trial during the war.

The Department of Justice, however, pressed for early trial in the middle of the war. At this time, I was no longer Alien Property Custodian.

At some point during these proceedings, Mr. Halbach was induced by the Department (whether as a price of being permitted to retain his employment with the company and thus preserve his reputation before the public during the war or otherwise) to cause his daughter's trustees and his former associates to compromise and sell their stock to the Alien Property Custodian at a price of \$118 a share when the book value of the stock, as publicly stated by the Attorney General at the time, was nearly five times that amount.

Earlier this year (1951) the Alien Property Custodian, by similar purchase and compromise, acquired another block of the GDC stock (vested at the same time the Halbach stock was vested) from a Mrs. St. George at a price of \$365 a share. Obviously the very disparity among the amount paid the Halbach daughters (\$118) the amount paid Mrs. St. George (\$365), and the amount of the estimate of the Attorney General (\$510) is prima facie evidence that Halbach, a competent judge of the value of such property, was not permitted to deal at arm's length to defend the property.

In at least the cases dealing with the interests of the Halbach daughters and others similarly situated, the Government paid them the bargain compromise price by having a Government-appointed board of directors declare a cash dividend to the Alien Property Custodian on the vested stock out of cash surplus in the company's own treasury—a transaction which Judge Burns has always advised me was completely illegal.

I have never been able to comprehend where and how the Alien Property Custodian acquired legal authority either to compro-

mise the uncompromisable issue of the enemy or nonenemy character of the property or, having done so, to expend Government funds for the purchase of property to which the Alien Property Custodian already had clear title, without paying compensation, by reason of my act of vesting.

As a part of the sales transaction, the Halbach daughters, the trustees of a trust created by Halbach, and Halbach himself were required to consent to the dismissal, with prejudice, of the suit in the Federal Court which had never reached the point of trial on the merits. The Halbach daughters, I understand, have again instituted proceedings in the Federal Court seeking to reopen their case and have a trial on the merits, and are being threatened with their compromise agreement of 1945 as a bar to their attempt to have a trial.

As GDC is still in the power of the Alien Property Custodian, I feel it is very important, since the powers of the Alien Property Custodian are continued by this resolution closing the war with Germany, that the Halbach daughters and others similarly situated should be accorded an opportunity of a full trial on the merits in court to clear their reputations and their property and that all procedural impediments to such trial should be removed. I do not believe that the Alien Property Custodian's war record should close on the deprival of American citizens of their day in court on the basis of administrative expedients of, to say the least, the most doubtful legality.

So far as I can see, the language of the amendment that you propose could not hurt the United States nor the rights of any third parties. But it would guarantee that the affairs of the Alien Property Custodian's office would close on a note to the effect that every effort had been made to see that the Government of the United States had not overreached its citizens during a period of war stress which the resolution is now bringing to a close.

I would be willing myself to testify before your committee in support of such an amendment. I would suggest, too, that Judge Burns of Boston, who was my adviser and my conscience in this affair, should also be called to testify. Should he not be available for any reason I should be happy to present to you a copy of certain reports rendered by him to me under dates of October 20, 1942, and December 14, 1943.

Respectfully yours,

LEO T. CROWLEY.

Work for New England

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following copy of a letter mailed to all New England governors on October 15, 1951, by Mr. Frank J. Benti, president, Rhode Island State CIO executive council:

His Excellency DENNIS J. ROBERTS,
Governor of the State of Rhode Island
and Providence Plantations,
State House, Providence, R. I.

DEAR GOVERNOR ROBERTS: This letter is simultaneously being addressed to you and the governors of the other five New England States in the fervent hope that through the medium of the Governors' Council imme-

date action may be taken to determine why our New England industrial area has been given only a limited opportunity to fulfill governmental defense orders so vital to our own economy and our Nation's mobilization program.

Throughout the Nation a shortage of workers is reported to exist in most areas. Yet in New England today we have tens upon tens of thousands of unemployed skilled workers, while in other areas, particularly the South, a defense-work boom is well under way.

In Rhode Island alone more than 34,000 able men and women are unemployed, and approximately 26,000 of this total are now receiving unemployment compensation. This same situation is true in varying degrees in many other industrial centers of New England.

Furthermore, in New England we possess a reservoir of the most qualified workers in these United States; workers whose technological know-how in textile, metal working, machine tool, jewelry, rubber, leather, plastic, and electrical industries is of a definitely superior level; workers whose skills made it possible for this region to make invaluable contributions to the World War II defense effort.

The fact that defense production is booming in other areas of the Nation and is so negligible in New England is due solely to the dearth of defense-work contracts being channeled into this region by the Defense Department and other governmental procurement agencies, this despite the fact that New England industry needs the work and has proved in the past that it can do the work by meeting the most exacting standards and schedules.

The debilitating effects of large-scale unemployment—measured by the drains upon our unemployment compensation funds, the lowering of our labor-management morale, and the weakening of the over-all economic structure of our region—demands that prompt action be taken to correct a most unjust situation.

Action in the form of congressional investigation of the situation already has been proposed by both Democratic and Republican members of our New England congressional delegation. In this respect Representative LANE, of Massachusetts, has pointed out the Government's failure to expedite defense-contract allocations to this area while, at the same time, it is issuing certificates of necessity to southern textile mills.

Furthermore, Representative LANE has rightfully noted that New England possesses "the machinery, the manpower, and the know-how eager to go into production."

However, it is our suggestion that any congressional probe should be implemented by action on the labor-management level as well—in order that Washington may be convinced of the complete unanimity of opinion shared by labor, management, State, and national officials and the general public concerning the discrimination being evidenced by the Defense Department and other agencies toward our New England economy. Therefore, we propose the following:

1. That the Governors of the six New England States meet in council at their earliest convenience and that they appoint six-member committees from their respective States—these committees to consist of three members each representing industry and labor. (The three-member labor delegation, in turn, might well be made up of one member each representing the CIO, the AFL, and a major independent union.)

2. That this 36-member New England Labor-Management Committee To Expedite Defense-Work Contracts promptly convene after its appointment and make arrangements for an immediate conference in Washington with qualified representatives of the Defense and Commerce Departments.

3. That all New England congressional Members be invited to participate in this conference.

4. That emphasis be placed upon New England's unemployment situation and the imperative need for immediate distribution of governmental defense-work contracts to take up this slack; upon New England's outstanding defense production record of World War II, as well as upon its supply of highly skilled workers, upon the need not only for textile contracts but also contracts for qualified firms in need of orders in the metal-working, machine-tool, jewelry, leather, rubber, electrical, plastic, and computable industries.

5. That the supporting testimony supplied at this proposed conference also be made available to any congressional committee appointed to look into the situation.

We make this proposal for such a joint committee only because we feel it will properly supplement and abet a congressional probe. Furthermore, we are not unmindful of the fact that responsible leaders of Congress are declaring that adjournment of that body is in the immediate offing.

Because we feel that swift, alert, constructive action must be taken to correct a most inequitable situation we urge that you exercise your good offices in making our proposal—or some comparable suggestion—a reality by the concerted action of the Governors of New England.

Respectfully,

FRANK J. BENTJ,
President, Executive Council, Rhode
Island State CIO.

Inadequate Food Control and Relief for Flood Victims

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. SCRIVNER. Mr. Speaker, there are many sadly disappointed people in the Midwest in view of two of today's congressional acts.

In the first place it was hoped that the conference report on civil-functions appropriations would include construction funds for Tuttle Creek Dam on the Big Blue, and for Toronto Dam on the Verdigris. The report includes only planning money, but there is every reason to believe that building funds will be made available in the coming year. With this start, they can hope for rapid progress.

The other cause for heavy hearts in the Midwest is the failure of the Senate to include in the so-called flood-relief bill any funds for grants-in-aid to those who need it most. As I pointed out in the debate when the House considered this measure, all it did was to give the flood sufferers a chance to go more deeply in debt.

There was no provision for helping those who lost most, if not all, of their earthly possessions by direct grants to help them refurbish their homes and reclothe their families.

Yet, Mr. Speaker, only a week ago countless millions were made available, though not with my vote, to refugees

and the unfortunate around the world. The present policy seems to be to grant billions for global help, but not a dime for flood-stricken victims.

If the administration, from the President on down, really desires to help those refugees from the Nation's greatest, most disastrous flood, support can be given, and immediate hearings undertaken on H. R. 5681, which I have introduced and which has been referred to the Judiciary Committee. Enactment of this bill will give, in part, at least, the help these unfortunate flood victims so urgently need.

As I have said so often, Mr. Speaker, the need is great; the need is now.

Tribute for Service

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. HAGEN. Mr. Speaker, I am sure all Members of the House will want to read a tribute given to a former outstanding Member of this body, by the publication known as *Armed Force*, published here in Washington, D. C., at 1833 Jefferson Place NW.

A splendid editorial of commendation and appreciation in connection with the service and accomplishments of Brig. Gen. Melvin J. Maas, USMCR, appeared in the issue of October 6, 1951. So that his many friends in the House may read it, I have asked permission to insert this splendid editorial in the CONGRESSIONAL RECORD.

It follows:

VICTIM OF WAR

Ironically, it was just about a year ago an editorial appeared in these columns lauding Brig. Gen. Melvin J. Maas, USMCR, for his superlative efforts in behalf of the formulation of realistic and workable Peace policy. As the chairman of a Defense Department subcommittee, General Maas and his associates worked speedily and strenuously to rectify the injustices and inequities which were just beginning to emerge from the illogical call-up of civilian component forces at the outbreak of the Korean war.

It is now our distressing duty to report that the excessive strains, burdens and demands on his time and energies, placed upon him by his activities of the past year, have taken a heavy toll of "Mel" Maas. He lies convalescing from a serious illness at the Naval Medical Center, Bethesda, Md., and is apparently faced with the prospect of a considerable stay before he recovers. Even after his physical recovery, he is faced with the serious impairment of his eyesight, perhaps even to the point of near blindness.

Mel Maas is a victim of the Korean war just as surely as if he had been in the front lines. Colleagues who had followed closely his numerous and effective appearance before congressional committees and other official bodies concerned with manpower and Reserve force policies had expressed concern months ago about the state of his health, but he continued to give of himself, and of his strength, with an almost fanatic dedication. While this falls into the realm of guesswork, and second guessing at that, it is quite likely

that had he slowed the pace, had he taken better care of his health, to the detriment of the cause for which he was fighting, the nature of his subsequent illness might have been less critical.

He was largely responsible for the reforms in Reserve force policy which were adopted by the Defense Department last fall, many of which were wiped out almost immediately by the disturbing turn of events in North Korea. Despite reversals and rebuffs, he continued to fight for the establishment of a sound, long-range Reserve policy, without regard for the expediences of the moment. His long experience as a Marine officer, as a legislator, and as a public-spirited citizen, plus his first-hand personal knowledge of Reserve problems and Reserve thinking, drove him on long after it would have been prudent for him, if he had been inclined to act selfishly, to have slowed his pace.

Rarely have the columns of Armed Force been used for a purpose such as this, but we know that the many friends of Mel Maas throughout the Nation, particularly the members of MCROA, which he headed so effectively, and of ROA, of which he is still legislative chairman, would like to know about him. He's immobilized now out at Tower 16, Bethesda Medical Center, Bethesda, Md., and a note or call from those of his friends who heretofore have not known about his illness would help a lot to raise his spirits and bolster his morale. For our part, this editorial is one of the few ways we know to pay tribute to General Maas, the marine who kept on fighting, selflessly and conscientiously, a battle in behalf of hundreds of thousands of reservists, without regard to service or branch.

Farmers Oppose Central Control of Farm Programs

EXTENSION OF REMARKS OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CARVER COUNTY FARM
BUREAU ASSOCIATION,
Waconia, Minn., September 12, 1951.
Representative JOSEPH P. O'HARA,
Representative WAITER JUDD,
Senator EDWARD J. THYE.

DEAR REPRESENTATIVE O'HARA: A meeting was held at the city hall in Waconia on the evening of September 11 to consider the work of the various Government agencies dealing with agricultural problems. The chairman of the local FMA committee presided at this meeting and he also had one of his clerks present to assemble notes on the remarks made by the people who were present.

For your information, it was the unanimous opinion of the people present that the farmers of Carver County and the surrounding area are definitely opposed to central control of farm programs. They also expressed their opposition to the proposed Office of Information as suggested by the department heads of the Department of Agriculture. We feel that this agency would bypass the work of the land-grant colleges and experiment stations and that the costs would be excessive.

A recommendation was made favoring the election by the borrowers of four instead of

three directors of the Crow River NFLA. This, too, was an expression in favor of more local control of all our farm programs. We feel that governmental agencies should not participate in policy making because this is a function of our elected representatives.

We hope that you can give these matters your favorable consideration when and if Congress is asked to consider these programs.

Respectfully,

DONALD ANDERSON,

Secretary, Carver County Farm Bureau.

Consideration of Remaining Hoover Reorganization Commission Recommendations Urged When Congress Reconvenes

EXTENSION OF REMARKS OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. BUTLER of Maryland. Mr. President, at the request of the junior Senator from New Jersey [Mr. HENDRICKSON], I ask unanimous consent to have inserted in the Appendix of the RECORD a statement released by him today urging immediate consideration of the remainder of the Hoover Reorganization Commission recommendations when Congress reconvenes next January.

There being no objection, the statement was ordered to be printed in the RECORD, as follows.

On September 28, 1951, Dr. Robert L. Johnson, president of Temple University and national chairman of the Citizens Committee for the Hoover Report, addressed a message to the President of the Senate and the Speaker of the House, in which he said "The time has come for plain speaking on the report of the bipartisan Commission on Organization (the Hoover Commission)." This message should be taken to heart by every Member of the Eighty-second Congress. We ought to do something about it.

Dr. Johnson points out that the present Congress has, in its first year increased the Federal budget by approximately 70 percent. Yet, the Congress stands practically at the point of adjournment without having taken substantial action on the Hoover Commission's recommendations for reorganization, efficiency, and economy. Authorities in management maintain that these reforms could yield operating economies of \$5,400,000,000 a year—if intelligently and ardently administered.

An overwhelming majority of the Members of both Houses and of both parties of this Congress have, in one way or another, expressed general endorsement of the Hoover report and its legislative recommendations. For my own part, I have repeatedly expressed unqualified support of the Commission's program. To my mind, the Hoover report is a plan, a complete plan, for the vitally needed modernization of the Federal structure. I see no sense in half measures when we consider its adoption.

Admittedly, no plan is perfect. Admittedly, there may be "i's" which could be dotted and "t's" which could be crossed in the Hoover report. Nevertheless, this is the most authoritative and comprehensive plan of its kind ever created. It deserves a fair trial. It will not get a fair trial unless it gets a complete trial.

If, therefore, there were some way of voting the remaining 50 percent of the Commission's recommendations into effect tomorrow, I, for one, would welcome the opportunity to do so. I am well aware that powerful opposition pressures would develop. Let us remember, however, that every single one of the reorganization reforms which have so far been adopted have met with similar opposition. Every department and agency fights change. Every one of them is supported in this fight by its "sweetheart" private organizations.

But mark this well. Of the 20 public laws and 26 reorganization plans so far enacted, not one has done harm. Most have done great good. Yet, in every single case, either the bureaus or their "sweetheart" organizations predicted dire catastrophe. It just wasn't so. In the one case out of the 46 where trouble appeared to be brewing, Congress took remedial action, in plenty of time.

Since there is no possibility of completing the reorganization job at this session, I do strongly urge prompt action when Congress reconvenes on January 8, 1952. The efforts of the Eighty-second Congress will not be wholly lost if we expedite action on the following measures, which have already had some congressional consideration.

Item No. 1, Federal-State relations (S 1146): The Senate should pass this bill immediately. It considered a similar bill during most of the Eighty-first Congress. This bill was passed once during this session, only to be recalled from the House through the motion of the senior Senator from Louisiana. We have been working on this particular measure for 3 years now. It has cost the Senate much time and much money. It is high time that we passed the bill, once and for all.

Item No. 2, overseas administration (S 1166): This bill was passed by the Senate in the Eighty-first Congress. It was passed again by the Senate in the present Congress, only to be recalled from the House by the motion of the senior Senator from Louisiana. Here, again, we have spent far too much time and money to permit this measure to go down the drain. It also should be passed immediately.

Item No. 3, Post Office Department (S 1148). Without wishing to intrude into the affairs of a committee of which I am no longer a member, I would like to point out that this matter was discussed extensively during the Eighty-first Congress by the cognizant committee. Once more, during the Eighty-second Congress, it has been discussed in extenso. There seems to be no earthly reason why this bill cannot be reported and passed.

Item No. 4, personnel (S 1135): This bill provides for modernization of Federal recruitment. It is my understanding that a version, for the most part in line with the Hoover Commission recommendations, has been ordered to be reported by the cognizant committee. In my opinion, the Senate should take up this bill immediately and pass it.

Item No. 5, general executive management: In this field, the administration has done absolutely nothing this year. In the Eighty-first Congress they sent down 34 reorganization plans. In this Congress they have sent down only one so far, the RFC plan, which represented only a part of the Hoover Commission recommendations for that agency. There are some among us who might allege that this plan was sent down more with a view toward taking the heat off that agency—to dampen the proclivities for mink coats—than to give us better organization in our Government. The Committee on Expenditures has addressed a letter to President Truman requesting him to submit more plans. He has responded by singling out the four plans that were de-

feated last year and asking the committee how they would draft them so that these plans could be (a) made to conform to the recommendations of the Hoover Commission and (b) assured of passage.

This action of the administration was nothing more than some high-grade buck-passing. The Reorganization Act of 1949 does not state anything to the effect that the Senate Committee on Expenditures is required to draw up reorganization plans for submission to the Congress. The law explicitly places this responsibility on the President, and it should be noted that this law was not the idea of Congress in the first place. It was the President who asked to have this authority and responsibility placed upon him.

Item No. 6, reorganization of the Department of Agriculture (S 1149): Hearings have been completed by the Committee on Expenditures. Once more, it would be scarcely appropriate for me to make recommendations to this distinguished committee, which has established a record amongst us for thoroughness and constructiveness. However, I, for one, would hope that they would give us an opportunity to vote upon the reorganization of the Department of Agriculture without much delay.

The Congress must be in a position to move forward toward vigorous and complete action in the early months of 1952. Otherwise, we face the danger of bogging down completely. Dr. Johnson rightly points out that "If nothing is done, buck-passing and blame-fishing will be the order of the day. The Congress can blame the administration and the administration can blame the Congress. The Democrats can blame the Republicans and the Republicans can blame the Democrats. There will be just enough merit in all these allegations to provide a partial 'alibi' for everyone."

But who wants an alibi? Here we have an opportunity to tell one of the greatest success stories in history. Always in the past, it has been assumed, cynically, that no reorganization program could survive the opposition of organized bureaucracy, the forces of group selfishness and public indifference. Now, for the first time, we have seen that unselfish citizens of both parties will think about their Government and will applaud sincere efforts toward its improvement. These citizens have shown great faith in the Congress. We must not let them down.

Now, I would not be a good Republican if I didn't fix a share of the responsibility with the administration. President Truman asked the Congress for the Reorganization Act of 1949. We gave him a greater opportunity than any previous President has had to reorganize the executive branch. In 1950, to be sure, President Truman was active in reorganization. In 1951 he has hardly lifted a finger to advance the program. He would now appear to claim credit for the fact that 50 percent of the Hoover Commission's recommendations have been adopted. This is presumptuous. I call attention to his recent statement to the Nation's postmasters that "Whenever there is any economy and efficiency in the Government, the President of the United States has been responsible for it, and don't let anybody tell you different."

This is preposterous.

I would not be a good American, however, if I stopped at merely reproaching the President. The fact remains that the Congress created the Hoover Commission by unanimous vote. The fact remains that the Congress has an essential responsibility for reorganization—and don't let anybody tell you different.

The fact remains that the Congress could, if it chose, enact the reorganization program

in its entirety, regardless of the violent protests of the bureaucrats.

This can be done, however, only by the strong bipartisan initiative of the entire Congress—a Congress determined to live up to the bright promise and to act on the same high level on which it originally brought the Hoover Commission into being.

We have before us the choice of a bipartisan triumph which will provide endless credit to every participant or a bipartisan failure for which no one can escape the blame. For such a failure, we may contrive alibi satisfactory to partisan constituents, but not to our own hearts. It is the clear duty of every economy-minded Senator to insist that the first order of business, when we return on January 8, 1952, be to expedite action on the balance of the Hoover Reorganization Commission report.

Address by Hon. Edward Martin, of Pennsylvania, Before Ohio Federation of Republican Women's Organizations

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address which I delivered at the fall conference of the Ohio Federation of Republican Women's Organizations at Columbus, Ohio, on October 8, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

I am sincerely grateful for the great honor of addressing this meeting of patriotic Americans who are loyal to the principles of the Republican Party.

I cannot emphasize too strongly my deep appreciation of the warm welcome I have always received in the great State of Ohio.

It is a pleasure to bring you greetings from your friendly neighbors of Pennsylvania. We share your pride in the greatness of Ohio and your place of outstanding importance in the economic, cultural, and spiritual life of the United States.

All the elements of real Americanism have entered into the building of your State. The early pioneers who came into the Ohio country did not find an easy way of life. They were a sturdy, courageous race of men and women who endured severe hardships and constant danger. They suffered the tragedies of Indian attack and many years of frontier warfare.

Into the new West came hard-headed Scotch-Irish, thrifty Pennsylvania Germans, and enterprising New Englanders. Virginia, Kentucky, the Carolinas, and many other areas were represented among the settlers who established new homes in the fertile valleys of the Ohio, the Muskingum, the Scioto, and the Miami. They were industrious and self-reliant. They worked hard and they prospered. They built schools and churches. They had the spirit and the will to stand on their own feet and to plan their own lives. They were free to take full advantage of the social, political, and economic opportunities open to all men of initiative and energy.

Upon that foundation of individual freedom the people of Ohio have created a true cross-section of American progress. You

have developed great centers of industrial production which contribute to human welfare in every part of the civilized world. You have a great wealth of natural resources in coal, oil, gas, and quarry products.

Your agriculture is strong and progressive, its mainstay being the many thousands of family-sized farms within easy reach of the city markets.

No State in the Union has produced so many outstanding leaders in Government, politics, industry, military affairs, education, and the church.

When I refer to Ohio's illustrious sons I can point with the greatest pride to your United States Senators, BOB TART and JOHN BRUCKER.

Since I became a Member of the Senate, nothing has given me greater pleasure than my association with these distinguished statesmen. They serve their State and Nation with exceptional ability and the highest integrity. They are patriotic Americans who battle fearlessly for the principles in which they believe.

No one in Washington has a more thorough knowledge of government or a more comprehensive understanding of national and international problems than your great Republican Senators BOB TART and JOHN BRUCKER.

When I recall that seven native sons of Ohio have been President of the United States, I am impressed with the possibility that the people of our Republic may look again to Ohio for the capable, courageous leadership so badly needed in these critical times.

I am proud to salute the Republican women of Ohio and all the women of America who have taken their places as shock troops in the front line of battle to preserve the American system of government.

The women of America are awake to the dangers that confront our Nation in these days of confusion, corruption, and communism.

The women of America are aroused to the evil conditions that threaten to bear down and destroy freedom of the individual and to rob their sons and daughters of all opportunity in the years ahead.

The women of America are preparing to fight for decency in government—to sweep away all the filth that has accumulated at Washington through the years of the so-called Fair Deal, and the scandalous years of the corrupt deal which is a stench in the nostrils of every self-respecting American.

And I mean every American, of both political parties, who places honor, principle, and integrity above selfish interest.

I mean every American who is disgusted with the lies, deceit, and trickery of men trained in the Pendergast school of corrupt political practice.

Of course, those who are riding the gravy train see nothing wrong. They are guided by the example of a little man in high office who has surrounded himself with a crowd of political gangsters, whom he defends as all honorable men who have done nothing illegal.

It is not denied that their misuse of public office for their own enrichment was unethical. It is admitted that some of their double dealing with public funds was immoral. But with brazen defiance of all decent standards they proclaim that they did not overstep the strict letter of the law—that they could not be taken into court and be convicted of any crime.

And that, my fellow Americans, is the phony justification for calling them all honorable men.

You and I believe in a different type of honor. We believe such morally bankrupt characters, who observe only the minimum standards necessary to keep out of jail, should be kicked out of the Government.

They should be brought before the bar of justice instead of being given free access to the White House.

If the Republican Party can be said to have one paramount objective—one cause to which it is committed above all else—it is to drive out corruption and to restore decency, integrity, and morality in our Government. The real clash now is between right and wrong. In this there can be no middle ground—no compromise.

We have had enough of shabby trickery, deception, concealment, and double talk.

We have had enough of government by crony, political favoritism, Executive direction, and government in defiance of the Constitution of the will of Congress.

We have had enough of Government that creates confusion, coddles communism, and conceals corruption.

At this critical time in world affairs, our Nation's greatest need is to return to the sane, sound system established by the founding fathers when they drafted the Constitution of the United States.

As Americans and as Republicans we believe that plan of government has been productive of more human progress and more happiness than any other system since the world began.

We Republicans believe in the Constitution and the Bill of Rights as the foundation of American liberty. We believe the rights enumerated in those immortal documents are God-given rights.

For too many years we have seen the fundamental law warped, twisted, and misinterpreted to serve selfish political purposes and to strengthen the power of the so-called Fair Dealers.

For too many years we have seen freedom of the individual weakened by riotous spending without regard for the solvency and stability of our Nation.

We have been led along the primrose path of false prosperity which can only end in financial collapse and national bankruptcy.

We hear a great deal about prosperity these days.

Just a few weeks ago, in a speech at Washington, President Truman said, and I quote: "The United States is now at the peak of its prosperity."

But when we remember that this so-called prosperity is built on excessive taxation, unlimited Government spending, and never-ending emergencies, we must realize that we are in the most desperate situation in the history of the American Republic.

And most important, if we can attain prosperity only through the tragedies of war, paying for it in the lives of our boys who are dying in Korea, I want to say right now, that the price is too high.

Our situation cannot be fundamentally sound so long as it is based on high taxes, deficit financing, bigger debt, and restrictive laws which exert inflationary pressure and send the cost of living higher and higher.

Our situation cannot be fundamentally sound so long as we face spending programs that will cost the taxpayers at least \$100,000,000,000 a year.

Our situation cannot be fundamentally sound so long as our Government is so big, so unwieldy and so cumbersome that it is beyond the power of any individual to comprehend its complex ramifications.

On the domestic front there is grave danger in the flow of power from the hands of the people into the hands of the Government. That is the process by which government creates the dictatorship of an all-powerful socialistic state. When government plans and controls the lives of the people all initiative is destroyed and freedom of the individual is lost.

On the international front we have continued a confused and uncoordinated for-

eign policy which shifts from day to day and holds no promise of restoring peace with honor and justice to the world.

In this time of national peril the American people cry out for leadership in which they can place full trust and confidence.

They want leadership in which they can entrust the safety and security of the Republic.

They want leadership that will not concede, conceal, or protect corruption.

They want leadership that will set an example of honesty and morality and will be an inspiration to every boy and girl in America.

We do not have that kind of leadership in the White House today.

We cannot expect that kind of leadership from the socialistic-minded Democrats or Republicans who would replace our system of government with one patterned after European failures.

No, my fellow Americans, the Republican Party is the only political organization which is fighting to preserve the sacred ideals of American freedom and independence.

The Republican Party is the only hope of good government—the only source from which our Nation can regain the material, moral, and spiritual strength upon which our Republic became great and powerful.

The most dangerous threat to the future of our country is not from any foreign foe. It is from within.

We have a great task ahead. It is a task which calls for loyal adherence to the principles of patriotic Americanism. Those are the principles of the Republican Party.

As Republicans we must carry the truth to the people.

We must point out that corruption in Government means a breakdown in the moral standards of the people.

We must fight against every socialistic proposal that holds out the false promise of security without effort and robs the people of initiative, self-reliance, and opportunity.

We must fight waste, extravagance and excessive spending at all levels of government.

We must demand a tax program that will encourage business and industry and will give the little fellow a chance to save and get ahead.

We must demand sound fiscal policies that will preserve the value of the dollar against the destructive force of inflation.

We must oppose pressure groups that demand the expenditure of public funds for selfish purposes and their own special advantage.

We must fight communism at home with 100 percent Americanism. None but Americans of unquestioned loyalty should have a place in our Government, or in our schools and colleges.

We must oppose Government competition with private enterprise.

We must uphold our fundamental concept of government by law and not by men. We must support the constitutional legislative process against government by Executive directive.

We must demand a foreign policy that we can afford and that the people at home and abroad can understand. There must be no more secret commitments or agreements that betray free people into slavery behind the iron curtain. The American people have a right to know the obligations we assume in foreign lands.

Above all, we must arouse among our people a deeper recognition of their personal responsibility for good government. We must fight against apathy and indifference on the part of so many citizens who take no interest in government.

I have outlined some fundamental truths which should appeal to every right-thinking patriotic American.

On every farm, and in every home, in every village, town, and city we must awaken the righteous indignation of the American people. We must arouse the fighting spirit of our decent citizenship to drive out the grafters, the bribe-takers, the dealers in influence, and all the other rascals of high or low degree who have betrayed the public trust.

I do not pretend that any one political party has had a monopoly on wrongdoers. But I do say that never before in American history have the leaders of our Government concealed, condoned, and protected corruption with such arrogant disregard for all ethical and moral standards.

Let me tell you how one President of the United States—a Republican President I am proud to say—handled corruption when it was revealed in his administration.

During the term of Calvin Coolidge the Nation was shocked by the Teapot Dome scandal, involving the leasing of Government-owned oil lands.

Before the full facts were disclosed, President Coolidge made a ringing declaration which can serve as a model for the present administration.

President Coolidge said, and I quote:

"If there has been any crime it must be prosecuted. If there has been any property of the United States illegally transferred or leased, it must be recovered. . . . I propose to employ counsel of high rank, drawn from both political parties, to bring action for the enforcement of the law."

"Counsel will be instructed to prosecute these cases in the courts so that if there is any guilt it will be punished, if there is any civil liability it will be enforced, if there is any fraud it will be revealed; and if there are any contracts that are illegal, they will be canceled."

"Every law will be enforced and every right of the people and the Government will be protected."

Criminal prosecutions followed. A cabinet member accused of taking a bribe was convicted and sentenced to a prison term. The Attorney General who refused to turn over certain files and records to a Senate investigating committee was summoned to the White House and dismissed from office.

That is the kind of leadership—honest, determined, vigorous and courageous—that the Republican Party will give to the people of America in January of 1953.

We are about to enter a national campaign with many vital issues—but most important is the moral issue of honesty against dishonesty.

On that issue the true women of America, no matter whether they are Republican or Democratic, will fight for the protection of the American home. They will fight to uphold the moral standards by which we live, based on the eternal truths of the Holy Bible.

At the Chicago convention next year we will select a standard bearer to lead the American people to victory. He must be a great American, imbued with all the American ideals. He must have the courage, the will, and the determination to slug it out with Trumanism and all it stands for. He must believe in economy in Government, balanced budgets, and sound fiscal policies.

And above all else, he must be a man of unimpeachable honesty and integrity and there must be no question that he is a real Republican.

With such a man as our candidate we can march to victory—restore honesty in Government and firmly establish our rightful place of leadership for peace, freedom, and sound prosperity in the United States and the world.

Grab-Bag Congress**EXTENSION OF REMARKS**

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. HELLER. Mr. Speaker, under unanimous consent, I include in the Record a syndicated column by Marquis Childs which appeared in the Washington Post October 18, 1951.

Last year the Committee on Interstate and Foreign Commerce reported out a very effective bill to separate the hidden airline subsidies from so-called mail pay.

Although this bill in amended form passed the House unanimously, the bill died with the Eighty-first Congress because the Senate did not act.

As noted in this column, the Senate has now put through a bill which unfortunately incorporates many weakening amendments.

It is, therefore, my hope that the Committee on Interstate and Foreign Commerce of the House will reject these weakening amendments and stand by its report of last year, House Report No. 3041 of the Eighty-first Congress.

I hope, therefore, that the House will enact a really effective bill, H. R. 508 or H. R. 190, and not a watered-down version.

The article follows:

GRAB-BAG CONGRESS—EXPOSURES CONFINED TO SMALL FRY

(By Marquis Childs)

The Congress that is now grinding to the close of a singularly tortuous session might well be called the grab-bag Congress. While a few of the small-fry influence peddlers have been exposed to the light of day, seldom has there been such jostling, such pulling and hauling, among the big boys seeking privileged access to the billions of dollars being spent by Government.

The vast armament contracts and the special tax amortization granted as an inducement to armament manufacture cause the big corporations to grow bigger. The giants of American industry are daily becoming more gigantic as they expand to proportions that even a few years ago were undreamed of.

One of the few men in Congress who has been working to stem this tide is Senator JOHN SPARKMAN, Democrat, of Alabama. As chairman of a small-business committee he has worked particularly hard to try to save the small nonscheduled airlines that receive no Government subsidy.

A report of the Sparkman committee recommended that the Civil Aeronautics Board reconsider the position of the nonscheduled and come up with a solution that would give them a chance to compete—without subsidy—in providing low-cost coach service. Of the CAB, the report said:

"It has a direct obligation to the public to use its very considerable powers to develop reliable and economical service on a greatly expanded basis. Should it fail at this point to develop policies toward that end, the Board would, indeed, lend credence to the charge that it is servile to the interests of the certificated airlines and that it lacks the scope and daring required at this moment, which sees American aviation standing at the

threshold of vastly expanded development and service."

The CAB ordered a study of the future of the nonscheduled. But at the same time the Board has proceeded by regulatory measures to pronounce sentence of death on the unscheduled lines.

Under prolonged pressure the Board has just wrestled with the task of separating subsidy from mail pay for the certificated carriers having admitted that currently 87 percent of mail pay is, in fact, subsidy. A rate of 45 cents a ton-mile has been allowed for the main trunk lines.

This figure compares with 23 cents a ton-mile the airplanes charge for carrying freight and express and 34 cents, which is said to be the cost of carrying mail. Analysts who have studied the separation plan with no axe to grind believe the rates allowed are, to say the least, overgenerous.

The subsidy dispute was aired in a remarkable Senate debate that got little or no attention. This centered on the effort of Senators who have repeatedly shown their interest in cutting Government spending to force a similar separation between subsidy and mail pay for American lines flying international routes. Led by Senator AIKEN, Republican, of Vermont, the group included Senators DOUGLAS, Democrat, of Illinois; WILLIAMS, Republican, of Delaware; and LEHMAN, Democrat, of New York.

On the other side were loyal friends of Pan-American Airways which has repeatedly been charged with driving toward a monopoly of all foreign routes. To such faithful friends as Senators MCCARRAN, Democrat, of Nevada, and BRISWATER, Republican, of Maine, was added Senator McMAHON, Democrat, of Connecticut. They wanted contracts without reduction for a period of 10 years. At one point the forthright AIKEN said:

"If there is any bill which this Congress has to consider which tends to build up an almost airtight monopoly for a single part of a single industry, this bill is it. . . . It is one of the worst bills the Senate has ever had before it."

Finally, the period was cut from 10 to 5 years, with the economists hammering away at the burden imposed on the American taxpayer. One estimate puts the amount of airline subsidy paid out since VJ-day as high as \$250,000,000.

In its swiftly expanding phase since the end of World War II the airline industry is still very new. It is possible to see the developing pattern of monopoly as it threatens to freeze into being the present set-up with its limitations on the progress of a means of transportation as yet in infancy. There are other industries long past this stage with the freeze so solid that the antitrust laws are completely irrelevant.

of Communist dictators. The penalty awaiting these deportees is generally liquidation.

The supreme board of the Croatian Catholic Union of United States of America gathered at its meeting in Gary, Ind., October 12, 1951, on the occasion of its thirtieth anniversary celebration, seriously discussed the matter of the demand of the Yugoslav regime of Tito that Dr. Andrija Artukovic, a prominent Croatian opponent of communism, be deported into the custody of Yugoslavia.

In the name of the Croatian Catholic Union of United States of America and its thousands of members who are loyal citizens of America, prepared to sacrifice everything and even their lives for American freedom and democracy, we protest against such requests of Yugoslavia's communistic regime that Dr. Artukovic be deported to Yugoslavia. We base our protests on the following reasons:

1. Dr. Andrija Artukovic committed no murders and crimes such as he is accused of by the Yugoslav regime; we know positively, that these accusations are purely political means of the Yugoslav Communist dictatorship to rid itself of its political opponents in the world who oppose its communistic tactics in Croatia.

2. Dr. Artukovic is well known as an opponent of communism even from his youth.

3. The Yugoslav Communist regime, as we know, first demanded the deportation of Dr. Artukovic on the basis of political reasons, and when it failed to be successful, it changed the charges against him to murder and criminal action of which he was never guilty.

4. The law of the Kingdom of Serbia of 1902 can in no way be applied to Dr. Artukovic since he never had been either a citizen or resident of Serbia.

5. If free and democratic America permits Tito's communistic regime to take Dr. Artukovic, it will pave the way for allowing Tito's regime to seek the deportation of any and all of its political enemies or opponents who raise their voices in foreign lands against communism in Yugoslavia and other parts of the world.

For the above reasons and for the sake of human rights, we appeal to our American officials not to deport Dr. Andrija Artukovic to Tito's Communist regime, for in no case can a political rival deal fairly with his political opponent. If Dr. Artukovic erred and broke any laws, let the unbiased, democratic American courts decide the matter.

Deportation of Anti-Communists**EXTENSION OF REMARKS**

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. MADDEN. Mr. Speaker, the following resolution, adopted by the supreme board of the Croatian Catholic Union of United States of America, sets out a just appeal that steps should be taken by our Government to protect citizens of iron-curtain countries who have been actively fighting communism from being deported into the clutches

Conference Report on the Tax Bill**EXTENSION OF REMARKS**

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. JACKSON of Washington. Mr. Speaker, when the 1951 tax bill was before the House, I voted for its passage. Much as I dislike the idea of imposing an even heavier tax burden on the American people, we, as a Nation, have embarked on a huge defense mobilization program, which nearly everyone agrees must be done. Now the bill must be

paid—either honestly, through taxes which everyone can see and understand, or through the hidden tax of inflation, whereby the burden falls primarily on the shoulders of the working people of this country and on the elder people who are retired and living on fixed pensions.

So, Mr. Speaker, the country is desperately in need of additional revenues if we are to bring the budget within hailing distance of being balanced. But that does not mean that this House must accept any bill that comes before it. While no one enjoys the thought of higher taxes, I firmly believe that the people of this country are willing to share in paying for the defense effort, so long as everyone is paying his fair share. The conference report now before the House does not distribute the tax load fairly, and I do not intend to lend my support to any tax bill as inequitable as this, no matter how great the need for revenue. I intend to vote against the conference report.

To show the unfairness of the changes from the House bill made by the conferees, I should like to show what has been done about distributing the individual-income-tax burden. The conference bill imposes \$264,000,000 less in individual income taxes than the House bill. Of that \$364,000,000 reduction, only \$86,000,000, or less than one-fifth, goes to families with incomes of less than \$5,000, yet these families comprise 80 percent of all individual taxpayers. At the same time, a \$278,000,000 reduction has been granted taxpayers with incomes of over \$5,000.

This seems to me to be an upside-down arrangement, when 80 percent of the taxpayers get 20 percent of the relief—comparing the House bill with the conference report—and 20 percent of the taxpayers get 80 percent of the relief. I cannot support such a proposition.

Many of the provisions of the House bill which would have assured a fair share of the load for everyone in the community have been eliminated in the conference bill. For example, the House bill made the new corporation tax rates effective on January 1, 1951, following the practice of nearly every corporate tax bill since 1913. The conferees changed this effective date to April 1, 1951, thus exempting the record-high first quarter corporate profits from the new tax rates, and sacrificing \$500,000,000 in revenues. The corporations were advised that the effective date of the new taxes would probably be January 1. They have all set aside appropriate tax reserves. If this \$500,000,000 is not raised this year through taxes, it will fall on the helpless section of our population in the form of higher prices and inflation. To me, this does not represent equality of sacrifice.

The House bill contained a permanent reform for our tax system that would have yielded an additional \$323,000,000 in revenues each year—not by raising anyone's tax rates, but merely by collecting taxes which should be paid now, but are not being paid. I am speaking of the system of withholding the tax on

dividends and corporate-bond interest, just as the tax is withheld on wages and salaries. It is argued that this system will impose hardships on thousands of widows and pensioners who now do not have to file tax returns, but who would now have to file for their refunds. I would have more sympathy for this argument if I did not know that both a survey of individual tax returns by the Treasury Department and a sample survey by the Federal Reserve Board show that 92 percent of the families in this country with incomes of less than \$3,000 receive no dividends or interest whatsoever. Those with incomes of \$10,000 and over receive 63 percent of the dividends paid in this country. No one seems to complain on behalf of the millions of wage earners, most of them in the low- and middle-income category, who are under a withholding system, and to whom nearly a half-billion dollars in refunds are made each year. Every year, the receipt of dividends is under-reported by over \$1,000,000,000—not necessarily intentionally, but often because the dividends come in small checks which are easily forgotten. The withholding system recommended by the House Ways and Means Committee and passed by the House merely assures that those who should be paying taxes actually do.

The capital-gains rate, which is available primarily to those with considerable means, has not been raised since Korea, despite the fact that the current tax bill contains the second increase in ordinary income-tax rates. The House bill raised the capital-gain-tax rate from 25 percent to 28 percent, which in my opinion is a minimum; the conferees eliminated this increase, and left the capital-gains rate at 25 percent.

The House bill contained a provision which would make all current corporate earnings in excess of 75 percent of the highest 1946-49 earnings taxable at excess-profits rates. The Senate bill struck this provision, and left the earning base at 85 percent of the 1946-49 profits. The compromise reached by the conferees was 83 percent—only 20 percent of the way toward the House bill. I do not think this is a true middle ground such as we might expect would emerge from conference.

I am particularly disturbed that the conferees have seen fit to include in the conference bill a modification of the so-called Jenner amendment, which is nothing more than a rider to this tax bill. It has nothing whatever to do with raising taxes, which is the purpose of this bill. This provision makes it possible to publish the names, addresses, and amounts of assistance of the millions of self-respecting persons on the assistance rolls.

I have long felt that the provisions in the Social Security Act providing for aid to certain groups of our needy citizens constitute one of the most humanitarian programs ever established in this country. The criticisms that have been made about the so-called confidentiality of records provision are in my opinion grossly exaggerated and it is my earnest

hope that the Members of this House will insist on the retention in the Social Security Act of the provisions which require that information about worthy recipients be kept confidential.

I can think of nothing more abhorrent to me than the idea of publishing, or otherwise making known the names of the unfortunate members of our community who are recipients of public assistance. To my mind, it is misfortune enough for a person to be in need and to be forced to apply for assistance. To have to endure the publication of one's name and circumstances where they can be seen by all persons is humiliating to an already distressed person who needs help rather than persecution because of his circumstances. Such people need not only financial assistance, but also protection under the law against the exploitation and the indignity to which publication of their names would subject them. This protection is in keeping with the American ideal of respect for the worth and dignity of every human being.

I do not know to what extent there are persons receiving assistance who are not eligible for aid. From all the information I have, I am convinced that this number is small. The many aged, blind, and disabled persons, and the dependent mothers and children who are receiving assistance have no other choice but to seek aid from the programs which the Congress and the States together have established to meet their needs. They have no other way of providing for themselves. It is the responsibility of the States to determine the eligibility of the persons applying for and receiving aid through the State program. Applications for assistance are made to the local welfare departments and an investigation must be made to determine whether they meet the conditions of eligibility set up by the States. Once assistance is granted, the necessity for continuing payments is reinvestigated periodically, and as the circumstances of the recipients change. This is not to say that some people may not seek to take advantage of these programs or that abuses may not occur. But it is our State and local welfare officials who have the responsibility of administering the public assistance program who should see to it that any "chiselers" are dropped from the rolls.

We all should be, and are vitally concerned in the administration of our public-assistance program. As taxpayers and as persons deeply interested in providing assistance to the needy, we want to be sure that only eligible persons receive assistance, and that every effort be made to help them regain self-support, where this is possible. This is the aim of the States in administering their various assistance programs. However, in my opinion, the indiscriminate publicity that is being proposed here would not promote but would hamper the efficient administration of assistance

as well as impose needless humiliation on needy people. I am not convinced that publication of names would reveal ineligible persons. Rather, I believe that this publicity would merely frighten away many needy people whose pride is great enough to discourage them from accepting the aid they need, if publicity is a condition of such aid. In establishing their eligibility, persons often give personal and private information regarding the circumstances which brought them to apply for aid. This becomes part of the record of eligibility, and the prospect of publicity of such information could only reduce the possibility of establishing understanding and confidence in and between the welfare agency and the applicant.

The Social Security Act limits the disclosure of information concerning applicants and recipients to persons directly connected with the administration of assistance. However, as I understand it, this restriction does not operate so as to prevent the publication of certain kinds of information which throw light on the operations of the public assistance agency. I know that States can and do publish information such as the cost of public assistance, the financing of these expenditures, the number of recipients and causes of dependency, and the standards and methods used for deciding the need of the people applying for help. And this requirement does not prevent giving full information, including the names and other information about recipients, to legislative and administrative groups charged with studying the operations of the public-assistance department. This information can also go to auditors, law-enforcement officers and others in connection with the administration of public assistance.

I hope that my colleagues will think twice before they vote to change this provision in the Social Security Act, and thus to expose needy people, the aged, blind, children, and the disabled, to the kind of publicity which is being urged upon them in this House. Let us continue to treat the unfortunate with the dignity and respect which the Social Security Act now assures them. To subject them to the pressures of political or commercial exploitation and to make their personal affairs a matter of public record is to go back to the abandoned tradition and methods of the old poor laws. Let us not lose the progress we have made through the Social Security Act by discarding the provisions on the protection of confidential information.

There are other provisions of the conference bill which reinforce my conviction that this is both an inequitable and an inadequate tax bill. The defense bill must be paid, but there is no reason why it cannot be paid in a fair and equitable manner. I shall vote against this conference report in the hope that the conferees will reconsider their action, and that some of the provisions of the House bill which I have mentioned will be retained.

"The Decision of the Joint Chiefs of Staff To Increase the Air Force to at Least 140 Groups Will Give Us an Air Force Second To None, Which in All Probability Will Prevent Any Future War"—Chicago Herald-American

**EXTENSION OF REMARKS
OF**

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. BOYKIN. Mr. Speaker, I have just received a clipping from the Chicago Herald-American of October 10, 1951, headed "Air power in keeping with our needs."

It is a short editorial. It discusses the legislation which we passed to give the Air Force an extra billion dollars for immediate expansion—and another \$4,000,000,000—as soon as the detail plans for further expansion are formulated.

Mr. Speaker, no bill that Congress has ever enacted has proven more popular throughout the length and breadth of these United States than has this—to provide these United States with an Air Force second to none.

I have said before, and I repeat on this floor, that the peoples of these United States, whether they live in the coastal cities or in the great Mississippi Valley Corn Belt, all know that the United States Air Force is their first and greatest powerful defense against enemy attack. Further, they know that victory in the next world war, is going to perch on the banners of that nation which has supremacy in the air.

The tremendous achievements of our Air Force in Korea are far and beyond the expectation of any military authority. Top-flight Army officers, one after another, have complimented the Air Force on its splendid work. Many have frankly stated that—were it not for the Air Force—the ground forces, our own as well as the United Nations, would have been thrown out of Korea a long, long time ago.

While nobody has ever thought of an airplane as a weapon designed to kill individual enemy soldiers and enemy personnel on the ground—authoritative sources report that United States air power has already accounted for more than 47 percent of all enemy casualties in Korea—72 percent of all enemy artillery destroyed, 81 percent of all enemy trucks destroyed—to say nothing of the hundreds of bridges, highways, and dams destroyed, and the other enemy delaying actions accomplished by our flying forces.

Only last week came report by way of NBC television, on the Battle Report, Washington program, that—

F-51 Mustangs are taking off laden with rockets and napalm bombs on strafing missions in Korea. Along with our jets and bombers they succeeded in one 24-hour period this week end—in destroying or dam-

aging a record-breaking 1,121 Communist trucks ferrying supplies and reinforcements to the front

Mr. Speaker, without further ado, I include herein a short editorial from the Chicago Herald-American, which reads as follows:

AIR POWER IN KEEPING WITH OUR NEEDS

The National Defense Establishment of the United States is now in a fair way to becoming, for the very first time since the advent of military aviation as a decisive element in warfare, an air power of a stature in keeping with our minimum needs.

This vital position is now definitely in prospect by virtue of the decision of the American Joint Chiefs of Staff to increase the Air Force to at least 140 groups, the present strength being 95 groups.

Senator LODGE, of Massachusetts, a Republican but often a spokesman for the administration in matters pertaining to national defense, reported this decision to the Senate while the Air Force appropriation bill was nearing final disposition.

The main provision of the bill is to give the Air Force \$1,000,000,000 for immediate expansion, with as much as four additional billions to be forthcoming as soon as detailed plans are formulated.

This fits squarely, and logically and most laudably, into the pattern of Air Force expansion contemplated by the Joint Chiefs of Staff.

It also brings nearer to realization a policy that has long been advocated by the Hearst newspapers, to wit. An Air Force second to none.

The American people should be appreciative of the fact that they are soon to have an Air Force which will be the main offensive, and therefore defensive, arm of their Military Establishment, and which will be capable of winning any future war.

In all probability, such an Air Force will prevent any future war.

The only concern of the American people is that the country does not have that kind of an Air Force now, as it should have had long before now, in order that the desired security might be a matter of present enjoyment rather than future prospect.

The Tax Bill

**EXTENSION OF REMARKS
OF**

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following telegram:

WASHINGTON, D. C., October 17, 1951.

Hon. WILBUR D. MILLS
House Office Building:

We are greatly disturbed by House action on tax bill. Farmers don't like to pay taxes any better than anyone else. However, in view of appropriation authorizations approved by Congress, the choice available to the American people is to pay for these expenditures through taxes or through inflation. Let us not forget the people pay the bill either way. Although farmers recognize the dangers inherent in increased taxes, we fear far more the sequence of rising prices, production-strangling controls, and loss of personal freedom which are inevitable

consequence of inflation resulting in failure to balance Federal budget. We believe proposed tax bill represents the best bill that can be devised this session, and therefore urge its passage.

ALLAN B. KLINE,
President,
American Farm Bureau Federation.

Build Howell Mill Shoals Dam Now

EXTENSION OF REMARKS OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following radio address delivered by me entitled "Build Howell Mill Shoals Dam Now":

"Sheathe your swords, take back your men, take back horses; you will need them down there to develop that great fertile country for which God and nature have done so much."

These words were spoken at Appomattox at the time when General Grant refused to accept the sword of the gallant Gen. Robert E. Lee. Since this dark day in the history of the South, Alabama has made great strides in following the advice given by General Grant. It is highly encouraging to see the booming industrial development in our State. The Institute for Economic Research has given Alabama its highest rating, that of superior growth. During 1950 almost \$200,000,000 was spent in Alabama for new construction and for expanding and improving existing industries. Today she is a great producer of iron and steel products, coal, lumber, textiles, naval stores, pulp and paper, and is making progress in the manufacture of clothing, oil refining, chemicals, farm equipment, aluminum, electrical fixtures and appliances. Only the surface has been touched and if Alabama could develop her great water resources she could become the Ruhr Valley of the United States. This is a great river basin which extends from the Blue Ridge Mountains of northwestern Georgia and southeastern Tennessee, beginning at Rome, Ga., and running a distance of almost 650 miles across the Piedmont Plateau to the lowlands of the Gulf coastal plain which, if developed, will revolutionize the industrial economy and wealth of this great section. The Coosa-Alabama River system is formed by the union of the Etowah and Oostanaula Rivers near Rome which becomes the Coosa River; the Coosa and the Tallapoosa flow through the middle part of the basin to form the Alabama River, the Alabama River flows across the gently sloping coastal plain to join the Tombigbee River, empties into the Mobile and thence flows southward to the Gulf of Mexico. In this basin is found a moderate climate, abundant rainfall, and fertile soils. The raw materials needed by industry are present and the supply of labor is adequate and stable.

The Corps of Engineers has been intensely interested in the development of the great Alabama-Coosa Basin for over 80 years. Among the first improvements constructed was a series of locks and dams in the Coosa River for shallow-draft navigation to reach Rome, Ga. In recent years, a more important step toward the development of the basin was the appearance of the 308 Report in 1934. This report recommended locks and dams on the Alabama River and on the Coosa River above the existing power dams, and with locks in the power dams, it was

planned to provide a 9-foot channel for navigation upstream to Rome, Ga., and additional power. Increased industrialization intensified requests that this 308 Report be reviewed. Flood control and flood protection works have been built at Prattville, Ala., and at Rome, Ga., and the mighty Allatoona Dam and Reservoir has been built on the Etowah River 48 miles above Rome. This is the first Federal power plant in the basin and generates 74,000 kilowatts of power.

In 1941 the Engineers submitted a report recommending a new program of development of the basin's water resources in accordance with the plans being prepared by the Chief of Engineers. This was adopted by Congress and the President in the River and Harbor Act of March 2, 1945, Public Law 14, Seventy-ninth Congress. This program calls for a navigation lock and dam and two power dams with locks on the Alabama River below Montgomery and a power dam with lock on the Coosa River at Howell Mill Shoals Reservoir. Other reports are being prepared which will provide for a modern 9-foot barge channel to Montgomery and additional power and flood control. The remainder of the program contemplates three navigation power dams with locks on the Coosa, a flight of locks in each of the three power dams on that stream and in the Howell Mill Shoals Dam and 20 power and storage dams on the Tallapoosa and tributary streams. The completed development would add some 942,000 kilowatts to the installed capacity in the basin; the average annual output would be almost 2,236,000 kilowatt-hours. The total outlay based on 1949 construction costs would be about \$525,000,000.

The immediate need for this development is supported in a statement by Mr. Crelin, director of the Southeastern Power Administration. He has stated, "that there is a need for additional power everywhere in that area." This statement is based on a study by the Atlanta regional office of the Federal Power Commission in 1950. This report further says, "Since no one can now predict how long the defense effort will of necessity be prolonged, plans must not be delayed beyond the year 1953. * * * Construction should be started at once on those projects determined to be needed to meet the future power loads in the area. * * * Any other course might at best result in serious restriction of commercial, industrial, and residential use of electrical energy, or at worst badly limit the effort which must be made to assure adequate defense." This report points to the Howell Mill Shoals project as follows:

"Howell Mill Shoals is located within easy service distance of one of the most highly industrialized areas in the South. Large amounts of cement, steel, and steel products are produced in the area centered on Birmingham, Ala.

"The regional engineer of the Federal Power Commission has indicated the possibility that a defense plant may be built in Alabama which will require a substantial block of power. Howell Mill Shoals would be a desirable source of power for that plant. In addition ordnance facilities are being activated, and other defense facilities may be constructed, extended, or reactivated. These may require an additional power supply beyond that allowed for the present Federal Power Commission estimates.

"The river regulation from Howell Mill Shoals Dam will increase generation at existing power company dams downstream by about 60,000,000 kilowatt-hours a year and it will substantially increase the dependable output of those plants. These feed into a system which serves the Birmingham industrial area as well as a short-supply area further to the south.

"Detailed plans for this project have been well advanced, but construction cannot be initiated until funds for that purpose are

appropriated by Congress. With larger appropriations and construction at a maximum rate, the first power unit could be placed in operation in 1954."

It is imperative that this dam be built to insure Alabama's full contribution in the coming struggle for power. We now have almost a million and one-half people in this basin and there is a growing tendency for industry to move into this section. There are now about 130 textile mills which employ about 43,000 people. Steel and iron mills in Gadsden, Anniston, and Rome use coal and iron ore mined nearby and employ about 10,000 men at 33 plants. There are 64 establishments in the chemical-manufacturing group and about 70 concerns in the glass, clay, and stone group, making out stone, marble, building brick, and tile.

A tremendous growth in population is taking place in the northern part of this basin as shown by the 1950 census reports. Calhoun and Talladega Counties show a growth in population of almost one-fourth each since 1940.

Some of the greatest military centers in the country are found in this basin. With the beginning of the Korean war the gigantic Anniston Ordnance Depot was ready to supply our soldiers with tanks, guns, and ammunition. It has almost doubled in personnel since June 1950 and is now undergoing an expansion of about \$12,500,000. Fort McClellan, which was one of the best infantry-training centers in World Wars I and II, is continuing to train National Guard troops and is the new home of the WAC officers-training center and the chemical-warfare-training school. A tremendous expansion is underway there. Craig Air Force Base at Selma is expanding and again training first-line pilots for Uncle Sam's Air Force. Childersburg, which was one of the four greatest powder-producing plants in World War II, is now contributing its part through a great new phint mill and rayon plant and is standing ready to again supply this country with vital ammunition. Added to these expanding plants and installations there are many foundries and steel plants in this area which are busily working on defense orders and many others which can be converted over night to the manufacture of tanks, armored vehicles, shells, guns, and other war material. Recently, the General Electric Co. has started construction on a new industry which will manufacture defense items. New plants have been recently announced at Talladega and Selma, Ala.

The tremendous increase in the population in this area places a growing strain on consumption of power by the civilian population. Practically every city in the northern part of this basin has shown a growth in population, thereby increasing civilian power demands. The cities of Selma, Anniston, Talladega, Gadsden, Jacksonville, Pell City, Piedmont, and Rome show rapid growth principally from the influx of war workers in World War II who have now become permanent residents. Further industrial expansion is needed in many of the counties, such as Clay, Coosa, Autauga, and Elmore, which have lost people because of the lack of industrial opportunities. A great power supply would attract new industries thereby saving the economy of these counties.

One of the basic reasons for the development of this basin will be the benefits which will result from flood control. While most of the urban cities are not subject to overflow, the flood of March 29, 1951, created havoc and left damage and devastation in its wake. Roads and bridges in more than three counties were destroyed. Many homes were flooded. Cattle and crops were destroyed, and thousands of people found it necessary to flee their homes because of the lack of proper flood control on this river system. It is estimated that almost \$3,000,000 in property damage was sustained. In a letter, dated June 7, 1951, the Corp of Engineers estimated

that if the Howell Mill Shoals Dam had been in operation stages of the March-April-1951 flood would have been reduced by about 8½ feet at Childersburg. Such a reduction would have resulted in a flood crest about 3½ feet below where serious urban damage starts and 4½ feet below where serious agricultural damage starts.

In his book *Man and the Soil* Dr. Hugh Hammond Bennett, Chief of the United States Soil Conservation Service, has declared, "The rate at which nature builds soil under the most favorable conditions has been estimated all the way from 300 to 1,000 years for a single inch." Further, he points out that in the red clay subsoils of the Southeastern States erosion progresses with dramatic rapidity. He further estimates that more than 300,000,000 tons of surface soil are carried regularly each year by the Mississippi into the Gulf of Mexico. Think of this. It is the equivalent of 7,000 100-acre farms. He further estimates that the equivalent of 10,000 100-acre farms is lost every year to the United States through water erosion. The lesson of soil exhaustion may be found in the ruins of the ancient and once rich civilizations of history.

In the early development of this section, the Alabama and Coosa Rivers furnished the most convenient traffic arteries to a large part of Alabama and Georgia. Shallow-draft navigation served the larger commercial and financial cities of the basin. With the coming of railroads and improved highways, river commerce on the Coosa disappeared. There is still some movement on the Alabama River, most of the traffic being made up of gravel, sand, logs, and pulpwood barged or rafted to Mobile on the lower part of the Alabama River. With the development now projected, and so badly needed, it is estimated that even from Mobile to Montgomery, the navigational facilities would develop some 442,000 tons of water-borne commerce annually with an annual saving in transportation cost of \$1,500,000.

Extensive recreational facilities constitute an attractive feature of this development. Two State-park areas, three county-park areas, and cabin and club sites would be developed. Much of the area would be devoted to upland game conservation, grazing agriculture, and scenic protection. Fishing, hunting, and outdoor activities will result in wholesome and helpful recreation for the people of this section.

The Southeastern Power Administration estimates that the existing dams will be greatly benefited and that approximately 40 percent more power will be developed by the building of the Howell Mill Shoals Dam. So far as has been determined, there is no opposition from private utilities to the building of this dam. The Georgia Power Co now buys the output of the Allatoona Dam and distributes it to its customers.

The Howell Mill Shoals Dam must be built now. Unless the people of this basin become active in promoting this development it may be lost for all time. The leaders of the people in the northwestern section of this country are spending huge sums of money in the promotion of the development of the Columbia River. The same is true of the Southwest. However, these sections are within easy bombing range of our potential Russian enemy. The Coosa-Alabama River Basin is located at a remote point from Russia, but in the Southeastern section of the United States. It is well protected by military installations within easy air distance of such as Maxwell, Gunter, and Craig Air Force Bases, all in Alabama; others such as Robins Air Force Base in Georgia, Pensacola Naval Station, and Eglin Field in Florida, and Kessler Air Force Base in Mississippi. A tremendous fighter screen could be thrown up by these fields to protect this great industrial section.

Development of this system will furnish an additional medium of transportation

which will be cheap and in many instances where heavy goods are carried, it will be faster than highway and railroad transportation. It will provide cheap water transportation, thereby making it possible for new industries to compete successfully with other sections.

It will attract new industries overnight and increase employment and give a greater per capita income to a section which has long been strangled by a low per capita income. It will enable our people to buy goods produced in other sections of the country and to build a secure and stable economy thereby enabling this section to carry its proper load of taxation.

In recent years it has been generally agreed that the lack of newsprint is a serious menace to a continued free press. Over four-fifths of our newsprint is furnished by the Dominion of Canada and in order to improve our position as a buyer in the world market additional plants must be built in this country. The Coosa-Alabama River Basin furnishes every element which will make for the successful building and operation of these plants. There are over 19,000,000 acres of forest land in Alabama, a great portion of which is concentrated along the watershed of this river system. Alabama can be reached by water from Texas and Louisiana which are the principal sources of sulfur supply. Recently new plants at Lufkin, Tex., and Childersburg, Ala., have demonstrated beyond question the South's ability in this new field.

Rich mineral deposits lying on the banks of these rivers consist of bauxite, clays, coal, gold, lead, graphite, granite, marble, mica, lime, manganese ore, iron ore, silica sand, and asbestos. Many of these are in sufficient quantity to warrant shipment by barge if adequate channel depth were made available. An increase in the production of these vital minerals would be made overnight if cheap water transportation were possible thereby making the mining of these minerals profitable.

Nearby this basin and meshed with its economy are the great industrial and distribution centers of Birmingham, Ala., and Atlanta, Ga. Much in the way of engineering, scientific, and technical skills is readily available for the building of new industries and for the integration of existing facilities into a war economy, or a civilian economy that will be the envy of people all over the world.

Time is short. Now is the time for leaders in agriculture, business, manufacturing, and all related fields to demand that this section be given what it so richly deserves—the right to contribute its full share and to demonstrate that it is the Nation's No. 1 economic opportunity. I appeal to every person within the sound of my voice to join me in bringing this great development to our section. It will bless you and generations yet unborn.

Thank you and God bless you.

Naugatuck, Conn., BPOE, No. 967, Calls for Oatis Release

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. PATTERSON. Mr. Speaker, although the United States State Department seems to have relaxed its efforts to effect the release of William N. Oatis, prisoner of the Czechoslovakian Communists, the people of America have not.

I include as a portion of my remarks a resolution adopted by the Naugatuck, Conn., Lodge No. 967, BPOE, decrying the illegal trial and imprisonment of this American citizen.

The Elks are ever mindful of the rights of even a single citizen and unceasing in their efforts to obtain justice.

I am pleased to submit the words of my home-town brother Elks for the RECORD:

The following resolution was adopted by the members of Naugatuck Lodge, Benevolent and Protective Order of Elks, at the regular session held on Tuesday, October 2, 1951:

"Whereas the Communist dictators of Czechoslovakia have arrested and imprisoned without benefit of fair and proper trial, an American citizen and newspaperman, William N. Oatis, and

"Whereas the conviction of William N. Oatis was designed as propaganda to embarrass the United States and hold up to ridicule the constitutional privilege of freedom of the press; and

"Whereas William N. Oatis, who was charged with the responsibility of obtaining factual news and reporting it, did perform these services as chief of the Associated Press in Prague; and

"Whereas William N. Oatis was secretly arrested, held incommunicado, denied counsel of his own choosing, convicted and sentenced by a prejudiced dictators' court, and denied contact with any representative of the United States.

"Now, therefore, the members of Naugatuck Lodge, No. 967, of the Benevolent and Protective Order of Elks of the United States of America pledge to the President of the United States their full support of the strongest measures that may be necessary to obtain the immediate release of William N. Oatis."

EDWARD V. FOX,

Exalted Ruler.

JOHN F. MCGROARY,

Secretary.

NAUGATUCK, CONN., October 16, 1951.

Report of Projects Committee, National Rivers and Harbors Conference

EXTENSION OF REMARKS

OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the Projects Committee, National Rivers and Harbors Conference:

WASHINGTON, D. C. May 11, 1951.

Hon. JOHN L. MCCLELLAN,
President, National Rivers and
Harbors Congress,
Washington, D. C.

DEAR MR. PRESIDENT. In pursuance of the call of the President, your projects committee met on May 10, 1951, to consider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 44 proposals embracing all resource improvements with which this Congress is concerned, including navigable waterways, harbors, flood control, soil conservation, reclamation, and water conservation.

Of the proposals examined, this committee is convinced that 17 constitute projects sound in conception, needful, and sufficiently advanced in status to warrant endorsement, involving a total estimated cost of \$231,-823,180. Nine proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on 13 proposals, surveys have been authorized but the reports on such surveys have not been completed and we therefore recommend in these cases that the Congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this Congress. We find three proposals which on preliminary examination appear to be desirable and needful, and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization. Of the proposals investigated, we find two are without necessary data or sponsorship to enable the committee to reach a reasonable conclusion on their worth. However, we desire to give the applications sympathetic consideration, and, if possible, offer to the proponents the services of this Congress in reaching a solution to their problems. We have, therefore, not classified these but have suggested that the Secretary communicate with the applicants concerned and request additional data upon the receipt of which further consideration will be given to their proposals.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

Since the session of this organization a year ago, a major omnibus flood control and river and harbor bill (H. R. 5473) was enacted into law and approved on May 17, 1950 (Public Law 516, 81st Cong.), supplementing and expanding previous flood control and river and harbor law. Additional projects were authorized, as well as additional investigations of other desired navigation and flood control improvements. However, also in the past year, the threatening international situation has required a greater concentration of our national activities on defense, and investigation and construction of projects not clearly having defense aspects have been curtailed.

Your projects committee wishes to point out that many navigation, flood control, drainage, irrigation, and other projects improving the use of our rivers and land and water resources have important defense values, either immediately to the military or to civilian and industrial activities concerned with the defense effort. Works already accomplished, such as flood protection of the great industrial center of Pittsburgh, multiple-purpose developments for flood control, water supply, power, and other uses, as in the Ohio, Missouri, and Columbia River Basins and various projects affecting food and fiber production readily illustrate the important place and great value that the national program of river and harbor development have in our present crises, as well as in normal peacetime pursuits. Both defense and ordinary economic values illustrate the foresightedness of the Congress of the United States in formulating a national policy and program for the development of our natural resources and for the security and welfare of our people.

For the immediate future, it will be necessary to concentrate on those water resource development investigations and projects necessary to our security as a Nation. These projects will, of course, also have important beneficial effects on the civilian economy, as in the past. When peace becomes once more

secure, we can look forward to reexpansion of river and harbor development for the added purpose of increased peacetime activities and for gaining and enhancing increasingly higher living standards.

We renew our former recommendation that at least \$70,000,000 be provided annually for maintenance of rivers and harbors.

Respectfully submitted,

SID SIMPSON,
Chairman.

NOTE A—A project which has been placed in class II, III, IV, or V by the committee may be re-examined from time to time upon due application and the submission of material supplementary information, with a view to advancing its classification, but no project will be reported upon by the committee more than once in each year.

NOTE B—Attention is called to the fact that when a project is once put in class I—Endorsed, such status continues and it is unnecessary to follow up at subsequent sessions with new applications. All projects endorsed by the Congress, upon the recommendation of the committee, retain their status until finally constructed, unless such action is rescinded by the Congress, and the Congress stands pledged to do everything possible to assist in reaching that goal.

Appendix A

(Letter R following the project number indicates revision of a previous application)

CLASS I—PROJECTS ENDORSED

(Endorsed. This means that the committee is convinced that the project is sound, needful, and sufficiently advanced in status, and should be promptly constructed in the public interest.)

Project No.	Name of project	State	Division
709 R-3	Monongahela River, Opekeiska and Helderland Locks and dam.	West Virginia	O. R.
722 R-3	Cape Fear River at and below Wilmington (including widening the transition channel at the downstream end of the anchorage basin)	North Carolina	S. A.
741 R.	Boston Harbor, extension of President Roads	Massachusetts	N. E.
744 R-3	Oregon Inlet and related channels	North Carolina	S. A.
745 R-3	Masonboro Inlet	do.	S. A.
748 R-2	Norfolk Harbor-Craney Island disposal area	Virginia	N. A.
769 R....	Weymouth Fore River	Massachusetts	N. E.
817 R....	Ohio River New Cumberland Locks and Dam.	Ohio and West Virginia	O. R.

860.....	New York Harbor, South Channel	New York	N. A.
871.....	Saline River (Benton Dam)	Arkansas	L. M. V.

CLASS III—EXPEDITIOUS REPORT ON AUTHORIZED SURVEY REQUESTED

Expeditious report on authorized survey requested. This means that the committee believes the Congress should request the engineering authority to expedite the report of its investigation and survey of the project to the end that appropriate further action may be had thereon in regard to classification by the Congress.

Project No.	Name of project	State	Division
725 R-3	Carolina Beach	North Carolina	S. A.
770 R....	Saginaw River Basin flood-control project	Michigan	G. L.

879.....	Miami River and mouth	Florida	S. A.

CLASS IV—PROJECTS RECOMMENDED FOR SURVEY

Recommended for survey. This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government.

Project No.	Name of project	State	Division
864.....	Monongahela River, Lock and Dam No. 5, replacement	Pennsylvania	O. R.
873.....	Diavos Harbor, ship channel and turning basin	Texas (Brazoria County)	S. W.
874.....	Myrtle Grove Sound pollution.	North Carolina	S. A.

Resolution Sponsored by the Council of Polish Societies and Clubs and the Delaware Division of the Polish American Congress

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. BOGGS of Delaware. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolution, which was read and adopted on the occasion of the commemoration of the one hundred and seventy-second anniversary of the death of Brig. Gen. Casimir Pulaski, on October 14, 1951, at Pulaski Place, Wilmington, Del. This resolution was sponsored by the Council of Polish Societies and Clubs in the State of Delaware and the Delaware division of the Polish American Congress:

Resolution read and adopted by the assembled at a commemoration of the one hundred and seventy-second anniversary of the death of Brig. Gen. Casimir Pulaski, sponsored by the Council of the Polish Societies and Clubs and the Delaware division of the Polish American Congress, held on Sunday afternoon, October 14, 1951, at 3 o'clock at the Pulaski Place, Wilmington, Del.:

"We, Americans of Polish descent, assembled at the Pulaski Place to commemorate the memory of Brig. Gen. Casimir Pulaski, who gave his valor, courage, and his life to the American cause for liberty and independence, coming to America from Poland to lend his aid in winning the Revolutionary War, to whom the principles of liberty was uncompromisable with any enemy of such, later these principles were created and kept wholly up to the time of the Tehran Conference.

"Further, we, Americans of Polish descent, are upholding the American principles for which General Pulaski gave his life, having our sons and brothers all over the world who shed their blood, in War I, in War II, and who are shedding their blood in the present so-called police war in Korea, of whom a number have made the supreme sacrifice for the principles stipulated in the Atlantic Charter and the "four freedoms," which were to bring freedom and independence to all nations and peace to the world.

"Further, we, Americans of Polish descent, rightfully condemned the Yalta pact, predicting that it would leave in its wake tragedy, slavery, and war—and it has. When pro-Soviet sentiment swept the entire country we manifested political wisdom and moral courage by being the first to go on record against Yalta and Soviet aggression. We were, we are, and we always will be anti-Communist. We stood alone courageously defending Americanism at a time when it was popular to favor the Reds.

"Further, we join with the Polish-American Congress, with the Polish Government in exile in London, and with all other groups urging that the United States of America should not change or attempt to change the presently established western boundaries of Poland.

"Whereas the Polish Nation is not governed by representatives of its own choosing; that it is governed by the puppets of Moscow and controlled entirely by the rulings of Moscow; calling this fact to the attention of the American people so that the acts of the

puppets foisted upon the Polish people by Moscow should never be accepted as the willful acts of the Polish people, and that the words spoken by the so-called Polish delegates at U. N. meetings and at other conferences should not be taken or adopted as the words of the Polish people and the Polish Nation.

"Whereas the House of Representatives of the Congress of the United States adopted resolution 390, to bring to light the truth about the monstrous crime committed in the Katyn Forest during the winter of 1940 slaying 5,000 officers of the Polish Army. That the investigation will uncover the fate of another 10,000 Polish officers that are missing from the time of the Russian invasion of Poland, and

"Whereas there are few instances in history, indeed, of a more heinous, more brutal, more barbarous mass slaughter. It was unspeakable in horror and degradation. It was an act of perfidy and bestial cruelty. It was an incident of frightful and devilish inhumanity. It was in violation of every principle of civilization, and

"Whereas there has been a shameful delay in moving to get all the real facts in this mass slaughter, evidence known to and available to officials of our Government was suppressed and overlooked, these officials were willing to hide these hideous facts, block a real investigation of them because they were unwilling to offend Soviet Russia, the committee should bring to light these officials who have put the soft pedal upon this uncivilized outrage and for what reasons and considerations, and

"Whereas the traditional American theory of government was and is that our basic rights are 'retained by the American people' even as against the Government itself, and are not subject to change or modification unless the Constitution be changed by the people themselves; and

"Whereas, since the people expressly reserved these 'retained rights' and did not grant their control to any agency of Government, our governing officials have no constitutional power to take them away, or modify them, by treaties or otherwise, and

"Whereas the United Nations are a group of nations banded together for the sole purpose of preserving peace in the world; and

"Whereas the plans of the United Nations are usurping and will eventually usurp the vested rights and privileges of American citizenship, and

"Whereas power has been delegated by our national Congress so that the power of the United Nations is superior to the power of the United States affecting the individual rights of the American people; and

"Whereas the dangers inherent in government by treaty as proposed under U. N. procedure should cause every thoughtful and patriotic American to reread and restudy the Constitution of the United States so that he may be sure in his own mind that in striving for a world ideal, we are not yielding some of our precious liberties to supergovernment shaped in an Old World design; and

"Whereas the Constitution was written by men who understood better than we the price of liberty and the blessings of free institutions, we should not scrap it for something that may destroy our heritage, and

Whereas the Constitution makes Congress the legislative organ of the United States, not GATT or NATO or UNESCO or any other international body. Yet, we are entangled in the decisions of these various agencies; and

"Whereas there has been introduced in the Congress of the United States of America a resolution whereby the Congress would formally declare that world government is the fundamental objective of American foreign policy; and

"Whereas a world government would deprive the citizens of the United States of inalienable rights, privileges, and immunities now guaranteed by the Constitution of the United States, and

"Whereas Senators and Representatives of our Congress of the United States, judges, our representatives in the U. N. and a number of our high-ranking Federal officials after taking the oath of allegiance to the United States of America and to uphold, protect, and defend the Constitution and laws not to any world government or Atlantic union and yet we see their names on world government and Atlantic union literature, and

"Whereas the President of the United States did send to the United States Senate, on June 16, 1949, a proposed treaty or convention entitled "Convention on the prevention and punishment of the crime of genocide," with a recommendation for ratification, and

"Whereas the present document is so drawn that it does not apply to genocide as practiced by Stalin in Russia or in the Russian satellite countries, in drafting article 11 of the convention and in order to appease the Russians, genocide was limited to 'national, ethnical, racial, or religious groups.' The political group was omitted. Hence, dictators can sign the genocide convention with complete immunity. All they need to do is to classify a particular group as enemies of the state, and

"Whereas there is not a word in the convention which denounces as genocide the mass killing and destruction of peoples by governments if the Genocide Convention is ratified as treaty, it will supersede every city and county ordinance, every State law, and every State constitution, as well as every Federal statute on the same subject, it threatens the American concept of freedom of speech and of the press as guaranteed by our Bill of Rights.

"Whereas you will find no U. N. flags on any British flagpoles; France does not accord it equality with her flag, even little Belgium would rip it down if anyone dared to hoist it alongside her flag—in Russia if anyone would dare to place it alongside the hammer and sickle, he would be shot instantaneously—yet, in our country we have people who call themselves Americans brazenly clamoring to have the U. N. flag replace our Stars and Stripes, and

"Whereas it is possible that we of this generation have become so degenerate and craven that we can stand by and let knaves and traitors desecrate our flag without lifting a hand or a voice to defend it?

"Whereas present are terrible times of national emergency, the Red menace from within is reaching out to destroy not only our bill of rights, but America itself. It is abusing everyone of our constitutional privileges by using them as a cloak in which to hide its nefarious activities. To afford it the protection of these liberties as a safety zone in which to destroy our rights is national madness and suicide, and

"Whereas so-called intellectuals, liberals, and other false prophets of a philosophy which knows no God, have been gradually undermining all that is fundamental in the American way of life; and

"Whereas they proclaim that God's plan has failed, that security is preferable to liberty. That freedom of the individual should be surrendered to a planned and regimented economy directed by an all-powerful central government. This is the philosophy of communism. In every country where the people have followed such a false philosophy, religion has been destroyed, the self-respect of the individual has banished; and

"Whereas the rot of appeasement spreading from men in high posts in this country

through our social structure, is more dangerous than any Soviet atom bomb; and

"Whereas in the present crisis it is important that the citizens of the United States present a united front against any forces that tend to destroy our American heritage. Americanism needs fanatics to combat contrary philosophies which seek to destroy our way of life.

"Resolved by the assembled, That the United States—

"1. Repudiate the Yalta pact, the source of the world's evils.

"2. Immediately withdraw its recognition of the present Polish Government in Poland, because it does not represent the Polish people, but is merely the obedient pawn of Stalin, yielding to his every wish and demand.

"3. That the Katyn murders and their perpetrators be brought to full light and that the responsible criminals be made to answer for the greatest single crime in world history.

"4. That in view of the heroic deeds and the unswerving loyalty for which Poland was called the inspiration of nations there will not be any further mutilation of the boundaries of Poland in favor of the German imperialists.

"5. Support only the proper and legitimate aims and purposes of the United Nations in their efforts to bring about and maintain world peace and security.

"6. Only the flag of the United States, the Stars and Stripes, is the revered symbol of the sovereignty of our country, the symbol of liberty throughout the world, and the only flag to which American citizens owe and may pay allegiance.

"7. Should be unalterably opposed to the movement for World Government and Atlantic Union as being intended to reduce all the peoples of the world to the slavery of the state-dominated nations behind the Iron curtain and the destruction of all the ideas of freedom of the individual upon which this country has become a great nation.

"8. Outlaw the Communist Party, drive the Reds out of the schools, Government, industry, press, movies, and television, before they can do any more damage.

"9. Build American military, naval, air, and atomic strength to a point where it has no equal.

"10. That the Congress of the United States submit to the several States an amendment to the Constitution of the United States, the representative form of Federal Government, consisting of the Congress, the executive, and the judiciary, the sovereignty of the governments of the several States, the express limitations on the powers of Congress, the guaranties of individual liberties and the independence of the Federal judiciary, contained and guaranteed in and by this Constitution and in particular the first 10 amendments thereto, shall not be abolished nor altered by any treaty or executive agreement.

"Resolved further, on this one hundred and seventy-second anniversary of the death of Brig. Gen. Casimir Pulaski of Poland, the land of our forefathers, we send this message: 'Do not lose faith, the enemy will one day be driven from Polish soil.' As for America, it is our country, her flag is our flag, it is a symbol of everything we love most. Guard the United States well, for with all its imperfections, it is still the most wonderful country in the world. That a copy of this resolution be forwarded to the President of the United States, to the Secretary of State, and to all United States Senators."

ADAM J. ROSIAK,

Chairman of the Commemoration Meeting.

VINCENT J. KOWALEWSKI,

Secretary of the Meeting.

Operation Home Front

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. HOLLAND. Mr. President, throughout the summer and fall I have noted with keen appreciation a highly appealing program which has been conducted in Washington under the auspices of the American Newspaper Women's Club for the entertainment of servicemen and servicewomen stationed in or near the Capital. These patriotic women of the fourth estate have given to their program the distinctive name Operation Home Front. Either at their clubhouse in Washington or at the country estates of various outstanding citizens of this area they have entertained large groups of servicemen. Several Members of the Senate, along with their wives, have been privileged to be among those present. Any American would be made happier to see these young Americans enjoying the instrumental music, the group singing, the swimming, and other outdoor sports, the card games, the friendly conversation and laughter, and the abundance of excellent food which have made these occasions so truly delightful. I am sure that the effort is worthy of strong approval and of emulation elsewhere.

I heard, with particular interest at one of these occasions, a statement by Brig. Gen. C. W. Christenberry, Chief of the Special Services Division of the Army, which I thought included some paragraphs which fully deserve incorporation in the CONGRESSIONAL RECORD. I ask unanimous consent to offer herewith for inclusion in the Appendix of the RECORD excerpts from the informal address of General Christenberry.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

The Defense Establishment is pleased with the fact that the city of Washington has provided Operation Home Front; and we of the military service are appreciative to those who have given of their time and opened their homes and estates for this purpose. For this unselfish home hospitality, given a new impetus here in the Nation's Capital, may well prove contagious, inspiring, an already generous citizenship throughout the Nation to invite your son and mine, your daughter and mine, when in uniform and away from home, to share other fine home atmospheres in a free and friendly manner, just as these 350 enlisted men and women are enjoying today this wonder estate.

You do not need to doubt the fitness of our uniformed personnel to deserve a welcome into the best homes. I am informed by Mrs. Patricia O'Malley Strickland, president of the American Newspaper Women's Club, that over 950 of our young men and women have recently been guests in several of the fine homes of this area; and not one instance of untoward conduct or damage to furniture has occurred. The parents of these servicemen and women would be proud but not surprised to hear this. Those of you here today—especially our distinguished Senators and their wives—will be interested

to know that increased emphasis is being placed on the planning of clean, healthful, recreational opportunities for service personnel during their free-time, or off-duty hours. Participation in off-the-job activities of their own choosing provides an essential balance for enlisted personnel in the programs of intensive military training so necessary in this emergency. Variety in choice of free-time participation not only provides a balanced training schedule with necessary recreation; it also develops leadership, culture, self-confidence, community interests, and eventually returns thousands of young men and women to their home towns better equipped for effective citizenship than when they first donned the uniform. Our service libraries, clubs, music programs, soldier shows, various types of crafts, and wide sports program all point in this constructive direction; and these activities are coordinated with the chaplain's activities, and with the division handling information and education. And most important, Operation Home Front, as well as our entire special services program, is truly democratic, for it aids in doing the thing that General Eisenhower recently stated was so important; it helps preserve the dignity of the individual, the very heart of our American way of life.

And finally, let us recognize and be grateful for the close cooperation between the civilian and the military in this extended emergency. Communities all over this great Nation are sharing their cultural, recreational, and religious facilities with local camps, posts, stations and bases. This fine party today for enlisted personnel on this beautiful estate, sponsored as a phase of "Operation home front" by the American Newspaper Women's Club, is a specific example of such cooperation.

This growing unity (and the resultant better spirit of understanding) between the military and the civilian, adds immeasurably to the efficiency of national defense. Above all, it adds a zest and willingness to cooperate in the defense of our precious freedoms and way of life. When the citizen in civilian dress, doing an arduous defense job in factory, or in governmental work, feels that the importance of his position is genuinely understood and appreciated by those in uniform, self-respect is enhanced, a will to produce is furthered, and a recent motto coined, I believe, by General Bradley, "Teamed for defense" progressively begins to mean a completely unified citizenship for defense—which simply cannot fail.

These are not generalities. Specific cases are available. For instance, this joint understanding and laboring together of the military and the civilian, produced in the last war, civilian-minded leaders, one of whom could be shifted easily and naturally from such a key job as Supreme Commander of all our Allied Forces in Europe, presidency of one of our largest universities (General Eisenhower), or to give another instance, the personality of one of these leaders so expressed warmth and human understanding that his high qualities of leadership could be readily transplanted from the command of armies in Europe to the top position of the vast and complicated Veterans' Administration (General Bradley). This close cooperation of the civilian and military in all ranks aids in bringing about one, undivided citizenry. We should all—in and out of the military services—realize the great significance of this too-little recognized fact, that young Americans can, in an emergency such as this present one, undergo a sustained period of rigid discipline and intensive training in large groups and under severe stress, and yet maintain their distinct individualities and their personal dignity. This is firm American policy—and it is succeeding. It can be no other way in

this great Nation. For to lose this great sense of the importance of personal dignity and individual freedom—even in the face of great military victories—would actually be defeat.

**Unpaid Tax Account of A. H. Myers,
Kansas City, Mo.**

**EXTENSION OF REMARKS
OF**

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the RECORD a brief statement in which is embodied a letter from the Commissioner of Internal Revenue, John B. Dunlap, relative to the unpaid tax account of A. H. Myers, Kansas City, Mo.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILLIAMS

On October 8, 1951, I made a statement which appears in the CONGRESSIONAL RECORD on pages 12760 and 12761, regarding the unpaid tax account of A. H. Myers, Kansas City, Mo., totaling \$675,344 16, representing extra assessments for the years 1942 to 1946, inclusive.

In that statement I said that while the statute of limitations had not expired on the criminal phase of this case, it had expired on civil fraud for three of these years.

It has been called to my attention by the Treasury Department that I was in error in that statement and that it should have read that the statute of limitations on the criminal phase had expired—but not on the civil phase.

The full text of the Commissioner's letter pointing this out is as follows:

OCTOBER 15, 1951.

MY DEAR SENATOR: The CONGRESSIONAL RECORD of October 8, 1951, at page 12760 and following pages, contains a statement of Senator WILLIAMS, of Delaware, concerning the income-tax returns of Mr. A. H. Myers, Kansas City, Mo. Senator WILLIAMS said, according to the CONGRESSIONAL RECORD, in substance, among other things, that he was not attempting to pass upon the merits or demerits of a proposed assessment of the taxes but on the other hand, some explanation should be forthcoming as to why the assessments were allowed to elapse without any effort being made to collect.

In deference to the Senator's suggestion, I should like to set forth the following facts with reference to the investigation of Mr. Myers' income-tax returns for the years 1942 to 1946, inclusive.

The fraud investigation of this case was started on October 1, 1947, and Bureau Special Agent Park submitted his report on July 20, 1950. After this report was reviewed by Park's superiors it was transmitted by Special Agent in Charge Lohn to the regional counsel of the Penal Division under date of August 16, 1950. This is the normal course these cases follow. The years covered by this report were 1942 to 1946, inclusive; and criminal prosecution was recommended for the years 1944, 1945, and 1946.

A final conference had not been accorded taxpayer's representatives while this case was under investigation and in accordance with the usual administrative procedure the lawyers for the taxpayer and the Bureau's representatives conferred on the case at Kan-

sas City September 26, 1950. After this conference, further consideration was immediately given the case by the Bureau's representatives, and after the most careful review of the evidence it was concluded that further information would have to be developed in order to make the case suitable for criminal prosecution purposes. The evidence as the case then stood was in the opinion of the lawyers deemed insufficient for criminal prosecution purposes, where the Government has to carry the burden of proof of guilt beyond a reasonable doubt, and for that reason further investigation was undertaken. Under date of March 29, 1951, the Bureau's agents submitted a supplemental report covering these evidentiary deficiencies. This supplemental report was forwarded to the Bureau's lawyers on April 2, 1951.

The substantial prosecution years in the Myers case are 1945 and 1946, which involve a liability of approximately \$200,000 and \$130,000, respectively. On October 12, 1951, the case was referred to the Department of Justice with a recommendation that Myers be prosecuted for attempted income tax evasion for 1945 and 1946. Such a prosecution may be undertaken any time before March 15, 1952.

As is usual where the tax is not in jeopardy, no efforts have been made to assess or collect the civil liability pending disposition of the question of possible criminal action.

The files of the Bureau of Internal Revenue disclose that waivers executed by the taxpayer to extend the periods within which assessments may be made are on file for the years 1942 to 1946, inclusive; the statutory periods for later years, within which assessments may be made, have not expired. The statute of limitations for the assessment and collection of the civil liabilities for all years involved (1942 to 1946, inclusive), therefore, is still open without regard to whether the returns are finally determined to be false and fraudulent.

Very truly yours,

JOHN B. DUNLAP,
Commissioner

It should be noted that this does not alter the other facts which I pointed out in my speech of October 8, 1951, namely, that—

1. Mr. Myers does have outstanding tax assessments of \$675,344 16 and that this account had not been referred to the Department of Justice at the time I made my statement. (It was referred on October 12, 1951—4 days later.)

2. Mr. Dan M. Nee, former collector of internal revenue, Kansas City, and collector during the years involved, is now representing Mr. Myers as his attorney.

3. Mr. Myers and Mr. Nee are partners in the Mid-West Realty Co., a company which leased 153 Government buildings at Camp Crowder, Mo., at an annual rental of \$11,270 and 4 days later leased this same property back to another Government agency at a rental which grossed them \$382,201 11 during the next 20 months.

4. While it is understood that all of this gross income was not carried to net, nevertheless in the General Accounting Office's audit report, the net profit realized for the first 11 months was stated as being \$94,226.55 and the same report carried the notation that profits during the ensuing months would be at a substantially higher percentage basis due to the fact that during the first few months all of the expenses of getting the property ready were written off.

5. The lease for this Camp Crowder property was negotiated by Mr. Myers, Mr. Nee, and their associates through Quirk J. Bernard, Kansas City official representative of the War Assets Administration. At the time this lease was negotiated, Dan M. Nee and Quirk J. Bernard were also partners in another business enterprise.

America Needs All of Us

**EXTENSION OF REMARKS
OF**

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. MANSFIELD. Mr. Speaker, I am happy to call to the attention of the Congress the fine work being done by the Bureau of Reclamation and private industry in helping the physically handicapped.

On the great Hungry Horse Dam in Montana comes a heart-warming story of how the physically handicapped are given opportunities for employment on this project.

The following story from the October issue of the Reclamation Era should be of great interest to all of us and furnish hope for our physically handicapped citizens:

AMERICA NEEDS ALL OF US

In cooperation with the President's Committee on National Employment the Physically Handicapped Week (NEPH Week, October 7-13, 1951), and in response to a request from the chairman of the committee, Vice Admiral Ross T. McIntire, Marine Corps, United States Navy, retired, we present these typical examples of the part the Bureau of Reclamation is playing in offering opportunities to handicapped persons, on the farm, in the office, and on the construction job.

HUNGRY HORSE PROJECT

From the Hungry Horse project in Montana comes a heart-warming story of a tough, hard-boiled construction outfit that is doing an outstanding job in employment of physically handicapped workers.

Hungry Horse is the fastest growing concrete dam in the world. Set up originally on a drumhead tight schedule, the job is being highballed to get reservoir storage capacity and power generation at the earliest possible date to help supply the critical power requirements of Pacific Northwest defense plants.

And the job has all the dangers inherent in construction of the world's third highest and fourth largest concrete dam. Working on a giant construction job like Hungry Horse Dam, a man needs better-than-normal physical equipment—not less.

But General-Shea-Morrison, prime contractor for the Hungry Horse Dam and power plant, has a strong policy of employing physically handicapped men on jobs which they can handle. Mel Hord, assistant to Project Manager C. W. "Smoky" Wood, is quick to point out that the policy is the result—not of altruism—but of the knowledge that these men, when placed in the right spots, frequently do a better job than men with unimpaired physical faculties.

As you make the rounds of the job talking to men who have been crippled by war, polio, tuberculosis, accidents, you find the reasons. They are simple, compelling reasons that should make sense to every man who has the responsibility of staffing a job, whether it be construction, shop work, farming, or a business office.

You talk to Ed Sizer, electrician for G. S. M., who had his right leg blown off just below the knee when he and 26 other members of a First Marines' observation post were caught in a deadly hail of machine gun and rocket fire behind the Japanese lines in Okinawa. Today, Ed skis, skates, swims, and packs a bowling average as high as

169. The determination and the will to succeed that have enabled Ed to overcome his handicap and engage successfully in these sports are 'h' qualities that make him a valued employee in the G-S-M organization. Ed's artificial leg doesn't bother him much. In fact, he seems to be much more sensitive about his receding hairline—always bows with a cap on.

At the contractor's heavy-duty machine shop, you run across Art Stratton who has to be careful that he doesn't weld the hook that serves as his right hand to the tractor frame he is working on. Art lost his arm and his right leg under a railroad car many years ago, but the tragic accident didn't keep him from doing his part as a welder in the Lake Washington shipyard during the Second World War. He's been on the Hungry Horse job for 3 years, and his shop foreman, Leo Lefester, says welders don't come any better than Art.

It is significant that a majority of the physically handicapped men on the Hungry Horse job are employed as cableway operators or cableway signalmen. This is startling, to say the least, when you realize the tremendous responsibility that rests on the shoulders of the men who fill these jobs. They are keymen in a high-speed operation that keeps concrete moving from the mixing plant to the dam at an average rate of 7,600 cubic yards, or 30,400,000 pounds every 24 hours.

You make the long climb to the operators' tower anchored high on the canyon wall and step into one of the glass-enclosed booths. Through the window in front of the operator you see the 139-foot high concrete mixing plant and Montana's shortest and busiest railroad on which Diesel-powered "dinkies" shuttle back and forth carrying concrete from the mixing plant to the cableway buckets. The operator leans forward tensely and his hands flick over the controls quickly and surely in response to a series of flashing lights and staccato buzzer signals. Then, through a speaker, comes the low voice of the operator's signalman, "Give us a little headtower, Ralph—easy, hold it—now bring her down a bit. This is a tight spot—not much clearance—O K, dump her and highball it." Following the operator's eyes, you see the big 8-cubic-yard concrete bucket leap skyward as it drops its 16-ton load of concrete in one of the massive concrete blocks rising in the river canyon.

As he flips the controls that swings the bucket back across the canyon to the loading dock, cableway operator Ralph Olson turns and greets you.

Then you make a surprising discovery. Ralph is literally bolted to his job. A special steel joint, designed by Ralph and machined in the General-Shea-Morrison machine shop, connects his artificial left arm with the cableway speed control. The special joint, which has a ball-bearing swivel to give it the smooth flexibility of a man's normal wrist, screws on to the artificial arm and bolts firmly to the speed-control handle.

You learn that Ralph lost his left arm above the elbow 17 years ago when his car was sideswiped by a truck. He broke in as a cableway operator at Shasta Dam in 1911 and has been operating cableways steadily since that time. You learn from other men on the job that he is one of the best.

You drop to the operator's tower on the graveyard shift and talk to Al Black who started operating a cableway at Hungry Horse in April 1951. Al worked as a signalman at Hungry Horse last year—his first job since his recovery from almost fatal injuries received in a 65-foot fall from a whirly crane at Davis Dam in 1947. Al's permanent injuries include a crippled left arm from which the elbow joint has been removed, and a crippled left leg. But his

bad left arm handles the cableway controls as quickly and surely as his good right arm.

Physically handicapped signalmen working on the Hungry Horse job include John McKee who lost his right arm above the elbow in a logging accident. He also wears a brace on his paralyzed right leg.

Then there's Al Hendrickson who spent 13 of his first 15 years in hospitals fighting TB of the spine and leg. He started working at the project as a guard in 1948, later tried his hand at clearing work in the 34-mile-long reservoir area, and then returned to the dam where he was a checker at the mixing plant for a time before starting his present work as signalman.

Up at the concrete-mixing plant, Cal Crouch, dock foreman, gets around with amazing agility, in spite of his polio-crippled left leg. Cal works the graveyard shift, supervising clean-up in the busiest and most dangerous spot on the Hungry Horse job.

Looking back on your hurried trip over the project and your talks with these men who are doing their jobs in spite of lost or maimed arms and legs, you wonder a little that you haven't realized before how many there are on the job. And then the truth dawns on you. They are doing their jobs so quietly and so efficiently that you just don't realize that they have physical handicaps.

COLUMBIA BASIN PROJECT

Of the approximately 2,000 employees of the Columbia Basin district in the State of Washington, a quick count reveals approximately 175 are 10-point preference veterans.

Typical of these is Ellis Shorthill, photographer, who was in the Pacific theater when he received a head injury from an exploding grenade, which paralyzed him completely. After about 3 months in an American hospital during which time he regained his ability to walk, he was captured by the Japanese and was a prisoner of war for 2½ years. He continues to have difficulty with the left side of his body but the handicap does not prevent him from doing good photographic work.

William S. Lovercheck a World War II paratrooper living on irrigation block 1 of the Columbia Basin project, has overcome his serious wartime injuries so well that very few people can tell the extent to which his injuries interfere. If at all, with his farming.

JEAN CAMERON

Blind since birth, Miss Jean Cameron, an employee in the Commissioner's staff offices in Denver, has proved that a physical handicap is not of necessity a deterrent to the leading of a full and happy life.

Jean is employed as a dictating machine transcriber. She came to Reclamation in 1944 as a stenographer transferring from Lowry Air Force Base in Denver where she had been employed as a clerk-typist for a year and a half.

Jean and her seeing-eye dog, Mabel, have become an essential part of the environment in the Bureau of Reclamation offices at the Denver Federal Center. Jean arrives at her job every morning in her own automobile. An extremely satisfactory arrangement with fellow workers who live in her neighborhood whereby they drive and Jean rides, permits her the comfort of personal transportation to and from her office.

Born in Lehi, Utah, Jean attended the Colorado School for the Deaf and Blind in Colorado Springs, Colo. In 1933 she enrolled at Colorado Woman's College in Denver, concentrating on psychology, history, social sciences, and Spanish. She completed the prescribed 2-year course, and was awarded an associate in arts degree in 1935.

She is an accomplished vocalist, plays the piano and organ, and has had magazine articles published. She is keenly interested in music, stage plays, and movies. Her "handicap" in no way hinders Jean's full participation in practically all types of social activity.

In her present position as dictating machine transcriber, one of Jean's principal tasks is the transcription of the proceedings of meetings in which several speakers participate. Following the initial introductions, Jean depends solely upon the speaker's voice for identification. Final preparation of drafts of the proceedings is also her responsibility. An award for superior accomplishment in 1948 and consistently high yearly efficiency ratings attest to Jean's capability.

It seems incongruous to speak of Jean Cameron as handicapped. Her ability and her independence exceed that of many who have complete possession of their physical faculties. Those who know her well are quick to point out her ability to be the life of any gathering in which she may participate. Her cheerfulness, ability, and lively interest in all aspects of life provide a model for any who know Jean Cameron.

STUART M. BLYDENBURGH

"Stu" Blydenburgh was employed by the Bureau of Reclamation in 1949, following his graduation from Case Institute of Technology in Cleveland, Ohio. He was awarded a bachelor of science degree in civil engineering from this institution in June 1949. Prior to his entry into the Army, he attended Ohio Wesleyan University for 2 years. Summer employment between semesters as an engineering aide with the Buffalo district office of the United States Corps of Engineers preceded his permanent employment by the Bureau of Reclamation.

Shrapnel wounds while in action in France in 1944 resulted in the loss of Stu's left arm. This loss has affected neither his desire nor his ability to get ahead.

Mr. Blydenburgh is now assigned to the special assignments section of the Dams Branch in the Division of Design and Construction in Denver. He recently completed a series of the rotation assignments in which many of the Bureau's young engineers participate. Stu's ability to do an outstanding job has been recognized by a recent raise in grade and salary.

As a civil engineer in the Structural Behavior Unit of the special assignments section, Stu is responsible for preparing detailed drawings from rough sketches, notes, and oral instructions. He also assists in the compilation and analysis of data received from field offices in the form of reports and instrument readings.

Stu's missing left arm has not affected his ability to perform high-caliber work. Equipped with a prosthetic limb, he has become proficient in its use. It permits him, for example, to hold the steering wheel of his auto or to pick up objects if the occasion demands.

Stu's supervisors have rated as outstanding his dependability and his willingness to cooperate in the accomplishment of work to be done.

HARRISON J. HURLBURT

A little more than a year ago, on September 14, 1950, to be exact, a strapping Air Corps veteran walked into the Bureau of Reclamation's Yakima project office in the State of Washington. He was a lucky winner of one of the 11 Roza homesteads. The ex-lieutenant, who had lost his foot in the service of his country, had come to claim his farm.

This year, farmer Hurlburt has an artificial limb and is not dependent any more on the use of crutches. In the meantime, he has raised over 50 acres of crops—25 acres of peas, planted with alfalfa that will be raised for seed, 17 acres of red Mexican beans, and 12 acres of sweet corn—doing most all the work by himself, with the aid of his faithful tractor. Except initial planting and harvesting, Mr. Hurlburt estimates he has not spent over \$50 for outside labor.

He even built his own house, obtaining it from the White Bluffs area (Hanford

atomic energy work vicinity), had it moved in three sections, built his own foundation, and reassembled it with the aid of one other man. He has electric power and hopes to obtain domestic water through a proposed cooperative well agreement of neighboring farmers.

Hurlburt has invested all of his capital in the farm and plans to stay with it—says it is too short a time yet to decide whether or not he will be successful, but doctors have certified that he has the makings of a successful farmer and is equal to most others.

On page 125 of the July 1951 issue appears another example of a wounded World War II veteran who made good on his Home in the West.

Resolutions of the New York Joint Legislative Committee on Interstate Cooperation

EXTENSION OF REMARKS OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a series of resolutions adopted by the annual executive conference of the New York Joint Legislative Committee on Interstate Cooperation. This committee is the New York link in a Nation-wide chain of interstate commissions which are seeking through legislative and administrative channels to strengthen State governments and thus check our headlong rush toward overpowering centralization of government in Washington.

The first of these resolutions calls for the creation of a Commission on Intergovernmental Relations, authorized to study and recommend a proper allocation of responsibilities, jurisdictions, and tax resources as between Federal, State, and local governments. Such a step was recommended by the Hoover Commission, and several bills, including H. R. 5251—Ostertag—are now pending to bring this about. It should not be necessary to labor before this body the urgent importance of this measure. The officials of virtually every State of this Union have written me in recent weeks pleading for the enactment of legislation of this kind; and the enormous grants of fiscal and jurisdictional power given to the National Government by this Congress, under stress of the defense emergency, only underscore the vital importance of counter-balancing with legislation such as this proposal.

The second of these resolutions is somewhat related to the first. It calls for enactment of legislation to provide proper and adequate compensation in lieu of taxes to State and local governments where Federal installations have removed taxable properties from the tax rolls. It should be pointed out in this connection that real estate is the only tax resource now left exclusively to State and local governments by the Federal Government. Every other tax resource has been invaded and/or preempted to

meet the insatiable demands of our ever-expanding Federal bureaucracy.

The third resolution calls for early action in expediting the pending civil defense and forest fire protection compacts with Canada. These are interstate compacts in which the cooperation of the contiguous Provinces of Canada is of vital importance, and every effort should be made by this Government to surmount the legal and technical difficulties which have thus far prevented their approval.

The fourth resolution deals with the vital matter of development of water and power resources, and stresses the importance of State and interstate development and control of these resources.

The fifth resolution deals with an important problem which the States are handling themselves through reciprocal legislation, namely, the enforcement of support of dependents. Under this legislation, which has now been enacted in 39 States and three possessions of the United States, breadwinners who abandon their families are required to continue to support them, even though living in another State. The effect of this program is to keep many dependents off the public-assistance rolls, thus saving taxpayers many thousands of dollars. At the moment the District of Columbia does not have a law of this kind, but I expect to introduce such legislation within the near future.

The five resolutions follow:

I—COMMISSION ON INTERGOVERNMENTAL RELATIONS

Whereas it is evident that intergovernmental relations in the United States are becoming increasingly complex, notably in the field of fiscal relationships; and

Whereas a thorough examination and review of such intergovernmental relations is urgently needed and action leading to reforms in the fiscal field should be provided at the national level; Now, therefore, be it

Resolved, That the New York Joint Legislative Committee on Interstate Cooperation urges prompt action by the Congress of the United States for the establishment of a national commission on intergovernmental relations as embodied in Senate bill 1146 and in the Ostertag bill (H. R. 5251) now pending before the Congress.

II—PAYMENTS IN LIEU OF TAXES

Whereas problems raised by the exemption of Federal property from State and local taxation have long been serious and were sharpened by the impact of the wartime expansion of Federal facilities; and

Whereas the States have long urged Federal action to meet this problem through a general plan of payments in lieu of taxation of federally owned property; and

Whereas a bill to provide such relief now is pending before Congress after years of delay and many hearings, some of which were sponsored by the New York Joint Legislative Committee on Interstate Cooperation: Now, therefore, be it

Resolved, That the New York Joint Legislative Committee on Interstate Cooperation recommends the prompt enactment of H. R. 5223, with an amendment changing the date from which payments will be made from 1946 to 1939.

III—CIVIL DEFENSE AND FOREST FIRE PROTECTION COMPACTS

Whereas the State of New York and its neighboring States are vitally interested in

the extension of the provisions of two interstate compacts, the civil defense and the forest-fire protection compacts, to neighboring Provinces of the Dominion of Canada; and

Whereas the New York Joint Legislative Committee on Interstate Cooperation is informed that legal and technical difficulties have arisen in this connection on the Canadian side. Now, therefore, be it

Resolved, That this committee respectfully requests the United States Department of State to explore with the Government of the Dominion of Canada methods by which Canadian participation in the interstate arrangements established by these compacts can be effected.

IV—WATER AND POWER RESOURCES

Whereas the Federal Government recently has shown unusual interest in the surveying of the water and other natural resources of the Nation through the country-wide activities of the President's Water Resources Policy Commission and the regional studies of the New England-New York Interagency Committee; and

Whereas the President's Water Resources Policy Commission in its report has outlined certain policies and advocated legislation which, if enacted, might well have the effect of adversely influencing, if not directly superseding, the wise and salutary actions already initiated by the several States and interstate agencies in furtherance of their respective inherent rights and responsibilities to regulate and control their own water and power resources; and

Whereas it seems apparent that an attempt may be made to have the studies of the New England-New York Interagency Committee translated into Federal policies and legislation. Now, therefore, be it

Resolved, That the New York Joint Legislative Committee on Interstate Cooperation urges that the Federal Government recognize the inherent right of States and local governments to regulate and utilize their own resources and the full ability of these governmental units to fully and successfully cope with these problems, and be it further

Resolved, That Federal resources policies and law recognize the ability of the States through interstate compact agencies, existing and future, to formulate and effectuate plans for the control of resources of a regional character to the best interests of the people of these areas; and be it further

Resolved, That such local State and interstate agencies be consulted prior to any attempt by the Federal Government to promulgate national resources policies and that such legislation be implemented and strengthened in order to preserve the rights of the States and interstate agencies to control, develop, and resolve their own resources problems, and that the role of the Federal Government be limited to the establishment of broad national policies and practices which will serve to encourage, guide, stimulate, and aid such local action, limiting Federal activity to cooperation where national and local interests make such action imperative.

V—SUPPORT OF DEPENDENTS

Whereas 39 States, Hawaii, Puerto Rico, and the Virgin Islands have enacted reciprocal legislation to enforce the support of dependents; and

Whereas the New York Joint Legislative Committee on Interstate Cooperation was instrumental in initiating this type of legislation; and

Whereas since the original New York draft was promulgated, the National Conference of Commissioners on Uniform State Laws has formulated and recommended a new uniform act known as the Reciprocal Enforcement of Support Act: Now, therefore be it

Resolved, That this committee undertake studies based upon experience in the administration of the New York law to evaluate the need for amendment or revision in accordance with the new uniform act.

Manufacturers' Ceiling Prices

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. MORTON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter:

PEERLESS MANUFACTURING CORP.,
Louisville, Ky., October 3, 1951.

Mr. ERIC JOHNSON,
Administrative Economic Stabilization
Agency, Washington, D. C.

DEAR SIR: On August 1, 1951, the new Defense Production Act became effective, which provided, among other things, that manufacturers' ceiling prices should reflect increase in materials, direct factory labor, factory overhead, administrative overhead up to July 26, 1951.

Our understanding of the new act was to direct the Office of Price Stabilization to provide formulas under a revised CPR 22 so that manufacturers could recalculate their prices so as to be compensated for increases and more necessary, to be able to include those overhead costs which are just as legitimate as material and direct labor costs but which were denied inclusion under the original CPR 22.

It seems to us the Office of Price Stabilization has ignored the will of Congress by unduly delaying publishing a revised CPR 22 that will provide for the inclusion of these denied costs in ceiling prices. To make matters worse, our costs are still going up, costs that even under the new Defense Act we cannot include in our prices, because on September 10 last, we agreed with our union to put into effect a wage increase of 7 cents per hour, which was also extended to our office personnel.

What is so irksome to us about this situation is that we complied faithfully with the regulations of the Office of Price Stabilization by filing ceiling price forms under CPR 22 before the deadline of May 28 last. The filing of these forms required that we reduce our major product line about 10 percent below our general ceiling prices, but, the Office of Price Stabilization granted an extension beyond May 28 to those who did not file by the deadline date. In the meantime, Congress froze the whole pricing set-up until July 1, while developing the new act. Now the Office of Price Stabilization postpones indefinitely the filing of price forms under CPR 22 and leaves those who did not file, under their old General Ceiling Price Regulation, but makes those who complied with CPR-22 stuck with their reduced prices. We feel that we have been discriminated against, and that we should have the same rights as those who were permitted to stay under their old general ceiling prices.

With labor costs continuing to rise, how are we to get relief? Certainly we cannot be expected to absorb these costs continually.

Yours very truly,

PEERLESS MANUFACTURING CORP.,
T. W. BARRY,
Executive Vice President.

Congress Has Failed Miserably To Discharge Its Obligation to the Aged of This Nation

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. VAN ZANDT. Mr. Speaker, no group of Americans is suffering more from the high cost of living than those who have to rely on old-age pensions.

While Congress has been busy appropriating billions of dollars to foreign nations under our foreign-aid program it has been impossible to get action on legislative proposals of either the Townsend or American pension groups. The Congressional Steering Committee of which I am a member always gets the same old answer from the Ways and Means Committee that it is busy with other matters.

Mr. Speaker, there is a discharge petition on your desk containing 157 of the 218 required signatures of Members of this House in an effort to force the Townsend bill to the floor for a vote. A similar effort has been made by the American pension group through questionnaires and the majority of the membership of the House have indicated by these questionnaires that they want action on old-age pension legislation.

It is nothing short of a national disgrace that the aged of our Nation are continually ignored by Congress.

We cannot escape the fact that the cost of living has aggravated the general problem of old-age pensions and that present benefits are wholly inadequate.

The plight of the aged of this country is best told by Sylvia Porter in her column which appears in the St. Petersburg (Fla.) Times, because she tells the truth about the predicament of our elderly citizens in their battle against the high cost of living. Miss Porter's article follows:

INCREASE IN COST OF LIVING BRINGS ADDITIONAL WORRY FOR AMERICAN PENSIONERS

(By Sylvia Porter)

In 1938, the cost of providing an elderly couple with a decent, healthy standard of living was \$70 a month.

Today, that same budget—allowing few, if any, of the small luxuries of living—demands \$115 and \$120.

Most elderly folks, dependent on pensions and living in decidedly moderate circumstances, simply cannot obtain that extra \$45 to \$60.

Thus, somehow, some way, they now must struggle along with only three-fifths of the goods and services considered necessities by the most objective nutrition experts.

And if they are to live above the subsistence level—are to have a few things beyond their absolutely minimum physical needs—their monthly budget today runs to \$150.

Again, most elderly couples, relying on pension checks and either too bewildered or too feeble to get outside jobs find this even more impossible of attainment.

Thus, to them, luxuries are just a dream. Subsistence is their way of life.

And the pensions that just a short while ago they thought would give them comfort in their older years are a cruel mockery.

This dramatic illustration of what inflation is doing to the millions of pensioners in our land was outlined to me this week by Laurence D. De Trude, of the National Industrial Conference Board.

What is particularly painful about the figures is that they emphasize that this is happening to our older folks—to our fathers and our mothers who worked a lifetime, scrimped and saved in the expectation of enjoying independent, proud later years.

And what is particularly pertinent about this story now is that it shouts a deeply vital message and warning to those groups who insist on fighting for greater and greater financial security—and yet, who are ignoring what inflation is doing to that security.

Pensions and pay checks in terms of dollars mean little in periods of this sort.

The benefits makes sense only when translated into terms of food, clothing, shelter—what the money will buy in the market place.

The food that cost \$1 in January 1939 now costs \$2.15.

The clothing that cost \$1 then now costs \$1.49.

The housing that cost \$1 then now costs \$1.16.

And on the same \$1 comparison, house-furnishings cost \$1.63.

Fuel, gas, and electricity cost \$1.33.

Sundries cost \$1.59.

The cost of food and shelter, alone is now as great as the total budget for an elderly couple before World War II—leaving nothing, just nothing, for all the rest.

And as De Trude added, "the farther down the scale of living you go, the more disastrous the inflationary effect has been. As funds diminish, an increasing percentage of income is spent on food."

"The cost of foods commonly consumed by elderly couples has increased much more than the average for all items over the past 10 years, cutting in half the purchasing power of those living on smaller incomes."

Instead of being laggards or indifferent followers in the battle to stabilize the dollar's buying power, all those with pension arrangements, with private retirement income policies, with special corporation retirement deals, should be far in the lead.

Otherwise their benefits won't mean much when they get around to collecting them.

There can be no financial security to all unless we stop this insane cost-of-living spiral. Just glance back at the few figures in this report if you still wonder why.

Quick of Tongue

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Washington Daily News of Thursday, October 18, 1951:

QUICK OF TONGUE

When the Attorney General of the United States accuses a reputable Federal judge of telling "damnable and contemptible lies"

presumably he should know what he was saying.

J. Howard McGrath, the Attorney General, said it of Federal Judge George H. Moore in St. Louis. And apparently didn't know what he was saying.

Without Judge Moore there might have been no grand jury investigation of the Internal Revenue Bureau in St. Louis, an investigation which now has led to the bribery indictment of the ex-collector, James P. Finnegan.

The judge said yesterday he called Mr. McGrath last March after the local United States attorney reported he couldn't get clearance for the probe. He said Mr. McGrath told him these things had to "go through channels."

"But what do you do," the judge said he replied, "when the channels are dammed up and blocked up?"

Mr. McGrath retorted to these statements by calling them "damnable and contemptible lies." Last night he had a change of heart after discovering, he said, a memo which recorded the telephone call. So he sent Judge Moore "apologies and regrets."

Maybe Mr. McGrath ought to look up some more memos.

Last May, for instance, Senator JOHN J. WILLIAMS, who has done more than anyone else to uncover the scandals in the Internal Revenue Bureau, said available evidence had been withheld from the grand jury.

The St. Louis Post-Dispatch charges the Justice Department, which Mr. McGrath heads, twice tried to interfere with the investigation.

A congressional committee is investigating alleged attempts to interfere with another scandal in San Francisco.

And Senator WILLIAMS charges the dust has been collecting on the Government's \$2,000,000 claim against Big Bill Lias, notorious Wheeling racketeer, while Lias was disposing of his assets among members of his family.

A quick tongue does not always make friends and influence people. Nor answer important questions. Memos are better.

Dr. Bunche and Jewish Hospital

EXTENSION OF REMARKS OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Brooklyn Eagle of October 10, 1951:

DR. BUNCHE AND JEWISH HOSPITAL

Dr. Ralph J. Bunche, director of the department of trusteeship for the United Nations, is the latest in the growing line of world-famous personages who have come to the Brooklyn Jewish Hospital to autograph the mural, "Children of United Nations," in the children's pediatric ward.

Like the Duke and Duchess of Windsor, former Ambassador Halifax, the late Wendell Willkie, Mrs. Franklin D. Roosevelt, General Romulo, General Bradley and others who have come to the hospital on previous occasions, Dr. Bunche was thrilled by his experience. His recent letter to Max Abelman, the institution's public relations director, pays a great tribute to the hospital. After speaking of its "sense of dedicated service to humanity," he declared that it is at once "a

monument to the fine public spirit of Brooklyn and a noble example of democratic medical service for the Nation."

We believe it is fitting that the people of this community be made aware of the high regard in which Jewish hospital is held. The borough may take just pride in its accomplishments and in all those who have any part in bringing them about.

40 Et 8 Establishes Scholarship Enabling French Student To Attend the Uni- versity

EXTENSION OF REMARKS OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the Record an article from the Northwest (Ark.) Times of October 13. This is an excellent example of the way in which the exchange of persons program is inspiring the private citizens of our country to cooperate in the great work of bringing about better relations with the free peoples of the world. I especially want to congratulate the Voiture Locale No. 956 of the 40 and 8 of Fayetteville and their Chef de Gare, Joel Bunch, an outstanding legionnaire of Fayetteville. When a Government program enlists the cooperation of the citizens, as this one is doing, it is certain to succeed.

There being no objection, the article was ordered to be printed in the Record, as follows:

40 ET 8 ESTABLISHES SCHOLARSHIP ENABLING FRENCH STUDENT TO ATTEND THE UNIVERSITY

An annual scholarship enabling a French student to attend the university has been established by Voiture Locale No. 956 of the 40 et 8, honorary organization of American Legionnaires. It is believed to be the first 40 et 8 Voiture in the country to establish a foreign student scholarship. Dr. Richard Hostetter, president of the university's foundation for international exchange of students, said in announcing the scholarship.

Each year, including this year, a French boy or girl whose father is a veteran will receive the scholarship. The nationality of the student was selected because of the French origin of the 40 et 8.

Joel Bunch, of Fayetteville, chef de gare of the Voiture, said the scholarship fund was raised by personal subscription. The organization, he declared, established the scholarship because the foreign scholarship program is aimed at world understanding and peace, for which the American Legion and 40 et 8 also work. Another aim of the veterans' organizations, that of assisting youths, is carried out by providing the scholarship, he said.

The Voiture has members in Springdale, Fayetteville, Lincoln, Prairie Grove, Winslow, West Fork, Rogers, Eureka Springs, Berryville, Huntsville, and Green Forest.

The recipient of this year's scholarship is Jacqueline Solet of Paris, France, daughter of a World War I veteran. In sponsoring her year at the university, the 40 et 8 Voiture joined forces with the Greater Little Rock

Federation of Women's Clubs and seven Fayetteville families, to provide her tuition and fees, room and board, books and supplies, and some vacation funds. Her round trip travel expenses from France are covered by a Fulbright Act grant.

Another Disaster Hits Midwest Flood Victims

EXTENSION OF REMARKS OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. SCRIVNER. Mr. Speaker, the flood victims suffered another disaster when the administration leadership in Congress failed to furnish them the financial help they so urgently need.

In his message to the Congress on August 20, 1951, President Truman proposed the liberalization of loan conditions and an increase of available funds for that purpose. He also proposed that the flood victims be indemnified for a portion of their loss of real and personal property and said:

Loans, even on liberal terms, are not enough to meet this situation. For these reasons I consider it essential to provide some rehabilitation grants, directed particularly to assist wage earners and small farmers and businessmen, whose losses in this flood represented personal financial tragedy.

Bills for various types of relief for the flood victims were introduced. In the hearings which opened before the Appropriations Subcommittee on September 19, Col. A. E. Howse, speaking for the administration, said:

The program is not a pork-barrel proposition to replace, say a pair of shoes for Joe Smith in Kansas City (p. 34).

It is not intended to reimburse the home owner for household goods, furniture, or personal possessions. . . . It is not in any sense of the word to compensate for the general losses that occurred during the flood (p. 35).

This is nearly a month later. . . . We have eliminated the crops, the livestock, the household goods, the personal possessions, and in that elimination my personal view is that we have pretty well eliminated the humanitarian point of view also. We have presently restricted this program in our thinking to the rehabilitation of productive plant (p. 112).

Between the date of his message and the date of the hearing before congressional committees it is apparent that the President and the administration had abandoned the idea of direct grants to cover personal losses, and were concentrating on restoring farms, rebuilding factories and businesses—in other words—production.

When this so-called relief bill came before the House on October 4, I pointed out that all it did was give flood victims a way to go further in debt and that it failed to help those who needed help most, namely, wage earners who owned

nothing but their clothing, furniture, and personal possessions—who lost everything they owned except the clothing they wore when they fled the on-rushing water. I offered an amendment to the bill to create a Federal Flood Claims Commission, with authority to pay claims for losses of personal property—furniture, and so forth—suffered by these individuals, up to \$3,000, and proposed an appropriation of \$100,000,000 for that purpose. That amendment was ruled out of order by the Presiding Officer—Democrat—in the House, thus preventing its consideration. I have now introduced a bill, H. R. 5681, containing the same provisions but I do not expect the administration to do anything about it.

In my remarks to the House when the bill was up for vote, I called attention to the fact that taxes taken out of Kansas made it impossible for Kansans to provide the needed relief; that we were asking only for the return of a small portion of the billions we had sent to the United States Treasury in the last few years; and that if this country could afford to send billions to rehabilitate the refugees of other lands overseas, we certainly could afford a few millions to help our own folks here at home.

The Democrat leadership in Congress—the Vice President, the Speaker of the House, the majority leaders in both Houses, the chairmen of committees, all Democrats, and the Democrat majorities in both Houses—is just about all-powerful. With that line-up I am sure the President could have obtained the relief these unfortunate people need so urgently and to which they are entitled, if he had sincerely wanted them to have it; if he had lived up to the publicity about what was to be done. For some reason, the administration changed the program and as Mr. Howse said, they had decided not to make direct grants for furniture and other personal property. Why?

The Townsend Pension Bill

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. VAN ZANDT. Mr. Speaker, the Townsend Clubs of Pennsylvania, at the annual convention held in Erie, Pa., October 6 and 7, 1951, unanimously adopted the following resolution extending greetings and appreciation to the Pennsylvania delegation in Congress and to all Members who have signed Townsend discharge petition No. 4 in behalf of the Townsend pension bill.

The resolution follows:

Be it hereby resolved, That we, the officers, delegates, and representatives of all Townsend Clubs in the State of Pennsylvania, in convention assembled at Erie, take this opportunity of expressing our sentiments and the sentiments of the entire Townsend State

membership, to all Pennsylvania Representatives in Congress.

We sincerely appreciate the concern manifested for the welfare of our senior citizens and the cooperation offered to help provide the proper measure of economic security for all unfortunate, impoverished, and disabled citizens, by many Pennsylvania Congressmen, who have in recent weeks signed the discharge petition No. 4, to bring the two Townsend bills out of committee and on the floor of the House for action.

We pledge our best support and cooperation to each Member of Congress, who now has signed this petition, or will soon place his signature thereon.

To all of the Pennsylvania Representatives, who have not yet signed this discharge petition No. 4, we respectfully request that they do so at the earliest opportunity; and be it further

Resolved, That copies of this resolution be mailed, by the secretary of this State convention, to all Representatives of Pennsylvania.

E. B. GRUVER, *State Organizer.*

Mrs. ANNA L. REIDENBACH, *Secretary.*

PITHIEP J. BARBER, *Chairman, Resolutions Committee.*

Stopping Interstate Dealing in Undersized Fish

EXTENSION OF REMARKS OF

HON. ALVIN F. WEICHEL

OF CHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. WEICHEL. Mr. Speaker, fishing always has been one of the natural recreations of man from the earliest time. And in order to preserve one of nature's oldest pastimes, conservation departments, State and Federal, have grown up to assist in preserving this recreation for our citizens. However, it seems in the face of all of this there are loopholes, one of which is the interstate shipment of illegal undersized fish. The practice has seemingly gone on for years with State officials unable to take action while interstate transportation is in progress. However, the Federal Government can be of aid by stopping such transportation of undersized fish in interstate commerce and I have introduced the following bill to prevent the shipment, transportation, and movement of illegal undersized fish in interstate commerce. Such action would stop the movement of undersized fish between the States, and the various States have full authority to carry on enforcement laws within their own States:

A bill to prevent the shipment in interstate commerce of illegal undersized fish

Be it enacted, etc. That the sending, shipping, and transportation in interstate commerce of fish, undersized or otherwise illegal according to the law of the State wherein such fish were netted, taken, possessed, transported, or shipped, shall be a Federal offense.

SEC. 2. Any person, firm, or corporation found guilty of violation of section 1, of this act, shall be fined not less than \$100 for the first offense, not less than \$200 for the second offense, and not less than \$1,000 for offenses thereafter.

Statement of Attorney General McGrath

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. CURTIS of Missouri. Mr. Speaker, I was greatly distressed upon reading the full text of Attorney General McGrath's statement on his belated recollection of a telephone call to the Attorney General from Judge George H. Moore, senior Federal judge of Missouri. After referring to Judge Moore's statement as "damnable and contemptible lies," the Attorney General now admits that he now thinks he prepared a memorandum subsequent to such call from Judge Moore to the Attorney General's office. Yet it took a day's search of the Department's files to convince the Attorney General that he had in fact received such a call, and it was in a most grudging and ungracious fashion that the Attorney General attempted correction to his unnecessarily violent outburst at the senior Federal judge of the State of Missouri. I should like to quote this statement of the Attorney General of the United States at this point:

STATEMENT BY ATTORNEY GENERAL J. HOWARD McGRATH

In further reference to the question of a telephone call which Judge George H. Moore, of St. Louis, says he made to me in March complaining about the handling of certain tax cases before a grand jury at St. Louis, which call I denied having any recollection of, I ordered a thorough search of departmental records that could have any bearing on establishing whether or not such a call was received, and in a file in the Tax Division there appears a memorandum which was sent to that Division on February 21 by Mr. Peyton Ford, then Deputy Attorney General, in which he advised the Tax Division that Judge Moore had called the Attorney General and expressed dissatisfaction with the handling of tax cases in St. Louis. The Attorney General's memorandum instructed the Tax Division to look into this matter immediately.

Thereafter, on March 6, in pursuance of the Attorney General's direction, the Tax Division sent Mr. Ellis Slack, chief of the Appellate Section of the Tax Division, to St. Louis to confer with Judge Moore and the grand jury and to cooperate with the United States Attorney.

Having strongly denied any recollection of Judge Moore's call, the Attorney General regards the memorandum in the file as conclusive evidence that such a call must have been made and therefore feels that he should and has communicated with Judge Moore and has expressed his regrets and apologies.

The Attorney General's calendar indicates that he was out of the city on the day that Judge Moore's call was received and it is probable that the call was transferred to the Attorney General through the departmental switchboard and upon the Attorney General's return to the office he now thinks he prepared the memorandum herein referred to.

Mr. Speaker, in view of this example of ineptness and confusion in high places in the administration of justice, I respectfully urge the appointment of a subcommittee of the House Committee on the Judiciary to investigate thoroughly the situation involving the grand juries

in St. Louis and San Francisco which obviously now transcend tax matters, and which may well involve an attempt to coerce and control the judicial branch by the executive branch. At the very least, a pattern of impeding, or minimizing, the proper course of courts and grand juries is amply demonstrated.

It is my opinion that Mr. Drake Watson, the district attorney of St. Louis, whom I understand will leave that office within the next few days, might have some extremely valuable information for the appropriate committee of Congress on the actual current operations of grand juries and grand jury investigations. While, so far, this has been a matter involving the Bureau of Internal Revenue, it would seem to me that any examination of the operation of the grand jury system is not only within the purview of the Judiciary Committee, but would also assist in relieving the already heavily burdened subcommittee investigating the administration of the Internal Revenue System.

I do not believe any stone should be left unturned, even in the hectic and trying closing days of Congress, if in moving one more stone we can uncover the reptilian tracks of entrenched evil.

Baseball Investigation

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. POULSON. Mr. Speaker, since the subject of baseball is before the Judiciary Committee and the problems of the Pacific Coast League have been aired, I thought my colleagues would be interested in the following opinions expressed by one of the outstanding sports writers of the West, Ned Cronin, sports editor of the Los Angeles Daily News:

NEW YORK, October 12—That soft, humming noise that was heard along the Pacific slope about 10 30 a. m., Pacific standard time, some 10 days ago might have sounded like the familiar buzz of a million television sets being turned on.

Actually, it was the death knell of the Pacific Coast League as the West's principal representative of the horseshoe dodge. The coast league may not be dead as of this very minute, but it is dying and is well on its way to the morgue.

Television killed it. Not because a camera-eye version of the sport will ever take the place of baseball in the flesh, but due to the fact that having seen the game practiced by the best talent in the land, the western sports fans no longer will be satisfied with the third-rate product that is currently being foisted upon them by the coast league owners.

A vast majority of southern California residents have seen little or no baseball. During the past 10 days, they were able to sit before their television sets and watch the greatest play-off series in the history of the game and follow that with the World Series itself.

As we said at the outset, this is a pretty cheap imitation of the real thing. The

screen on a TV set can accommodate only what is seen in the camera's eye. The overall picture of the changing defensive set-ups as different hitters take their stance in the batter's box, the many intricate little maneuvers indulged in by the big leaguers are not perceptible.

But what can easily be seen is the unalterable fact that baseball in the Coast circuit and in the majors is the difference between a Stanley Steamer and a Cadillac sedan. The western fans will never be happy with what is laughingly called triple A baseball again. Something like asking a man with a thirst to go back to draught beer after he's been gargling champagne for a week.

The apparatus that brought the World Series across the Nation for the first time in history couldn't have struck at a more untimely moment insofar as the Coast League is concerned.

The boys in our neck of the woods have just finished a season that is a cinch to set baseball back a good 40 years. The old-timers in the circuit caved in all at once as if they had been struck by an epidemic of muscular collapse, the youngsters failed to pan out, and the guys in the middle were just that and nothing more.

LIKE VARSITY TURN-OUT AT LINCOLN HEIGHTS

For the most part the customers couldn't stomach the mediocrity that was being peddled to them by the Coast league owners, and as a result, the attendance figures looked more like the varsity turn-out at Lincoln Heights on Saturday night than anything identified with what is known as the national pastime. Take San Francisco, for instance. The paid attendance up there was 198,000. Not for 1 week, but for the whole season.

Plays that seem positively amazing are taken in stride by those accustomed to watching the major leaguers go through their exercises. I recall a couple made by Bobby Brown, the Yankee third baseman. He's good, but he's certainly no bearcat in the fielding department when compared with some of his colleagues.

He picked up a bunt in a game against the Giants and fired the ball down to second. At the moment, it seemed to this observer to be a singularly foolish thing to do, for the runner coming down from first was under a full head of steam and only a few feet from the bag when Brown got his dukes on the ball. Bobby cut it loose, the ball zinged into the shortstop's glove, the umpire's arm flew up to indicate an out, and I'm sure I was the only person in the ball park who was the least bit surprised by it all.

Again, and these incidents are recounted purely as examples, the Giant batter was falling away from a pitch that came winging smack toward his wishbone. When Brown saw the hitter back off he relaxed. To his surprise, the ball struck the bat and bounded down toward third.

CRONIN'S FACULTY OF PERCEPTION WAS WARPED

Brown had to rock back off his heels, chaige in, pick the ball up, and make the long throw to first, which he did just in time to retire the runner. Struck me as being a pretty worth-while exhibition of rapid-fire recovery, but nobody whooped it up much except perhaps a few personal friends that Brown had got some tickets for.

Then it occurred to me what was happening. My faculty of perception was warped. I was looking at these various situations through the eyes of a gent who has just finished a season of watching coast leaguers under similar situations. I had thought they were remarkable plays because, with a few notable exceptions, nobody on the western slope would have been able to make them.

I had forgotten that the major league baseballers were more generously bestowed with the necessary talents for keeping the game at a high level, or had not reached an age

where the mind was willing but the body weak.

These birds don't take so long to pick up the ball, and having flagged it down, they require but a fraction of a second to send the pellet on its way. Additionally, they throw much harder, the ball traveling with such speed that a runner who appears to be safe one instant is out the next.

[Having tasted of baseball's golden fruit once more, along with the millions of westerners who lapped it up over their television sets, it is easy for me to understand why the stuff served up by the Coast league will never again satisfy the sport fans' appetites.

COAST CIRCUIT IS IN A BIND

It didn't exactly knock them loop-legged this past semester, what with people avoiding ball parks in such great numbers as to fracture the financial hopes and aspirations of the club owners from one end of the circuit to the other.

A veritable gold mine during the boom days of the immediate postwar series, the Hollywood outfit suddenly found itself saddled with a budget that not only tapped the till for everything that came in at the gate, but went so far as to dig into the dumper for additional funds that had accrued during the lush years. Only trouble with this was that the aforesaid monies had either been already divided up, or had gone into the depths of the stockholders' kickers and it became necessary to borrow, beg or—wup, I almost said steal.

The Coast circuit is in a bind. Television has removed the curtain that has obscured or clouded the difference between the brand of baseball played in the West and that practiced by the top clubs in the majors.

The owners on the sunset side of the Rockies have to come up with something that can be sold to the fans on the basis of a worthwhile product. They've got to put up something for sale that represents value received in the expenditure of the pleasure dollar.

Offhand, I would say the Coast league has a better chance of going out of business than going outlaw.

Somebody has to move over and let major league baseball come in.

Investigate Russian Fur Shipments to United States

EXTENSION OF REMARKS OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. MACK of Washington. Mr. Speaker, members of the Teamsters Union and International Longshoremen's Union, of New York City, have discovered in a New York warehouse 150 bales of Russian furs, weighing 150 tons, and valued at millions of dollars, that have been smuggled into this country, contrary to our Nation's laws, according to a news article by Victor Riesel, widely known writer on labor affairs, which appears in the October 11, 1951, issue of the Daily Mirror.

Union workmen, the Riesel article says, ripped open several of the bales and found they contained Russian furs. The inner packages, bearing Russian lettering, the Riesel article states, had been completely covered with canvas to

conceal the nation of origin of the shipment. Such camouflaging, if proven, obviously was done to circumvent the laws of our country.

If Mr. Riesel's facts are correct, they clearly indicate that fraud and deception was employed by the Russian shippers and American importers to get this illegal shipment of Russian furs into our country. The seriousness of the offense warrants a prompt and thorough investigation by the proper Federal authorities.

The Riesel article of October 11, 1951, in the New York Daily Mirror follows

UNCOVER 40 TONS OF SMUGGLED SOVIET FUR
(By Victor Riesel)

The underground smuggling route used by Soviet Russia to pour slave-labor furs into the United States was uncovered yesterday when 40 tons of camouflaged skins, valued at several millions, brought illegally into this country, were discovered in a lower West-side warehouse.

The contraband shipment, contained in at least 150 bales, came to light when Pat Connolly, vice president of the International Longshoremen's Association, and Patrick Riley of the International Brotherhood of Teamsters paid a surprise visit to the Apex Trucking Corp. warehouse at 38 Bethune Street, near Washington Market.

Ripping open several of the bales, the union leaders discovered they contained black karakul furs—banned for entry into the United States—and that the inner wrapping, over which camouflage canvas had been placed, was imprinted with Russian script. A violation of customs regulations was immediately evident in that the outer coverings failed to indicate the country of origin.

Investigation by the union leaders, who with Joseph P. Ryan, president of the ILA, have been cooperating with the Mirror in a campaign to keep Russian slave-labor products out of this country, disclosed that the furs left Leningrad early in September. They were detoured to Stockholm, where they were remarked and rebound in canvas and addressed to a free-trade zone.

A Moore-McCormick freighter carried them to where they were unloaded, on pier 82, in Philadelphia, on September 27, while Ryan and his lieutenants were negotiating here with stevedoring companies over a new contract.

On their return to Philadelphia, the union leaders were apprised by the longshoremen of their suspicions that the cargo was contraband. A probe was started.

It was found that Apex trucks had moved the bales out of Philadelphia to New York and were resting in the Bethune Street warehouse, awaiting delivery to the consignees.

According to Ryan, the bales of furs, which were shipped here in direct violation of the Trade Agreement Extension Act of 1951, aimed at the importation of products of the U. S. S. R. and Communist China, are only a small part of the tremendous shipments of materials which the Communist government is attempting to slip into this country.

This huge smuggling activity is actuated, it was stated by Ryan, by the Reds' acute need of millions of dollars to fill the vast monetary deficits caused by the cost of the Korean war and the Russian development of the atomic bomb.

Similar shipments, according to Ryan, have been brought into the United States through Montreal and other Canadian cities. Efforts will now be made by the ILA to enlist the cooperation of all AFL unions concerned in the handling of such shipments to uncover further violations and to plug the smuggling loopholes.

Privileges of Newspapermen

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 18, 1951

Mr. HELLER. Mr. Speaker, several months ago I introduced a bill in this House which provides that in certain cases newspapermen and others dealing with public information shall not be required to reveal in Federal courts the source of their information. Considerable interest has since then been shown in the matter. From various parts of the country people engaged in newspaper, radio, television, and similar information media have written to me in support of this measure.

I trust that early in the coming session the House Judiciary Committee, to which the bill has been referred, will hold hearings and give these people an opportunity to appear and present their views. In the meantime, I desire to place in the RECORD a brief article by Chalmers M. Roberts, noted staff member of the Washington Post, dealing with this subject. Mr. Roberts' article, which appeared in a recent issue of the Guild Reporter, is as follows:

WASHINGTON ROUNDUP

(By Chalmers M. Roberts)

For the first time in a long while there's a chance, but not much more as yet, that Congress may pass a bill to grant newspapermen the privilege of refusing to reveal sources of information to a Federal court.

Representative Louis B. HELLER, an aggressive New York Democrat, has filed a bill to do just that and hearings are likely when Congress gets back in January. The reason I think there is some chance of passage this time (a dozen similar efforts in the past 25 years having gotten nowhere) is the part newspapers have been playing recently in disclosures of crime, graft, and corruption. Much of the important information has come from sources who would talk to reporters only in confidence.

HELLER's bill would provide:

"A witness who is employed by a newspaper, news service, newspaper syndicate, periodical, or radio or television station or network, as a writer, reporter, correspondent, or commentator, or in any other capacity directly involved in the gathering or presentation of news, shall not be required in any court of the United States to disclose the sources of any information obtained in such capacity, unless in the opinion of the court such disclosure is necessary in the interests of national security or to avoid the concealment of a crime."

HELLER's bill is the outgrowth of a declaration by Federal Judge John C. Knox in New York last spring that Leonard Lyons as a newspaper reporter or columnist had no right to claim a privilege "akin to that which exists between a lawyer and his client, a minister and his penitent or a doctor and his patient." Knox said he had gone into the law thoroughly and "I find he has no such privilege."

Recently reporter Ted Link refused to tell a Senate committee some of his news sources and the Senators didn't press him; in fact several made it clear they would oppose any move to do so. In effect, this particular congressional committee (investigating the Bill Boyle, et al., case) granted the privilege. But that's different from a Federal court.

The law in general recognizes that certain communications are confidential; husband-wife, attorney-client, doctor-patient, cleric-penitent. But the fight to establish a reporter-news source relationship with the same privilege has had only partial success; 12 States so far have granted the privilege in State courts.

The Library of Congress Reference Service says these States have such statutes: Alabama, Arizona, Arkansas, California, Indiana, Kentucky, Maryland, Michigan, Montana, New Jersey, Ohio, and Pennsylvania. Efforts in other States to get similar laws on the books have flopped but it is heartening to know that 11 of the 12 successes have come since 1936.

In 1948 the Law Revision Commission of the State of New York reported it found no evidence that the administration of justice has suffered as a result of any of these State laws. But that wasn't enough to get a bill through Albany.

John Peter Zenger went to jail back in 1734 for refusing to identify a letter-to-the-editor writer and a fair number of fellow newspapermen have done so in the intervening years.

At this year's guild convention at Pittsburgh, the delegates adopted a resolution noting that recent court cases have renewed the question of "professional ethics" among newsmen as to their sources, and directed that a code be drafted for consideration of the 1952 convention.

The language of the Heller bill seems to me to be quite reasonable. The courts must have discretion, even though "in the interests of national security" and "to avoid the concealment of a crime" are broad phrases. Of course, the libel laws would still protect the public against stories with anonymous sources.

As of this writing Chairman EMANUEL CELLER of the House Judiciary Committee has not yet ordered hearings on the Heller bill so there is time for newspapermen around the United States to get together case histories they think ought to be presented to Congress as reasons for passing such a bill.

What's Wrong With Washington?

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. POULSON. Mr. Speaker, I am inserting this article by Mr. George Todt, published in one of the principal newspapers in my district, the Highland Park News-Herald, showing what the people back home are thinking about—the regular taxes plus the hidden taxes which go to pay for the reckless spending by the bureaucrats:

WHAT'S WRONG WITH WASHINGTON?

There is too much nonpaying freight aboard the bureaucratic gravy train.

There are untold numbers of unnecessary workers to pad the gargantuan public payrolls throughout the Nation.

Who pays their passage?

You are graciously allowed to pick up the check to pay their costly fare.

You are constantly paying for them in the countless little hidden taxes with which the country is plagued today.

Whenever you buy a loaf of bread or quart of milk.

Whenever you buy necessary clothing for your family.

Whenever you take them out to the ball game or to the movies.

As a matter of fact, two or three times more is drained away from you in this manner each year than for that whopping big income tax you must pay to the Government outright.

It is unfortunate that about 90 percent of the citizens who are forced to chip in to make up the wasteful costs of the overstuffed gravy train—like it or not—are people with incomes below \$600 per month.

This is you, Mr. Average American.

Whom else did you think it was?

You—not the idle rich but you—are painfully paying the enforced left-handed pensions to these smug bureaucratic workers on the excessive public payroll system.

You ought to try to do away with bureaucracy in Government. Besides putting an unnecessarily big squeeze on the private citizen, it is also the breeding grounds for the stupidity of socialism.

Why don't you awaken to the menace of this form of creeping paralysis and attempt to do something positive about it?

What could you possibly do?

Simply this: Legislate to require the Washington spendthrifts to live sanely within the financial means of the American people to afford their spending.

How can it be accomplished?

Only through some hard work on both your and your neighbor's part. You can still express your will by working together through majority vote.

From this could result some sound and conservative legislation designed to keep financial lunatics from destroying the economy of the Nation through dreaded inflation and devaluation of the time-honored American customs of thrift and savings.

For instance, it might become possible to work out some certain proportion of the national income to become a ceiling for Government spending.

Since the Government puts curbs on everybody else, perhaps it is time we commenced to put curbs on its astronomical spending powers.

Five or ten percent of the national income ought to be far more than enough to run the entire costs of the Government which are legitimately necessary—less defense costs, of course.

But a realistic ceiling of some kind should definitely be set.

Then we should say something like this to the bureaucrats:

"Only this much money for you, and no more. Here is your allowance—see that you stay within it. Either get the job done, or get out."

The water in Washington would quickly find its level after such an ultimatum from the people.

Much of the bureaucratic frills of waste and padding would go down the drain immediately.

Savings accomplished from this type of surgery might later be utilized by turning it into new venture capital to expand production on all fronts.

Vital new sources of productive jobs would be provided by this action.

But here a sad note begins to creep in: The able-bodied young bureaucrats tossed bodily off the gravy train would then be forced to go to work in commerce and industry to earn their pay.

There is a question whether many of these parasites really want to do useful work of any kind, however.

Riding the gravy train is the only work they know.

They should be taught how to go from parasite to producer in one easy lesson.

Is it possible to raise the American standard of living without new and increased production?

In the final analysis, we cannot have more unless more is produced and distributed thereafter. This is the law of supply and demand.

The way to attain it, however, is not to sit supinely by and watch the Government milk away the surpluses of wealth producers.

It would only be doled out later to the excessive hordes of politicians who make up the ugly bureaucratic mushroom—possibly the adstool would be a more fitting description.

These leeches provide little enough for the charity which is given them for their upkeep—except mountains of useless red tape and whole rivers of bungling attempts which only succeed in confusing the public.

Their efforts are only herculean when it comes time to add more names to the pay-rolls.

This is done to justify increases in top-level salaries later on.

This excess baggage—and every single one above the minimum amount compatible to getting an adequate job done is pure excess—cannot be classified as real wealth of any kind.

They are only economic millstones around our very necks, and it is very difficult to breathe while we have to wear them.

They cost us far more than the Marshall plan every year.

Worst of all, they are a sheer negative factor in American wealth production.

What we need more than the proverbial 5-cent cigar is top leadership that knows how to wield an ax with surgical skill to pare down the wasteful excess.

The bureaucrats must be taught to live within their means—our means, actually.

We must not allow their preoccupation with self-perpetuation to destroy the capitalistic goose of free enterprise in America which lays the golden eggs.

The bureaucrats must be warned to either become sensible or get out.

They cannot be supported forever by the Government's loot of the surpluses of those who produce goods and services in the Nation.

It is just too bad we can't dispense with the services of the noble bureaucrats altogether.

Wish I was allowed to use that paring ax I mentioned earlier.

Category IV Officers

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include portions of a letter received from an American officer in Korea whom I know personally. Why are our military leaders still unable to straighten out the confusion and inequities in the handling of reservists which has led to such ridiculous misuse and unjust treatment of good intelligent American citizens?

KOREA, September 21, 1951.

The Honorable WALTER H. JUDD,
Congressman State of Minnesota,
Washington, D. C.

DEAR SIR: The shameful, un-American treatment of Category IV officers has become unbearable. The recall of these officers in the main was made without regard whatsoever to reason. The handling after recall has been even worse. I personally know of many, many

cases here in Korea but I will dwell mainly with my own.

In World War II my life was interrupted by a war which I believed to be just and unavoidable. In this present war, due to vacillation of the State Department, administration weaknesses, and refusal of the Government to believe people who knew something of the Far East, such as yourself, we were drawn into the awkward position of having to fight again. Because of what they called my ability and qualifications, I had to leave my family again, sell my house, and risk life and limb for a principle no right-thinking person will be able to understand. That principle seemingly being that it is better to always "yes" instead of "no" until one is so involved that more "yesses" are impossible. The face of our State Department and administration as a whole is not worth saving at the cost it seems we have to pay.

Frankly most of us are more than willing to do our share if those who are or should be better qualified were doing theirs. The active reserves in the main have not been touched. The morale of the Category IV involuntarily recalled officers is the lowest I have seen in anyone in 5 years of military service. Surprisingly enough, efficiency has been high but in the last few weeks it has assumed an all-time low and will go lower. Concrete action is necessary immediately.

In 1945, after receiving my commission, I was sent to the University of California to study the Chinese language for 4 months. I was then sent to India and made no use of what little language I had learned. I was released in 1946 and had no contact with the language again until 1950, when I was sent to the Presidio of Monterey, Calif. There I was supposed to receive several months of instruction in Chinese. Unfortunately no one at the school knew I was coming and the only instruction available was 2 hours a day, 5 days a week for 2½ months. The balance of the time I had to study alone. Even after diligent application, I failed the fluency tests miserably, which the instructors anticipated, as they knew the school's shortcomings. I was sent to Tokyo and took the language tests again. After failing the tests again I was classified as a linguist anyway, and when I asked if it was because of my investigative experience rather than language, they admitted that was true. Because I was classified as a Chinese linguist I am frozen in Korea, even if the classification is erroneous. Were I classified in the Army as an investigator I would not be frozen in Korea.

Now I have been assigned to help train ROK troops in the field. When I was assigned to this job, I was told that I was the only man qualified to handle the job, yet I am an Ordnance officer, frozen in Korea because of Chinese language, doing infantry work, far removed from either the language or my qualifications in investigation.

The situation is as nonsensical as it is unbelievable but nonetheless true and no different from many other service inefficiencies.

Yours truly,

Since Stalin

EXTENSION OF REMARKS OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 27, 1951

Mr. POULSON. Mr. Speaker, I would like to call to the attention of all of my colleagues the fact that there is now in

print a very graphic "Photo History of Our Time—Since Stalin." It is one of the best publications yet put out showing the history of communism. It is a contemporary history, illustrating the dark birth, the bloody adolescence, and the sordid maturity of communism, all of which has happened within our own lifetime.

The book is edited by Boris Shub and Bernard Quint, who are especially qualified, and it is published by Swen Publications Co., Inc.

Analysis of Senate Bill 1889: Transportation Act of 1952-53

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an analysis of Senate bill 1889, being the Transportation Act of 1952-53, made by Mr. Hugh C. McCarthy, former counsel to the Subcommittee on Domestic Land and Water of the Senate Interstate and Foreign Commerce Committee.

There being no objection, the analysis was ordered to be printed in the Record, as follows:

ANALYSIS OF S. 1889, TRANSPORTATION ACT OF 1952-53, PRESENTED BEFORE THE ASSOCIATION OF INTERSTATE COMMERCE PRACTITIONERS, DISTRICT OF COLUMBIA CHAPTER, OCTOBER 16, 1951, BY HUGH C. MCCARTHY

Of course, you all know that the bill (S. 1889) developed out of the studies and hearings under Senate Resolution 50 (81st Cong., 1st sess.), which, in turn, sought to meet the postwar transportation problems, as a whole (A) domestic land and water, (B) air, (C) maritime, and (D) communications.

Similar action was taken after the First World War, following Government control, and the Transportation Act of 1920 ensued. That act marked a change in congressional policy from antimonopoly to a consideration of the needs of the carriers.

In due course, I assume that much the same sort of action will follow the studies under Senate Resolution 50.

The question now is, "What are some of the problems of transportation?"

As practitioners, you know more about the problems of the areas in which you specialize, than one engaged in over-all studies.

The over-all problems of rail, motor and water transportation were presented by experts at the hearings under Senate Resolution 50, and in the simultaneous House committee hearings. Accordingly, there is nothing new or novel in the bill.

However, there may be differences as to views in regard to remedies or to the weight to be given the problems presented.

The comparative print which I have made available gives more detail than can be here presented, as it covers existing law, section by section, and proposed changes—with references to hearings and committee report, in order to permit of adequate comparisons and conclusions.

It is a matter for others to determine whether the solution should be piecemeal or by an over-all approach. I may quote

Hon. Clarence Lea (former chairman of the House Committee on Interstate and Foreign Commerce), who recently said to me, in substance:

"The present law is a patchwork of years of different ideas."

The bill (S. 1889) in parts, shows inconsistencies in existing law which need revision—and they were included in order to draw attention of the committees, and others interested at this time, to the inconsistencies.

In the light of the patchwork nature of existing law, it is a tribute to our quasi-judicial processes that the Interstate Commerce Commission has been able to apply the law without destroying the national transportation system.

I have in mind the grandfather clauses and the tacking process which will extend transportation facilities to kingdom come, unless Congress acts.

Surplus transportation facilities with cut-throat competition in normal times, means bankruptcy for many operators when the Korean war is over.

It is generally conceded that the hearings were outstanding in the reasonable approach of experts to the current transportation problems.

The 1940 bill went to conference committee three or four times because of the unwillingness of some groups to be regulated. They are now under the umbrella, in part, and there is now some basis on which to determine their operations in relation to each other and the national transportation system. The hearings show the pressing need for uniform transportation statistics.

The bill and the comparative print were prepared with an eye to the obstacles in the way of passage, to show fully and clearly just what is intended by each provision and its source—in order that there may be a meeting of the minds, as near as may be, before committees are asked to judge what the solutions should be.

Primarily, the bill is a shipper's bill—those who have to use common carriers and who do not afford enough traffic to own, operate, or contract for their own transportation facilities.

What is profitable to haul? Generally, high-rated manufacturers.

Are common carriers (rail, motor, and water) going to be limited to low-rated traffic, to a large degree, and pass on their costs to these shippers? The coal witnesses seem to think that this is so.

Comes the war, are common carriers necessary?

Or, if they run at a loss because enough of the high-rated traffic has gone to the unregulated or private carrier (which will probably lead to industrial cartels), will the Government bail them out?

Then, will the Government permit any kind or character of competition with its "babies"? The French, German, and English Governments protect their own government carriers with restrictions on privately owned carriers little dreamed of here. The price of gasoline in France is out of this world.

Probably, it would be best to do the job now—while the body is still warm and the patient can stand the loss of blood.

Existing law, in many respects, fails to adequately establish principles for application by the Commission—and attempts to spell out cures which ought to be administrative determinations. For instance:

(A) Favoring agricultural exports in domestic transportation while ignoring all other exports.

(B) The use of "grandfather" clauses in infancy and failure to permit the Commission to determine the "public convenience and necessity" of operations in maturity.

(C) Specifying the number of vehicles (20) free of acquisition restrictions,

(D) Applying an antitrust provision to a public utility, the provisions for the granting of certificates of public convenience and necessity in the act—contemplate an exclusive franchise under regulation—and rejects the theory of laissez faire competition, contemplated in the antitrust laws.

(E) Granting "exemptions" that lead to "leasing practices" which tend to destroy the national transportation system—instead of permitting the Commission to determine whether the nature, character or quantity of the transportation impairs regulation.

(F) Favoring one type of carrier over another—like permitting the use of publicly financed waterways and of highways, at less than the full cost.

(G) Granting of water preferentials on rates * * * where the joint rail-barge case shows the theory to be unsound, as water terminal costs have wiped out the "inherently lower water cost" even on free waterways.

(H) Granting of theoretical "certificates of public convenience and necessity" where existing carriers fully and adequately meet the demands of the shipping public—e. g. section 207.

These provisions of existing law may be described as "statutory arbitraires" rather than statutory principles for general application to all carriers alike.

Some of the principal considerations covered at the hearings and treated in the bill, may be summarized as follows:

(The reference "EL" means existing law.)

(The reference "B" means the bill.)

(1) Surplus Transportation Facilities—Brought about by (a) "Grandfather" clauses; (b) no control over number of vehicles (sec. 208 (a) (EL)); (c) contract carriers as substitutes for common carriers (sec. 209 (a) and 309 (f)).

The bill—

(a) Limits certificates to transportation where the nature, character, or quantity of transportation does not impair regulation (sec. 4 (4) b). This merely extends a provision of existing law to all carriers (sec. 204 (a) (4a) EL).

(b) Controls leasing of vehicles (sec. 4 (8) (c) B).

(c) Limits certificates where existing carriers provide adequate service (sec. 4 (1) B).

(d) Eliminates contract carriers.

The hearings indicate that contract carriers constitute a preference for big shippers with volume and discriminate against shippers forced to use common carriers at higher rates—note supplement to OPS Regulation 25 of August 25, 1951, establishing preferentials and where contract carriers are not even controlled, even in some measure, by Commission.

(2) Revocation of certificates, permits, and licenses (sec. 212 (e) EL).

The bill (a) limits dormant certificates to 90 days (sec. 8, B); (b) requires revocation where the nature, character, or quantity of transportation impairs regulation (sec. 8, B).

Under the Administrative Procedures Act, there should be no revocation without cause. In spite of widespread abuse of Commission regulations, there have been few, if any, revocations because, under the act, abuses can be cured and repeated.

(3) Acquisition of control of carriers (sec. 5 (2) a, EL).

The bill (a) removes present artificial restrictions and recognizes the business of transportation (sec. 9 III, B); (b) eliminates conditions subsequent (sec. 4 (8) B).

(4) Preferentials: Water (sec. 307, EL).

The bill omits them.

(5) Free or reduced rates (sec. 1 (7) and sec. 22, EL).

The bill (a) restricts to Commission determination (sec. 39 (a) B), (b) controls Government action (sec. 36 (b) B).

(6) Carrier classifications (sec. 204 (b) EL).

The bill (a) proposes two classes of all carriers—common carriers and private carrier's.

The commodity distinction is eliminated in the interest of a national transportation system, with all carriers required to serve the public generally and not specially. The highways and waterways are public and, in time, will be so treated. Sixty percent of the country's traffic moves by rail, which hauls everything, and unless shown to be inadequate should not, in the public interest, be faced with the "specialty" haulers skimming the cream of high-rated traffic, particularly, where they do not pay the full cost of transportation—e. g. the use of public facilities at less than full cost.

(7) The Commission (sec. 17, EL).

The bill (a) makes the chairman the permanent administrative officer (sec. 51 (2) B); (b) suggests revision of conflicting provisions (sec. 72, B).

(8) Intrastate rates, abandonments (sec. 13 (3) and (4) EL).

The bill (a) requires that the Commission determine "undue burdens" on interstate commerce (sec. 75 (1) B).

(9) Economic justification for, and user charges on, expenditures of public funds (sec. 78-8).

The bill—

(a) Provides that the Commission, as an arm of Congress, look at the over-all national transportation system in the use of public funds for transportation facilities (sec. 78, B).

(b) Provides a method of reimbursement for public expenditures, by way of taxation rather than by uncertain tolls (sec. 81, B).

(c) Equalizes the tax on transportation of property and persons (sec. 81, B).

(d) Delegates to the Commission the power to establish and maintain sizes and weights of interstate motor vehicles in the public interest (sec. 79, B).

(e) Requires manifests of weight and lading of interstate motors (sec. 79, B).

In the matter of taxation rather than tolls which would probably require a long and expensive study—(the result of which would be something like the provisions of the bill, in the view of many familiar with the problem)—the bill merely reapplies the provisions of existing law—consolidating the Internal Revenue Code section 3460 with section 3475.

The Ways and Means Committee approached this problem in the current tax bill (H. R. 4475) which the Finance Committee suggested requires further study.

From a transportation angle, it is striking that where a commodity moves by pipeline over a privately owned and maintained right-of-way it bears a 4½-percent tax, but where the same commodity moves by barge free on publicly developed and maintained waterways, the tax bill proposed a 3-percent tax charge, which the Senate eliminated; yet, after leaving the barge terminal, the commodity usually moves privately over public highways free of any such tax and at less than the full cost of transportation to boot, but if moved by common carrier under identically the same circumstances it is taxed 3 percent.

This raises the question, when looking at the over-all picture of national transportation:

"Is it so arbitrary as to constrain to the conclusion that it is not the exertion of taxation but a confiscation of property in violation of the fifth amendment?"

"Is it so wanting in the basis of classification as to produce a gross and patent inequality as to inevitably lead to the same conclusion?"

The remainder of the bill (S 1889) is largely a consolidation of existing law, elim-

inating duplication and repetition, and an attempt to undertake to apply the same rules (as near as may be) to transportation as a whole in a national transportation system, rather than patch up the crumbling walls until hard times do not permit of a sound, well-considered, leisurely approach to problems that appear to be bound to become critical under more normal world conditions. The return on rail common carrier investment in 1949 of 2.89 percent indicates the margin of safety.

Thank you.

The Fulbright Ideal: A Great International Experiment

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article from the magazine *Pacific Neighbors*, published by the Australian-American Association of Australia. This article, written by an Australian, is further evidence of the effectiveness of the exchange-of-persons program being conducted by our Government. I sincerely hope that some of the leaders of the Appropriations Committee of the Senate will take the trouble to examine this material and will be persuaded to support this program more effectively.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FULBRIGHT IDEAL: A GREAT INTERNATIONAL EXPERIMENT

(By Geoffrey G. Rossiter)

On November 26, 1949, Dr. H. V. Evatt, then Australian Minister for External Affairs, and Mr. Pete Jarman, United States Ambassador to Australia, signed an agreement to provide for a program of educational and cultural exchange between Australia and the United States. Referring to the agreement, Mr. Jarman said that it was the greatest single step which could be taken to cement complete understanding between Australians and Americans.

It is, as yet, too early to attempt an overall assessment of the value of this exchange. But on that day in November 1949, Australia gave her support to a grand experiment and joined with a whole family of nations who gladly accepted the generous offer of the United States Government to turn the materials of war into an instrument for the preservation of peace, for the breaking down of barriers of misunderstanding, the removal of intolerance.

For this is the essence of the FULBRIGHT program—the belief that peoples of diverse races, creeds, and cultures can, by the exchange of peoples and ideas, come to the realization that, despite superficial differences, they have and will continue to have, many common interests, and that they are faced with many common problems, the resolution of which can be achieved most efficiently as the result of common action; the belief that the mobilization of the forces of education, science, and culture are as es-

sential to the maintenance of world peace as the mobilization of military power, the belief that the most effective path to enduring peace lies in the building up of understanding and good will amongst the free peoples of the world by a concentrated emphasis upon individual human relations.

A LONG-RANGE PROJECT

The FULBRIGHT program is a vast enterprise which, given peaceful conditions, will extend over a period of about 20 years. It will involve the award of scholarships and fellowships to more than 100,000 individuals from more than 20 countries at an expenditure of approximately the equivalent of 70 million Australian pounds.

These are not simply cold statistics but telling evidence of the basic belief that an increasing number of educated citizens, imbued with a world outlook, can be a potent influence for good in the troublous times through which we are passing. This is essentially a long term project, the true benefits of which cannot reasonably be expected to become apparent for some years to come. But the seeds have been planted in more than 20 countries, and there are many who believe that they will bear fruit abundantly.

Support for the Fulbright program throughout the free world has been overwhelming. In the United States public interest is clearly evidenced from the spate of Fulbright applications—more than 12,000 for approximately 1,000 opportunities available in the various participating countries during the academic year 1950-51. Similar response has been forthcoming from the other participating countries and no country which has been offered the opportunity of becoming a partner in the enterprise has refused.

The general reaction of official circles in countries which have Fulbright agreements can perhaps be summed up in the following statement, issued by the British Foreign Office after the Anglo-American agreement had been signed: "The arrangements being made represent one of the greatest experiments of the postwar world. They are based on the feeling that if the mass of the people in all countries can be brought to know each other and can be allowed to communicate as freemen, a solution can be found for their common problems."

QUESTION OF RECIPROCITY

There have been critics of the program and undoubtedly these criticisms will continue in the future. The most trenchant of them attack the enterprise at its most obvious point of weakness—the apparent lack of complete reciprocity. The very nature of the program, which is based upon the use of nondollar funds, makes complete reciprocity difficult of attainment. This challenge is being accepted, and since the passage of the Fulbright Act more than 4 years ago, the question of complete reciprocity has been the subject of constant attention.

Through the cooperation of Government and private agencies in the United States means are being devised to assist students and scholars from dollar-starved countries to participate in the vast exchange program, even though the only contribution available to them from Fulbright funds consists of traveling expenses. Under the Information and Educational Exchange Act of 1948, commonly known as the Smith-Mundt Act, the United States Government allocates varying amounts of dollars to assist students, lecturers, and research scholars to meet their living expenses while in the United States. Six Australian Fulbright students were assisted last year in this fashion to continue their studies at American universities, and during the present year as many as 15 students and 8 more senior scholars will receive similar benefits.

American universities, and other private agencies, traditionally generous in providing scholarships, fellowships, or teaching assistantships for non-American students, have also increased the opportunities which they offer, and it is the belief of the United States Educational Foundation in Australia that any students with a first-class academic record will not be turned away empty-handed if it is his serious desire to pursue further postgraduate study in the United States.

But perhaps the most telling example of the genuine desire of Americans to ensure true reciprocity in the Fulbright exchange comes from Italy. American Fulbright students to that country in 1949, wishing to express in a practical fashion their appreciation for the opportunities afforded them by making it possible for more Italian students to benefit from a period of study in the United States, contributed to a fund for the establishment of a scholarship for an Italian student who went to the United States during 1950-51. This plan has been continued, and Fulbright students now in Italy are busy raising funds in order that similar assistance might be afforded another Italian student during the academic year commencing next September. This type of response is surely the best answer to criticisms of "lack of reciprocity."

There cannot be the slightest doubt but that the Fulbright ideal has found practical expression in "the greatest fellowship program in the world's history." As such it merits our whole-hearted support but, in addition, it requires our sympathetic understanding. The vastness of the enterprise and its reliance upon the ready cooperation of numerous agencies and institutions in many parts of the world will continue to present problems of no mean magnitude to those called upon to administer the program both in the United States and the "Fulbright countries."

As Charles E. Odgaard of the American Council of Learned Societies says "Anyone who has had the slightest connection with the operation of a fellowship program knows the difficulties involved. In the case of the Fulbright program, there is, and will continue to be, a steady stream of new problems calling for rational analysis and policy determination. The indulgent sympathy of the entire educational world in America and abroad is needed."

"At the same time, it is important that those who are gratified with various aspects of the program as it unfolds should make that gratification known. The Fulbright Act is a tool which has been fashioned in the expectation that it would lead to better international understanding. Those who believe in such efforts have a responsibility not merely to criticize mistakes of operation, but also to make known in all appropriate places the full meaning in terms of human experience and understanding of a Fulbright year."

The Problem of Inflation

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. DIRKSEN. Mr. President, yesterday I obtained unanimous consent to have printed in the RECORD a statement I have prepared entitled "The Inflation Engine," and I submit it now.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE INFLATION ENGINE

I have introduced a resolution to limit the taxing power of the Federal Government. It appears to be the only course left to avoid ultimate disaster.

We are presently pursuing a strange course. The theory is that since production for war will diminish the supply of civilian goods but continue to put more and more dollars in the consumers' pocket, there must be heavy income taxes to drain off this supply of dollars. This is supposed to reduce consumer purchases and keep the supply of money and goods in balance and prevent a rise in prices. This course of action is further fortified with price, wage, and rent controls in the belief that this combination will head off disastrous inflation.

But what is the inexorable logic of the situation which confronts us? The long hand of Government reaches into the pocket of consumer and corporation alike to take away the dollar they might otherwise spend. Considerable brokerage is involved because it costs hundreds of millions to collect the tax. Thus, the Government is richer and the consumer is poorer by the amount taken by the tax man.

The supply of spending money has not been reduced. It has merely been transferred from the consumer spender to the Government spender. The Government then proceeds to spend the same dollars for payrolls, tanks, atomic-energy plants, uniforms, rations, planes, buildings, and a host of other items mostly of a military nature. The pile of consumer goods is not increased. In fact, it is diminished.

Thus the flow of money back to the consumer continues. As wages rise, the supply of spending money increases. Full employment is sustained by increased Federal spending and by the production of war goods. And full employment naturally sustains a lively demand for food, clothing, motorcars, and all manner of goods and services. So prices rise as Government spending increases the supply of spending money while the same Government diminishes the supply of available goods and services.

What then is the net economic effect of high taxes? They are an item of cost in the production of goods and must therefore be passed on in the form of higher prices. This in turn shrinks the value of the dollar in the consumers' pocket and provokes a demand for higher wages, to offset not only the shrinkage in the dollar but the additional tax upon the consumer himself. This in turn must be reflected in further price increases and finally requires more and more taxes by Government because it must also pay more for the war commodities which it buys.

And what is the ultimate effect of this tax-around upon the country? The Government will continue to pour fiat money into the economic bloodstream. It will impart a momentary but superficial glow of health to our economy. Jobs will continue plentiful. Money will jingle in the pocket for a time at least. The dollar continues to shrink. The value of insurance policies goes down. The value of money in the bank goes down. The billions that frugal, hard-working people have accumulated in the Social Security accounts shrink as they grow older and move toward the shadow of retirement. People on pensions will find their standard of living reduced. Those receiving old-age assistance will find the going increasingly difficult and demand larger allowances. The clamor for more and stricter controls will grow and it will be eloquent testimony that controls do not control. They merely dislocate the whole machinery of pro-

duction and distribution. The power to make economic decisions will more and more, be transferred from what was once a free market into the hands of the bureaucracy. The volume of directives and decrees will grow. We shall find that control is only Socialism in action. And we shall also find to our dismay that through the back door by means of administrative power, we shall have socialized our economy without nationalizing a single railroad or coal mine or by taking over a single bank or steel plant.

A freely elected Congress will have helped to bring this unhappy condition upon the country. It will have been done within the framework and form of a government that was once dedicated to freedom. It will have been done without a man on horseback. We shall have done it to ourselves.

Is there an answer for this dismal prospect? I think there is. It lies in the proposal I have introduced to limit the amount which Government can take from the citizens in the form of taxes. Taxes are the fuel which makes the spending engine run. The spending engine is the engine of inflation, and it is already out of control. As Mr. Charles Wilson said in response to my questions before the Banking Committee of the Senate "We cannot halt inflation. We can only slow it up."

Only by putting a brake on Federal spending can we avoid economic disaster. Only by limiting the amount of spending money which Government can extract from the pockets of the citizens can this be achieved. Only by writing it into the Constitution can we be sure that it will be effective. And that is the purpose of the resolution which I have introduced.

The Farmer's Stake in Meat Market Prices

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Before You Beef About Beef Prices, Know the Story," published in the Minneapolis Star of October 12, 1951. It is a very pertinent editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEFORE YOU BEEF ABOUT BEEF PRICES, KNOW THE STORY

Beef, the darling of the American consumer when he has the money in his pocket to buy the food he loves best, is becoming a public relations villain for the farmer, who gets at least part of the blame for the high cost of living.

This red meat is currently fetching the farmer who feeds a special kind of cattle 149 percent of the parity price American agriculture holds sacred.

Veal and lamb, red meats that ride along with beef where prices are concerned, share a small part of the villain role in the high cost of living drama—small because veal and lamb don't amount to much in the total consumption of meat.

But through the whole range of things the farmer raises to fill the Nation's market baskets, prices are below the sacred parity point—and well below the point at which ceilings could lawfully be imposed upon them.

THE POTENTATE

Parity, the exalted potentate of Federal farm programs, is a tough thing to explain if all the gimmicky details are taken into account. The gist of it, however, is that the prices farmers get for the produce they sell ought to square with the prices they pay in about the same way they did in 1912.

Take the wholesale price the dairy farmer gets for milk. If the average dairy farmer got the parity price for each hundredweight of milk he sold he'd net \$4.79 a hundredweight. Instead he averages \$4.60 a hundredweight.

For hogs, which are an enormous part of the meat eaten in the United States, the farmer gets an average of \$19.70 a hundred pounds. If he got the parity price he'd be getting \$21.30 a hundred pounds. Hogs, incidentally, are selling comfortably above the price at which the Government might have to step in, yet a long way under the point at which the Government could put a ceiling on prices.

WHEAT AND CORN

Wheat, the raw material for the staff of life, is bringing the farmer an average price of \$2.13 a bushel, whereas the parity price is \$2.41 a bushel. And corn, the No. 1 raw material for meat making, is selling for 14 cents a bushel less than the official parity price.

A few of the farm-produced items that go on the consumer's back rather than into the market basket are giving beef a close run for leader in the price race. But they don't loom very important in the whole picture of the farmer's income.

The market picture of beef right now, according to the Government experts who watch it day by day, is complicated by the very fact that consumers are so willing to pay premium prices for beef—but not for other things the farmer raises.

CORN VERSUS BEEF

The ordinary farmer who raises a few beef cattle and feeds a drove of hogs is hanging on to his young beef cattle rather than send them to market. He isn't doing this because he's a hoarder, but because it makes sense in terms of the corn he'll husk in his fields this fall.

If he feeds that corn to beef animals he'll have a product that promises to sell for close to 150 percent of the sacred parity price. But if he feeds it to his hogs, they'll sell for around 92 percent of parity.

Why should he sell his young steers when he can keep them and make them bring him a fancy price for his corn?

Naturally, the farmer, like the housewife, has beef on his mind. But where his pocket-book is concerned, his wheat, corn, oats, milk, etc., are calling the turn.

NAT S FINNEY.

Editorial Comment by Memphis Commercial Appeal on Address Delivered by Senator Fulbright

EXTENSION OF REMARKS OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. FULBRIGHT. Mr. President, on October 7 I delivered an address at the dedication of the new hospital at West Memphis, Ark., which was constructed under the provisions of the Hill-Burton Act. The Crittenden Memorial Hospital

is the first to be built in Arkansas under the provisions of this legislation and is located in the rich delta area across the Mississippi River from Memphis.

In the course of my speech at the dedicatory ceremonies, I made the following comment on the fact that the facilities of the hospital were being made available equally to both white and Negro citizens:

I think that one of the points of greatest significance about your hospital is that its facilities are available equally to both white and Negro citizens. There are 50 beds for white patients, there are 50 for Negro patients. Food and all accommodations are the same for everyone. The hospital's doctors will administer to all who need treatment, regardless of color. This policy, I think, is certainly in keeping with the one set recently by this city of West Memphis in providing for the educational needs of its colored population. It is a vigorous and healthy sign and one which points to the particular progressiveness of our State in this direction. You people of Crittenden County are attacking your problem by giving a three-story brick and concrete example of racial tolerance for all the Nation to see. This is the real answer of the South to the misguided policies of the reformers of the North.

I believe that the progress which is being made in racial relations in the South is not fully understood and appreciated by many persons elsewhere in the country, who still believe that the practice of lynching is widespread in our section. Therefore I ask unanimous consent to have inserted in the Appendix of the Record the attached editorial from the Memphis Commercial Appeal, which supports my statement relative to the far-sighted attitude which has been followed by the persons responsible for the Crittenden Memorial Hospital.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INSPIRING EXAMPLE

For many years, wiser counselors of this Nation representing all sections of the country and both racial groups, have argued that relationships between the races must be worked out primarily on a regional basis, according to specifications basically just and mutually acceptable. For political profit, other persons have argued that interracial relationships must be dictated from Washington, by persons who have neither knowledge of the problem nor sincere interest in its solution.

It was heartening all the more then when Senator FULBRIGHT, of Arkansas, who has won the esteem of men in all walks of life in far places, hailed the opening of Crittenden County's new memorial hospital at West Memphis as a concrete example of racial tolerance for all to see.

The county and city have earned humanity's plaudits for having built this hospital, and in the policy of making its facilities available to members of both races. Crittenden County and West Memphis have voiced the most effective rebuttal to those political opportunists who make capital of setting man against man.

The county and city already had shown a disposition to deal justly and honestly with people within their boundaries through expanded educational facilities for Negroes. This hospital and its availability to all who need it, regardless of color, is an added testimonial to the inherent sense of justice and kindness which even the South's most bigoted detractors must admit.

Here is one more step toward peace, harmony, and prosperity, and the most reassuring part of it all is that it was motivated from the local level, not by executive mandate from afar.

The Crittenden County Memorial Hospital will serve its area well and wisely, and particularly are we of the South grateful to Senator FULBRIGHT for calling the world's attention to this new testimonial to our sense of fitness and right.

Private Investment in Underdeveloped Countries

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, October 18, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of principles by the steering committee of the National Planning Association. The statement is entitled "Private Investment in Underdeveloped Countries," and it was released on the day before yesterday, namely, Tuesday, October 16, 1951.

The purpose of the statement, as set forth by the National Planning Association, is to explore ways for stimulating increased participation by private enterprise in international economic development and to examine questions of the relationship of public financing to private investment.

I am told that the lead in the making of this statement and its development was taken by Mr. Charles J. Symington, chairman of the board of the Symington-Gould Corp.

I point out to the Senate the relationship of this most interesting statement, as issued by the National Planning Association, to the so-called Benton amendment to the Mutual Defense Act, the appropriations for which were voted by the Senate today, and which is designed to encourage much more widespread development throughout the underdeveloped areas of the world, to be stimulated by private investment as well as by Government action.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PRIVATE INVESTMENT IN UNDERDEVELOPED COUNTRIES¹

Members of the steering committee of the National Planning Association are concerned about the lack of speed with which the United States is moving to help people in the vast underdeveloped areas of the world in their efforts to achieve better economic and social conditions. The fundamental principles which should guide our programs for assisting people of underdeveloped areas to help themselves were put forward in the steering committee's statement of February 19, 1951.²

¹ To be printed as NPA Special Report No. 30, for sale to the public.

² The United States and the Lesser Developed Countries of the World, Special Report No. 29 of the National Planning Association.

That statement stressed that there are a number of ways to finance developmental activities in underdeveloped countries. There should be an increased channeling of the countries' own domestic capital into their development programs. There is need for increased external financing of health, education, and other public services through government-to-government loans and grants and for financing of business by foreign private investment in the form of bond flotations or direct investment.

Private investment can play an important role in the economic and social improvement of underdeveloped countries of the world. In recent years, however, it has received too little attention—due, probably, to the fact that conditions have not been conducive to risk-taking by private capital. The purposes of this statement is to explore ways for stimulating increased participation by private enterprise in international economic development and to examine questions of the relationship of public financing to private investment.

ROLE OF PRIVATE FINANCING

Private saving and investment—whether it be from domestic or foreign sources—is the foundation upon which any country's long-run progress will be built. Public investment for developmental programs is indispensable, but long-term public investment in most fields should have as one of its principal aims creating acceptable conditions for the accumulation and use of private funds.

The steering committee's earlier statement on United States policy in regard to underdeveloped areas like the Report to the President by the International Development Board issued in March 1951—stresses the need for balanced social and economic development; for progress in the fields of health and sanitation, education and technical training, public transportation and communication, irrigation, flood control, and agricultural experimentation, as well as the growth of local financial institutions and of industry.

Enlightened private capital has played a part in providing many public services. This is perhaps most notably exemplified by the major American oil companies in Latin America and in the Middle East. However, the development of basic public services by private enterprise is naturally secondary to the achievement of other ends and their extent and location are influenced more by economic than by political or humanitarian considerations.

Basically only public authorities, national or international, can press development of public services sufficiently rapidly and on a broad enough front. This also may be true of large-scale power development programs where the prospects of commercial profits may be insufficient to justify the risk of adequate private capital.

Even within the sphere of public enterprise, however, the ultimate objective of progress through private initiative can be served. Improvement in health, diet, education, and basic services will always directly assist commercial development, and in some cases it may be indispensable. The underdeveloped countries today are mainly agricultural. Many of them are, nevertheless, unable to supply their own populations with an adequate diet owing to a variety of causes, including overpopulation, inefficient farming methods, and lack of even the simplest of tools, shortages of fertilizer, and need for irrigation developments. Agricultural production in such countries should be increased. But real improvements in agricultural production, highly desirable in themselves, frequently depend on expanding the production of basic commodities and manufactured goods for domestic consumption and export trade. To further such production is the normal function of private capital.

The warmest friends of private enterprise must agree that international private equity investment since World War II—apart, perhaps, from the mining and petroleum industries—has been far too small to justify any optimism that it can play a major role in the advancement of the underdeveloped countries. However, it must be equally recognized that decisions on investment policy reflect a balancing of prospective profit and risk. Generally speaking, foreign investment carries serious risks beyond those involved in domestic investment, so that a correspondingly greater return must be expected. This is particularly true during a period of high business activity when investment opportunities are favorable in the domestic market. To stimulate foreign investment, therefore, foreign risks must be minimized so far as possible and profit opportunities enhanced.

DIFFERENTS TO PRIVATE FOREIGN INVESTMENT

The principal factor militating against a normal flow of private investment funds abroad, and particularly to underdeveloped countries, is the existing world tension. Management is faced with unpredictable political and military risks which it is reluctant to assume. However, other factors exist which, even in a more peaceful world, would discourage private investment abroad. These include (1) Unduly high or discriminatory taxes; (2) unrealistic exchange rates; (3) taxes on foreign exchange transactions; (4) requirements covering the employment of local personnel and inclusion of local capital which are impractical and cause inefficiency; (5) and—most discouraging—the possibility of interrupted operations, destruction of equities, or eventual expropriation.

A normal pattern for private equity investment in underdeveloped areas would show an initial and prolonged period of relatively high risk with low return. This should be followed by a period of relatively high profit to justify the initial venture. Private capital naturally would hesitate to accept the risks and privations of the early period in the face of a strong probability that the eventual rewards would be lost through expropriation—even expropriation with "compensation." Private investment can hardly flourish so long as a country's public policy suggests that the private investor will be welcome during the risk-taking period, but not permitted to enjoy the fruits of success.

Even where the toleration of foreign investment could be expected on a permanent basis, other local factors may discourage investment. For example, certain countries levy taxes at high rates which on the surface appear to be nondiscriminatory, but which fall very heavily on the foreign investor. In some countries with sharply progressive rates the only enterprises large enough to be affected by the ultimate progression are foreign-owned. Discrimination exists in cases of export taxes where the exporters are substantially all foreign investors or, for that matter, when any income taxes are levied at such high rates that practical enforcement is slanted against the alien. Similarly, taxes on foreign exchange transactions (as in the Philippines) or multiple exchange rates (as in Indonesia) operate to discriminate against the foreigner and, hence, to discourage further foreign investment.

The foreign investor, by improving his welcome, can himself do many things to encourage fair treatment. Among these are to follow sound, fair, and progressive labor relations policies and, particularly, to carry out programs for the training and advancement of nationals in the activities for which they are responsible. No one would question the propriety of national policy favoring the employment and training of local citizens in commerce and industry and the utilization of

local capital where it is available. In many countries, however, local private capital is unavailable and there is a serious lack of local managerial competence. In the face of these practical difficulties, a program requiring the enlistment of local capital and impractical speed in up-grading local staff may have a serious deterring effect on economic development, if pressed more with an eye to national pride than with regard to sound economic practice.

INCENTIVES TO FOREIGN INVESTORS

Certain steps to minimize the risks of foreign investment can be taken by unilateral action in the United States.

Consideration might be given, for example, to moving in the direction suggested in the report to the President by the International Development Advisory Board. That Board recommended the "adoption of the principle that income from business establishments located abroad should be taxed only in the country where the income is earned and should therefore be wholly free of United States tax." It seems clear that a positive incentive for the introduction of foreign capital can most easily be afforded by allowing a relatively high return on investment, net after taxes, in the recipient country. Such efforts to encourage inflow of American capital, however, may be largely frustrated by high tax rates in the United States. This point is already well understood in several Latin-American countries.

Another suggestion has been that certain of the risks peculiar to foreign investment, notably the nonconvertibility of foreign currencies, might appropriately be covered through governmental insurance arrangements. Such proposals are controversial in that they may imply a degree of governmental supervision and control of private investment abroad. They have, nevertheless, received substantial support from business interests as well as from governmental and advisory groups and merit further serious consideration.

The people and governments in the very countries where the need for development is greatest are today highly suspicious of private foreign capital—sometimes with cause, sometimes without. Many foreign countries, by facing up to the fact that the exploitive practices more characteristic of a past day are no longer followed by typical private investors, could do much to stimulate greater private investment from abroad.

It has been suggested that Government financial assistance to underdeveloped countries should normally take the form of loans. However, grants to countries which are credit worthy, except where the grants are essential in order to make loans feasible, tend to deter potential borrowers from applying for loans. It seems equally true that the scope for private investment may be seriously limited if the underdeveloped countries are given easy access to long-term, low-interest public loans for the same purposes as might otherwise be served by private investment. In countries where the foreign capitalist is considered, at best, a necessary evil, governments may take no steps to encourage such foreign private investment while capital funds are available from governmental sources. On the contrary, they will not hesitate to erect barriers against foreign investment or to continue or accelerate policies which discourage the potential investor from overseas.

We believe that public capital should avoid competing in the normal sphere of private investment where the latter is available or can be encouraged. There is some feeling among persons interested in the practical aspects of foreign investment that international lending agencies should clearly define their fields of activity, and that thought should be given to restricting the activities

of such agencies in fields clearly more appropriate for development by private capital.

An international lending institution may properly recommend to the borrowing countries such reforms in fiscal and monetary matters, and general economic policies, as are considered essential for their economic development. Where it is in a position thus to encourage sound economic policies in the recipient countries, an international lending institution can assist economic progress by making the extension of public grants or loans conditional on the recipient's adoption of policies which would encourage the concurrent and increasing investment of private funds.

Consultation with existing and potential foreign investors in specific countries would disclose which particular factors constitute impediments to private initiative and new commitments. Both technical guidance and financial aid by international agencies, and through intergovernmental agreements, are clearly indispensable to rapid and comprehensive economic progress in underdeveloped areas. Even so, public disbursing agencies, governmental or international, might well consider how their prestige, influence, and economic power could be used to insure that recipient governments exercise the maximum practicable efforts to attract private investment capital before supplementary public investment is made, lest the public-aid program merely facilitate a drift toward state socialism.

SELF-FINANCING

The growth and marshaling of domestic capital is the soundest long-run method for developing the economy of any country. Such a development of local capital, however, must be on solid ground. We must remember that United States' progress in the nineteenth century was aided importantly through the use of European capital. This hastened the process of gradual accumulation and reinvestment of substantial United States capital, until this country became the greatest reservoir of private capital in the world. The accumulation and investment of local capital is highly desirable, but efforts to foster it should not so unfairly penalize foreign investment that the end result is the failure of private foreign capital to supply the need before the creation of a domestic capital structure sufficiently strong to stand alone in international competition. Such a policy, however attractive politically in the short run, must eventually defeat itself.

CONCLUSION

As long as the present international tension lasts, the investment of American private funds abroad—except under Governmental guarantees which would tend to remove the transactions from the ordinary hazards and normal conception of free competitive enterprise—will probably be limited in scope. We hold firm to our belief in the free competitive enterprise system and would like to see it spread to an ever-growing area once the tension is relaxed. It, therefore, seems only prudent to try to explore the obstacles with the dual purpose of minimizing them so far as possible at present and planning now for the time when they can all be effectively removed.

This statement was prepared for the NPA steering committee under the leadership of Charles J. Symington, member of the NPA business committee and board of trustees and chairman of the board of the Symington-Gould Corp.

NPA members of the steering committee who, in addition to Mr. Symington, sign the statement are:

H. Christian Sonne (chairman, NPA board of trustees and steering committee), president, Amsinck & Co.

Clinton S. Golden (vice chairman, NPA board of trustees, and chairman, labor committee), labor consultant, Economic Cooperation Administration.

Luther H. Gulick (member, NPA board of trustees and international committee), president, Institute of Public Administration.

Albert J. Hayes (member, NPA board of trustees), international president, International Association of Machinists.

Allan B. Kline (member, NPA board of trustees, agriculture committee, and international committee), president, American Farm Bureau Federation.

Donald R. Murphy (vice chairman, NPA board of trustees, and chairman, agriculture committee), editor, Wallace's Farmer and Iowa Homestead.

Clarence E. Pickett (member, NPA board of trustees and international committee), honorary secretary, American Friends Service Committee.

Elmo Roper (member, NPA board of trustees and business committee), Elmo Roper, Marketing.

Beardsley Ruml (vice chairman, NPA board of trustees and chairman, business committee), New York City.

The Importance of the Federal Grand Jury

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address to the new members of the Federal Grand Jurors' Association for the eastern district of New York on September 24, 1951, at the Federal Building, Brooklyn, N. Y., by Anthony W. Fitzgerald, counsel for the association:

THE IMPORTANCE OF THE FEDERAL GRAND JURY

Gentlemen, our president, Mr. Raymond A. Young, has made an unusual request of me this evening, that is, that I should say a few words of welcome and counsel to you, the new members of this association, who have just experienced the great pleasure and honor which service on a Federal grand jury entails.

I am not going to make a long speech, much as members of my profession are wont to and like to do. I would like just a few minutes of your time to consider a situation which has become appalling, desperate, and even frightening in some aspects.

A mere reading of the newspapers nowadays is an unpleasant experience. I do not refer to the war being waged on Korean soil nor to the presence in our midst—and often in high places—of those traitors who owe sole allegiance to the worst despot in history in Moscow; I do refer to the existing mess in which our own country, our own State, and, in particular, our own city find themselves. The average citizen—and Federal grand jurors are average, intelligent members of the community—feels shocked at recent disclosures and knows not where to turn.

Review with me the events of the past spring and summer: the disclosures at the Kefauver hearings with squirming, perjurious witnesses, the conviction of Mr. Moran, who held a post of trust in our city administration, the recent Gross fiasco, with District Attorney Miles F. McDonald, one of our

most capable lawyers as victim, the nasty mess on Staten Island where a hapless woman was intimidated and refused due process of law by a man in high office. Smell out with me the odors arising from the RFC, where one gentleman admitted that his conscience would not balk at a ham as bribe, just so it did not weigh more than 12 pounds.

All of this is old hat; you have heard these things or read them and discussed them among yourselves. Oh, it is easy to groan and growl and shake your head and play the ostrich by hiding from the evil rampant in our community. It is easy to turn on your TV set and bury your cares in a Dodger game or a western "thriller." The hard thing is to do something about it.

Some will refer to the ballot box as the great reformer and discourse with vigor and some wind on the value of the power of the vote. That may be so, but what choice can we make by setting one party against another? There have been recent offenses by members of both the Democratic and the Republican Parties. Is there anything constructive, anything practical that you as grand jurors can do to alleviate this intolerable situation?

Remember that we are not persons of power and, although our association has influence in many quarters, nevertheless we are unofficial and private citizens. We cannot hurl mighty thunderbolts to smite the evildoers or, what is much worse, the lax public officials who have forgotten what their oaths mean.

We have at hand a sharp and fearsome tool, the Federal grand jury itself. Criminals do not like to be indicted and tried before Federal juries, for there pull and leal gymnastics are of little avail. Federal juries have a record of convictions, fairly arrived at but impressive indeed. Federal jurisdiction sweeps across artificial county barriers and scorns attempts to evade it by legal devices.

When you seive on the Federal grand jury, remember that its powers are almost unlimited. Remember you can initiate an investigation, can demand action from the Federal attorney, can even remove him from the grand jury room at any time. A Federal grand jury, proceeding with due regard for the processes of law, is one answer to the present mess. It can hale offenders before it, dig into the facts, question Federal officials who may seem or are lax and render indictments against the guilty. What the grand jury must have is courage, guts, as we would say it ordinarily. It must be fearless, questioning, skeptical and tireless. Can you do that when you serve again? Will you? Don't forget the very future of this beloved country of ours may depend on your courage and determination.

Coupled with the idea of courage is also an idea former United States Attorney Saypol has told us tonight: that of humility. It is the humble man whom our enemies most fear, for he is a persevering man; slow to move but look out once he gets started. We must each of us act in his own way and according to his own powers—protest vigorously, yes; be alert to what is going on, yes, and be ready to strike at crime and those who have harbored it.

In closing, I would like to remind you of the motto of another group which is helping in our national crusade against communism—and collaterally, against those who would ruin our national life by coddling criminals. I refer to that humble but courageous group who do not rant and rave about the way things are, who do not sit back and wait for the inevitable but who do something about it. I mean the Christians, whose motto it is: "Better to light one candle than to curse the darkness." Let that be our motto, too, Federal grand jurors.

Star Farmer of America

EXTENSION OF REMARKS

OF

HON. PAGE BELCHER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. BELCHER. Mr. Speaker, every citizen of Oklahoma is proud of Harold DeWayne Hodgson, 21, of Freedom, Okla., who on October 9 was named the Star Farmer of America. This award was made in Kansas City at the twenty-fourth national convention of the Future Farmers of America Foundation. Each year a Star Farmer is selected from the FFA members who receive the American Farmer degree, which is the highest degree conferred by the organization. The four degrees, Green Hand, Chapter Farmer, State Farmer and American Farmer are all based on achievement.

This is not an award limited in interest to any one State, however, for DeWayne serves as an example to the rural youth of the entire United States. At 21 he has proved that with initiative and hard work it is possible to make one of the finest contributions any man can make to his country. Through constant study and zealous devotion to his job, he has turned 320 acres of run-down land into a producing farm—and he has made money while he was at it.

During the present national emergency we have heard over and over again of the importance of defense production and the need for more workers in the defense plants. I am not here to minimize the importance of building up our defenses, but it seems to me that we cannot afford to overlook the vital significance of the farm when we are thinking of this emergency and of the future of our country. We cannot forget our rural people, and we need to remind them of the valuable services they are rendering.

The loss of rural population to the cities has been a matter of increasing concern to me. It is primarily this concern which prompts me to rise in praise of a young man who has demonstrated effectively that life on the farm is challenging, rewarding and profitable.

Several years ago, when Harold DeWayne Hodgson was still in high school, he read a story about a Star Farmer of America and told his father that some day he wanted to win the award. His father, who was a tenant farmer for many years and who weathered the depression on a farm, gave DeWayne every possible encouragement, but warned him that he could lend no financial assistance. I think everyone in the United States would like to know how young DeWayne—now married and the father of a 15-month-old son—has at the age of 21 accumulated assets worth \$30,495.40. It is not a story of intrigue; it is the story of a young man, willing to work and with a desire to make good, who took advantage of every opportunity to use his knowledge of farm management and who

learned to profit from his own experiences. No other country in the world can offer such opportunities. With young men like DeWayne Hodgson on our farms we cannot lose.

Upon graduating from high school, DeWayne rented 320 acres of run-down land from his grandfather. There was not enough grass on the land, the barn was dilapidated and the house had once been used to store wheat. Young Hodgson has renovated the buildings, put up fences and improved the land. Later on he was able to borrow \$8,000 to buy the property and sold one-half the mineral rights for \$2,000. He now figures the land is worth \$14,000. In applying for the American Farmer award, he listed the following additional assets: His livestock was valued at \$9,538, his farm machinery, equipment, and buildings were worth \$7,265, his growing crops were estimated at \$6,000 and he had miscellaneous assets of \$742.40. He still owes \$7,450, which includes a \$6,500 mortgage on the farm. His net worth is \$30,495.40. He now rents 255 acres of land in addition to the farm he owns.

It takes real courage to achieve such a farming record. The Star Farmer from Freedom, Okla., has had constant advice and encouragement from his father. I am sure both father and son would pay a great tribute to the Future Farmers of America for the inspiration, leadership and training which that organization gives to every farm boy. By giving young Hodgson the \$1,000 Star Farmer award, the Future Farmers of America have given Nation-wide recognition to an outstanding farmer. This is not the complete story, however. Only one boy can receive the highest award each year, and \$1,000 is certainly a prize worth going after, but we cannot overestimate the value of the example DeWayne Hodgson has set, nor can we overestimate the value of the inspiration which the Future Farmers of America organization gives to its 350,000 members. This group, the Future Homemakers of America, and the 4-H Clubs are working constantly with young people to maintain their interest in rural life.

In 1947 another farm youth from the Eighth Oklahoma District, Ray Gene Cinnamon, of Garber, Okla., received the Star Farmer of America award. We are justifiably proud of these two boys and of Wayne Booth, of Cordell, Okla., who was named the Star Farmer of America for 1943.

This year 14 young Oklahoma farmers were honored by the Future Farmers of America at its Kansas City convention. In addition to Harold DeWayne Hodgson, who received the Star Farmer award, the following Oklahoma boys were given American Farmer awards: Max Brissey, Broken Arrow; Charles Brown, Chickasha; Ray Watson, Verden; Donald Coffin, Guthrie; Charles DeBord, Perry; James Gilmour and Wayne Karrenbrouk, Kingfisher; Rudy Hanza, Lawton; Harold Dean Hepner, Freedom; J. D. Travis and Robert Kupa, Clinton; Jack Litzell, Waynoka; and Ernest Rexroat, Helena.

While I am naturally proud of the record of my district and of my State, there is another reason why I am asking that

my remarks be published in the CONGRESSIONAL RECORD. The value and importance of rural living cannot be over-emphasized. In times when we are more and more aware of the dangers which threaten our Nation, we need to place more stress on the advantages of the most American of all of our institutions—the farm.

Centennial Anniversary of Lackawanna Railroad

EXTENSION OF REMARKS

OF

HON. HARRY P. O'NEILL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. O'NEILL. Mr. Speaker, under leave to give my remarks in the RECORD, I wish to include the following address by Gov. John S. Fine, of Pennsylvania, at a banquet in Hotel Casey, Scranton, Pa., on October 15, 1951, ending the 3-day celebration of the Lackawanna Railroad's centennial anniversary:

FINE LINKS RAILROAD TO HISTORY OF PENNSYLVANIA—GOVERNOR SAYS DELAWARE & LACKAWANNA ASSISTED IN STATE'S GROWTH

Gov. John S. Fine coupled the Lackawanna Railroad's one hundredth anniversary with the observance of Pennsylvania Week last night in his address at the Hotel Casey dinner which climaxed the road's 3-day centennial program.

The text of Governor Fine's address follows:

"It is indeed a great pleasure for me personally, and as Governor of our Commonwealth, to extend congratulations to the Delaware, Lackawanna & Western Railroad, which has reached the ripe old age of 100 years.

"There is an old saying that the first hundred years are the hardest, and I hope that this proves true about the Delaware, Lackawanna & Western, a railroad which has played such a colorful and important role in the building of America and in its social and industrial life.

"Famed in song and service, in history and in legend, the Delaware, Lackawanna & Western Railroad has seen much of, and contributed materially to, the growth of Pennsylvania, which now ranks foremost of all the States in industry. Like all the other railroads in this country, the Delaware, Lackawanna & Western has had its ups and downs, varying with the economic prosperity or depression of the Nation itself.

"A railroad is one of the main arteries in the intricate body of State and Nation, and the Delaware, Lackawanna & Western has most certainly been such an artery in Pennsylvania. We could not possibly have risen to preeminence in the industrial world if our great factories and plants had been deprived of necessary transportation. Because we in Pennsylvania have always considered it of paramount importance to have only transportation of the very best and of all forms, we have been eminently successful."

STARTED AS SMALL LINE

"The Delaware, Lackawanna & Western got its start in the fabulous days of high finance, a game which then was played quick and hard. Beginning as a small coal-hauling line, it became a vital link in the country's transportation system and established one of

the earliest and busiest commuting services to New York City. It has contributed materially to the growth of the Commonwealth, as beautiful and scenically lovely suburbs sprang up all along its right-of-way.

"From George D. Phelps, first president, on through the years, men of wisdom, energy, and perseverance built up the Delaware, Lackawanna & Western. Its 100 years of operation were marked by terrific competition in a field so vital to the pulsating life of the State and Nation."

[Governor Fine deviated from his prepared speech at this point to dwell on Pennsylvania Week now being observed. He cited the State's many and great industries, schools, and system of highways. The Governor said Pennsylvania is proud of what it has to offer America to help make it the great Nation it is.]

"Pennsylvania was a pioneer in the development of the American railroad. Certainly one of the earliest evidences of what was to become a great network of transportation was the horse-drawn railroad in use over a short track as early as 1809. This was at Lelleville, not far from Philadelphia."

"The railroad and its history are woven close into the history of Pennsylvania itself. Not far from here where we meet tonight, the Mauch Chunk Railway was completed in 1827, less than 25 years before the completion of the Delaware, Lackawanna & Western. It was built for the transportation of coal from the mines, and its 9 miles of track at that time formed the longest and the most important railway in the entire Nation."

"Only 2 years later, in 1829, the first train ever drawn by a steam locomotive in America made two trips between Carbondale and Honesdale on rails which had been laid by the Delaware & Hudson Canal Co. I said they made two trips, because these trips were never repeated. The locomotive proved to be too heavy for the light rails, but those two trips made history because, in fact, they were the beginning of the American steam railroad. Of course, railroads today have huge investments in their properties. They, like everything else, even including government, as I so well know, face continually rising costs for operation. Volume of business carried, even during the war periods, has not come anywhere near a comparative return on money invested."

STATE APPROPRIATED CASH

"It seems almost inconceivable, therefore, in the light of present-day operating and construction costs, to learn that a railroad from Philadelphia to Columbia, just south of Harrisburg on the Susquehanna River, some 81 miles long, was built through an appropriation by the Pennsylvania General Assembly for \$2,000,000. That railroad was built in 1834 and was the eastern link of rail and water transportation which ultimately linked the two biggest cities of the Commonwealth—Philadelphia and Pittsburgh. Here was a whole railroad line built at a cost—well, I don't think you could get many locomotives for that amount of money today."

"As we look back over the history of railroading, we see that, in the pioneering days as well as today, the operators of railroads knew that their biggest source of revenue was the hauling of freight. The very first passenger-carrying railway in the world was a 38-mile horse-drawn line in Great Britain, built in 1825. However, 2 years before the opening of this English railway, the Philadelphia-Columbia Railroad, of which I have just spoken, was chartered in 1823 as a steam railroad for the transportation of both passengers and freight."

"The industries of Pennsylvania have always been closely allied to the railroads, and each has been dependent on the other. Our earliest railroads used coal as a fuel for operating steam locomotives and it was Penn-

sylvania anthracite which supplied the motive power."

"There is an interesting little anecdote about railroads and the public. When the charter was granted to the Philadelphia-Columbia Railroad in 1823, the public was so ignorant regarding this method of transportation that a reader wrote to a Pennsylvania newspaper inquiring, 'What is a railroad?' Perhaps this public ignorance was not entirely upon the reader's side because the editor, who probably didn't know either, replied, 'Perhaps some other correspondent can tell.'"

PENNSYLVANIA IN FOREFRONT

"In the century and a quarter since the publication of that inquiry Pennsylvania has been in the forefront in railroad development in the Nation. It is a fact worthy of note that every county in Pennsylvania, except Fulton County, is served by the network of railroads which cross and recross our State. It is a happy fact that, although Pennsylvania has only 1½ percent of the total area of America within its boundaries, she ranks third among all the States in main-line railroad mileage. The Interstate Commerce Commission credits Pennsylvania with 9,747 miles of main-line track, but our own department of internal affairs says that the total mileage, including branch lines, is 11,281 miles."

"Now with all this mileage in the State and with the number of railroads, including the Delaware, Lackawanna & Western whose centennial we observe today, it is little wonder that Pennsylvania not only led in railway development but also has always been a foremost user of rail transportation. From the very beginning of our industrial history, Pennsylvania has shipped and received more carload freight than any other State in the Union. In most years the industries of Pennsylvania ship one-seventh of all the carload freight carried by American railroads. One-eighth of all the carloadings carried by American railroads comes to Pennsylvania destinations."

"Let's go back for a moment in history to reveal some of the many firsts Pennsylvania contributed to the development of the railway industry in America."

"The first railroad locomotive equipped with a cab for the protection of the engineer and fireman was built in Philadelphia for use on the Lehigh Valley Road in 1835."

"The first railroad sleeping car ever constructed in the world was a rebuilt day coach which ran between Harrisburg and Chambersburg in 1836. This car was really a bunkhouse on wheels, lighted by candles, and provided with the then modern convenience of one wash basin."

FIRST BRIDGE AT MANYUNK

"The first iron railroad bridge in the United States was built near Manyunk on the outskirts of Philadelphia in 1845."

"What was probably the first railroad telegraph in America was a line, still operated by the Reading Co., which went into use on May 10, 1847, between Philadelphia and Reading."

"The dining car, now an accepted necessity of railroad travel was first operated during the Civil War between Philadelphia and Baltimore."

"The first tank car ever to transport oil in the United States began its run in November 1865 from Titusville."

"Perhaps the most important development in all railroad history after the invention of the steam locomotive was that of the automatic airbrake, developed by George Westinghouse of Pittsburgh between 1869 and 1872. This invention made possible safer, high speed transportation on railway lines, and has been adopted in every country in the world."

"Pennsylvania railroads were among the first in the Nation to make use of the tele-

phone. One year and two months after the first transmission of a telephone message by Dr. Alexander Graham Bell, the inventor began the installation of telephones in the Altoona shops of the Pennsylvania Railroad."

"Among the 71 railroad companies operating in the Commonwealth, there is the shortest railway in the United States—the Valley Railroad of McKean County, a little more than one-half mile long and the company with the longest track mileage and the heaviest traffic—the Pennsylvania Railroad Co. The total trackage in the various States through which it operates is more than 25,000 miles."

"This list by no means completes the story of Pennsylvania's part in the history of the American railroad. It is only fair to say that though the railroads made possible the intensive industrial expansion in our State, Pennsylvania's contribution to the development of the railroads is fully as important as the railroads' contributions to the development of Pennsylvania."

I MUST WRITE FRESH CHAPTER

"I hope that we may continue to contribute to each other's development and prosperity. I trust, too, that, as I said earlier, the next 100 years will be easier, healthier and more profitable to the Delaware, Lackawanna & Western Railroad. True, problems of grave magnitude will confront you and will challenge solution by you. In solving them it would be arrogant to ignore suggestions from competent quarters or to discard records of human experience. Sometimes we are too disinclined to let the dead hand of the past weigh too heavily upon us. We must remember, however, that the past has a living hand also and if we aspire to write a fresh chapter of the railroad's history worthy of pursuit or emulation, we cannot afford to ignore the well-thumbed pages preceding it. Duty, service and courtesy to the public have no date mark. Those changeless needs undergird the changing railroad company and while generation after generation, we ought to grow into their fuller comprehension and their wiser embodiment, all talk of progress becomes a farce if we began to think that the hour has now struck for growing out of those needs. They are basic and fundamental. They are constant guide posts springing for the trestle board of a useful past to guide and pilot the changing plans of a changing future."

"May the road of Phoebe Snow confidently adapt herself to the challenges of tomorrow. May her rails which traverse our lands, climb our mountains, cross our streams and bind together her life with our economy continue this century of progress and promote a better and greater Pennsylvania."

Neckyoke Jones Says

EXTENSION OF REMARKS OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a Neckyoke Jones Says column published in the Sheridan (Wyo.) Press on October 10, 1951:

NECKYOKE JONES SAYS

"Did you seen where ol' ALBIN BARKELEY, the Vice President, said him an Truman had been doin' a top job together?" I inquires of my ol' pardner, Greasewood today. "Yep," he rejects, "but that may or may not

be a matter of opinion. At first glance, it'd look like as far as investment is concerned ol' ALBIN is just about a total loss to the taxpayers—but on the other hand costs of every thing is goin' up so that even wind is gettin' to have some value. Ol' ALBIN has been peddlin' that there commodity for a long time an' apparent he wants to give the taxpayer value received—an' fer the money you kin git more wind outen him than anybody in Washington—where there ain't any shortidge noticible as yet. Yessir, ifen there is anythin' folks could suffer along withouten for 4 years come 1952—it'd be ol' ALBIN, an' from what you hear even the Demimycrats don't ilgger he is the indispensable man." Looks like Greasewood thinks ALBIN is sufferin' from senile delusions. Hopin' you are the same, I am.

Yute Iren,

NEWYOKKE JONES.

"Listen Bud, I Never Had It So Good"

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. BUFFETT. Mr. Speaker, the last time I was home, I visited one of the feed lots west of town. I had heard a lot of talk about the beef shortage. So I wanted to get the story straight from the horse's—scuse me—steer's mouth.

Going into the lot, I walked up alongside a likely looking steer—a fleshy animal pushing the 1,200-pound mark. I asked him to tell me—off the record, of course—how he was getting along.

He was in a talkative mood. Here are his views as I remember them:

Listen bud, I never had it so good. I'm getting all I can eat three times a day and ottener if I want it. I'm getting a balanced ration—you know—everything that's good for me, corn, protein meal, minerals, everything. I've got a veterinarian that looks after me good to be sure I don't get sick or anything. My owner, he does all the worryin'—makes sure the grounds are in good shape, and that I'm protected from the weather.

Let me tell you, I never had it so good. I wouldn't trade this deal for the old rugged days out on the ranch where I had to rustle, and lots of times, I didn't have a full belly at night. Now I'm on full feed all the time. Yes, sir, I never had it so good.

As I was leaving the lot I happened to see the owner. He said to me:

How do you like the looks of this bunch of steers? I'm sending them to south Omaha for slaughter Monday.

The next day, Mr. Speaker, I started back for Washington. Along the route I heard some people say, "I never had it so good."

Somehow or other, an unpleasant thought began to form in my mind. I recalled that again, the third time in 35 years under a Democratic President, people were saying, "I never had it so good."

I remembered, also, that each time the young men of our country, like the steers in the feed lot, were sent to the slaughterhouses of war.

The feed-lot steer, Mr. Speaker, was a dumb animal. So of course, he would not know—or worry—about where he was headed.

You would expect him to say, "I never had it so good."

But when the Government conscripts young men to fight and die in foreign wars for the third time in 35 years, is not there something ominous about the boast, "I never had it so good?"

Every hour of every day the lifeblood of more American boys soaks into the soil of Korea.

Have you wondered how those lads must regard that smug crack, "I never had it so good?"

Or how those lads feel about those who use that glib chatter to promote their political fortunes?

"Well I Remember When Senator Charles Fenwick and Arlington Delegates Magruder and Damm Called, Soliciting My Support for the Hill-Burton Bill—They Told of Six Virginia Counties Without a Single Doctor and of Conditions in Arlington Hospital, Where the Corridors and Sun Porches Were Filled With Beds Occupied by Military and Federal Government Workers"

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. RIVERS. Mr. Speaker, I would, for a short time, like to discuss with you, sir, and with my colleagues of this House, the condition of our Nation's health, in general—and, in particular, the magnificent results that are now beginning to accrue to the benefit of Arlington County and to the Nation—by way of the enactment of the Hill-Burton bill. This was a measure passed by the Seventy-ninth Congress in 1946, which was designed to expand medical facilities, and do so particularly in rural and urban areas.

Naturally, we are all interested in the health of our families, our neighbors, our constituents, and in the well-being of our State and of the Nation. Inasmuch as my congressional duties necessitate my being in Washington so long as Congress is in session, I have been domiciled for the past several years in Arlington County, Va., just across the Potomac. In consequence thereof, I have had a particularly fine vantage point from which to view the results of the Hill-Burton Act upon the well-being of a cross section of both our rural and urban people.

Mr. Speaker, I need not tell you that Arlington County, Va., contains Arlington National Cemetery—the home of the great and beloved statesman, soldier, and patriot, Robert E. Lee, the Tomb of the Unknown Soldier, and other noted and

historic spots closely associated to the early history of this Nation. Neither do I need tell you that Arlington County is today one of the fastest growing and most progressive areas in the entire United States.

I well remember a story that was told to me 20 years ago by a noted political economist who had been charged by the Federal Government with developing a plan to provide the most efficient, economical, and ideal system of local government that could be devised. The purpose of the study was more than theoretical. Application was to be made to such gigantic Federal communities as the Tennessee Valley Authority, the Greenbelt, Md., development, and other Federal developments then in the making.

This great authority had already completed extended research studies of local governments in Europe and in the Scandinavian countries as well as in the various States throughout the Nation. He was himself surprised to learn that the government instituted by Gov. HARRY BYRD in Virginia was—as of that day and hour—acknowledged to be the most efficient, the most representative, and the most economical—at both county and State levels—that we had in these United States.

Mr. Speaker, that statement—by such a distinguished economist—was to me both provocative and thought-compelling.

You can readily understand, therefore, why I, as a representative of an urban and a rural constituency embracing the great city of Charleston S. C., should look into this system of government left to the people of Virginia by Senator HARRY BYRD when he entered the United States Senate—in order that I could better inform my mind with respect to the ideals in government from the standpoint of Federal administration.

It is, in part, because of this interest that I became a keen observer of county government, of the fast-growing community of Arlington County, which is, itself—and due to its origin—one of the most peculiar subdivisions of government in the United States.

Arlington County is that narrow strip of land on the south bank of the Potomac which the Commonwealth of Virginia deeded to the Federal Government when the District of Columbia was established. Its acquisition was desired because the Federal Government would then control both banks of the Potomac at the new site of our Nation's Capital. It would, also, have made the District of Columbia a body of land exactly 10 miles square. However, it was never developed as part of the Nation's Capital—and was returned to, and became part of, the Commonwealth of Virginia.

Mr. Speaker, the average county in the country today is about 35 miles square, and is made up of 36 townships, each 6 miles square. Thus, the average county has an area of about 1,200 to 1,400 square miles of land. The accepted reason for making counties of that size—with the county seat laid down in the middle—was because it was approximately 17 miles from the edge of

the county, or about a day's ride with a team of horses from practically any part of the county—into the county seat and back home.

There are but few counties in the political subdivisions of one sort or another. Some contain great metropolitan cities, with even smaller cities, towns, and villages and boroughs situated within the county limits. However, Arlington County, Va., which is today as cosmopolitan and as metropolitan a community as exists in the United States, has no political subdivisions of government whatever, nor any governing body other than that afforded by the county board of commissioners administered by a county manager.

There are no cities, no towns, no villages in Arlington County, largely due to the fact that the entire county itself embraces a piece of land of but approximately 24 square miles in area, which is only two-thirds the size of an ordinary township. You will find, as I said before, 36 townships in the average county.

Despite any vexations that might have occurred, I have long counted my sojourn and life in beautiful Arlington as happy and pleasurable as it could possibly be so long as I had to be apart from my own kinfolk and constituency in the First District of South Carolina.

Notable among the men who have so maintained those delightful living conditions in Arlington, I shall always remember that beloved, distinguished, and esteemed first citizen of the county, the late Honorable Harry K. Green and the "big three" that had worked with him so hard, so ardently, and so long for the people of Arlington in the general assembly at Richmond, the Honorable Charles R. Fenwick, State senator from Arlington; the Honorable Maynard Magruder, and the Honorable George Damm, members of the house of delegates.

It is, therefore, understandable how happy I was to listen over that little radio station in Arlington to an address delivered in the manner and style of the Commonwealth itself. No vituperation, no vilification, no name-calling, just a mere recitation of what three Virginia office holders and gentlemen—the Honorable Charles R. Fenwick, State senator from Arlington County, Va.; the Honorable Maynard Magruder, and the Honorable George Damm, members of the Virginia House of Delegates—have done to bring more and better, sorely needed hospital facilities to Arlington County and the Commonwealth of Virginia under the Hill-Burton hospitalization program fostered by the Federal Government.

Mr. Speaker, it is pleasurable for any man to look back in retrospect and review the little part that he played in achieving some good for a community.

How well I remember the day that Charlie Fenwick, Maynard Magruder, and George Damm called on me, soliciting my support for the bill. They told me of the fearfully crowded hospital conditions in Arlington County, where the corridors and sun porches were filled with the beds of military and civilian personnel who worked for the Federal

Government in the Pentagon or elsewhere in Washington.

You can gain some idea of the plight of Virginia at that time with respect to a lack of hospital facilities. The State had six counties in which there was not even one single doctor. In 12 counties, there was but 1 doctor for 12,000 population.

Mr. Speaker, you will, therefore, see why I worked for the passage of the Hill-Burton bill—both in the committee and on the floor. I am glad that, even as far back as 1946, Maynard Magruder and George Damm offered a resolution in the general assembly, authorizing the Commonwealth of Virginia to participate in the Hill-Burton Federal hospitalization survey and construction program, and I am glad also that State Senator Charlie Fenwick introduced into the succeeding general assembly a bill that made it possible for that great Commonwealth of Virginia to match the Federal funds provided under that act, and thus bring to perfection the construction of greatly enlarged hospitalization facilities sorely needed by Government workers and their families on the grounds of Arlington Hospital.

Mr. Speaker, in order that the membership in this House may know of the splendid work in that particular instance—that has been accomplished by Senator Fenwick and his associates in the house of delegates, Maynard Magruder, and George Damm—and that, by unanimous consent of my colleagues to extend my remarks, I include in the Record a radio address made by Senator Fenwick over Station WARI in Arlington the afternoon of September 30.

That address is as follows:

Good afternoon friends, \$274,000 for the Arlington Hospital. This is the good news that I bring you today.

Back in 1946, Messrs. Magruder and Damm offered a resolution in the general assembly authorizing the State of Virginia to participate in the Hill-Burton program. This measure passed by the Federal Congress and supported by both political parties was designed to expand medical facilities, particularly in rural areas and areas serving rural people.

The situation in Virginia had been shown to be acute as the result of a commission which I headed in 1942. Prior to that, we had undertaken a medical scholarship program which would encourage doctors to serve in rural areas, be awarded the scholarship in the medical school as a condition to their serving 1 year in a rural community for each year of the scholarship. It was realized, however, that it was necessary to have medical facilities if doctors were to adequately practice in those areas, that 45 percent of the cost of construction should be raised by the locality, the remaining 55 percent to be provided between State and Federal Government.

Some idea of the need back in 1942 may be gained from the fact that there were 6 counties that did not have a doctor and 12 where there was 1 doctor for more than 12,000 population. The resolution to participate in the Hill-Burton program was adopted by the general assembly.

Shortly thereafter, the Virginia Health and Medical Care Council was formed, composed of representatives of professional and lay groups for the purpose of advancing public health in Virginia. It was my privilege to serve as chairman of the legislative committee of this council. A health program was adopted, one of its objectives being to have

the State appropriate money under the Hill-Burton program to assist localities for public health centers and hospitals.

By the time the legislature convened in 1948 no money was contained in the budget for this purpose. It was imperative that the State appropriate funds in connection with the critical need for hospital and health centers.

Knowing that the Governor came from a tobacco-growing section and that there was great need for medical facilities in southside Virginia I introduced a bill which placed a tax on cigarettes and earmarked the money for the Hill-Burton program. At the time I introduced the bill I told the Senate that my sole purpose was to raise money for the health program and that if the money was appropriated I would forget the bill. Incidentally, Virginia was one of the few States which did not have a State cigarette tax.

The Virginia Health and Medical Care Council then went to work. The needs of the State were carried to the grass roots and hundreds of people wrote in, urging that my bill be supported.

The first break came when a group of southside Senators conferred with me and asked if I would withdraw the bill, provided sufficient money was appropriated. I told them that I would, that I was only interested in doing something about the situation. They then arranged for a joint hearing before the Finance Committee of the Senate and the Appropriations Committee of the House and people came from all over the State. It was one of the greatest demonstrations of public interest ever held in the State Capitol.

By this time, the appropriation bill had gotten to the Senate with still no appropriation for Hill-Burton funds. I was asked if I thought \$500,000 would be sufficient. I shocked the Finance Committee by saying we needed \$2,500,000. I then conferred with the Governor and he agreed to recommend \$1,500,000 outright appropriation and \$1,000,000 conditionally. This was adopted by the finance committee and passed by the general assembly. Needless to say, my tax bill on cigarettes did not get out of committee and everybody was happy.

In the year 1949 the Governor not only released the \$1,000,000 which had been conditionally appropriated but created a deficit appropriation of another million dollars for this program. Virginia became one of 6 States in which contributions were made at the State level to the Hill-Burton program.

To date, 17 hospitals and 7 health centers have either been completed or are under construction as a result of this program.

The resolution adopted by the general assembly provided for a State survey to establish priorities as to hospital beds. It also created a council to administer Hill-Burton funds and pass on applications. Twenty outstanding citizens, including doctors, hospital administrators and businessmen were appointed and I had the distinction of being the only member of the legislature appointed to the commission.

It is also interesting to note that a Negro doctor and minister were appointed to the council to represent their race.

A reappraisal of needs is made every year so that as hospitals are constructed, priorities change.

The question naturally asked is: "What does this mean to us in northern Virginia?" Well, with the action taken this week it means that what had looked like a hopeless situation for several years to come may prove an almost immediate reality.

The Arlington Hospital having 115 beds, along with the Alexandria Hospital, has been attempting to serve a population of over 350,000 people. People naturally say, "Well, if we can't get a bed in Arlington or Alexandria we will go to the District." Unfortunately, the hospital-bed situation in the

District is becoming tighter and tighter so that the matter cannot be disposed of as easily as this. There is another problem which is overlooked. Northern Virginia, with its network of roads, has a terrific number of accidents. The emergency room of the Arlington Hospital averages over 800 cases a month. This is a 20-percent increase over the corresponding period last year.

When a person is involved in an accident you don't have time to telephone around to try to find a bed. You rush them to the nearest hospital, which is usually Arlington. Many times these are bed cases and with the hospital operating at 115-percent occupancy, there just aren't any beds available. Then what is the hospital going to do? Do you realize that almost 21,000 patients were served by the Arlington Hospital in the last 8 months, and at least 50 people a month are denied admission.

The hospital board decided last year to apply for Hill-Burton funds, but, unfortunately, the Federal appropriation was cut so that only projects already started could be completed. They then decided to attempt to raise \$400,000, knowing that this would be a long haul. One hundred and forty thousand dollars was raised, and it was decided to put on an annual drive in an attempt to raise enough money for the addition. The hospital board and the representatives of the legislature arranged for conferences with the director of the Hill-Burton program. The need was evident. The question was whether Arlington's need was greater than that of other sections of the State.

It was pointed out that not only does the Arlington Hospital serve the immediate population but at least 50 percent come from Fairfax, Prince William, and Falls Church, not to mention the innumerable accident cases which represent people from all over the country.

At the time of the meeting of the State hospital council there were applications in an amount exceeding \$11,500,000 with only a little over \$3,000,000 available from State and Federal funds. It then became a question of selling Arlington's need above that of many other projects. I can assure you that even though I was a member of the steering committee and of the council that unless Arlington's case could be sold on its merits it would have been impossible to obtain these funds.

A terrific campaign was launched at the last minute by the Richmond Memorial Hospital Association, which represents a new general hospital of 300 beds to cost \$5,500,000. They pointed out that over 50 percent of their money was already raised, and because Richmond was a teaching center these beds were badly needed. They based their plea primarily on the fact that they are serving most of the northern neck and territories as far away as Williamsburg. It was shown, however, that even if this population were accredited to the Richmond area, in view of the beds now available they would only have advanced one position in priority, which would have still left them far down the list. Another point stressed in opposition was that the amount required was so large that it could only have taken the form of a split project, and since the funds are made available from year to year, it is not wise, except in acute cases, to approve projects which cannot be completed out of funds available in any 1 year.

When the final vote was taken by the 20-man council, \$600,000 had been approved for a new hospital at Lexington, \$505,000 for a new hospital at South Hill, \$274,000 for Arlington, \$433,000 for an addition to the University of Virginia Hospital, \$440,000 for the Martha Jefferson Hospital at Charlottesville, \$303,000 for expansion of facilities for the Northampton-Accomack Hospital on the Eastern Shore, and an addition to the General Hospital at Bristol, Va.

Among those localities which had made application and did not receive funds were

Roanoke, Bedford, Williamsburg, and Richmond.

Naturally, George Damm, Maynard Magruder, and I came home extremely pleased and when I called John Anderson, administrator of the hospital, on the telephone I could almost hear him say a prayer of thankfulness.

Too much credit cannot be given to the hospital board, whose chairman is Gilbert Hall, the hospital fund campaign committee, directed by Clarke Daniel, and Bill Ames, who made a trip to Richmond and talked to Dr. Roper, the late commissioner of health.

The problem now confronting Arlington is to raise some \$80,000 so that they may receive \$274,000 from the State and Federal Government. Under the terms of the award, bids for construction must be available for approval by March 31, 1952. Undoubtedly, the hospital board and the campaign committee will get together and decide on means of raising the required money.

It has been nice talking to you and thanks for listening. Goodbye until next Sunday at 3 o'clock.

Railroad Rate Discrimination

EXTENSION OF REMARKS

OF

HON. CHESTER B. McMULLEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. McMULLEN. Mr. Speaker, I am taking this time to call to the attention of the Members of the House a situation existing with reference to rail rates insofar as the port of Tampa, Fla., is concerned, and which, to my mind, establishes conclusively that the rates governing the traffic on exports from and imports to the port of Tampa are unjust and discriminatory.

The port of Tampa has served the Nation well in time of war and emergency. Tampa has shown that its financial institutions can handle and finance the commerce carried by the port; that adequate repair yards, wharfage, and stevedoring facilities were and could be made available. Today, however, this port does not get its fair share of export and import business because of rail-rate discrimination on exports; a discrimination which the rail carriers into Tampa are willing to remove, but other rail carriers and ports that in times past sought relief themselves, are now objecting.

The national transportation policy, the decisions of the ICC, and the repeated announcements of Congress contemplate there should be no such discrimination as exists against this port in my district. The Congress has authorized a further expansion of these port facilities and the Army engineers have spent substantial sums on their development. This port, which has proved to be vital to the welfare of the Nation, should not have to depend for existence on local import and export business, but should have the advantage of fair import and export rates in order to provide regular sailings. It is an economic loss to have a ship take bottom cargo in Tampa and then move on to other ports for its top cargo—and this is the condition today.

Tampa is a growing and progressive city. It has made great efforts to obtain

cargo for export through its port, but the higher rates applicable to Tampa have proved an insurmountable obstacle. The Interstate Commerce Commission, created by Congress to prevent discrimination, has recognized that the character of steamship service is determined by the traffic. Traffic flow is determined in large part by rates. The Commission used these words in Galveston Commercial Association against G. H. & S. A. Railway Co.:

The character and frequency of the steamship service from or to any port is generally determined by the character of the traffic flowing through that port.

Again, in the same case:

The greater the variety of the commerce, the greater the number of ports for which commerce is handled, the greater the number of steamship lines that will serve that port and the more frequent the sailings therefrom.

The Interstate Commerce Commission in the Corpus Christi case has set a pattern for relief within which the port of Tampa falls; a pattern which, when properly applied, will give to Tampa the relief to which it is so justly entitled.

Tampa comes within South Atlantic and Gulf groups when distances are considered. Tampa is nearer Cincinnati than is Beaumont, Houston, Corpus Christi or Galveston, Texas, and the distance from Corpus Christi to Chicago is greater than the distance from Tampa to Kansas City, Joplin or Memphis. Tampa is nearer to Atlanta than either Wilmington or New Orleans, and Tampa is nearer Louisville, Pittsburgh, and Akron than is either Beaumont, Houston or Galveston. These are only a few illustrations. Many others can be cited. As compared with distances to certain South Atlantic or Gulf ports, Cincinnati, Louisville, Evansville, St. Louis, Chicago, Peoria and Omaha are only a few of the interior points that are less distance from or approximately the same to Tampa on short tariff routes.

If short line distance is considered, Tampa is less distant than some of the preferred ports; or if we consider short-tariff route distance, again Tampa is less distant than some of the preferred ports. Also, the short tariff route of Tampa is considerably less distant than the long tariff routes to the many preferred ports.

The Congress, in its wisdom and out of its experience, created the Interstate Commerce Commission to prevent discrimination. It is in the national interest and in the interest of commerce to remove this discrimination, to give Tampa the chance it so justly deserves. This discrimination should no longer exist. Tampa should be treated as a Gulf port, and I hope that the Tampa people will continue to fight for more equitable export rates, and ask that the full membership of the Interstate Commerce Commission be given an opportunity to remedy the situation, as it has done for Corpus Christi and other ports in the past.

The Congress, in amending section 3 of the Interstate Commerce Act, contemplated the use of the ICC as a forum for relief such as Tampa needs, and did not require complaints or inter-

vention from interior shippers. Congressional intent may be taken from the report of the committee on the amendment to section 3, wherein it is said:

It will encourage and promote the freedom of the movement of export, import, and coast-wide commerce through the ports of the country. The committee considers that it is to the interest of the public that such commerce be permitted to move freely through as many available ports as the governing circumstances will reasonably permit, and that no restrictions upon and impediments to the free movement thereof should be imposed that are not clearly shown to be sound or economically justified. The recommendation of the committee that this bill be enacted is intended to afford competing ports a forum in which to complain of rate adjustments which tend to concentrate the movement of the traffic and deprive other ports of an opportunity to handle a part of such traffic.

We are clearly entitled to invoke this forum, and the elimination of this discrimination will give to this port a fair and equal chance to develop into a great port; to become a great asset to the commerce of the world, and to provide additional strength to our defense and our transportation system.

Farley Finds No Saints at Harvard

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Heffernan, from the Brooklyn Eagle of August 29, 1951:

HEFFERNAN SAYS FARLEY FINDS NO SAINTS AT HARVARD

Since the late Wendell Willkie circumnavigated the world and found that it was not only round but that it was one world, no modern emulator of Magellan has traveled the route more extensively and with greater attention to what he hears and sees than James A. Farley. And Mr. Farley, having seen and heard much that many of us neither see nor hear, considers it an obligation of good citizenship to let us in on the good news.

Some years ago, when Dr. Einstein devised equations to prove that everything that has been never was, President Hutchins, of Chicago University, called it the "good news of damnation." There followed the rise of the secularists in this country and much else, which is neither of good repute nor high hope. Our leading statesmen abandoned the things that had made America great, and placed all their reliance on the atomic bomb. As distinguished a statesman as Bernard Baruch returned from Europe not long since with the announcement that General Eisenhower was doing the best bit of crusading work in Europe since Peter the Hermit, a comparison that would no doubt puzzle the robed rallier of Christendom as much as the present organizer of Europe's scattered forces.

Mr. Farley, speaking at Loras College, Dubuque, finds hope in France, and even more in England and a revival of faith in many lands, and contrasts it with the universal panic that almost won the world.

United States Assumes Mantle of Imperialism

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mrs. ST. GEORGE. Mr. Speaker, some years ago I made the statement in a public address that it was evident that our country was assuming the mantle of imperialism that Great Britain was forced to lay down.

Of course I was soundly berated in some quarters but the statement was and is still true.

In this article by Mr. George Sokolsky he brings out the fact that the role of empire has been assumed unbeknownst to the people of our country and certainly without their votes.

It would perhaps be well to find out if the people want to assume this part all over the world. At least the issue would be clearly stated and voted on in the American way.

THESE DAYS

(By George Sokolsky)

Beginning with Woodrow Wilson's 14 points and his advocacy of the League of Nations, the United States accepted, not without considerable internal opposition, the role of leadership in world affairs. What that meant in practical terms has been that the United States succeeded to what had been for at least two centuries, Great Britain's place in international affairs.

There has been no evidence that any large element of the American people aspired to this role. At no time since the defeat of the Paris Treaty in the Senate in 1920 has any kind of referendum been submitted to the American people over the role this country is to play in international relations.

In no political campaign since Warren Harding was elected President has an issue of peace or war, of international leadership, of imperialism been submitted to the American people. The grand-scale developments in this field, involving this Nation in war and in bloodshed, are the result of day-by-day administrative decisions and acts which face our people as facts accomplished.

There is no use speculating on what might have happened had Willkie or Dewey debated these questions or if Senator Vandenberg had not purchased the bipartisan foreign policy. The fact is that by agreement between Democratic and Republican leadership, the foreign policy of this country and the actual implementation of that policy have never been submitted to the American people. Nor has the entire truth concerning it been documented so that the people understand what has happened and what the cost has been.

We have been going back and forth over the China situation with a bitterness and recrimination that is now strictly personal and is likely to be a principal issue in the next Presidential campaign.

Yet, for most Americans that issue is not clear, shall they believe Harold Stassen or Philip Jessup, Louis Budenz or Owen Lattimore? Are they to believe Gerald Swope about the Institute of Pacific Relations or the documents found in E. C. Carter's barn in Lee, Mass.? Is Joe McCarthy a liar or even crazy, or is Dean Acheson hiding something that is itching to come out?

The public will have to know one day why they are stuck with the Korean war.

They will have to know why to date there have been 90,000 casualties in what was obviously an avertible war. No brilliant publicity planning can save the architects of that error.

But that is not at all that will have to be understood. This role of leadership is becoming burdensome. Here we are involved in Iranian oil. What are we going to do in Iran? Are we going to force the Persians to capitulate to the British? Are we proposing to make those people hate us? Do we plan to drive them into Russia's arms? Are we trying to convince the entire Moslem world that the United States is their enemy?

What decision of the American people, in Congress assembled or at an election has authorized anyone to give the Moslem world, from Casablanca to Pakistan, cause to hate the United States? It was apparently intended to include Iran in the Truman containment document, which somehow was watered down to Turkey and Greece. Why Turkey and not Iran? Why Greece and not Formosa?

How deeply are we going into Egypt? Are we entering upon a police action on the Suez Canal? Will the British do it alone or shall we step in too? And what if the British go it alone and the Egyptians defeat them? After all, Israel beat the British and the Egyptians combined. There is no telling what can happen in these nationalistic days when some men fight for power and others for glory.

Is this Suez Canal just plain old-fashioned imperialism or is it one of the United Nations resolutions to maintain everywhere the status quo of 1945?

What happens if Iraq, Syria, Saudi Arabia, Jordan, Yemen, and even distant Pakistan get into this quarrel between Islam and Britain, are we not involuntarily involved under the North Atlantic Pact? Should not NATO act, with Eisenhower, at the head of a European army consisting of American troops?

Leadership is not just words and speeches; it involves fighting, constant, interminable war. Leadership has brought to our shore the permanent war. We worry about Joe Stalin, but that is only one front. What of the Islam front? The Indian front? The Indo-Chinese front? The Philippine front?

It is a big world and nobody loves the leader.

Sensible Censorship Supervision

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. DONOHUE. Mr. Speaker, there have been few occurrences, of recent date, causing more comment among our individual citizens than the President's security directive designed to prevent the unwise release of vital information that might be of aid and comfort to the enemy.

On this subject, as on so many others, the extremes of opinion have not materially contributed any suggestions toward a sensible supervisory diligence that would, at once, withhold the publication of that, which the enemies of peace could use against us, and allow the publication of facts to practically enlighten the American people as to our national and international objectives with the consequent morale uplift and

approval which knowledge of the truth inevitably brings.

I have, myself, been personally concerned in this issue for I very deeply feel the majority of our loyal citizens, particularly among the armed services, were not being presented with enough of the truth to place wholehearted spirit behind our Government's basic objective to pursue every avenue toward peace simultaneously with our necessary preparations to defeat any aggressor's armed attack if it should come.

I brought my convictions on this score to the attention of the military officials some months ago and I am happy to say real advances have been made in the troop information and education program which is now a part of everyone's training in the military service.

With respect to the general public, I have asked the President to review his directive for the purpose of making some qualified additions to the present Security Council membership, so that the Nation at large will not get the unfounded impression that this Government intends any program of imperial censorship. In my judgment we must be careful indeed to guard against unwitting infliction upon our own people of any of the freedom-destroying policies we so openly oppose and criticize in the governing actions of the totalitarian dictators.

I am, therefore, glad to call the attention of my colleagues to a very timely and practical article by Mr. Roscoe Drummond on this subject, which appeared in the Christian Science Monitor issue of October 16, 1951.

His editorial follows:

STATE OF THE NATION—POSITIVE APPROACH TO CENSORSHIP

(By Roscoe Drummond)

WASHINGTON—There is a reasonable prospect that President Truman either will amend the new directive tightening the release of official information or will allow it to be softened in application.

A number of the President's advisers counseled against its issuance, and now that it has run into almost unanimous—that is, unanimous outside the Government—criticism, their position has been considerably strengthened.

At the moment, it is the views of the Defense and Central Intelligence Agency officials which have prevailed, and their primary responsibility and training are on the side of keeping things secret, not keeping the public informed. Obviously there is always a danger of overinforming the enemy, which all acknowledge, but there also is a danger of underinforming the Nation, which too often is overlooked.

There is always a conflict within government over what and when to release information to the public and it is this positive side of security which has been neglected. Though there are risks involved—democracy is not the easiest form of government, just better—security is more served by keeping the country in the light than it is by keeping the enemy in the dark.

If the President had given due heed to recommendations which had been laid before the administration by the Committee for Economic Development in its report on National Security and Our Individual Freedom, he could have avoided the pitfall into which his recent directive unwittingly fell. I say unwittingly because the President does not believe in censorship any more than other loyal Americans. He simply was overim-

pressed by the negative side of his responsibilities.

The committee is as well qualified and balanced a citizen group as there is. Its four pertinent recommendations are:

That there be added to the National Security Council (President, Vice President, Secretary of State, Secretary of Defense, Chairman of the National Security Resources Board) three full-time civilian members without other governmental responsibilities.

That one of these new full-time members be made responsible for a more effective flow to the public of information relating to national security.

That another be made responsible for reviewing the effect of security measures on individual liberties and advising the President thereon.

That vigorous efforts be made to stimulate discussion throughout the country on the problems of national security and their relation to freedom.

This approach is positive and constructive. It puts the negative part of censorship into proportion—about 1 to 3—1 part of keeping the enemy uninformed to 3 parts of keeping the Nation informed.

Everything the President rightly seeks to put additional safeguards around secret data is here. But there is also (a) allocation of responsibility to see that security is not used as a cloak to cover up incompetence, (b) continuous review of the security program; and (c) top attention to seeing that the essential facts flow to the public, without which there can be neither adequate support nor adequate criticism of public policy.

If the President's one-sided security directive leads to enough sustained public outcry to produce the reforms which the CED advocates, it will have served a beneficial purpose.

Crowley Tells of War Years—Warns Radicals

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. VAN PELT. Mr. Speaker, on October 15, 1951, Mr. Leo T. Crowley, who served as ECA Director during World War II, delivered a speech in Milwaukee, Wis., that casts new light on the question of who wanted to give our atomic bomb secrets to Russia.

A Milwaukee Journal reporter who covered the speech reported that Mr. Crowley "gave a strong impression that Truman, Acheson, and Wallace actually favored giving the bomb to Russia as a gesture of good will." The reporter quotes Mr. Crowley as saying the matter was discussed at a Cabinet meeting in August 1945. The Milwaukee Journal account of the speech follows:

CROWLEY TELLS OF WAR YEARS—WARNS OF RADICALS

President Truman once "brought up the question" of giving atomic bomb secrets to Russia and Dean Acheson and Henry Wallace indicated that they favored the idea, Leo T. Crowley told 275 Catholic men at a Holy Name Society meeting Sunday. Crowley, who served as foreign economic administrator during World War II, spoke at a breakfast meeting at St. Monica Catholic Church, 5631 North Santa Monica Boulevard. The

meeting had been announced as open to men of all faiths. Many visitors from other parishes attended. After his speech, however, Crowley insisted that he had been told the meeting was closed and asked that most of his talk not be reported.

The society president, George Robinson, 5630 North Santa Monica Boulevard, confirmed that the meeting had been open to the public. Father John Barry, parish priest, said that it was a closed meeting, however, and that he had assured Crowley that his remarks would not be fully reported. Crowley released an advance text which he said was not off the record, and consented to the release of some of the statements he had made during the meeting.

TEXT, SPEECH DIFFER

The text differed widely from the speech, which was a sharp attack on the influence of communism and "intellectual radicalism" in our Government. Crowley emphasized that he knew of these dangers because of his intimate connection with the Government under Roosevelt and Truman. "I know the philosophies of the people who have influenced our policies," he said.

But if the press reported these stories of his experiences, it would violate the confidence he had shared with the late President Roosevelt, he said.

"In August 1945, at a Cabinet meeting, Mr. Truman brought up the question of exploring the advisability of giving to Russia the secrets of the atom bomb," Crowley said after the meeting. "It was stated that it would take about \$3,000,000,000 for Russia to build the bomb unless they were given economic aid. Acheson, who was sitting in for Mr. Byrnes, said that he knew Mr. Byrnes would oppose the idea but that he (Acheson) thought it should be considered. Mr. Wallace made similar remarks."

NEVER ACTUALLY URGED

Crowley said that the question was never brought up again and that neither Acheson nor Wallace had ever actually urged giving the atom bomb to Russia. He had described the incident much more vividly in his speech, which gave a strong impression that Truman, Acheson, and Wallace actually favored giving the bomb to Russia "as a gesture of good will."

Acheson was Under Secretary of State at the time and Wallace was Secretary of Commerce. Wallace later resigned. Acheson later became Secretary of State. Crowley quit his Government posts in October, 1945.

"Extreme intellectual radicals are out to destroy the home and the church," Crowley warned at the start of his address. Afterward he added that he saw "a great difference between liberalism and intellectual radicalism." He declined to identify the persons he was warning against, but he said they are "in and out of Government and in our educational system."

TOLD ROOSEVELT ANECDOTE

He told the following anecdote:

One of the last visits he had with President Roosevelt was in a railroad station as the President was leaving for Warm Springs, Ga., where he later died.

"I told him that the German war was near an end," I said, "I'm going to start immediately to reduce the amount of aid to England and Russia, in keeping with their contribution to the war with Japan."

"President Roosevelt said, 'You go ahead and handle those things as you always have. You know Stalin has insulted me several times. I have yet to get my first compliment from him.'"

During his speech he had charged that Roosevelt had always taken Stalin's side at Big Three meetings. "At every conference we had Roosevelt went along with Stalin and Churchill took a different position," he said.

At the Yalta Conference, Crowley said, they (the Russians) traded China out of Manchuria and Korea. Roosevelt said to me, "The old man (Chiang Kai-shek) is going to be awfully mad. We had better arrange to give him two or three billion dollars in economic aid."

Afterward he asked that these remarks be modified to say simply that Roosevelt once thought he could do business with Stalin, but later became disillusioned.

KEEP ECONOMY STRONG

The theme of his speech was that America has been right in being idealistic, but must be firmer in its dealings in the future. He said we should "try to keep our economy strong, try to support Eisenhower, give those countries some economic aid if they have to have it, but make them assume some responsibilities for their own economy." He warned against radicals who might "lead us by the nose" into believing we can live side by side with communism.

Lend lease, which he headed, should have been given "with an understanding of the kind of peace we were going to have," he said.

Crowley, a prominent Catholic layman, is chairman of the board of the Milwaukee Road. His home is in Madison. He headed the Federal Deposit Insurance Corporation from 1934 to 1939 and held eight wartime governmental jobs.

Hill-Burton Progress and Prospects

EXTENSION OF REMARKS

OR

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks, I include a report by Dr. John W. Cronin, Chief, Division of Hospital Facilities, Public Health Service, presented at the conference of hospital architects at the fifty-third annual convention of the American Hospital Association, St. Louis, Mo., on September 17, 1951:

HILL-BURTON PROGRESS AND PROSPECTS

(By John W. Cronin, M. D.)

The modern hospital is the result of a profound change in the concept of hospitals; their design, function, and place in our society. The advance in medical science and in technology have strengthened popular demand for hospital care and resulted in a tremendous expansion in our hospital system. No longer is the hospital concerned only with cure of illness. The modern hospital is now concerned with prevention as well as cure.

This is not the place for me to develop the history of hospital construction in the United States. All of you are familiar with it. It will be sufficient to point out that during the thirties construction of new hospitals was virtually at a standstill. Although the early 1940's saw some emergency construction, this construction did not scratch the surface of the long accumulated deficit in hospital construction. The Commission on Hospital Care summarized the cumulative effect in its report when it pointed out (1) The shortage of hospital beds in the United States, (2) the poor physical condition of the existing hospital plant, and (3) the maldistribution of hospital especially with respect to rural areas.

The culmination of all of this resulted in the passage of Public Law 725, Seventy-ninth

Congress—the Hill-Burton Act—on August 13, 1946. For the first time the country was embarked on a systematic, Nation-wide hospital construction program with financial aid from the Federal Government.

It is now 4 years since the first State plan was approved. It is of particular interest at this time to compare the situation regarding existing acceptable hospital beds in 1948 with that of 1951.

In 1948, 868,000 hospital beds were classified by the State agencies as acceptable. These met 49 percent of the Nation's total need (as based on the formula toward which we can build). In 1951, a little more than a million beds were classified as acceptable. Now 54 percent of the total bed needs of the Nation are met. The States need 840,000 additional beds and the territories 33,000 to meet their formulated needs.

Total bed needs does not tell the story, however. It should be pointed out that the story with respect to general hospitals has been an excellent one. Within the categories, new construction has most markedly increased the supply of general hospital beds. In 1948, the States reported a supply of 388,000 acceptable general beds. In 1951, they reported 489,000 acceptable general beds. More than two-thirds of the general bed needs have now been met. It is in the fields of mental and chronic bed needs where the impact of new hospital construction is yet to be felt. These two categories constitute two-thirds of the Nation's present bed deficit.

Let us now take a look at the trends in hospital construction. No separate data are available on the number of beds constructed outside the Federal-State hospital construction program. However, an estimate of the dollar value of this construction is available from reports by the Department of Commerce and the Department of Labor. In 1950, the total value of "work put in place" on hospital and institutional construction amounted to \$812,000,000. (It is estimated that institutional construction constitutes only a small percentage of the total.) Privately financed construction amounted to \$221,000,000; publicly financed construction, including construction for the Veterans' Administration not participating in the national hospital survey and construction program, amounted to \$359,000,000; project construction under the hospital survey and construction program amounted to \$232,000,000.

It should be pointed out that the dollar value of new projects as differentiated from additions, alteration, or replacements, are roughly equal between those participating in the Federal-State hospital construction program and nonparticipants. This would seem to show a more nearly equal number of beds added to the Nation's pool of hospital beds than the dollar volume indicates. Additions and alterations frequently involve additions to or replacement of adjunct services and nonacceptable beds.

As of August 1, 1,600 projects have been approved under the Hill-Burton program; nearly 500 are completed and in operation and about 1,000 are under construction. More than \$1,200,000,000 will be expended on these projects of which the Federal share is \$433,000,000. Of all projects approved, nearly 75 percent are for general hospitals; 15 percent are for public health centers; 5 percent for mental hospital projects; 3 percent for tuberculosis projects, 1 percent for chronic disease projects.

The general hospital projects account for 84 percent of the total funds and a like percentage of the Federal share of the costs. Nearly three-fifths of the general hospitals are for completely new hospitals. The remainder is made up of additions or alterations to existing plants. The development of hospital services in needy areas especially rural areas is slowly being accomplished. Most of the new hospitals are being built in small towns which serve the rural areas;

three-fifths of the new general hospital projects are located in places of 5,000 population or less and nearly four-fifths in places of less than 10,000 population. More important is the fact that two-thirds of the new general hospitals are being located in areas which heretofore had no general hospital or had hospitals whose beds were classified by the State agency as nonacceptable.

How big are the new general hospitals being built? Three-fifths have 50 beds or less. Only one out of six will have more than 100 beds.

From such data it becomes apparent that the new general hospitals are being built to serve rural areas. The construction of these hospitals have had an impact on these small communities. The primary benefits accrue, of course, to the patients who are admitted and cared for. Equally important, however, is the effect of construction of a new hospital in an area where no hospital previously existed on the availability of medical services. The construction of new hospital facilities furnishes the motivation for physicians to move into the community. Frequently the opening of a new hospital results in the establishment of a prepaid hospital insurance plan for the first time. It also attracts nurses and technicians living in the community who had dropped out of their professional fields because there was no such employment readily available. Many of them are now willing to return to work on a part- or full-time basis because they can remain in their home communities.

Again I would like to emphasize, there are dangers in building small hospitals and these must be considered in the administration of the Hill-Burton program. Sometimes competitive civic pride between communities in close proximity must be overcome. Methods of avoiding them must be worked out in a feasible, practical way. Small hospitals cannot always provide the variety of service that can be given in larger hospitals. Low occupancy rates are frequently found in the small hospital. There is a relationship between demand for hospital care and the ability to pay for it and the lower the financial resources of the community the lower the use of the hospital beds. Relatively low income in a small town and rural community forces the small hospital to operate marginally. As a result the small hospital in a small community has found it difficult to set aside sufficient funds for the purchase and maintenance of modern equipment, or for the employment of specialized personnel. The existence of a fine physical facility should never be a substitute for adequate training and skill in the physician.

The indiscriminate building of small hospitals in all rural areas is not sensible. The provision of such facilities where they can effectively serve their purpose of bringing needed medical services to the population is acceptable. Careful study and sound community planning is a must. The provision in the Hill-Burton Act for survey and planning has proved to be one of the soundest features of the law. Each community fits into a pattern of service as outlined in the State plan. The community must determine the size of the facility that can be supported and the services to be included. The local community planning features are one of the major reasons why the Public Health Service believes that a program for what we now call defense impacted areas, with increased populations, should follow the Hill-Burton concept. Service at the local level is the objective of the program for war impacted areas. Therefore, advice from the communities where the affected people live is essential. Conversely, State and Federal advice to local planning groups is important if the planning is to be really effective. Small hospitals should not stand alone but should share with the larger hospitals of the hospital-

service area and accept services and assistance as well as render services and assistance to those hospitals. This is the basis of the coordinated and integrated hospital system. It is the key note of modern medical care.

Planned construction of hospital facilities means community planning. There is need, therefore, for teamwork among many groups. The contributions of every group concerned with making available good health services is necessary. The architect's role is important in the construction of facilities which meet the community needs. I would be remiss if I did not note your contribution to the success of this program professionally and as citizens contributing through the advisory councils in the States.

In addition to the Hill-Burton program, with its obvious limitations for hospital construction resulting from the present emergency there are several programs designed to provide assistance. These programs involve allocation of scarce materials, civil defense, and war impacted areas.

We are experiencing little difficulty in getting materials and equipping the projects. To date the problem of shortages has not been insurmountable. We may anticipate that the situation may become more acute. In the administration of the Hill-Burton program we have strongly urged that substandard and "ersatz" equipment not be used in the civilian hospitals. It would be disastrous if the communities of the Nation were forced to replace plumbing, sterilizers and other equipment in a short period of time due to such action. Those in charge of programming, distribution and allocation of scarce materials will not overlook the importance of hospitals and hospital construction in our Nation's defense effort. The Federal Security Agency has been designated the claimant agency for hospitals and health materials, supplies and equipment. The Division of Civilian Health Requirements in the Office of the Surgeon General of the Public Health Service is responsible for carrying out the assigned functions.

The Federal Civil Defense Act does not contemplate the making of grants for hospital construction. It does provide for the incorporation of shelter areas or other construction designed to provide protection of the occupants against enemy attack. Funds, however, are very, very limited.

The Defense Housing and Community Facilities and Services Act was passed by the present Congress and signed by the President. Title III of this act relates to community facilities and resembles in some respects the Lanham Act of World War II. The provisions of this act include hospital facilities and services for the care of the sick, as well as facilities for water, sewage, sanitation and other community facilities. Federal funds in the amount of \$60,000,000 are provided for the construction, maintenance or operation of community facilities in areas designated by the President as critical defense housing areas. In the case of assistance for hospital construction, these funds will be available only if funds are not available under the Hill-Burton Act. This legislation provides that maintenance and operation payments will not exceed the portion of the maintenance and operation expenses attributable to the national defense activities in the area. The act also specifies that the function, powers and duties with respect to health, refuse disposal, sewage treatment, and water purification shall be exercised by and vested in the Surgeon General of the Public Health Service. This latter provision properly relates the health activities to those existing in regard to the Hill-Burton program. The success of this legislation depends entirely upon local, State, and Federal cooperation and coordination of hospital and health services—the kind of

cooperation which has proven so eminently effective to date.

There is another advantage which has accrued to the Nation from the construction of the Hill-Burton hospitals in the small towns and cities of the country. Over 600 new general hospitals have been approved for construction throughout the country. Three hundred and seventy-five of these will serve in communities which now do not have a single hospital bed. One hundred and fifteen more will replace hospitals which have beds in them classified by the respective State agencies as nonacceptable. These beds will be available to meet any catastrophe, great or small. Today atomic and bacteriological catastrophes are a concern of many of our more densely populated communities. Three-fifths of the new general hospital construction is located in communities of 5,000 or less, only 7 percent are in cities of more than 50,000 people. This to me points up the providential nature of the Hill-Burton program. There is a duality of purpose noted. I pose the question, "Cannot these Hill-Burton hospitals be regarded as evacuation centers for our potential target areas?" I hope we will never be called upon to put this statement to a test, but we may be. Although our original purpose was to meet the needs of the highest priority areas in the States, the emergency possibilities of the Hill-Burton hospitals cannot be overlooked.

Taxeena Calls Her Uncle Sam

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. SMITH of Kansas. Mr. Speaker, the people back home are becoming more and more conscious of the spending program of their Congress. They want it stopped.

I submit the following verse written by Ethel Durnal Posegate, of Plainville, Kans., as portraying a vivid picture of our present-day plight:

TAXEENA CALLS HER UNCLE SAM
(By Ethel Durnal Posegate)

Taxeena—

Uncle Sam, this is Taxeena.
My word! where have you been?
I've tried for years to call you but
They said you were not in.

Uncle Sam—

I've been right here, Taxeena.
I never leave at all.
But lately some employees have
Developed lots of gall.
They've shoved my desk back 'gainst the
wall—
Built a Mularkey screen.
I'm not consulted very much
And never, never seen.

Taxeena—

That's just what Mrs. Public said:
"We don't see Sam no more."
They've likely locked him in a room.
Filed bureau 'gainst his door."
We need you badly, Uncle Sam—
I'm growing 'way too fast,
I wish you'd help reduce me like
You did in years long past.
I've tried to pull those certain strings
That kept me tightly laced.
It simply makes no difference 'cause
It all just goes to waste.

Uncle Sam—

I've worried 'bout you Tax, my girl.
You are my favorite niece.
I feared without my sound advice
You'd rapidly increase,
But I've been handicapped my dear
Through all the years expanse
Since F. D. R., with taking ways
Who took my striped pants,
Then next he donned my long-tailed coat
And by and by—my vest.
I blame near lost my shirt, my dear
I had to fight my best
The fit was none too good, Tax, my girl.
But he put in a V.
And I'll be blest, he pulled the wool
And called it victory.

Taxeena—

O, that was awful Uncle Sam,
I, too, was made a dupe.
I gained because they stuffed me with
His alphabetic soup.

Uncle Sam—

I've known things were not going right,
I've heard 'em at t'ie till
But it's indecent to appear
In my scant dishabille
But Tax, my girl, I'm glad you called.
You tell folk I'm not licked.
An old goose grows more feathers
Each and every time he's picked
Your first reducing lesson is
To use your little voice
And order a reducing pill.
From your own voter's choice.
I have some good friends working who
Are watching for a chance
To see if they can find for me
My striped pair of pants.

Taxeena—

You give me courage, Uncle Sam,
I'd like to kiss your cheek.
Nobody loves me cause I'm now
A bloated circus freak.

Uncle Sam—

Tell John Q Public I said if
He'd write some letters, too,
Perhaps he'd find conditions changed
By nineteen fifty-two.
And if he finds a good, sound nag
Whose "spirits" don't run high,
To swap him in midocean and
To all I'd say "Good buy."

Hospital Dedicatory Address of Hon. J. William Fulbright, of Arkansas

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks, I am including the complete text of an address by Senator J. WILLIAM FULBRIGHT at the dedication of the new Crittenden Memorial Hospital at West Memphis, Ark., on Sunday, October 14, 1951:

COMPLETE TEXT OF SENATOR FULBRIGHT'S
HOSPITAL DEDICATORY ADDRESS SUNDAY—
PEOPLE OF CRITTENDEN COUNTY ARE CON-
GRATULATED; CITES HOSPITAL AS EXAMPLE OF
RACIAL TOLERANCE

It is pleasant to be in West Memphis today on this fine occasion. I want to thank you for letting me come and be with you for the dedication of your magnificent new Crittenden Memorial Hospital.

As I drove into your city today, I thought how particularly fitting that this hospital

the first to be built in our State under the provisions of the Hill-Burton Act, should be erected in West Memphis, which in less than 12 years has more than quadrupled in population. Surely this is indicative of the worth of its people.

You, who have watched this hospital grow day by day above these cotton fields, have the immeasurable satisfaction of knowing that the hospital is your hospital, the product of your planning, your energies and your devotion. It is the product of the splendid vision and untiring labors of Hugh Brinkley along with Harvey Adams, Henry Banks, Lawson Garner, Judge Oliver, Judge Johnson, J. W. Young, Bert Dickey, the late Alex Stirewalt, and your other hospital trustees and hospital officials. I, along with the citizens of Crittenden County and the State of Arkansas, congratulate each of you.

This hospital marks a new day of medical care for the people of West Memphis, Crittenden County, and this section of the Delta. It will give them the finest medical and surgical care. No resources of time and money, of architectural planning or materials have been spared to make this hospital the most modern, the best-equipped hospital of its kind.

Here are operating rooms, laboratories, obstetrical and pediatric rooms; departments for physical therapy, and emergency and clinical treatment. Here is the finest X-ray equipment for treating cancer and other diseases. The broad grounds of this hospital offer the convalescent the healing, strengthening benefits of light and air and sunshine in pleasant surroundings.

I think that one of the points of greatest significance about your hospital is that its facilities are available equally to both white and Negro citizens. There are 50 beds for white patients; there are 50 for Negro patients. Food and all accommodations are the same for everyone. The hospital's doctors will administer to all who need treatment, regardless of color. This policy, I think, is certainly in keeping with the one set recently by this city of West Memphis in providing for the educational needs of its colored population. It is a vigorous and healthy sign and one which points to the particular progressiveness of our State in this direction. You people of Crittenden County are attacking your problem by giving a three-story, brick and concrete example of racial tolerance for all the Nation to see. This is the real answer of the South to the misguided policies of the reformers of the North.

In building your hospital you confirm the wisdom of our hospital act, the wisdom of helping the people to do for themselves. You show that when the Government helps to meet the need for hospitals by providing assistance grants, the people, with their sense of local responsibility and local leadership are eager to meet the opportunity and build their own hospitals.

This hospital is built for the future. And even as its doors are opened, I urge you to draw again upon that fine cooperative spirit that brought it into being, to move on to the next vital step for securing its benefits to all the people, the step of integrating voluntary health insurance facilities with your hospital.

We are often reminded that too little thought and effort are being devoted to our health, our most vital personal and national resource. I imagine some of our Army doctors could tell us a great deal about the miracles of modern medicine in rescuing the lives of battle casualties and of the rate at which disease is weakening our manpower resources. They could tell us that the physical rejection rate today under selective service is higher than during World War II. Since Korea the equivalent of 17 infantry divisions have been rejected for physical defects. Think of it. Three hundred thou-

sand young men between the ages of 19 and 25, the flower of our defense manpower found physically unfit to serve. What better warning do we need before we move on all fronts to correct this appalling situation caused in such large measure by neglect of our Nation's health.

When I talk about health and what we must do for the health of our people, I like to speak of the six pillars of health—doctors, hospitals, preventive medicine, research, education, and the soil—each vital to everyone of us and to the Nation's well-being.

You have good doctors here in this section of the Mississippi Valley. This hospital will help to insure that you continue to have good doctors. But throughout the Nation there is a serious shortage of both hospital and medical personnel. We must train more doctors, dentists, nurses, and medical technicians. We must follow your example and build the hospitals we need to give all our people adequate hospital service.

The marvelous strides that we have made against typhoid fever, scarlet fever, diphtheria, malaria, smallpox, pellagra, and other such diseases is proof of what can be accomplished through our public health services in the field of preventive medicine. We must provide urgently needed help to the States, their counties, and cities in their never-ending struggle against disease—cancer, heart disease, tuberculosis, mental disease, infantile paralysis. We must help them in the advancement of such specialized programs as maternal and child care.

We must provide more intense and greater research to study the causes of disease and to bring forth new discoveries for prevention and cure. Surely a Nation that can produce the atomic bomb can find the cause and cure for cancer.

I wonder if you were surprised when I named the soil as one of the pillars of health. You and I know what happens to an automobile if we put the wrong kind of oil in it, or if we get grit in the gasoline. The same thing applies to the machinery of the human body. The right food that we put into our bodies makes for health and strength. The wrong food makes for weakness and sickness. The minerals and nutrients which feed and make up our bodies come to us from the plants and products of the soil. More and more doctors and scientists attribute diseases to differences of minerals in our soil.

Down in Deaf Smith County, Tex., they have no decay of the teeth because the minerals in the soil of that county prevent such decay. Missouri does not just happen to be a mule-raising section. It produces big, tough mules because of the phosphorus and other minerals in its soil. Cotton of this delta is of superior quality because of the composition of its soil.

And so the farmer in his farming practices and soil conservation, is working and contributing to your health and my health and the health of all of our people. That is why it is so important that we continue to help the farmer in his soil conservation. In helping him we are helping all.

Education is essential to health. Health and education go hand in hand. It is the educated person who knows best how to take care of himself and preserve his health. The more uneducated and illiterate people are, the more sickness and disease we find among them. We must make certain that America's children, tomorrow's citizens and defenders of our democracy, have the opportunity for the education that will equip them for responsibilities of citizenship and the building of lasting peace.

These are the six pillars of health. All must be strong if our people are to be strong and healthy and we are to have a strong America.

The great hope of all of us today is for peace. And our hope for building and keeping the peace lies in a strong America.

America must be strong in her Armed Forces, her armed might. She must be strong in her economy and strong in the united determination of her people to save and build the peace.

We know that during the last war the final victory of our fighting forces was made possible by production. American workers and American management produced more war materials than the rest of the world combined. American farmers pushed food and fiber production to record heights.

As we produced to win the war, we must produce today to defend our freedom and win the peace. As you increase the harvest of your acres here in the Arkansas delta, as you increase the production in your mills and factories, you can know that you are waging the fight for peace and freedom in the spirit of that great statesman, Woodrow Wilson, who gave us these words, the finest tribute ever said to a people:

"There is one thing that the American people always rise to and extend their hand to, and that is the truth of justice and of liberty and of peace. We have accepted that truth and we are going to be led by it, and it is going to lead us, and through us the world out into pastures of quietness and peace such as the world never dreamed of before."

This afternoon, as we dedicate your healthful hospital, we know that this is Sunday, the day of Him whom we call the Great Physician. In His name and in His spirit, let us dedicate this hospital to the heroic war dead of Crittenden County, Ark. With their sacrifice in mind, begin the work of healing your sick and binding up their wounds.

The World on Your Doorstep

EXTENSION OF REMARKS OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. REES of Kansas. Mr. Speaker, I am including in the RECORD today an important address delivered by Dr. Deane Malott, president of Cornell University, at the meeting of the American Bankers Association in Chicago last week.

Dr. Malott, prior to becoming president of Cornell University, was chancellor of the University of Kansas, where he made an outstanding record as a college administrator. He is one of the foremost educators in this country.

The address follows:

THE WORLD ON YOUR DOORSTEP

As the first back-sliding black sheep in a banking family of several generations, I am especially privileged today to address the American Bankers' Association, but I speak to you as to individuals, for assembled in this hall is a substantial part of the thinking leadership in the world of banking and finance. And never before in the history of the Nation has your leadership been so badly needed, your voices so necessary to avoid the dangers that lie ahead.

These are not times for traditional sedateness in the banking fraternity nor for mere pious analysis of the value of loan collateral. Storm signals are flying in the very financial structure of this Nation and the future of the world is literally on your doorstep.

By what means it arrived there is too long a story for this morning, but suffice it to

say that all of the dilemmas of our tormented day did not just happen. They have had their seeds deep in the furrows of history, nurtured by both indolence and aggression, by intelligence and stupidity, by selfishness and Utopian dreams, as well as by the statesmanlike efforts of countless men of good will throughout the world. All of these forces of power and of frustration have left their imprint on the crowded course of human events, and these same forces are carrying us hurriedly forward with dramatic suddenness, into an unpredictable future.

It has been 175 years since our founding fathers struggled with the American declaration of freedom, a small part of which reads:

"We hold these truths to be self-evident, that all men are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed."

It was the beginning (back there in 1776) of another epoch in man's long struggle for freedom. It was not new; other men had sought it from the beginnings of recorded history. Some had attained it and with their republican governments had built up rich civilizations which had risen to great heights of cultural and material well-being, and then withered again, stultified by the eventual emergence of arrogance in government and public clamor for the fulfillment of promises beyond the power of any government to give. History is strewn with the wreckage of nations who have gone down to ruin under the insidious belief that government can answer all of the problems of harried peoples.

In every case in history the weak link in the structure has been financial tinkering in nations living beyond their means. In some cases it has led to debasement of the currency and ruinous inflation, in some cases it has paved the way for tyrannical seizure of government powers, in still others it has wiped out the educated and cultured classes, and given way to barbarism and chaos. But in all recorded history, man's experience with successful democracy has been brief, sporadic, and beset with dangers.

I am convinced that the American way of life as we know it will not survive these turbulent days of revolutionary change, without the niggard and aggressive leadership of our bankers and financiers, leadership such as President Shelton so vigorously called for in his presidential address yesterday, and as so well exemplified by the resolution passed today. No banker would allow any customer to get into the position of our Federal Government, living extravagantly and wastefully beyond its means, fostering inflation, borrowing increasingly, and consuming with utter abandon the Nation's raw material resources, with little heed for tomorrow. While the danger point of Government debt is largely determined by the psychological temper of the people, should we not look to the bankers of America to be everlastingly and vociferously and aggressively pointing out the dangers and the consequences of unmitigated profligacy?

In this mad dance of the billions our public debt has increased 2 times since 1910, and is six times as much as it was in 1939. Interest alone on the public debt is now nearly six times the debt itself of 40 years ago. In the last 4 years our Federal Government has spent \$12,000,000,000 more than in all of the 150 years from 1789 to 1939. In only 3 years in the past 20 has the annual budget of the Government been balanced, and new additional civilian employees are being added to the payroll of the Federal Government at the rate of about 1 every 43 seconds, day and night, week in and

week out. Nearly one in every four people of the population are regularly receiving a check from the Federal Government for services, for relief, for pensions, or for participation in agricultural programs.

On the rolls of the great Federal bureaucracy is a growing army of Federal spenders. And the public gets only occasional glimpses of our fiscal operations, such as the discovery a few days ago that the Army and Air Force were planning for two radio and television entertainment programs at a total cost of \$688,000, and of course it has long been known that there is overlapping, and duplication, and chaotic administration in many a division of government.

You and I might well inquire if it is necessary to have 7,139 employees of the National Advisory Committee for Aeronautics, why there should be 35,928 employees of the Federal Security Commission, whether many of the 59,194 employees of the Department of Interior, for instance, could not be eliminated, why there is one employee in the Bureau of Indian Affairs for every six Indian families in America and whether the taxpayer is getting value received from 2,523 employees of the Office of the Housing Expediter. Do we need, and can we afford, as much government as is now being saddled upon us?

I hope you have taken time to read the Federal Budget, the greatest current publication in America today and to make known to your Congressional leaders your point of view on this vital matter.

The American people with alarming docility are becoming accustomed to regimentation. The farmers are willing to accept regimentation if it's their kind, businessmen cry for it, particularly under threats of depression; workmen seek it if it will make labor a scarce commodity.

The master planners who would bring us utopia under Government aegis fail to realize that the incentives of private enterprise do not and cannot pervade Government operations. The civil service cannot grade men in loyalty, vision, integrity, and teamwork; it leaves little to hope and ambition, but merely allays fear, in a milieu where ability and performance above average do not hasten progress, while performance below average is not a retarding influence.

Meanwhile the administration calls for ever higher and higher taxes to meet the costs of this fast-growing gargantuan. Concern is expressed everywhere that excess profits taxes will kill the sources of venture capital, that income taxes will destroy the wealth, and the incentives for wealth which lie at the foundations of our economy.

But hidden taxes, too—excises and sales taxes—take their toll, until today the tax bite on an automobile is nearly 50 percent of the cost; on a railroad ticket costing \$12.75 taxes claim \$2.25; on 14 cents worth of gasoline the average tax take is 11 cents; taxes eat up \$2 on every \$4 telephone call; and for every 10 cents spent for bread, one-half is the measure of the tax lag.

This is a throttling yoke which in times of huge and abnormal spending can be carried, but with serious recession the clamor for more Government programs of relief and aid will rise and with it the costs of Government will mount. Then, if the tax burden is too great, there follows a panicky swing to Government control and operation, and our freedom, slowly and insidiously and under the hue and cry of emergency, recedes as in the cases of many other great civilizations before us.

America needs strength—not only economic strength but the strength of an intelligent and vocal electorate under the leadership of those in the community who have the respect of the people, and the judgment to distinguish between immediate advantage and long-term stability.

Now of course all of the problems of the world on our doorstep are not financial nor can anyone hold the bankers entirely responsible for the accumulating dilemmas of this harried world.

Education has a large share of the responsibility for a literate citizenry, but education is neither self-propelled nor self-supporting, and depends upon the will of the people—a will which has not been overly firm or insistent, when we realize that today we are spending in this country \$2,500,000,000 for all public elementary and high school education, yet the Nation's tobacco bill is four billions a year, while nine billions flow annually into alcoholic beverages. Is it the measure of the relative importance of things that the citizens of this Nation believe the cocktail hour to be roughly four times as important as the twelve first and formative years in the preparation of America's greatest raw material, the young people who will so shortly inherit the trusteeship of our civilization?

No dinner-table conversation in the length and breadth of our land tonight would be complete without a discussion of the long shadow of communism with its sinister implications for our economic, political, and social future, as intriguers and plotters behind the iron curtain scheme and plan for our downfall. The gnome in the Kremlin may be waiting, counting on the unwillingness of us Americans to tighten our belts, or waiting with stubborn assurance for the day when free capitalism will have spent its substance, and its people become enslaved.

Yet it seems clear to me that the problem of America's responsibility is not alone that of meeting Russian communism. The outstanding problem in the world today is human misery. The down-trodden peoples in India, Asia, and Africa constitute the greatest threat to world stability, the greatest challenge to our leadership.

Our eyes must be focused upon Asia rather than so exclusively upon Europe. Every Russian could die this morning, every Communist be obliterated, and this problem of underprivileged millions would still remain. These people now know, as the world shrinks closer together, that their poverty and misery is not necessary, that there are ways of life that will bring a measure of security and dignity to those who seek the means. They know that capitalism has food and money, and medicines, and good houses, too. They also know that Russian communism has promised them some measure of order, some food for their stomachs, the opportunity for literacy. We of the democratic countries, however, have no program for them, except the unimplemented and vague promises of point 4, and they are suspicious of our wealth, of our imperialism, of our multiple-minded lack of a firm conviction in our relations with them.

As someone has pointed out, we too often fail to realize the condition of other peoples, somehow assuming they possess the same backgrounds, the same opportunities, the same general status which we enjoy ourselves.

Most people in Asia will go to bed hungry tonight. Most people in Asia can neither read nor write. Most people in Asia live in grinding poverty. Most people in Asia have never seen a doctor. Most people in Asia have never heard of democracy. Most people in Asia have never known civil liberties. Most people in Asia believe anything would be better than what they have, and they are determined to get it. Most people in Asia believe that the freedom of free enterprise means the freedom of Western colonial powers to exploit Asians. Most people in Asia distrust people with white skins. Most people in Asia are determined never again to be ruled by foreigners.

This is the back-drop against which American foreign policy must be formed and im-

plemented. Only the sentimental "do-gooder" would suggest that we solve the problem of these underprivileged races by gifts from the acknowledged rich resources of America. We have neither enough money, enough skilled technicians nor enough raw material resources to bring satisfaction to those untold millions of struggling people. We should go down to bankruptcy in any such attempt.

Nor can we bring economic, political, and social salvation to those great Asiatic centers of world destiny by encouraging private enterprise under our free-enterprise system. Private enterprise cannot enlist its stockholders' property to provide literacy, good roads, better health and hygiene, or stable governments to peoples on the far side of the world.

It cannot be done by imperialism because the shackles have been loosened and these people and their leaders have glimpsed a way of life in which they will no longer be subservient to foreign domination and to a foreign government's control.

Our aid and responsibility, therefore, is to help them through a cooperative, friendly program, whereby capitalistic nations and newly awakened peoples work together, in a program which has some chance of eventual success, in filling stomachs and in alleviating misery. This need be no sketchy and idealistic program, but can be implemented specifically by us. Assuredly it does not mean cramming our form of government and our way of life down the throats of other nations and other peoples. We can furnish them some scientific and technical help. We can cooperate to broaden the educational opportunities for their nationals in our institutions of higher learning; we can extend limited and emergency help to start their ventures, and we can firmly announce our belief in their rights to freedom and self-determination. This latter is the most important step of all, and lies in a field of negotiation where we have been most confused because of the pressures of European politics and their inevitable implications of Europe's age-old imperialism in Asia, as we inaugurate the vital task of arming Atlantic Pact nations.

These are some of the areas where we as citizens can extend a pervading influence as we undertake the task of leadership which we have inherited, inherited from our colonial forefathers who never dreamed as they sat around the village stores and argued for their individual freedom that in the short space of 175 years America would become a mighty empire, trustees, and the only hope of the future for a large part of the world's two and a half billion people.

If all of this sounds reactionary to you, I must challenge you in that point of view. We stand in human history as the greatest revolutionaries of all times, not just we Americans, but all of us in the free nations.

As a great newspaper editor has recently put it, "We in the Western World are the true standard bearers of a great and emancipating doctrine. But we have allowed ourselves to be thrust into the indefensible position of seeking to protect the status quo. Our tradition is not static, but is constantly dynamic. Our tradition strikes off chains. Totalitarianism would put them back on again."

These are stirring times. The issues are clearly before us. The bankers of this Nation have both a stake and—let me emphasize—a responsibility in America's future. Either we free Americans will stand firm and clear and courageous, or little by little we shall surrender those great freedoms for which our forefathers paid such a desperate price, and for which we now stand as trustees for those in the generations down the distant future.

Beyond Containment to Liberation

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 11, 1951

Mr. JUDD. Mr. Speaker, when a great nation gets into trouble it is usually because something has gone wrong with the thinking of its leaders. The entire philosophy of the New Deal, and its successor, the Fair Deal, has been that the end justifies the means. They acted upon the notion that social and economic inequalities require correction; that the Democratic Party is the one most dedicated to make progress in this field; that the Democratic Party could do this by remaining in office, and using the public Treasury for the purpose of buying votes and using patronage and permitting abuse of power in order to maintain itself in office. Its leaders acted upon the theory that since their objective was sound and popular with the majority of the people, the means and methods by which they sought to obtain their objective need not be moral, honest, just, legal, or constitutional. This is the way in which our constitutional safeguards have been seriously impaired. It has resulted in corruption of the morals of the people, the lessening of incentive, and all of the other attendant evils with which we are familiar. The moral issue thus raised is the outstanding issue in the country today. A revitalized Republican Party thoroughly grasping the problem, understanding it, and capable of making it clear to the voters, would not only get back into control, but having dedicated itself to reform on the basis of this important principle, would restore our Government to the path toward which our founding fathers dedicated it.

The most penetrating analysis I have seen of the confusion of so many of our modern mis-called liberals is the following article by Bogdan Raditsa from the September issue of *Commentary*. Raditsa is one of the leading political exiles from Eastern Europe in this country. He was chief of the foreign press department of the ministry of information in the Yugoslav coalition government formed by Tito and democratic exiles in 1945. He broke with Tito, as he had broken with the exile government of King Peter, when Tito moved toward tighter dictatorship rather than liberal democracy. He raises boldly the question of why America and its Western Allies seem to have no plan to free the exiles' homelands from the totalitarian yoke, or for using the democratic faith and political knowledge and capacities of the exiles in such a struggle of liberation.

The article follows:

BEYOND CONTAINMENT TO LIBERATION—A POLITICAL ÉMIGRÉ CHALLENGES OUR MACHIAVELLIAN LIBERALISM

(By Bogdan Raditsa)

(Bogdan Raditsa is one of the leading political exiles from Eastern Europe in this country. Mr. Raditsa was chief of the foreign

press department of the Ministry of Information in the Yugoslav coalition government formed by Tito and democratic exiles in 1945. He broke with Tito, as he had broken with the exile government of King Peter, when Tito moved toward tighter dictatorship rather than liberal democracy. He here raises boldly the question of why America and its western allies seem to have no plan to free the exiles' homelands from the totalitarian yoke, or for using the democratic faith and political knowledge and capacities of the exiles in such a struggle of liberation.)

Since the end of World War II, the United States—rather to its own surprise—has become the haven for a large flock of political refugees sweating out in America the eventual liberation of their homelands. A number of specialists among them are working with United States intelligence agencies or have accepted positions in private American business firms or schools. But most are receiving asylum and assistance through the National Committee for a Free Europe and its two main divisions, Radio Free Europe and the Mid-European Studies Center. These exiles have not suffered from any lack of hospitality. On the contrary, they have received employment, been set to work on interesting projects, and provided with the assistance of hundreds of graduates from America's finest universities. Yet, I trust I breach no canon of courtesy when I say frankly that many of them have found their American experience discouraging and depressing.

The political exile from Eastern Europe is genuinely fond of the Americans among whom fate has thrown him, to say nothing of being grateful to them. But it does not take long before their relationship becomes salted with irritation and dismay. The underlying cause of this antagonism between the exiles and so many of their American friends and colleagues is the difference with which they approach the problem of the fight against communism.

The exiles regard that fight as of primary importance to civilization, know that communism's appetite for expansion cannot be appeased or placated, and are convinced that the Soviet dictatorship in Russia and East Europe can be overthrown by the democratic forces within these countries, if these forces are properly encouraged and guided. Their American colleagues regard the struggle against communism as merely another trial in a life of good works, and—this is the crucial point—do not consider democracy and totalitarianism as necessarily irreconcilable. It does not take the exile long to discover that the staff of such an organization as the National Committee for a Free Europe—like many colleges, magazines, and government agencies—is permeated with what we might call, for want of a better term, Machiavellian liberalism.

The Machiavellian liberal, whose leading oracles are Walter Lippmann and Barbara Ward, is not necessarily a liberal in any classic sense of the term. In fact, he is as likely to emerge from a patrician as from a plebeian or petty-bourgeois environment, and is almost as often a Republican as he is a Democrat. His self-styled liberalism has one distinctive hallmark: an ambivalent attitude toward despots and despotism.

The Machiavellian liberal's fundamental premise is that the Bolshevik capture of power in Russia represents a historically progressive revolution in a backward area. Although, as an anti-Communist, he knows there is no democracy in the Soviet orbit; he is not sure that the peoples of East Europe could stomach too rich a diet of Western democracy. Communism east of Trieste and the Elbe represents a triumph of historical necessity. Industrialization and the liquidation of the large landowners are, in these benighted lands, moving along the line of civilized progress. To

the Machiavellian liberal, the exile is an unfortunate fellow who may be personally charming but who is much too emotional and prejudiced about communism, and in any case is a historical failure.

The Machiavellian liberal respects success above all else. He is deferential toward political power because this is something real, and we live in a world of Realpolitik—our liberal is above all a realist. He dislikes communism but is intrigued by Marshal Tito, in whom he believes he has found a secret weapon in the struggle with Stalin.

"Was wirklich ist, das ist vernünftig," Hegel once remarked: "Whatever is, is rational." That, whether he knows it or not, is this latter-day liberal's motto; he believes in historical inevitability and slips into Marxism and/or Leninism without even being aware of it. His famous objectivity consists of not being bothered about communism so long as it does not, at this time, move aggressively westward. No Communist sympathizer now or ever, as he is eternally assuring you (in most cases quite truthfully), he distrusts emotional (serious) anti-Communist writers and has a special contempt for the ex-Communist "renegade"; he hopes to do business with Stalin, and such people are apt to rock the boat. He agrees with George Kennan (Foreign Affairs, April 1951) that "all distinction between freedom and authority are relative," and that "90 percent of them are no business of ours when they affect a foreign country." And with Walter Lippmann, who has written: "I believe in the simple idea that the danger of war in Europe lies not in the ideology of communism nor in the internal system of the Soviet Union but in the fact that a powerful Soviet army, far more powerful than the occupation of Germany requires, is standing 500 miles west of the Soviet frontier." The European who encounters this Machiavellian liberal is bound to be reminded of the state of mind of Europe during the era of the Napoleonic wars. But he will note a difference: men like Talleyrand, Alexander I, and Metetrich were intelligent enough to realize that they could stop war only if they could check the revolution that was bringing war. These statesmen understood that, for Bonaparte, revolution was an instrument for the subjugation first of France, then of all Europe. At the Congress of Vienna they sought to get at the root of the Napoleonic menace by destroying the revolutionary movement that was its source and inspiration. They established peace in Europe on the basis of a positive political principle, monarchical legitimacy; the peace lasted, with minor interruptions, for a hundred years.

The statesmen of the West at Yalta, true Machiavellian liberals, lost the peace by refusing to recognize that communism was a revolutionary movement whose momentum inevitably would bring about a war—unless it were countered and replaced by a different political principle, in this case the principle of representative democracy. They could see no connection between totalitarian terror at home and totalitarian aggression abroad. Whatever unpleasantness the association with Stalin entailed was explained away—and still is, for that matter—with a sage reference to age-old Russian imperialism, or the innate affinity for despotism of the Asian mind.

The Machiavellian liberal mind is phillistine to the core: "The Communists are different from us"—but let's not think about it too strenuously. Hamilton Fish Armstrong says that we can meet the representatives of different social systems on a plane of complete equality and even understanding provided they will accept the same principle: live and let live. To the Kremlin's thesis that the Communists are the vanguard of a historically inevitable world revolution, he responds with the antithesis of relativism:

There is no absolute truth in human affairs, and the way to make progress is to debate the differences. George Kennan would discount ideology entirely maintaining that forms of government are forged mainly in the fire of practice, not in the vacuum of theory. Common to all such political analysis is the presupposition that it is really a waste of time—and a bore to boot—to regard communism as seriously as Marx, Lenin, Trotsky, and Stalin have regarded it. Amateur geopolitics is much easier, and it is more pleasant to consult a map than to study Lenin's *The State and Revolution*. But, alas, *The State and Revolution* happens to be essential to an understanding of Soviet policy; if we have not read it, we shall never know why Stalin refuses to behave like the sick old czars of yesteryear, or how Soviet expansionism differs in essence from age-old Russian imperialism.

The Machiavellian liberal whom the East European meets today can often be identified by his admiration for the diplomacy of the British Foreign Office, which—whether in China or in the Balkans—he regards as the highest form of political realism, and this despite the fact that America, from Jefferson to Lincoln to Wilson, has stood in constant opposition to Britain's balance-of-power policy. He would laugh at the claim that the ideals of the American Revolution were closer to the yearnings of the people in Soviet-dominated lands than the ideals of the Bolshevik coup d'état. He blithely ignores the fact that it was a democratic revolution that overthrew the czar, and that Wilson's Fourteen Points had a greater impact on the East European masses than the Bolsheviks' overthrow of Kerensky's constitutional republic. And he has no patience with what he regards as the old-hat idea that the great revolution still to be attained in East Europe is not communism, industrialization, or agrarian reform, but, plainly and simply, national independence, the right of the people freely to choose their own rulers in their own national states within a European community. That is what America has represented to the people of East Europe, and this is their own unfulfilled dream.

The Machiavellian liberal considers all this to be inadequate, unadvanced, and even irrelevant, and says—unconsciously echoing Leninist-Stalinist materialist determinism—that the political feelings of eastern peoples are determined by their standard of living. But the east European knows that if America is to have a policy that appeals to the peoples of the satellite countries, she must base it on one prime theorem: Lifting the standard of living comes after a government has been established that has the consent of the governed; without liberty there is neither security nor the fruits of modern industrial civilization. (Poland, Hungary, and Rumania, besides, are not Iran or Egypt; there was little mass exploitation or famine in the former countries, and the standard of living was astronomical by Soviet standards.) The greatest revolution to be achieved in East Europe is the establishment of a just national power, freely accepted by the people.

His tolerance of despots and despotisms makes the Machiavellian liberal skeptical of the possibility (or the desirability) of popular struggle by the peoples under Communist control against their Communist regimes. He overestimates the efficiency and strength of totalitarianism—both at home and abroad—so that he is inclined to take a dim view of the potentialities of shrewd psychological warfare against these regimes, and would prefer to restrict propaganda to the refuting of specific Communist lies about America while "holding out hope" to the enslaved peoples. At the same time, the Machiavellian liberal's overestimation of totalitarian capabilities makes him act as though the decisive battles of the worldwide civil war

between representative government and despotism must needs be fought—though he hopes never to have to fight them—in the democratic rather than the Communist-controlled countries. The roundabout colossal effort of perfecting the "Western way of life" (including the immediate raising of the living standards of the entire Asian and African continents) seems to him more relevant and urgent than the organization of the anti-Communist forces that actually exist within the Soviet orbit. Meanwhile, he hopes—by building up "areas of strength" in West Europe, South Asia, Africa, and the Americas—to arrive at some kind of negotiated "settlement" of the cold war.

At the same time, his passion for "objectivity" and cool Realpolitik makes the Machiavellian liberal rather wary of the increasing anti-Communist temper of the American people. The fires of anti-Communist passion among the American people would burn much, much higher—and would have a more enlightened glow—could the exiles reach them more directly and effectively. But apparently, the Machiavellian liberal would hate to see the American people eager to help the peoples now under totalitarian rule to liberate themselves by democratic revolutions, after the 1776 model. That would be anti-Communist hysteria: their preference is for "debating the differences" between tyranny and freedom. Consequently, the Machiavellian liberal would limit the exiles' efforts at arousing sympathy and indignation in America over the sufferings of the enslaved peoples of Eastern Europe.

All of these attitudes and predispositions of Machiavellian liberalism are translated directly into the activities of—to take a good rather than an easy example—the National Committee for a Free Europe. I am sure the overwhelming majority of the exiles would prefer above all to be stationed in the frontier cities of the cold war—Trieste, Vienna, Berlin, etc.—turning out underground literature, making subversive radio broadcasts, working as intimately as possible with the underground organizations in their home countries. Yet only a small proportion of them are able to engage in such work at present (the Czech exiles who operate Radio Free Europe's new radio station near Munich are happy exceptions), and what there is of it is done in the Empire State Building offices of Radio Free Europe under the close supervision of Americans. On the whole, the exile is kept busy at minor works and studies and is enjoined to be careful, scholarly, and above all "objective"; generally, these works are never published. As a result of these discretionary limits politely imposed on the exiles, only the cases of the Catholic Cardinal Mindszenty, the Americans Vogeler and Oatis, and the Titoist Rajk have been really dramatized for the American people. The selection of these three symbols is in itself interesting. The plain fact is that the fate of the many democratic leaders (including Socialists, trade-unionists, and liberal intellectuals) killed or imprisoned in East Europe has been, in effect, played down.

At the same time, this velvet curtain of silence prevents the exile from meeting his authentic American counterparts—labor leaders, farm leaders, educators, journalists, Congressmen. Instead, he is invited to monthly teas where he meets solemn old ladies from Park Avenue to discuss the weather and family affairs. The secretaries of the mid-European center of the National Committee for a Free Europe are very careful to see that the exiles attend; their names are inscribed on a list, and their presence or absence is checked in a special notebook.

Seeing little of the real America in his isolated state, kept busy at scholarly studies that are rarely published and often become the center's property, the exile is seldom cheered by the encouragement of his col-

leagues. He tends to become gloomy and begins to doubt the authenticity of the American anti-Communist struggle with which he has associated himself. He wonders, at odd moments, what happened to the country that gave encouragement and support—as well as refuge—to such men as Kossuth and Masaryk. He hopes that the Stalinist dictatorship will be overthrown, but thinks privately that it will have to be, not because of, but despite, American leadership. In office suites in Manhattan and Washington, surrounded by Machiavellian liberal diplomats, assistant professors, and career bureaucrats, he finds it hard to understand the moral revolutionary force which America and her people have exerted on the world for a century and a half. He is pessimistic about the possibilities of a forthright ideological offensive, based on the traditional American faith in democratic revolutions, to weaken, and ultimately destroy, totalitarianism.

What can be done? How can the European exile better contribute to the common anti-Communist struggle? How can his stay in America be made profitable both for the American people and for the suffering people of his own country? There are, it seems to me, four lines of action which should be explored:

(A 1) Withdraw United States recognition of all Communist governments

(1) There ought to be a broadening and intensification of active political work directed at each exile's home country. In addition to making the greatest possible contribution to the fight against communism, this kind of work would also prevent the exile from becoming demoralized by the infectious ease of American life. It would transform his status psychologically from a "stipendist" to a resistance leader. Therefore, I believe the facilities of Radio Free Europe should be expanded as much as possible, both to increase its radius in the Communist world and to improve its programs. But radio is not the only form of political struggle. The exiles should be given the means to prepare and arrange for the distribution of leaflets, pamphlets, booklets, and underground literature of every type. Such work is being done on a major scale by Americans and Germans in West Berlin, and, as a result, both East Germans and the Soviet forces stationed among them are the least reliable of Stalin's subjects.

(2) Exiles in America should be exposed to every possible facet of the American democracy, and not through conducted "quickie" tours either. The East European Socialist should be placed in contact with American labor leaders, should be encouraged to observe the functioning of American unions in Pittsburgh, Detroit, Chicago, Toledo, and other great industrial centers. The exile peasant leader should spend most of his time in the Midwest farm belts, studying the varied forms of American agricultural life. The intellectual should be encouraged to tour American universities, and so on. All of these exiles should be permitted to learn at first hand what makes democracy work in America, what it means to Americans. The exile will then have the chance to learn that political power in America is rarely reserved for the few, but is essentially an open door to all. He should study the operation of sectional, industrial, labor, agricultural, and cultural pressures, and how all of these must be harmoniously reconciled in a national policy capable of being defended before the electorate. These are things the American takes for granted, but they furnish an inspiring lesson of which the exile is still only dimly aware.

(3) Means should also be devised to give the entire American people the benefit of the exiles' knowledge and experience. The Free Europe organization should encourage and arrange lecture tours and personal appearances; it should help the exiles establish

contact with editors, publishers, and working journalists, with business, labor, and other civic groups. Furthermore, it should drastically revise its present emphasis on lengthy, scholarly, and private publications written in East European languages, and concentrate instead on short popular publications in English, intended for wide distribution. At the present time, many of the popular books which deal with East Europe are full of ignorant misstatements, and quite a few of them are written from a neo-Communist viewpoint. A series of monthly or semi-monthly monographs should be started similar in style to the Foreign Policy Association bulletins, to provide background information on and expert evaluation of contemporary events.

(4) Finally, and most important, the exile must be provided with American colleagues who have the same seasoned understanding of communism that he has. All of the above recommendations, which seem so simple and logical, have not been translated into action primarily because of this lack of understanding on the part of so many in the American leadership. The exile is disheartened, not because effective potential leadership does not exist in America, but because it is kept on the sidelines. Anyone with a slight knowledge of American intellectual life will recognize that the American writers, thinkers, historians, and journalists who have the most thorough knowledge and understanding of communism and its methods, and the deepest commitment to the struggle against totalitarianism, are pretty much excluded from America's official, semiofficial, and private anti-Communist activities. Regardless of their political differences (there are, among them, conservatives, liberals, and socialists), they have emerged from the experience of the past decades with a sophisticated expertness concerning the true nature of the Communist threat. They are rarely rattled by Communist tactical shifts, and really, should it be held against them that they are supremely concerned with the fate of the peoples under totalitarian rule? Would the democratic cause not have fared better if we had had the benefit of their solid knowledge and deep-rooted concern in handling the Korean question instead of having to depend on the ignorance, realism, and cleverness of the Machiavellian liberals?

In Europe, the last three decades have shown that you cannot destroy an ideological enemy without being yourself ideologically prepared. Thousands of people have endured misery, destruction, and dictatorship because what should have been ideological wars—against nazism and fascism, against communism—have been conducted by diplomats and bureaucrats in conventional terms. Both in the League of Nations and in the United Nations, the diplomats have refused to fight ideas with ideas, and have contented themselves with pulling undercover diplomatic strings while the world burned. Let us remind ourselves again that Talleyrand showed himself a great diplomat because he worked in the service of a Europe united on a political principle; the French and British career diplomats of the 1930's proved themselves ineffective because they did not seriously believe in the principles on which their own democracies were founded. With "live and let live" as their motto, they tried to make deals with dictators, lost themselves in efforts to discover "practical" distinctions among Nazi, Communist, and Fascist totalitarians, and eventually placed their false hopes in the strength of French divisions whose morale has already been undermined. The diplomats and bureaucrats of our times, uninterested in ideas and concerned only with "expediency" and Realpolitik, follow ever shifting policies (flirting with Tito, or Franco, or the hopelessly decadent feudal regimes of the Arab world) which, in the last analysis, rest on faith in sheer military force

in the event of the showdown which these shifting policies bring ever closer. Their most potent weapon—democratic idealism—is left to rust in the attic.

The work of an architect cannot be done by a mason. American money invested in anti-Communist activities can only bring results if the Americans who lead the struggle understand it. ("By the same token, even the most effective independent anti-Communist enterprises can do little if they are hampered by an inconclusive official United States policy"—an informed American who read this manuscript commented to me.) If official, semiofficial, and private American groups are interested in a serious crusade for freedom all over the globe, the political exile from east Europe will wholeheartedly become part of that crusade. He will no longer consider himself an orphan, but rather an integral member of a true international democracy, passionately dedicated to the universal establishment of liberty. But America must not wait longer to summon its militant democrats of experience and understanding to lead a world effort of the oppressed peoples against totalitarian reaction; otherwise the victims of communism will not be able to rid themselves of it without world carnage.

Texans Want To Get Out of the United Nations—Pass Resolution for Complete Withdrawal

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WOOD of Idaho. Mr. Speaker, since the introduction of my bill H. R. 5030 to rescind and revoke membership of the United States in the United Nations and the specialized agencies thereof, I have received hundreds of letters from individuals endorsing my bill, and many organizations are being set up in various parts of the United States to work diligently for its passage.

Among these is the American Heritage Protective Committee of San Antonio, Tex., which at a public meeting on October 3, 1951, unanimously passed the appended resolution. Other organizations like the United States Flag Committee of New York State are working diligently in support of H. R. 5080.

The many letters I am receiving convince me that the American people are awake to the dangers of such entangling alliances, and far ahead of Washington in their thinking, as we Members of Congress will soon find out when we return to our home districts.

SICKENED BY SLAUGHTER IN KOREA

The American people are sickened by the senseless slaughter in Korea; shocked by exposures of corruption in government; and outraged by the half-truths, double talk, and lying propaganda disseminated by the administration at the expense of the taxpayers.

But what disturbs the American people most is the terrifying realization that the pseudo economists of the New Deal-Fair Deal have made such a mess out of our domestic economy that they must

promote war and war production to keep our economy going.

WHAT A GHASTLY PARADOX!

While American mothers fervently pray for peace the administration feverishly prepares for all-out war and sets the stage for a European debacle that will make the Korean war look puny by comparison.

The beating of the war drums, the barkings of the dogs of war, the over-exploitation of the atom bomb, and the exaggeration of Russia's war potential have so distracted our attention and unhinged our reason that we seem totally oblivious of the fact that we are being rushed headlong into a situation worse than war—total economic collapse. That will mean unbridled anarchy throughout the world, the breakdown of civilization, and a throw-back to the Dark Ages.

This situation is the more tragic because so absolutely unnecessary, and could be corrected in 90 days without cost to the American taxpayers, without economic disturbances of any kind, and without sacrificing the life of a single American boy in foreign wars, merely by carrying out a legislative mandate that has been on our statute books for more than 50 years.

The Texas resolution follows:

RESOLUTION UNANIMOUSLY ADOPTED AT A MEETING OF THE AMERICAN HERITAGE PROTECTIVE COMMITTEE IN SAN ANTONIO, TEX., OCTOBER 3, 1951

The American Heritage Protective Committee desires to submit to the membership and visitors at this meeting (October 3, 1951) an opportunity to endorse H. R. 5080, a bill introduced in Congress by the Honorable JOHN T. WOOD. This bill calls for the complete withdrawal of the United States from its membership in the United Nations.

We believe that continued membership of the United States in the United Nations Organization will ultimately result in the destruction of our Republic as a sovereign Nation, and urge the support of H. R. 5080 for the following reasons:

1. Because membership in the United Nations Organization has the binding force of a treaty, and in cases of conflict of our domestic law with the United Nations Charter, the latter will supersede our own domestic law, thus rendering our Constitution a meaningless document.

2. Membership in the United Nations has a direct tendency to destroy free enterprise, our American way of life, and to act as a restraint on our inherent rights as a sovereign of our own country.

3. Membership in the United Nations strikes at the very source of the inalienable rights of the American people, namely, the right of freedom of speech, of press, of assembly, and the most cherished of all our rights—the right to worship God according to the conscience of the individual.

4. Membership of the United States in the United Nations is a wholly unwarranted and unnecessary burden on the taxpayers of our Republic, because the American people are defraying the major portion of the expenses of the United Nations where foreign and decadent European ideologies are brought to force on the American by a mandate of the United Nations.

5. Because the United Nations is composed almost entirely of men and women who advocate and think in terms of political and economic theories diametrically opposed to our American heritage of freedom.

6. Because the United Nations, in its cumbersome and negative policies, is causing an

international confusion among nations, and instead of promoting peace, is actually promoting the very conditions which breed wars among men, and needlessly and brutally prolong those wars which are already in process.

7. Because the leadership of the United Nations is, of record, Socialist-Communist, which has resulted in the subordination of the wishes of the American people and the continuing and seemingly endless prolonging of the Korean tragedy.

Resolved, That a copy of this resolution be furnished to every Member of the United States Senate.

The Borg-Warner Strike

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, I am very much interested in seeing whether President Truman backs up the Defense Department, his Defense Mobilizer, Mr. Charles E. Wilson, and the Wage Stabilization Board, or whether he backs down to his labor-leader supporter, President Walter Reuther of the CIO-United Auto Workers.

I refer to Mr. Reuther's defiance of a Wage Stabilization Board request in connection with the 9-day-old Borg-Warner Corp. strike.

My interest in the matter arises from the fact that 1 of the 10 plants of the corporation—the Ingersoll Products Division—is located in Kalamazoo, Mich., in the Third Michigan Congressional District.

In addition, I have received letters from workers at the Kalamazoo plant who have been ordered out on strike against their wishes, asking that I do something about it. Of course, there is little that I can do as a Member of Congress, but these letters very naturally have increased my interest in seeing that the right thing is done in the matter.

The show-down confronting the President is in connection with the certification of this labor dispute to WSB, on grounds of serious interference with military production. This certification was granted by the President on urgent representations made by Defense Mobilizer Wilson and the Defense Department. The CIO-UAW president has refused a WSB request for a recess of the strike pending its investigation and hearings. Mr. Reuther has also demanded that the President withdraw the certification.

The alleged basis of Mr. Reuther's defiance is the claim that only 15 percent of the corporation's output of automotive parts goes into military vehicles. The strike itself is the result of union efforts to secure a company-wide labor contract replacing the present plant-by-plant contracts.

I am not disposed to comment on the strike issue beyond the single observation that this issue might very well be one for settlement under NLRB processes and by methods which would not

involve loss of either production or earnings by the employees.

I am very much interested, however, in finding out whether the President will stand back of his subordinates in the executive department whose only interest is uninterrupted war production—whether that production happens to represent 15 percent or 100 percent of a given plant's output—or whether Mr. Truman will capitulate to Mr. Reuther.

I am interested in finding out whether the President will continue to accept the reports of responsible subordinates—the Defense Department and the Defense Mobilizer—or whether he will decide, under pressure, to accept the say-so of the UAW president.

I am well aware that Mr. Reuther is reported as saying that where it can be shown that defense work is actually involved, the union will sit down with Government officials and work out a way to resume production. But that raises the question of just what sort of showing Mr. Reuther requires, since he has refused to accept the official representations to that very effect as given by the Defense Department and Mr. Wilson, and has defied the action of the President which was based on those representations. Is Mr. Reuther trying to "out show me," the gentleman from the "show me" State?

The position taken by Mr. Reuther in this dispute means that while he is being shown, to his satisfaction, that defense work is actually involved in the Borg-Warner strike, more time and more war production is being lost, along with more employees' wages.

Crime Probe in Reading and Berks County, Pa.

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. RHODES. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a statement on the crime probe in my district.

Mr. Speaker, I want to tell the Congress about the confused situation in my district of Reading and Berks County, Pa., since a Senate committee made an investigation there on organized crime. I am sorry to say that we are further away from a solution of the crime problem than before the probe started.

I regret this, Mr. Speaker, because I am aware of the evil influence of the crime syndicates. Every good citizen wants to wipe out this immoral and corrupting force in our community.

When I first learned that a crime investigation was to be conducted in Reading I shared the views of many good citizens that it would be a splendid opportunity to clean up some of the evil which was apparent to every interested person.

But discouragement followed, Mr. Speaker, when it became evident that the

probers were being influenced by a small group of local people who were using it, not to eliminate crime syndicates, but to promote the political ambitions of a group who were far more interested in advancing their own selfish interests, and in destroying the social gains of the average citizen, than they were in wiping out the rackets.

The net result of the probe was not good. Nothing effective was done that will put the rackets out of business. On the credit side, three persons were indicted on a contempt charge who are suspected of interstate crime operations. But that will change nothing so far as local operations are concerned.

Early demands for a full and complete probe which were made by a citizens committee proved to be phony. This hand-picked citizens committee suddenly lost interest in a complete probe when I offered my help in having the probers go all the way in an effort to get the full truth and all the facts.

The suggestion that offered something effective and concrete in fighting the rackets got no consideration whatever by the so-called citizens committee. The local press monopoly which gave lip service for a complete probe also soft-peddled and even ridiculed this suggestion and made an attack on its author.

The suggestion was for the establishment of a representative citizens committee to advise public officials. It was in line with the recommendation in the third interim report of the Kefauver committee which proposed that—

A local crime commission charged with the duty of observing and reporting on local crime conditions would be helpful in every large community.

The selection by such organizations as farm, labor, business and religious of their own representatives is an effective approach. A front organization or a hand-picked committee is neither fair, honest or effective in finding a solution for the crime problem.

I was discouraged, Mr. Speaker, when there was no interest shown by the so-called citizens committee in a State crime-probe bill which was introduced in the Pennsylvania Senate by Frank W. Ruth. Senator Ruth is a clergyman of the highest moral character and integrity, and he introduced his crime-probe bill when there were strong demands for a full and complete probe which then seemed unlikely.

I soon learned that the citizens committee did not really want a complete probe. They wanted it to stop before it reached too high in Republican State politics and to heads of that party in their own district. This committee, it has been revealed, is financed by certain wealthy and powerful interests which have always been big contributors to the Republican Party. These interests are influential in State politics and contribute handsomely to GOP State campaigns. If it was the desire of this group, which pulls the strings for the citizens committee, it could wipe out crime syndicates and rackets in Berks County at the wink of an eye.

I am not surprised at the activity of this group and their desperate attempt

to seize political power by setting up a smoke screen and masking as crusaders for good government. But, Mr. Speaker, I am disturbed because of some of my own experiences and some of the discoveries I made while the crime investigation was going on in my district.

My first incination that something was terribly wrong came on reports of the activities of the man who headed the Reading probe, Mr. R. P. S. McDonnell of the Senate staff. His performances were more like those of a Nazi storm trooper. But something seemed even more serious. The fellow appeared to be under the influence of the so-called citizens committee and spent a lot of time with the editor of one of the monopoly newspapers. I began to wonder who was really running the probe and deciding who was to be tainted with subpoenas, and who was to be spared.

I contacted the office of the Senate staff and reported what I learned. I asked that there be a full and complete probe. Several weeks later the hearing on the Reading probe was conducted in Washington. It was there that I first met Mr. R. P. S. McDonnell, assistant chief counsel of the staff, who headed the Reading probe. I noticed that he was greatly disturbed by my presence. He became very nervous when I told him I expected to volunteer as a witness. Seeing that I was serious he threatened to bring suit against me if I mentioned his name. I gave him absolutely no reason to suspect that I was thinking of him. When he saw his threats did not frighten me he became friendly and began to blame others for some of the things that happened which he suspected I was aware of. I felt sorry for the man because I thought then that he permitted himself to be unduly influenced by others. He begged me to keep his name out of any statement I would make because it would ruin him and his law business.

I noticed that others were disturbed by my presence at the hearing. Downey Rice, associate counsel, became angry after I questioned him on the manner in which he let down on questioning when he had an opportunity to bring out some important information if the witness dared to talk. I lost faith, completely, in the probe.

I notified the probe chairman that I would like to appear before his committee and that I would like to put something into the record. I was called to the House floor for a vote on an important bill, but on my return the hearing was ended.

In the presence of a group in the Senate Office Building I expressed my feeling on the matter of not being able to testify.

A Reading Eagle reporter asked if I wished to make a statement to the press and I immediately responded that I certainly would. On his request I held the story until the following day for publication in the Eagle.

Next day I gave the story to the reporter. About a half-hour later I got a threatening call from McDonnell. He insisted that I withhold the statement from the press. He said that I would

make some important Senators sore if I released the report. When he saw I was persistent and not frightened he again started to talk. He told me to withhold his name and he would have something important to tell me. He invited me to go with him for a cup of coffee. He called my office several times that day and invited me to have dinner with him at the Army and Navy Club that night. I accepted his invitation, but after talking with some of my colleagues in Congress I came to the conclusion that I had better stay away.

In his talk with me that day, McDonnell proposed that he meet with Wilson Austin and I. Why did he so abruptly bring in Austin's name I wondered. I felt that it was his guilty conscience. I felt more sure when he began to tell me how subpoenas were issued in the probe. He said plans were discussed to subpoena Mitchell, a Republican candidate. That would have left only one mayoralty candidate untainted by a subpoena. But the plan fell through, he said.

I got the biggest surprise when I learned that the Reading Eagle did not carry a word of my statement on the probe. I said it was a half probe, and like a half-truth it leaves doubt and suspicion. But the story was suppressed.

I got another surprise on my return to Reading when Mr. Austin informed me that he had a long-distance call from McDonnell. McDonnell asked Austin how well he knew me and whether he could talk to me and ask me to keep quiet.

This experience naturally increased my suspicion about the whole matter. I recalled the strange things that happened when the crime committee first opened its Reading office. McDonnell used voluntary women secretaries recruited from the Junior League. Accountants were selected with ties with the Wyomissing Industries. Background information was given McDonnell by leaders of the Chamber of Commerce. This entire group was made up of people who have long been actively associated with the Republican Party and were bitter opponents of the liberal program of the Democratic Party. For years the newspaper editor who had McDonnell's ear was using his paper to discredit the Democratic Party and to create internal friction between party leaders and public officials.

In the Reading Times of last June 29, this statement appeared:

The Reading Chamber of Commerce offered its services to the O'Connor committee investigators as soon as they appeared in Reading. The probers, under R. P. S. McDonnell, accepted the aid of members of the Chamber of Commerce in an effort to find interstate offenders the probers sought to determine.

But, Mr. Speaker, the people who once advised McDonnell and who so strongly influenced his action and the course of the probe are now trying to disassociate themselves from him. The reason may be found in the fact that McDonnell was recently arrested in Washington on a threat charge by a telephone operator. He is now being held for a mental test. According to a Washington newspaper report McDonnell was a mental hospital

patient previously and was released shortly before he took charge of the Reading crime probe.

I have no desire to denounce a man if he is mentally ill. But can there be any wonder why there is so much doubt in my district about this probe?

The people of my district are a good people. They are of strong and sturdy character. They are mostly industrial workers and small farmers and little-business men. The overwhelming majority of them want to see racketeering and corruption wiped out because they are the major victims of such evil. But they will not be victims of a gigantic fraud to deceive them.

There is much more that can be said about this probe. I made previous reports to the Congress on July 6 and 10 and submitted them to the people of my district. I include herewith a report I made on the newspaper suppression of my statement which was broadcast over station WHUM on July 17 last.

TWO EVIL MONSTERS EXPOSED THE CRIME DRAGON AND THE NEWS MONOPOLY DRAGON

Mr. Speaker, in my district there was a crime probe and hearing conducted by the Senate Crime Investigating Committee. The newspaper monopoly there, masking as a champion of clean government, made a strong plea for the probe and hearing.

After the hearing was conducted, I issued a statement but it was suppressed by the news monopoly. I am accustomed to press black-outs but I never expected such a brazen insult to the intelligence of the citizens of Berks County.

People have the right to know what their Congressman is doing in Washington, especially on a matter of such great interest to the citizens of our community.

A policy of news suppression, silence treatments, distorted and colored news and deceptive headlines is dishonest and dangerous because it leads us down the road to totalitarianism and disaster.

Yesterday I made a radio address over station WHUM on this matter, and I am putting it in the Record. It should be of interest to other Members of Congress. What is happening in my district may be a pattern of what is happening in other parts of the Nation.

"Today, ladies and gentlemen, I will confine my remarks to the recent crime probe and matters pertaining to the probe. I will also speak out to Mr. Herbert Kohler, editor of the Reading Times.

"In the recent Reading crime probe and hearings, I saw a determined effort to gain political advantage by a group which has always opposed liberal legislation and policies which would promote the well-being and happiness of the people. I saw a newspaper monopoly withhold news about the probe.

"Dishonest editors, armed with poison pens, devoid of principle and armed with the might of a monopolized press, unfortunately have a strong influence on public opinion.

"A newspaper has the means for readily reaching and influencing the public. It has the power to suppress the voices and opinions of all with whom they disagree or to give all the news and views. It has the power to use the news columns to play up certain groups advocating sales taxes and to black-out other groups and statements favoring liberal measures or it can be fair by treating all groups alike.

"The press has the power to build up public officials who serve the selfish interests of the monopoly. It can smear and try to crucify those it cannot control. That is a corrupting influence which breeds confusion, suspicion, disunity, and which lowers the ethical and moral standards of a community.

"A newspaper, with an honest desire to wipe out organized rackets in a community, could be a more powerful force for good than all the probes and all the law-enforcement agencies combined. But dishonest newspapers have never made an honest attempt in that direction.

"Like the gangland chiefs, they too have a desire to control public officials. They, too, have selfish interests to promote, interests which are usually in conflict with the public welfare.

"The gangland racketeers want permission for law evasion. The respectable gentlemen of an unfair press are more clever. They want to control the people who make the laws and those who administer them.

"We were told in a Reading Eagle editorial that the dragon is not yet dead, meaning the crime dragon. It wants you to support good candidates, meaning their candidates. I say there are two dragons in our midst. If these dragons put on a fake performance of fighting each other, some of us might lose sight of the real stakes involved in this fight, and of the real issues which the smoke screen is expected to hide.

"If we are fooled by this show it will be a costly performance for the average citizen, and especially for the most needy among us. Neither of these mighty dragons care about the things that mean a decent livelihood for the people. Neither cares about decent homes for the citizens. Neither of these dragons care about skyrocketing prices which rob our most needy people and the low- and middle-income families. Neither cares about our cherished freedoms. The monopolistic dragon wants free speech for itself, and only blows about it for others. It wants the power to bind and gag and club those who dare to challenge the monster's ruthless might and power.

"I despise the crime dragon and the underworld characters whose influence has always favored my Republican opponents each time I was a candidate for Congress. That is common talk everywhere in this community and something that Mr. R. P. S. McDonnell, of the Senate investigating committee staff, undoubtedly knows.

"I have spoken out against rackets, illegal and legal ones, which conflict with the public welfare. I have spoken out on the Reading crime probe, not only because I want crime syndicates wiped out but also because I saw the other dragon at work—the monopoly dragon—hoping to benefit by a well-worked-out plan to take over the city and county government while the people were watching the crime show and the so-called attack on the crime dragon. I saw the clever maneuvering of the monopoly dragon to smear and weaken its mortal foes.

"And now comes that great champion of the free press, the self-appointed authority on morality and clean government, Mr. Herbert Kohler, of the Reading Times. All the time when I was speaking out on the crime problem the news monopoly, of which he is a leading part, suppressed my statements. They wanted to silence me and now, in saintly fashion, Mr. Kohler demands that I speak out.

"How are Eagle or Times readers expected to know what I have said about this probe so far, Mr. Kohler? You are talking about things I said, but my statements were suppressed in the Eagle and Times.

"So where am I to speak out, Mr. Kohler? Is it in your paper or is it over this radio station, which you apparently must frequently tune in to get the news that your paper suppresses?

"Who do you think you're fooling, Mr. Kohler? Have you no respect for the readers of your newspapers? I assure you that they are much smarter than you think. Don't you think it's about time you gave an apology to your readers? Tell them, if you dare, why my statement on the crime probe was suppressed by the Eagle and chopped to

pieces and buried in the Times. Tell your readers that I offered to appear in a panel radio discussion with civic and religious leaders, and with you, too, Mr. Kohler, and your friend, the great investigator of the Senate staff, Mr. R. P. S. McDonnell.

"Again, I want to repeat what I said many times—that the representatives of the clergy was one group which I know were sincere in all they have done. To them I say, again, I am ready to fight the gangland syndicates and their corrupting influence. But I insist that we keep our eyes on both dragons.

"And now, Mr. Kohler, you ask me to speak up. You ignore my challenge to debate, you suppress my statements, you black-out news of my activities in Congress, you put a gag in my mouth, you try to silence me—then you pierce me with your poison pen, hit me with your monopolistic club, and demand that I speak out.

"I said plenty already, Mr. Kohler, but there is so much more to say. I will speak out some more. But are you going to continue to suppress my statements?

"How can I speak out on your news outlet? Fortunately for the good citizens of Berks County, you do not have complete control of all the sources of news and information.

"Yes, Mr. Kohler, there are a lot of things I would like to say. I would like to talk about Mr. R. P. S. McDonnell, whom I am told was in frequent touch with you during the probe here. I understand that McDonnell is no longer with the Senate staff. I never took the trouble to call to find out whether he quit or was fired. I don't care, but I do know that he should have been fired for his disgraceful and contemptible conduct here and the totalitarian practices he pursued. Perhaps the great investigator had poor advice and was a victim of some politicians who are far more interested in destroying the social gains of the people than they are about combating organized crime.

"It might be well if Mr. Kohler speaks out now and repeats his praise for the great investigator. Tell us, Mr. Kohler, what your real objective is. Try to explain to the people the reason for your policy of news suppression.

"Tell your readers, if you dare, why they are not permitted to know what their Congressman is doing in Washington. Tell them why my statement on the crime probe was suppressed by the Eagle-Times. I know the people are eager to know.

"You like to talk about red herrings, Mr. Kohler, but you are the champion when it comes to dragging them across the trail.

"Speak up, Mr. Kohler; let your readers know if you expect them to believe your editorials and have faith in what your crowd is doing.

"And if you dare to let me speak, if you dare to let me use the column you used to attack me or your front page, I will speak and I'll say plenty more that has not yet been told. But I don't want you to tell me what I must say. I want to speak without censorship just as you always do, and I expect the same space as you used to attack me.

"Will you let me talk, Mr. Kohler, or do you want to continue with your present act? It's a clever show, but a lot of people are getting wise."

The Greatest Subversive Plot in History

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. WOOD of Idaho. Mr. Speaker, I am herewith appending an article pub-

lished by the American Flag Committee, 876 Granite Street, Philadelphia, Pa., bearing the title "A Report to the American People on UNESCO."

How anyone who venerates and loves Old Glory as the symbol of the deathless march of the United States through the years to fulfill its destiny as a free and independent Republic can read this documented evidence of the greatest and most malignant plot in history against the future of this country, and its children's children, is more than I am able to comprehend.

Just how careless and unthinking can we be that we permit this band of spies and traitors to exist another day in this land we all love? Are there no limits to our callousness and neglect of palpable and evident treason stalking rampant through our land, warping the minds and imaginations of even our little children, to the lying propaganda and palpable untruths we allow to be fed to them through this monstrous poison?

It is my sincere hope that every parent of every child in America may be able to read the inroads that this infamous plot has already made in the educational system of America, and, reading, may feel impelled to do something about it, both locally and nationally; and particularly at the voting booth.

A REPORT TO THE AMERICAN PEOPLE ON UNESCO BY THE AMERICAN FLAG COMMITTEE

UNESCO, the United Nations Educational, Scientific, and Cultural Organization, is a subversive association. It is consciously furthering a campaign calculated to pervert the teaching profession in this country, and so destroy the worth and integrity of America's first bulwark of freedom—our tax-supported public schools.

Strong words? Yes, but not strong enough to alert you and the American people to a proper understanding of the UNESCO menace, which, unless met squarely and eradicated by the concerted action of parents, teachers and the general public, may shortly transform our schools into laboratories for the systematic destruction of all sense of national allegiance and loyalty in the minds and hearts of America's school children.

SCHEME TO PERVERT PUBLIC EDUCATION

UNESCO's scheme to pervert public education appears in a series of nine volumes, titled "Toward World Understanding," which presume to instruct kindergarten and elementary grade teachers in the fine art of preparing our youngsters for the day when their first loyalty will be to a world government, of which the United States will form but an administrative part. The booklets bear the following individual numbers and titles.

I. Some Suggestions on Teaching About the U N and Its Specialized Agencies.

II. The Education and Training of Teachers

III. A Selected Bibliography

IV. The U N. and World Citizenship.

V. In the Classroom With Children Under 13 Years of Age.

VI. The Influence of Home and Community on Children Under 13 Years of Age

VII. Some Suggestions on the Teaching of Geography.

VIII. A Teachers' Guide to the Declaration of Human Rights.

IX. Some Suggestions on the Teaching of World History.

COLUMBIA HOTBED OF BRITISH FABIANISM

These booklets are cheaply priced for maximum distribution and are printed by Columbia University Press, New York. This seems appropriate, considering the role Columbia's Teachers College has long played

in developing new methods for radicalizing and internationalizing public education in this country. The institution has become well-known as a hotbed of British Fabianism, that peculiar type of creeping socialism which sired the present Labor Government which has reduced England to a fourth-rate power and a star boarder in the European section of America's world charity ward.

TEACH DISLOYALTY TO CHILDREN

UNESCO's booklets read like the propaganda put out by United World Federalists, Inc., which has been denied tax exemption because of its specifically political nature. They begin by advancing the totally un-American doctrine that the prime function of public education in the United States must be that of capturing the minds of our children, at the earliest possible age, for the cause of political world government. The teacher is urged to devote every classroom minute to this end, and every subject taught must serve, or be revised in such a manner that it is made to serve, this same central objective.

The program is quite specific. The teacher is to begin by eliminating any and all words, phrases, descriptions, pictures, maps, classroom material or teaching methods of a sort causing his pupils to feel or express a particular love for, or loyalty to, the United States of America. Children exhibiting such prejudice as a result of prior home influence,—UNESCO calls it the outgrowth of the narrow family spirit—are to be dealt an abundant measure of counterpropaganda at the earliest possible age. Booklet V, on page 9, advises the teacher that "The kindergarten or infant school has a significant part to play in the child's education. Not only can it correct many of the errors of home training, but it can also prepare the child for membership, at about the age of seven, in a group of his own age and habits—the first of many such social identifications that he must achieve on his way to membership in the world society."

POISONING THE MINDS OF TEACHERS

Following this same line of attack upon patriotism and its parental encouragement, the same booklet, on pages 58-60, goes on to further poison the minds of our teachers by adding:

"As we have pointed out, it is frequently the family that infects the child with extreme nationalism. The school should therefore use the means described earlier to combat family attitudes that favor jingoism. Education for world-mindedness is not a problem that the school can solve within its own walls or with its own means. It is a political problem even more than an educational one, and the present position of teachers does not, in general, permit them to intervene in the field of politics with the requisite authority. We thought with cautious optimism that educators could also try to influence public opinion. Certain members of our group thought that educators might now besiege the authorities with material demands in the manner of a trade union. In our opinion it is essential that, on the one hand, a children's charter should secure for all children such education as is summarized in this report, which alone can create the atmosphere in which development of world-mindedness is conceivable, and that, on the other hand, a teacher's charter should secure for all members of the teaching profession the liberty to provide such an education by the means they decide upon, as well as the right of access to commissions and councils responsible for the organization of public education."

Aside from encouraging the public school teachers to make war upon the ideals of patriotic national devotion which UNESCO sees as infecting our children in the home, precisely what kind of instruction would the authors of these UNESCO booklets intro-

duce by influencing public opinion, besieging the authorities with material demands in the manner of a trade-union, and by pressing for a Children's Charter and a Teachers' Charter, which refer to instruments prepared in treaty form, making UNESCO principles the supreme law of the United States? Let's see

TEACHERS URGED TO SUPPRESS AMERICAN HISTORY

First of all, teachers are urged to suppress American history and American geography, which might enhance pro-American sentiments which UNESCO wishes to sterilize. Here is how booklet V, on page 11, treats the problem as it affects children aged 3 to 13 years:

"In our view, history and geography should be taught at this stage as universal history and geography. Of the two, only geography lends itself well to study during the years prescribed by the present survey. The study of history, on the other hand, raises problems of value which are better postponed until the pupil is freed from the nationalist prejudices which at present surround the teaching of history."

Translated into less abstruse phraseology, the teacher is instructed to purge American geography from the elementary school classroom, by divorcing it from its national element, and to completely ignore the teaching of history until the pupil enters high school, since this subject cannot be similarly internationalized, and so is too risky to advance until the youngsters' patriotic spirit has been thoroughly emasculated. Parents who take a bit of time to investigate may find (as we found in eastern Pennsylvania) that a number of elementary schools have already dropped American history as a standard, required subject.

LOGICAL TEACHING METHODS TO BE DISCARDED

Logical and orderly teaching methods are also to be discarded if found to obstruct UNESCO's program for de-Americanizing the minds and hearts of little children. Discussing the usual method of teaching geography, booklet V, page 11, continues:

"One method much in use now is to teach geography in a series of widening circles, beginning with local geography (i. e., the classroom, the school building and its surroundings, the village, the country) and proceeding to a study of the nation and the continent. Only when that routine has been accomplished is the child introduced to the rest of the world."

"This progress from the particular and the immediate to the general and the remote may be logical, but does it serve our purpose?"

The booklet goes on to conclude that it certainly does not, since it is found that this manner of presentation will lead pupils to the mistaken conclusion that what is nearest to them is the most important and vice versa. UNESCO-indoctrinated teachers must therefore reverse the procedure, upset the rule of logical sequence, and begin by teaching the 8-year old child about the distribution of land and water, of air and sea currents, hydrography, climate, occupations, etc. But, even before this, and certainly before the youngsters are given any kind of formal study of their own country, every opportunity should be taken to enlarge the child's imagination and encourage him in an interest in all that is remote and strange. This is accomplished by occupying the impressionable mind of the very young child with the games, occupations, tools, domestic animals, etc., of foreign lands. The purpose of this is not simply to teach our kindergarten and elementary pupils about alien peoples, but to cause them to identify themselves in their imagination with people different from themselves.

TRUTH IS TO BE SUPPRESSED

Truth, like orthodox and reasonable teaching methods, is to be suppressed wherever

and whenever it stands in the way of glorifying those things which are foreign above those which are particularly American. On page 14, booklet V, there appears the following advice:

"Certain delicate problems, however, will arise in these studies and explorations. Not everything in foreign ways of living can be presented to children in an attractive light. At this stage, though, the systematic examination of countries and manners can be postponed, and the teacher need seek only to insure that his children appreciate, through abundant and judicious examples, that foreign countries, too, possess things of interest and beauty, and that many of them resemble the beauty and interest of his own country. A child taught thus about the different countries of the world will gradually lose those habits of prejudice and contempt which are an impediment to world-mindedness."

And there you have the UNESCO instructions on geography and history. Suppress American studies in these fields; accentuate, by abundant and judicious examples, all that is especially worth while and attractive in foreign modes of living, but, as soon as the point of unfavorable reporting seems to be approaching, simply postpone further study, leaving the children with the false and truly prejudiced notion that the nations of the other continents are paragons of virtue, beauty and over-all perfection.

LIKE A PASSAGE FROM MARX COMMUNIST MANIFESTO

What else does UNESCO's teachers' guides recommend that our little ones be taught? For one thing (booklet V, p. 16), "the methods for putting the resources of the globe at the disposal of all people," which reads like a passage from Marx Communist Manifesto. Following the same line, page 51 of the same work proposes an international anthem for American classrooms (and tomorrow for all the inhabitants of the world). It is interesting to note that the booklet we are reviewing was prepared in 1949, and that a United Nations anthem was previewed by the U N in 1950, being presented to the public on October 1 of that year in California's giant Hollywood Bowl. The anthem describes how things will be when its flag [the spider-web banner of the U N—editor] waves over every land.

We have quoted extensively from booklet V, because it contains the most flagrant of UNESCO's anti-American propaganda, and develops it the most extensively. Now, in the space left us, let's quote from other volumes in the series.

OBJECTIVE: A ONE-WORLD GOVERNMENT

Booklet IV, on pages 13-14, sympathetically deals with the various methods for converting the United Nations into an actual world state. The original concept of the U N as an assembly of delegates representing free and sovereign governments is being challenged, teachers are informed, in an effort to break up the concentration of political power in the hands of national governments, especially the great-power governments, which includes the United States of America. There are two alternative proposals. The first, to popularly elect U N representatives, the second, to appoint representatives who will be organized specialists in limited fields. The latter proposal follows the Fascist ideology which developed the corporate state of Italy, under Benito Mussolini. UNESCO is not perturbed on this score, however, since "it would be a beginning of functional world government based on transnational rather than international cooperation."

CORRUPTING THE MORALS OF YOUR CHILDREN

Booklet VI contains a series of research suggestions which indicate an intention to stimulate ultimate classroom expeditions into the field of detailed sex education. Here are a few samples of the type of questions

which UNESCO, which is heavily subsidized by the tax dollars of many Americans who feel that sex training rests within the domain of the home or of the tenets of their own particular religious faith, propounds for our public-school teachers: "Are there devices . . . for limiting the family?" "What are supposed to be the typical feelings of pregnant women?" "Do parents undress before the child?" "What is he (the child) told about where babies come from?" A sense of propriety prohibits us from quoting the even less modest projects which appear with the above.

YOUR JOB AS A LOYAL AMERICAN

Space does not permit us to further examine the other booklets in the series, but this brief analysis should serve to alert the citizen to the menacing nature of UNESCO's activities. Once alerted, then, it is his job—your job as a loyal American—to take the next step. Contact your friends and neighbors, show them this Newsletter, ask them to join with you in forming a local committee to obtain further data and fight this danger. Order those nine booklets of UNESCO, and also the heavier paper-bound book titled "A Handbook for the Improvement of Textbooks and Teaching Materials," which suggested another UNESCO project (to eliminate Americanism from schoolroom reading material) which we may deal with in the very near future. Read this material for yourselves; then, as a committee, go into action.

Firstly, prepare your own report and submit it to your local school board. Introduce the matter before your parent-teacher association. Interview the teachers in your community and ask their assistance in obtaining action. Join with the American Flag Committee in demanding that your United States Senators introduce and support legislation withdrawing our Government from UNESCO membership and terminating its activities in this country. Many other ways will occur to you, in which you can help safeguard our American system of public education from infiltration and undermining by UNESCO's America last propagandists.

UNESCO MUST ASSUME RESPONSIBILITY

One further word remains to be added. Several of the booklets discussed bear a preface which states that the views expressed are those of their authors, and that they do not represent the official views of UNESCO. If this weak-kneed attempt to avoid responsibility is brought to your attention by a UNESCO apologist, tell him that one who administers poison to a Nation's youth is guilty of a crime, whether the prescription is official or other.

Address of Hon. J. Howard McGrath,
Attorney General of the United States

EXTENSION OF REMARKS OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. HART. Mr. Speaker, on Saturday evening, October 13, 1951, the first annual sports dinner of St. Peters College Alumni Association was held in the college gymnasium in Jersey City.

The gathering was addressed by Mr. Jack Lavelle, famous football scout; Very Rev. James Shanahan, S. J., president of St. Peters College; Hon. John V. Kenny, mayor of Jersey City; and Hon. J. Howard McGrath, Attorney Gen-

eral of the United States, who delivered the featured address. Mr. Richard I. Nevin was toastmaster.

The Attorney General spoke with his usual eloquence and intensity and completely captivated his large audience. The speech he delivered on that occasion is appended herewith:

Reverend Father Rooney, reverend clergy, distinguished guests, members and friends of the alumni of St. Peters College, it is a real pleasure and a distinct privilege for me to be with you this evening. I am always delighted to gather with graduates of an institution like yours. As an alumnus of Dominican Providence College, of Providence, I am cognizant of the common values you and I have received from institutions of learning affiliated with one of the great Christian churches. You and I have been taught and inculcated with those principles and phases of human knowledge which must be translated into action by mankind in order to dispel the elements of confusion, fear, and bewilderment which have gripped the world of today. We were imbued during our college days, and as alumni I hope, have retained, a love for God's moral laws, a profound reverence and realization of those age-old customs and solid principles of complete and wholesome living that from time immemorial have been the mainstay of a decent living in every age and generation. These are the moral doctrines which will serve to perpetuate our system of government as it has been preserved for us by our ancestors.

The American people, during the past 150 years, have created a magnificent temple—a government of law, under which all men, regardless of race, creed, or color, are free. This inspiring edifice of government, erected by countless hands, stands as a glorious cathedral of justice, a promise of hope for men and women throughout the world.

Today, in this year 1951, however, violent winds are whipping the international skies and attempting to destroy the shrine of freedom. Never, since the days of Washington and Jefferson, has the American way of life been so challenged. Communist thunderclouds have blotted out the sunshine of freedom in many areas of the world. Tyranny, for millions of people, has become the order of the day, liberty a mocking rebuke. The achievements of mankind, won through centuries of toil, despair, and sacrifice, are being tossed away like chaff in a roaring storm.

The Communists are determined by every possible means, legal or illegal, to reconstruct the world in their own image. They strive, not for limited objectives, but complete mastery. Every continent, nation, and people, every living human being, must be totally subjected. That is communism's dread danger—it distorts the very souls of men, ripping away free will, self-expression, and personal responsibility. Man is transformed into a mechanical dot, a breathing lump of matter on the vast cipher pad of Communist strategy. He is no longer a man but a beast, measured not for intelligence, honor, or integrity but by the number of acres he can plow or the pounds he can carry. The wheels of history are reversed, the struggle is no longer, as conceived by our forefathers for greater liberty, equality, and personal development, but for the self-aggrandizement of the few at the expense of the many. Communism is a tyranny, purposive, deliberate, and premeditated.

I speak with great feeling. I know as Attorney General what the Communist conspiracy at this very minute is endeavoring to accomplish. They are busy at work undermining your Government, plotting to destroy the liberties of every citizen, and feverishly trying in whatever way they can to aid the Soviet Union. America's defenses

must be manned, the task of every patriotic citizen is to keep our temple of free government sturdily anchored so the light of freedom may shine undiminished for all men who love and are willing to die for life, liberty, and the pursuit of happiness.

The Communists are here in the United States roughly 37,000 strong. These men and women are the handmaidens of revolution, the hands which if the opportunity arises will plant the hammer and sickle throughout the land. They are fanatical, well-trained, and highly disciplined. Each has his assignment as club organizer, courier, fund raiser, or party official. Others, not assigned full time to party work, are employed in industries, key transportation areas, or strategic locations. In numbers they are few. That is true. But through strategic placement, fanatical training, and unbounded energy they pose an immeasurable threat to the life of this Nation. They are the raw materials of revolution, the ingredients of sabotage, espionage, and sedition. They are the hard core of disloyalty.

The Communist Party, U. S. A., during recent months in particular, has steadily been dropping underground. Historic policy, of course, dictates that the Communist Party, though operating above ground, should always maintain an underground apparatus. Legal, open, above-ground methods, if possible, are utilized, but at the same time illegal, clandestine, and secretive plans are also pursued. They form two strands of the same thread. Today the Communist Party is virtually completely underground—the barest fraction of a periscope showing. The party may be likened to a submarine—it can cruise, if advisable, above water, with only the bottom of the hull under water. But, if necessary, with astonishing speed, it can crash dive, so only the periscope shows, or, in cases of extreme emergency, it can completely submerge.

Let's take a few examples to illustrate the clandestine character of the Communist Party. You will then see just how they are operating today.

Meetings are being held to a bare minimum, and never attended by over three members. Party business is transacted chiefly by courier, often by prearranged codes. Party records have been destroyed or hidden—sometimes so securely that party officials themselves can't even find them. In addition, the party carefully investigates its own membership, requiring new recruits to execute detailed personal questionnaires. This information has a twofold purpose: To determine, from his employment, past experience, and talents how he might best serve the interests of the party, and secondly, to discover any item which might indicate he wouldn't make a loyal member. And if there is even the slightest doubt about loyalty, out he goes. Rules of evidence? The right to a fair hearing? These do not apply in the Communist kangaroo courts. Expediency is the final test. To be innocent is not a mitigating factor. No, indeed. A study of the judicial processes of the Communist Party, if we can even use the term "judicial processes," would be highly enlightening to any person who still believes that communism represents an advanced form of liberalism.

Your Government has been alert—carefully watching and taking steps to combat the Communist danger. The Federal Bureau of Investigation, for years, has thoroughly, meticulously and patiently investigated the Communist Party, United States of America. Much of this work, most necessarily, has been unpublicized. The very nature of communism, clandestine, underground, secretive, made for slow, careful, and at times, most delicate investigation. Moreover, in years past, the lack of public awareness of the true Communist danger, a failure to appreciate the deadly, insidious, and uncompromising character of the Marxist-Leninist philosophy,

presented serious and handicapping obstacles. But the start was made—a start which is today paying rich dividends.

In October 1949, as you will recall, 11 members of the Communist Party's national board—the American Politburo—were convicted after a lengthy trial in New York City for violation of the Smith Act. This was an unprecedented step and represented the Government's first major move against the party itself. Literally years of effort went into the Government's case: the painstaking work of the FBI, procuring admissible evidence, developing informants inside the party itself, interviewing potential witnesses, and the advance preparation and efficient handling of the case in court by Department of Justice attorneys.

Nobody was more surprised at the strength of the Government's case than the Communists themselves. How could this happen? A trusted member this morning, a Government witness this afternoon. This trial literally shook the inner core of the American Communist Party. It went deeper and deeper underground, developed new clandestine contacts, and prepared to entrench in the catacombs of stealth.

The conviction of the Communist leaders, later sustained by the Supreme Court, was accomplished in the highest traditions of American justice. These men, who disdain the ideals of Washington, Jefferson, and Lincoln and would at a moment's notice, slash the Bill of Rights into pieces, were given every benefit of the judicial system they so bitterly abhor. They had their day in court, like any other accused person. The trial record, complete with Communist delays, harassment tactics, and diversionary haggling, is evidence not only of the legal bankruptcy of their case, but of the contempt they bear for democratic institutions. The Communist leaders and their attorneys attempted to use the trial as a circus staging ground, utilizing every technique of showmanship, propaganda, and deceit to overturn the operations of American justice. They failed: the patient, steady hand of Judge Medina defeated their foul purpose and made democratic processes the victor.

That is the strength of the American system—that we can meet every challenge, even the Communist threat, through democratic means. The sacred liberties of this Nation—freedom of speech, press and religion, habeas corpus, trial by jury, the right of appeal—must not, in the least iota, be sacrificed. National security must be safeguarded—yes, indeed. But national security does not mean the sacrifice of civil liberties. Security and freedom are inextricable links in the same chain; they are complementary, not contradictory. National security can be strengthened by allowing the free exercise of the rights guaranteed by the Constitution. To do otherwise is to copy the methods of the dictator.

In totalitarian states the handling of subversion is a relatively easy problem. The security police, if suspicion is directed toward a citizen, immediately swoop down, arrest him, and accuse him of disloyalty. The so-called trial processes of Communist states are well-known: the fancy court trials, the confessions, torture techniques, the propaganda overtones, then prison or death. For thousands of lesser known persons the elaborate court setting is missing—but the same penalties, imprisonment, slavery and death, are meted out. To be innocent is often a handicap to the defendant and an embarrassment to the authorities. On other occasions, the state deals with great masses, not taking the time or trouble to accuse them on an individual basis. The horror of mass arrests, the forced migration and torturing of entire peoples in Communist Europe are blots of inhumanity which will stain the canvas of time for years to come.

The contrast of democratic law enforcement is striking—and also revealing of some

of the special problems involved. The Government has dealt, and is today dealing, with each Communist on an individual basis. The FBI's investigations are designed to identify, determine the activities, and develop admissible legal evidence on each individual, especially the Communist leaders. You can readily see the staggering responsibility which has been thrown on the FBI today, when you consider there are only 6,300 special agents pitted against thousands of Communists, to say nothing of the FBI's other duties. I have often marveled at the manner in which the FBI operates and how it accomplishes so much with so few. The task is mounting daily, as the Communists burrow deeper and deeper underground, utilize aliases, invent code systems and hide their intentions. The Communists are now as jumpy as Mexican jumping beans—constantly fearful of being followed, watched or overheard. Since the recent arrests, they have scattered like wild rabbits, doing everything in their power to go undercover. Some obviously will be difficult to find. Our problem now is the most effective application of the FBI's manpower.

In recent weeks a number of regional, State and local leaders of the Communist Party, some from California, have been arrested. Mr. J. Edgar Hoover, Director, Federal Bureau of Investigation, has consistently opposed mass, wholesale arrests. I concur in that position. The Department of Justice is proceeding on a highly selective basis, giving its attention to key leaders, those persons who are in a position to do the greatest damage to the Nation. These individuals, as the 11 members of the national board, will be given their day in court.

But the problem, unfortunately, does not rest there. The recent jumping of bail by four of the convicted Communist leaders reflects another facet of Communist policy—designed to frustrate, hamstring and obstruct American justice. These Communists, as they were rightfully entitled, utilized every legal avenue to escape conviction. This is standard Communist policy—to bend to their own advantage every freedom, privilege and opportunity provided by democratic processes. However, when the die was cast, when every legal appeal was exhausted, and prison loomed, they jumped bail—abusing this legal device to escape the consequences of the law. The Department of Justice's authority and responsibility for these individuals, of course ceased with the granting of bail. Unfortunately, however, the courts which granted the bail do not have to seek their apprehension. If this were the case, I hazard the guess that some judges would be more realistic. This is Communist treachery, fully in accord with the strategy which dictates the use of illegal tactics as a supplement and, if necessary, a continuation of legitimate endeavors. This is the enemy we face—cunning, ruthless, disdainful of our judicial processes, yet at the same time attempting to extract every possible privilege from the very freedoms they abhor.

I am amazed to think that, at this very hour, despite all the tactics, maneuvers and open defiance of the Communist Party, there are still lawyers in this country who can assert that the prosecution of the Communist leaders is thought control or infringement of civil liberties. I assert, and I know you will agree, that communism and American jurisprudence are incompatible—any person, especially a lawyer who has been trained in the great traditions of Anglo-Saxon law, who asserts to the contrary, must look into the Marxist-Leninist core of his own heart for the answer.

The Communist danger, of course, has manifest itself in the espionage field. Every full-fledged Marxist-indoctrinated Communist member is a potential espionage or sabotage agent. However, the problem is not that simple. Russian espionage is a specialized art, embodying professional

agents, highly clandestine communications, and access to valuable material. Literally years may be spent in developing one informant, preparing an espionage front, or perfecting a contact. Communist members do serve the espionage apparatus—but, strange as it may seem, many of the best Russian agents are not and never have been Communist Party members. Harry Gold, for example, was not a member of the Communist Party, nor was Alfred Dean Slack. Yet these individuals were duped into supporting this alien conspiracy. The anonymous character of Soviet espionage agents who look, live, and act like millions of others, is the terrifying aspect of Communist espionage. To be concerned exclusively with Communist Party members is not sufficient. The FBI through hard work, intensive and patient investigations, must identify and bring to light these conscious—and in some instances, unconscious—agents. This is a terrific responsibility. The names of Dr. Klaus Fuchs, Harry Gold, Alfred Dean Slack, David Greenglass, Ruth Greenglass, Morton Sobell, Julius and Ethel Rosenberg are testimonials to the indefatigable endeavor of the Department of Justice.

The FBI during recent months has investigated a great number of cases involving allegations of sabotage. However, as during World War II, the vast majority of these cases were determined to have resulted from industrial accidents, carelessness, or foolish horseplay. To date, no cases of sabotage have been prosecuted. Moreover, no evidence has been found to indicate any Communist-directed or -inspired sabotage. However, the FBI remains alert and any allegation of sabotage received is immediately, thoroughly, and completely investigated. The recent fires and explosions have been carefully investigated, but no evidence of sabotage was found. The FBI, of course, is strictly an investigative agency. It has no jurisdiction whatsoever for the physical protection of the Nation's industrial plants. The Munitions Board, under the Office of Secretary of Defense, is responsible for formulating the policies, procedures, and standards from a security standpoint in plants manufacturing defense materials.

The Government, in view of the Communist danger, has taken steps to protect itself. The FBI first began conducting investigations into the loyalty of Federal employees during the 1942 fiscal year, and in 1947, of course, the Federal employees-loyalty program was instituted. As of August 18, 1951, under this program, a total of 3,821,641 loyalty forms have been processed by the FBI, and 99.5 percent have been returned to the Civil Service Commission marked "No disloyal data." A total of 16,662 full field investigations have been conducted. The program is being handled on a current basis by the FBI. The FBI's role is to report the facts to the Civil Service Commission without bias, conclusions or recommendations. It is the responsibility of the employing agencies and the loyalty hearing boards to weigh the facts and decide the proper administrative action. As of August 18, 1951, the Loyalty Review Board has reported that 268 incumbents and appointees have been removed or denied employment, 2,313 resigned or otherwise separated or withdrawn from consideration, and 9,028 were retained or accepted. The overall result of the loyalty program has been a resounding victory for free government.

In this connection, I want to emphasize one facet of internal security investigations frequently overlooked—the proving of innocence. Too often, I am sure, the outside observer will think only in terms of proving guilt. That is true, we want to know the identities of our enemies. But also, and equally important, is the absolute need for fair impartial and unbiased investigations—to clear the reputation of a man or woman

falsely accused. That is the spirit of Americanism. Character assassination, branding by innuendo or malicious slandering, has no place in the life of this Nation—it hampers, not increases, national security. These irresponsible methods create a climate of hysteria, violate civil rights, and incite mob actions. The one way—and the only way—is the American way of carefully ferreting out the facts, and thereby determining guilt or innocence.

We have come a long way—the Communists, though dangerous are today, because of the Government's actions, severely handicapped. They are finding it difficult to operate efficiently underground, they are jittery, and, according to our recent information—and rest assured the FBI still has informants inside the party structure—rumblings of dissent are beginning to appear. The Government is watching carefully, and in the event of a national emergency, stands ready to quickly and effectively immobilize our internal enemies.

The treasured liberties of this great Nation are our most sacred possessions. A damaged building, a wrecked home, even a ravaged continent can be rebuilt—but we can't recapture liberties, lost either by forfeit or conquest. The Department of Justice is doing everything possible to safeguard the security of this Nation and to maintain the liberties we all cherish. It can be done—and, with your help, will be done. Only by working together, in dedicated unison, will we be able to keep the flag of justice flying proudly over America's shrine of freedom.

You, as alumni of St. Peter's College, have gathered tonight to renew old acquaintances, to reminisce of joyful experiences, to enrich memories, and to renew your allegiance to a beloved institution. It is fitting that you take advantage of an occasion of this character to rededicate yourselves to the continued adherence to those principles which your alma mater has indelibly impressed on your minds during your college days. With the help of the Almighty and with your spiritual and moral commitments we shall see a better world in the not-too-distant future.

Register Right To Have Your Vote Count

EXTENSION OF REMARKS OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, several times since I have served in Congress I have sent last-minute reminders to friends back home to get out and register; otherwise they could not vote for me in the primary of the following year.

This action has served as a reminder to good supporters some of whom are wont to overlook the dates necessary to enroll in our State. It has never failed to pay off whenever I have done it, so my office staff redoubled our efforts this year.

Nearly 4,000 letters went into Broome County, and since then I have received score upon score of answers assuring me of my friends' continued loyalty.

The following is one which I have sifted out and will show the interest HALL supporters are expressing as the result of my exposure of so many sub-

terranean plots not only in the southern tier but in the whole State.

You can bet I will capitalize on all of these and more, too, before I get through.

BINGHAMTON, N. Y.,

October 15, 1951.

Congressman EDWIN ARTHUR HALL,

Washington, D. C.

DEAR MR. HALL: I want you to know for the first time in my life I have registered as a Republican in order to vote for you in the primary. You once did a favor for me for a friend of mine whose husband was in the service, and I haven't forgotten that. I consider it a privilege to be able to do this.

I and all my forbears have always been Democrats. I had an uncle who was Attorney General for the Confederacy and afterward became Governor of Alabama. I am a native Georgian. My uncle was known as War (Between the States) Governor of Alabama.

I was home (Atlanta) this summer, and more than one southerner told me they were voting Republican if Truman was nominated.

This is a two-party Nation and the Democrats have already been in too long.

Here's hoping you win with flying colors, and you may rest assured I will do all I can and what influence I have with my friends will be used in your behalf.

Yours truly,

Mrs. L. McK.

Welfare State Proposals Get Deaf Ear

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1951

Mr. SHAFER. Mr. Speaker, one of the few heartening features of the Eighty-second Congress is the fact that it has very largely turned a deaf ear to President Truman's demands for enactment of his welfare state legislative program, despite Democratic majorities in both Houses.

It is especially significant that these measures have been blocked in committees even though the chairmen and majority membership of the committees are Democratic.

In my opinion, two factors account for this opposition—recognition of the fact that our economy cannot withstand the demands of the Korean war and national defense program and the welfare state program, and the vigorously expressed unwillingness of the people to entrust new powers to the administration.

Here is a résumé of the major items in the Truman Fair Deal program which have received the cold shoulder from the Eighty-second Congress:

First. Although bills to repeal the Taft-Hartley Act have been introduced, no hearings have been held or scheduled in either House or Senate committees.

Second. Most of the proposed public power projects designed to compete with private enterprise have been turned down. Among the measures which have failed to get out of committee are the St. Lawrence seaway and power project, the central Arizona project, the Cumber-

land River project, and the Hell's Canyon project on the Columbia River.

Third. Not a single bill has been introduced to carry out the President's budget message request for funds for production payments to farmers—a revival of the rejected Brannan plan.

Fourth. Committees have held no hearings on the President's proposals for Federal aid to education or medical insurance.

This is all to the good, but it would be a serious mistake to ignore the fact that the vast spending programs which the Democratic-controlled Congress have approved involve a grave threat to the economy. While the road to socialism represented by the welfare state proposals has been blocked, the Nation is plunging headlong down the road to insolvency, by the route of confiscatory taxes and continued deficit financing.

The \$5,750,000,000 tax boost approved by the conference committee last week brings the total tax increase since the start of the Korean war to \$15,700,000,000. The total tax bill for the next year, as a result of this latest increase, will be a record-breaking \$97,000,000,000.

The disheartening fact which, I suspect, has barely dawned on the American people, is that despite these tax increases there is no end in sight for deficit financing.

I was advised last week by the office of Senator Byrd's Joint Committee on Reduction of Non-Essential Federal Expenditures that the Federal deficit for the current fiscal year, ending June 30, 1952, is expected to be close to \$20,000,000,000.

If that estimate proves correct, the national debt will be in the neighborhood of \$277,000,000,000 by next July 1. And at the same rate the national debt will be nearing the \$300,000,000,000 mark by the end of Mr. Truman's term, some \$42,000,000,000 more than when he took office in 1945.

The sins of commission of the Eighty-second Congress, in terms of reckless spending and wild extravagance, unfortunately outweigh even the virtues of omission so far as refusal to enact Mr. Truman's welfare state legislative program is concerned.

Remarks of Gov. Theodore R. McKeldin at Governors' Conference in Gatlinburg, Tenn., on October 3

EXTENSION OF REMARKS OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include excerpts from the remarks of Gov. Theodore R. McKeldin, of Maryland, at the Governor's Conference in Gatlinburg, Tenn., on October 3:

First, I am strongly opposed to the pending Senate bill 1529 which proposed to give quasi-legal recognition by the United States Government to gambling operations in the States. I am not unmindful that some very respectable and sincere persons have indi-

cated support of the measure, but to my mind the suggestion is quite shocking that where crime is not adequately suppressed by State authorities, the National Government should step in, collect taxes, regulate the bookkeeping requirements, and generally treat such undoubted criminal conduct like it would legitimate business. I can think of nothing that would so completely and certainly discourage and subvert the efforts of honest policemen and prosecutors in a difficult undertaking. It is altogether intolerable for the State to denounce activities as criminal while the National Government gives them implied sanction by according them treatment similar to that given to legitimate business. A business cannot be put on a tax basis and regulated by one government without pulling the rug from under the feet of enforcement officials of the other government whose duty it is to stamp out that very business.

Taxes at Danger Point

EXTENSION OF REMARKS OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. DONOHUE. Mr. Speaker, the most important legislative issue before the Congress today is the pending tax revenue measure now in conference.

In my considered judgment the basic question to be asked in determining any acceptance of the proposal to increase the present heavy burden on the American taxpayer is simply this—assuming an attempted pay-as-you-go policy is desirable, can the average working American and industry meet these proposed tax raises without danger of destroying our national economic stability?

The reason why I personally voted against summary acceptance of this tax bill on Tuesday was because of my lack of conviction that this fundamental question had been thoroughly explored and clearly answered. It was my intention, by that vote, and my hope that a re-examination of the entire provisions of the tax bill by the conference committee will result in a quick surgical removal of any unjust tax increases, particularly on the low-income groups, and also inspire an intense scrutiny, for reduction, of extravagant expenditures in various governmental agencies in no wise concerned with our vitally necessary defense effort.

Nobody will challenge the absolute need for us to fully prepare to repel any armed Russian aggression if such should come. A great many of us openly ask for clearer proof that the staggering military budget can, itself, be justified. Without such assuring proof I could not bring myself, as a conscientious Representative of my people, to vote to place this added tax imposition upon their already overburdened shoulders. The only reasons why I ever contemplated any approval of increased taxes, outside of military necessity, was because any excessive revenue would be applied to national debt reduction and the collection of it

might be of substantial aid in preventing the floodgates of inflation from being opened wide.

That we are fast approaching the danger point in tax imposition upon the American family and the American economy should be of paramount concern to each and every Member of the Congress.

Personally and cooperatively, in this time of emergency, I have felt it my patriotic, as well as representative, duty to demand the elimination of every Government expenditure not contributing to essential American defense and public service. There is no doubt that is the action each and every constituent desires and expects from his own Representative in the Congress.

That such is the case is evident from the widespread comments heard from every discussion group and from repeated publication in our alert newspapers. In that connection I wish to call to the attention of my colleagues a most timely editorial warning which appeared in the October 16 issue of the Framingham (Mass.) News.

The editorial follows:

TAXES AT DANGER POINT

At the President's insistence that the Treasury needs \$16,000,000,000 more per year at least, the House responded with a bill to raise an estimated \$7,200,000,000. The Senate bill provided \$5,500,000,000. The conference committee has agreed on a bill about half way between these two measures.

The inescapable conclusion emerges from the debates and deliberation of Congress that taxes have reached the danger point. Members of Congress, constantly importuned by the administration to provide more revenue to meet prodigious outlays, also realize that taxation has the power to destroy.

The plain fact is that many if not most Members of Congress believe that taxation is at the danger point and that some provisions of the new bill carry taxation above that point. Some Members of Congress contend taxation already has put a damper on production in many instances. Certainly income taxes have put a damper on initiative.

Senator WALTER GEORGE, of Georgia, a leading tax expert in Congress, says some provisions of the pending bill are too high and will compel alleviatory action by the next Congress. How can such action be taken if spending reaches a constantly higher level? The only alternative to higher taxes is less spending.

It is frequently asserted that when a government takes 40 percent of the national income, that government has achieved total power. The United States is approaching that point.

Jackson-Jefferson Day Dinner Address by the Vice President

EXTENSION OF REMARKS OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. HENNINGS. Mr. President, the citizens of St. Louis were singularly privileged to have as their honored guest at

the recent Jackson-Jefferson Day dinner in that city our beloved and distinguished Vice President.

It was my great pleasure and privilege to be present on that occasion, and to see the cheering enthusiasm with which his words of wisdom and inspiration were received.

I am sure that my colleagues in the Senate would like to read the Vice President's message, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM AN ADDRESS BY THE HONORABLE ALBEN W. BARKLEY AT THE JACKSON-JEFFERSON DAY DINNER, ST. LOUIS, MO., OCTOBER 6, 1951

I am proud to be the guest of the Democrats of Missouri and the Young Democrats of America at this Jackson-Jefferson Day banquet in the city of St. Louis.

I am proud to be in the home State of the President of the United States, with whom I have collaborated in one capacity or another for the last 16 years, first as United States Senators, second when he was Vice President, and, since the 20th of January, 1949, as President and Vice President of the United States. I am happy to be able to say, because it is true, that in the whole history of the Nation no two men occupying these positions have cooperated more completely, more wholeheartedly, or more conscientiously in the service of the American people. When the story of the Truman administration has been written, it will be found by the historian that, in a period when tragic and important decisions had to be made in domestic and foreign affairs, President Truman has acted with a vision and a courage which the American people have a right to expect of a man whom they have chosen as their leader and spokesman. When the history of his administration has been written in the perspective in which history will place them, the petty annoyances and petty controversies will fade into insignificance, as will petty efforts to discredit him and his administration and those who work with him.

I am glad to be in the home State of Senator TOM HENNING, who is making one of the best Senators from any of the States and one of the best Senators the State of Missouri has ever sent to Washington. He is able, conscientious, hard-working, and courageous, and it is a pleasure to work with him and to come to his home State to pay tribute to him.

We meet to celebrate the memory of Thomas Jefferson and Andrew Jackson at a time when all that they stood for in freedom and the rights of the people is under world-wide attack.

We meet at a time when all that democracy stands for in America and in the world is under world-wide attack.

It would seem that, after all the centuries which mankind has spent in the effort to rise from ignorance to the light of intelligence, from slavery to freedom and the enjoyment of the dignity of man under just and honest governments, it would not now be necessary to defend human rights under any form of government more representative and righteous than the governments seeking to destroy these ancient bulwarks of human freedom.

Nevertheless, we find that it is necessary to do so. We find that a godless ideology, proclaiming that religion is the opiate of the people, is seeking to destroy all the vestiges of the freedoms which have made America

so great and which are essential in the development of man's destiny.

The relation between man and his God is a personal relation. It is not one that can be controlled by the state. In the first amendment to the Constitution of the United States, embodied in the Bill of Rights, adopted soon after the parent document was framed, we have forever separated organic politics and organic religion. The Constitution provides that Congress shall make no law respecting establishment of religion or prohibiting the free exercise thereof. Congress can pass no law prescribing the form of any man's worship, the church to which he wishes to pay allegiance, nor prohibiting him from exercising the right to worship his God as he may see fit.

Yet one of the fundamental doctrines of communism is that religion is the opiate of the people, designed to lull them into insensibility while capitalism or political dictators work their will upon them.

We in America know the falsity of this doctrine. We know that our great institutions and our freedom are based fundamentally upon freedom of worship, the separation of church and state, the exercise of every man's right to worship, to speak, to write, and to assemble for every lawful purpose and for the mutual advancement of all the people.

It would seem that, after nearly 2,000 years of the Christian religion, and even longer years of other religions, it would not be necessary to fight a world-wide battle to preserve the inherent rights of every man to freedom of worship, of speech, of the press, and of assembly.

Yet we find at this very hour we are compelled feverishly to indulge in extraordinary expenditures in resources and blood, and in the concentration of power and authority, in order that we may be prepared to defend these things which are so dear to us and will free people from the onslaughts and machinations of the godless and ruthless horde who would snuff out all individualism and individual enterprise and all freedoms, including the freedom to own one's home, to educate one's children, to pursue one's lawful ambitions, and grind all these things into the dust for the sake of power. In such an ideology the state is everything, the individual is nothing. In our democratic institutions the individual is primarily the object of the state and, as Jefferson said, "All governments derive their just powers from the consent of the governed."

How many governments behind the iron curtain or within its shadow derive their just powers from the consent of the governed or derive any of their powers from the consent of the governed. Having been privileged to visit these countries, I know that not 15 percent of the people would vote to tolerate the kind of government they live under, if they had a free ballot and a free choice and their ballots could be counted as cast.

In view of these circumstances, the American Nation and the American people dwell under a peculiar challenge and obligation as the leader among the free nations of the world.

It is not necessary to inquire how we became this leader, but it is appropriate at this hour and under these circumstances to proclaim the theory that it was largely under the influence of Thomas Jefferson and Andrew Jackson that our institutions became an example of freedom to all the people of the world. No man ever wrote more eloquently on the subject of freedom of man than Thomas Jefferson, and no man ever fought more valiantly on the battlefield and in the chambers of legislation or in executive position to maintain the kind of freedom Jefferson proclaimed than Andrew Jackson.

It is fortunate that our country today is not only the leader in the fight for freedom but that it is qualified for such leadership and that it has the resources to endure whatever impact the fight for freedom may involve, without the destruction of our own economic foundations.

The Democratic Party has been in power for nearly 19 years. Some people proclaim that that is long enough for any party to enjoy power, but it depends altogether on how that power has been exercised. It depends on whether it has been exercised in behalf of the people or against them. It depends on whether its economic theories when applied to politics and economics have been sound and wise and have promoted the welfare of the people rather than destroyed the foundations of their faith in American institutions.

If this be the test, then we are willing to compare the last 19 years under Democratic administrations with the previous 12 years under Republican administrations and let the people draw their own conclusions as between them. Not only are we willing to draw this comparison as to the positive economic remedies which we have promoted in behalf of the people to dig them out of the depths of a Nation-wide depression that brought business stagnation, wholesale unemployment, financial disaster, and loss of faith in our very institutions, but we are willing to compare the morality of the people's government and the morality of the men in public life during this period with that of those who preceded it during the previous 12 years prior to the inauguration of Franklin D. Roosevelt on March 4, 1933.

All we have ever asked the American people to do is to look at the facts, take the record as it has been made. Whenever they have done that they have rendered a sound judgment and an accurate verdict. No matter who the candidates may be in 1952—and as to that I make no predictions—the Democratic Party will go before the American people in 1952 with a record of performance in the domestic and foreign fields never equaled by any political party in the history of the Nation. When the American people go into the ballot boxes and write their verdict on that record, they will not be dissuaded nor stupefied nor frustrated nor swerved from the performance of their duty by the petty wailings of those who have no record of their own to boast of, but only seek to tear down that which we have made. The American people will not be blinded as to the character of men in public life by the petty efforts to destroy their faith in men and in institutions they themselves have created, simply because other groups of men desire to obtain control of our political institutions.

On both sides let Democrats and Republicans alike tell the American people the truth. We are willing to tell them the truth, because we are not afraid of the truth. Let those who seek to regain power after a long season of its abuse and its misapplication show an equal frankness with the American people in telling them the truth. Surely the American people will not allow themselves to forget a lot of the truths which were fresh in their minds after twelve years of Republican administrations under Presidents Harding, Coolidge, and Hoover. In this statement, I cast no reflections upon any of those men, but I ask the American people to refresh their memories as to what their condition was when this period had ended.

We are enjoying today a prosperity never experienced by any nation in the world. Our productive capacity is at an all-time peak; our national income is at an all-time peak; our employment rolls are at an all-time peak. Out of our resources we are seeking to preserve our own liberty and the validity of our own institutions and to assist the free and liberty-loving peoples in doing the same.

In this great conflict of ideologies at home and abroad we are proud to know that the people of Missouri and of the Nation are ready for the decision. We are not only a world power of which we are proud, but destiny has placed a transcendent part in the history of our country and must play a transcendent part in the type of leadership which we shall give to the world.

Christopher Columbus

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. FURCOLO. Mr. Speaker, probably one of the greatest tributes that has been paid to the memory of Christopher Columbus is that he has been accorded the unusual dignity of being made into an international citizen. In these days of national tensions and extreme nationalism, it is a heartening thing to me that Columbus can be the rallying center for so many diverse nationalities. It is truly unfortunate that there are few in the history of the world who are accorded equal praise by a variety of nations.

That he merits this global regard is proven over and over as more modern biographers study and reveal his truly remarkable life and actions.

Samuel E. Morison, historian of the United States Navy, in his magnificent biography of Columbus, Admiral of the Ocean Seas, fills his pages with exclamations of surprise and admiration not only for the personal character of the great discoverer but for his astounding knowledge of navigation. The navigational ability of Columbus appeared to be almost intuitive because his reckonings made with the crudest kind of instruments, including a dry-card compass, checked in a major degree with the findings of the most scientific apparatus.

In celebrating Columbus Day, we pay tribute to the splendid courage and fortitude which he displayed and to the bravery of those pioneers from all countries who followed his example in crossing the waters and exemplified the same spirit of determination. They occupy a unique place in our history and in our hearts.

National Security Demands an All-Out Domestic Mica Mining Program

EXTENSION OF REMARKS

OF

HON. HAMILTON C. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. HAMILTON C. JONES. Mr. Speaker, under unanimous consent, I include my remarks on the important

subject, National Security Demands an All-Out Domestic Mica Mining Program:

The eyes and brains of present-day military planes, ships, tanks, antiaircraft guns, and many automatic weapons are the units of highly complex electronic equipment which they contain or which are used to direct and operate them, as the case may be. Without the electronic equipment now required for accurate, split-second detection, calculation, and controls our present-day weapons would be ineffective if not useless.

Large quantities of mica are required in the manufacture of electronic equipment for increasing military and industrial applications. Large quantities of mica also are required for the manufacture of electrical equipment, including motors and generators and communications apparatus. In fact, practically all mica, other than scrap and ground mica, is used as an insulator in the manufacture of electronic and electrical equipment. Mica is indispensable for such purposes.

In view of these facts, it becomes evident that an assured and continuing supply of mica is essential to the future defense and economy of the United States. However, in the last few years only 5 percent or less of the mica consumed in the United States, other than scrap and ground mica, was produced from domestic sources of supply. We have been dependent upon India for approximately 85 percent of all such mica obtained from foreign sources of supply.

Considerable amounts of mica have been produced in the United States in years gone by. The average yearly domestic production of mica other than scrap and ground mica for the 1941-45 period amounted to 25 percent of the domestic consumption.

There are some 3,000 known mica deposits in the United States of which 700 are said to be located in the Southeastern States, including a number of mica deposits in Avery and Mitchell Counties of North Carolina, which are in my own district. These mica deposits, together with those that remain to be discovered, might well yield considerably in excess of the 25 percent sufficiency attained in the past should the Government provide an adequate incentive purchase program as authorized by the Defense Production Act.

The United States can ill-afford to continue its dependence upon India, Brazil, Madagascar, and other overseas sources of supply for 95 percent or more of its mica requirements.

The defense and economy of our Nation make it imperative that the defense agencies immediately put into effect a mica purchase program which will reopen and obtain maximum production from the 3,000 or more domestic mica deposits over the next 5 years. Any effort less than this may well be regarded as a half-hearted attempt or gesture which could be expected to end in disillusionment and financial distress to hundreds of small venturing enterprises and in the ultimate failure of the program to obtain significant quantities of mica.

The defense agencies have taken close to 11 months to develop a simple mica program. Details of the program have been ready for announcement for several weeks, however, activation of a mica program now awaits the pleasure and approval of the Deputy Director of the Defense Materials Procurement Agency.

I am informed that under the proposed mica program the Government would, over a 3-year period, offer to pay producers approximately \$600 a ton for hand-cobbed mica containing stipulated percentages of useful and strategic mica meeting certain specifications, delivered at buying depots to be located in the principal mica producing areas

of the United States. The Government plans to contract for the processing of the crude mica purchased from mine operators. Total cost of the program as now proposed, including processing and administrative expenses, is reported to be approximately \$20,000,000.

After 11 months of inexcusable delays and indecision we still do not have a mica production in operation. I urge that a 5-year domestic mica program which will obtain the all-out production of useful mica from domestic sources of supply be announced and activated immediately. The national security demands such action. The supply of mica from India and other overseas sources of supply may be denied us in the future.

Columbus Day Address

EXTENSION OF REMARKS

OF

HON. HARRY P. O'NEILL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following address delivered at the Columbus Day Association, of Lackawanna County, Scranton, Pa., October 12, 1951, by Mr. George A. Tosoro, Deputy Economic Adviser, Office of Western European Affairs, Department of State.

Mr. Tosoro's address follows:

There is a strong parallel between the Great Explorer's voyage to the New World and Italy's postwar recovery. Columbus was, and is, a symbol of resourcefulness, courage, and energy. Postwar Italy gave to the world ample proof of the resourcefulness, courage, and energy of the Italian people.

The progress made by Italy in the 7 years between 1944 and 1951 is truly amazing.

In 1944 the economy of Italy was badly shattered, especially the economy of central Italy, which for long months was the battleground for some of the fiercest and most destructive encounters of World War II. In fact, in central Italy 90 percent of the power plants were destroyed or out of commission, 90 percent of the bridges were destroyed or badly damaged, industrial production was limited to 20 or 30 percent of capacity. At the same time 90 percent of Italy's merchant marine was destroyed or out of commission. The diet of Italian city dwellers was around 1,500 or 1,600 calories, very close to the starvation level (in our country we have an average caloric intake of 3,200). In the financial field, inflation was rampant, prices skyrocketed.

If we look at the Italian economy now, as compared with 1938, we find that electric power production has doubled, and industrial production has increased by 40 percent. Foreign trade is now 10 or 20 percent larger than prewar, and the Italian merchant marine has been restored to 90 percent of the prewar level. Inflation is not a danger any more, and monetary stability has been achieved since the end of 1947. In 1944 Italy's social situation was as dark as the economic one: black market, organized gambling, and prostitution were the striking symptoms of moral disruption and decay. Today, in 1951, social conditions are again normal.

The political situation, and the conditions prevailing in public administration, show a similar striking change since 1944. At that time, the northern part of Italy was under

Nazi control, southern Italy under United States and United Kingdom rule. Only a nominal Italian administration existed, with a coalition cabinet in which the Communist and the Socialist parties had equal voice with the democratic parties. The only bright spot in the picture were the Italian partisans, who valiantly fought against the German armies in northern Italy, with the support of, and in collaboration with our soldiers fighting on the central mountains of the peninsula.

Now, Italy has a stable government, with a cabinet composed only of representatives of democratic parties, under the leadership of Alcide de Gasperi. Now, Italy is an accepted and respected member of the family of nations, of the OEEC, of the North Atlantic Treaty Organization, and of the Council of Europe. She is not a member of the U. N. only because of the Russian veto.

The fact that Italy has made amazing progress in the economic, social, and political fields obviously does not mean that everything is bright. It does not mean that the process of reconstruction which was made necessary by 20 years of fascism and 4 years of warfare has been completed. Much work is still to be done in many directions. In fact, Italy's financial policies have probably been too strict in the last 2 or 3 years, and only now are being relaxed. Not completely unrelated to such policies, unemployment still looms large in Italy, around the 2,000,000 mark. A program of land reform has been discussed since the end of the war and was partially enacted into law, its implementation, however, just started a few months ago, and there is a long way to go. The tax system is still antiquated and has features of regressivity which must be eliminated, a new tax law, prepared according to the pattern of the United States income tax, was recently enacted, but the first effects of its implementation will not be felt for a long while. Progress has been made in the field of labor unionism with two democratic unions, the CISL and the UIL, now in existence, still the largest union is the Communist-dominated CGIL, with 3,000,000 members. The problem of developing the backward areas of southern Italy still presents the same tremendous difficulties which worried the great Italian statesmen of the Risorgimento, the Italian Government is just now starting to face the problem through the fund for the South, which was established last year. A tremendous amount of work still remains to be done also in this field.

All these weaknesses, all these negative factors, however, should not be considered as indicative of the over-all state of Italian affairs. There are clouds, dark clouds, but we must not focus our attention on the clouds only. We must not look at the trees and lose sight of the forest. If we look at the forest, happily we can see a much brighter picture—the picture of a tremendous progress made by the Italian people in the short span of 8 or 7 years.

As you know, the Italian people did not do all this alone. On Columbus Day, 1944, President Roosevelt stated on the radio: "To the people of Italy we have pledged our help . . . and we will keep the faith." We did keep the faith, we did give our help to the people of Italy—for an amount of approximately \$2,300,000,000. This was certainly a tremendous amount, if you consider it in itself, but in fact it was small, if compared with the enormous needs created by war destruction and economic disruption in Italy. In other words, we helped Italy, we contributed to her recovery, but the Italians themselves did most of the job.

In 1941 or 1942, the first time I went to Washington, I was looking at the Columbus Memorial on the Union Station Plaza, and Columbus seemed to me to be sad-looking, rather dejected. With Mussolini at the helm of the Fascist government, Columbus

could hardly be the happy symbol of friendly relations between Italy and the United States. But the Fascist regime was overthrown, and the great majority of the Italian people aligned themselves with the Allies in the fight against nazism. Victory was won. Friendly relations with Italy were restored, and a peace treaty was signed. In 1947 the Italian Premier de Gasperi came for the first time to this country. He was received at the airport by protocol officers and minor State Department representatives. A few weeks ago, Premier de Gasperi came to Washington for the second time. He was received at the station, in the shadow of the same Columbus Memorial, by President Truman, by Mrs. Truman, Margaret Truman and by practically all members of the Cabinet. The Columbus Memorial looked much brighter on that occasion—almost as bright as the equestrian statues which were cast in Italy as a gift to the people of the United States of America from the people of Italy, and which were dedicated at the Arlington Memorial Bridge Plaza on September 26, in the presence of President Truman and Premier de Gasperi. The ceremony of the dedication, with Ezio Pinza singing both national anthems, gave a real indication of the present status of the relations between Italy and the United States, and of the present standing of Italy, and its Government, in the international field.

Again, not all the picture is bright. The peace treaty is still to be revised, although the first steps toward a partial revision have already been agreed upon among the Governments of the United States, Great Britain, and France, and will certainly receive the support of all peace-loving signatories of the treaty. Italy is still to be admitted to the U. N., and the problem of how to overcome the Russian veto is being seriously considered. The question of the Free Territory of Trieste is still to be settled, although we do hope that the Italian and the Yugoslav Governments will be able to reach a mutually satisfactory agreement on this question. Finally, the surplus population of Italy still presents tremendous economic, social, and political problems for Italy, but we will help Italy to solve this problem through some international machinery.

In short, tremendous progress was made by Italy in all directions since actual fighting ceased in Italy, enough progress to be proud of, both as Americans, and as Americans of Italian descent. First, we can be proud of what the Italians did themselves, which, of course, was 99 percent of the job. Second, we can be proud of what we all did, as Americans, to help the Italians to help themselves. Now, thanks to our joint efforts, a reborn democratic Italy is moving forward. Today Italy is one of our best allies in the present troubled international situation, we can count on her contribution in our efforts to maintain peace, in our resolves to uphold western civilization.

Where Does the Money Come From To Lobby for the St. Lawrence Seaway?

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. VAN ZANDT. Mr. Speaker, it has been frequently charged that the National St. Lawrence Project Conference, the Nation-wide organization opposed to

the St. Lawrence project, although composed of some 250 labor, civic, business, and taxpayers' organizations, is largely financed by the Association of American Railroads.

So I think it quite pertinent to point out that while the project is advanced as a national defense necessity, the money for the campaign of the proponents comes exclusively from interests which would benefit from the waterway.

Last year, the Great Lakes-St. Lawrence Association, the organization supporting the project, received in contributions, according to its lobby report, roughly \$58,104. Of this amount approximately \$49,000 came from the six Midwest companies which have invested in Labrador-Quebec iron ore and which want the subsidized waterway for a competitive advantage over their fellow steel operators.

For the first 6 months of this year, this association reports receipts of \$58,622. Of this amount, \$28,968 came from four of these steel companies; \$10,000 from the city council of Detroit; \$5,000 from the Wayne County—Detroit—Board of Commissioners; \$7,000 from three other Detroit companies, and \$5,650 from the authorities of Ogdensburg, N. Y., and St. Lawrence County, N. Y. This is a total contribution by "special interests" of \$54,618 of the \$58,622 reported as receipts by this association.

Why Read the Bible?

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. RODINO. Mr. Speaker, today in our modern world where so many new fangled ideas keep springing up, and old fashioned ones are speedily being cast off, so many of us have overlooked, some have forgotten—yes; and there are even a few of us who have never gotten acquainted with—the best seller of all time—the Bible.

In these days of trial and tribulation, when the foreign hateful and godless ideology is raising its ugly head beclouding the hopes of man, it should certainly be a necessity that we look into the "Good Book" to find words of encouragement and wisdom.

What would be a better source to follow for learning how to live? The problems of life as outlined in the Bible are just as modern today as they were in the time of our Lord—so, in this, National Bible Week, I would like to urge each individual to devote some part of his daily life to the reading of his Bible.

I am sure the following newspaper article, which appeared in the Newark News, of Newark, N. J., on October 16, will stress to all the importance of reading the Bible:

WHY READ THE BIBLE?

Never, if by any chance it has been lost, can there be a better time to renew acquaintance with the world's greatest book than in

this, National Bible Week The mores change Daily Bible reading in the home with morning and evening prayers is less frequent than it was even half a century ago Yet the Holy Bible continues to be, year after year, the world's best seller.

National Bible Week is a nonsectarian movement, directed to all people throughout the land Protestant, Catholic, Jew, even those who in an age of science find it difficult to believe in direct revelation, can get from the Bible an inspiration they cannot afford to lose. To the Christian it offers the hope of salvation and a future life through the death of the meek and gentle Jesus, the man who more than any other has affected the course of the world To the Jew the Old Testament offers hope of God's kingdom on earth with a reign of righteousness and peace

From the Bible can be derived consolation for those stricken by bereavement, spiritual relief for the despondent an attitude of justice and good will toward men, whether it be derived from the teachings of Jesus and the disciples and apostles who carried on His work, from Moses and the prophets or from the psalmists, who have been a boon to the weary in spirit

Why should we get out our Bibles and read them? Because, among other reasons, had it not been for this great work of many men, there would be no civilization as we know it, with a code of morals based upon its fundamental precepts Let us not forget that it was devout believers in this book who settled the Western Hemisphere

So much else to read? Yes, there is no doubt From a selfish standpoint, even, the would-be cultivated man or woman cannot achieve his or her aim without understanding of the Biblical references with which the literature of all western nations abounds

For those who seek an interesting approach, Genesis and Exodus, the easy reading of two evenings contain, from the account of the 6-day creation to the return of the Jews from slavery in Egypt to the Promised Land, the greatest adventure story ever told Read that Bible, it will do something to you, and that something's good.

The British are far from blameless for the situation that has developed, just as they were for their loss of control of their oil industry in Iran. They were too late in recognizing the danger that was developing and in taking steps to avoid a crisis.

The plan for international defense of the Suez Canal, which has been proposed by the United States, Britain, France, and Turkey, and promptly rejected by Egypt, would have been a fair and effective solution of the problem Under that plan British armed troops would be withdrawn from the area and replaced by an international force, including Egyptian as well as British troops Thus Egypt would participate with the other countries in the defense of the canal

If this proposal had been made a year ago it might have been acceptable to Egypt But what happened in Iran changed Egypt's attitude Seeing how little Iran ran the British out and took over their oil interests, the Egyptians were emboldened to believe the time was ripe for them to run the British out of their country and take over control of the canal property

Even though the canal was cut through Egyptian soil when it was constructed nearly 100 years ago, it never has been owned by the Government or nationals of Egypt. It was constructed by a French corporation. It still is owned by a corporation in which British and French are the major stockholders The British Government and English capitalists hold about 40 percent of the stock

In the present period of Soviet aggression and ambitions for conquest, it would be dangerous to the west for the defense of the canal to be left exclusively in the hands of Egypt

In effect it might be about as dangerous to the western anti-Communist world as it would be to the United States for the defense of the Panama Canal to be left in the hands of the Republic of Panama exclusively, when an aggressor nation like Russia was anxious to gain control of the strategic lifeline between the Atlantic and Pacific

Yes, the United States, as well as Britain, France, and the other western powers, has a vital stake in the Suez Canal controversy.

The Evening Star article follows:

PRIVATE IMMIGRATION BILLS—POKING LOOP-HOLES IN IMMIGRATION LAW

(By Robert K. Walsh)

Private bills to bring aliens into this country or to keep them here put such a burden on the public lives of some Congressmen that they believe the immigration laws may be inept as well as incomplete

Yet, in the opinion of Representative DOLLIVER, Republican, of Iowa, overhauling of the general statutes would be time-consuming and almost endlessly argumentative. It might do serious injustices to worthy individuals seeking immediate entry or safety in the United States, he explained

Since Congress convened last January it has received about 1,500 such bills. Before it adjourns this fall it probably will have passed fewer than 200

Unlike most of the thousands of other measures annually introduced in House and Senate, each one of these private immigration bills involves in a very particular way a specific human being, Mr. DOLLIVER noted

Each requires a particular kind of study and handling, especially by a group of House Democratic and Republican objectors, of which Mr. DOLLIVER is one. The complicated process extends also to several administrative agencies of the Government. It has been greatly aggravated by world conditions since the war

Private bills in this category propose, in effect, that Congress halt or delay operation of some provision of the immigration laws. They have been described as personal favors for individual aliens

Actually, they are tied in with many other factors, domestic and foreign as well as personal. Few are exactly alike in their application. Some present the toughest kind of tangles for Congress and immigration officials to unravel

For one reason or another, an apparently deserving alien cannot come to the United States under ordinary quota restrictions or comply fully with the letter of other regulations. Perhaps he faces possible deportation through no direct fault of his own. And so a Member of Congress, on his own initiative or at the request of constituents or organizations, sponsors a bill "for the relief of" the alien.

Congressional authorities concede that the practice has been seriously abused at times and that the system still has flaws and dangers. They report progress in correcting shortcomings, setting up stronger safeguards, and providing stricter supervision

"The job of being one of the six designated objectors to private bills in the House certainly doesn't help to make friends," Mr. DOLLIVER commented.

It also doesn't give the objectors much time to themselves. The daily grist of private bills, having been screened in various other official quarters, is parceled out among the objectors for additional study and checking

The first and third Tuesdays of each month are private calendar days in the House. Many private bills are called up but comparatively few are chosen for passage. By the time the immigration bills get as far as the Private Calendar the objectors find they have relatively little objecting to do.

Much of the work is done ahead of time, occasionally a year or more ahead. At least 600 of the private immigration bills dropped into the House hopper this year were presented in the Eighty-first Congress and got nowhere.

That does not mean the repeaters are necessarily undesirable or doomed. Some require more investigation or information than could be given last year

Nevertheless the introduction of a private bill, under certain circumstances can stop

Whole Western Free World Has Big Stake in Suez Canal Controversy

EXTENSION OF REMARKS

OF

HON. HAMILTON C. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. HAMILTON C. JONES. Mr. Speaker, under leave to extend my remarks, I insert the following able and timely editorial carried in the Charlotte Observer on Thursday, October 18, 1951:

WHOLE WESTERN FREE WORLD HAS BIG STAKE IN SUEZ CANAL CONTROVERSY

Regardless of who is right or who is to blame for the Anglo-Egyptian controversy over the Suez Canal, the United States and the whole anti-Communist world have a large and vital stake in the outcome. That life line between the Atlantic and southern Asia is of major importance in the struggle of the west against Russian aggression.

Russia knows that, and, therefore, would give much to gain control of that vital gateway between the Mediterranean and the Indian Ocean. And that might be what would happen if its protection and control were left exclusively in the hands of the Egyptians, as they demand.

Private Immigration Bills

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. WALTER. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following article which appeared in the Evening Star on Monday, October 15, 1951. Regarding this article, it is certainly comforting for the hard-working members of the Subcommittee on Immigration and Naturalization to know that the man who checks on our work, Mr. DOLLIVER, one of the official objectors, approves of our judgment and sense of fairness

I wish to assure the House that after H. R. 5678, revising and codifying our immigration and nationality laws, is enacted there will be fewer private bills taking up the time of the Congress. Many inequities and shortcomings of our present immigration system are being corrected in this new bill, and I therefore sincerely trust that very early in the next session the House will favorably consider this important legislation.

or delay the administrative processing of an individual alien's case until Congress acts one way or another. That, according to some Members of Congress, may account for re-introduction of some bills, particularly to enable aliens to remain here as long as possible.

Any prolonged abuse of that kind is unlikely, according to House Judiciary Committee experts who examine private bills. If the immigration bureau has sufficient grounds for believing delay would be dangerous to the security of this country or otherwise be undesirable, the bureau notifies the committee and prompt action probably can be taken.

The large majority of private immigration bills, however, present different types of problems because of their volume and individual questions.

They are so numerous that the House Judiciary Committee's immigration subcommittee meets almost daily. Mr. DOLLIVER, a member of that subcommittee, said this involves not only study but hearings before any bills are reported to the full committee on the private calendar.

"It also brings up some of the most difficult human problems," he added. "One case may concern the efforts of American parents to bring into this country a baby they adopted in Europe. The next one might be the plea of a young alien woman trying to avoid being sent back to a country where she has been declared stateless."

"I don't suppose that any single new section of the law could be written to cover all the situations in the private bills we get. Of course, as in the case of American naturalized citizens who were blocked from return to this country because they voted in the Italian elections, a special blanket bill proved practical."

"It might seem there is something inept about the immigration laws if this is the only way we can handle cases of this kind."

Mr. DOLLIVER, a nephew of former Senator Dolliver of Iowa, and a House Member since 1945, glanced toward the latest batch of private bills on his desk.

"Maybe this is the only way to handle such individual problems," he said. "Anyway here they are in front of us from all over the world. Almost every one of them might effect a human destiny, and some of them perhaps could touch the destiny of our country."

A Record of Infamy

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. SMITH of Mississippi. Mr. Speaker, an editorial in the September 4 issue of the Memphis Commercial Appeal, one of the Nation's outstanding newspapers, discusses at length the fine speech which our distinguished colleague, Hon. Louis B. HELLER, delivered in the House last June, recounting the sordid history of Russia's violations of its agreements with the United States.

Under unanimous consent, I include the editorial:

A RECORD OF INFAMY

If the record is any guide, United States and Allied nations' diplomats who gather at San Francisco to negotiate the Japanese Peace Treaty will find themselves confronted by a campaign of insincerity, deceit, and cynicism unparalleled in modern history.

Already the Russians have indicated that they expect to sabotage the proceedings if at all possible, but upon sober reflection, the civilized world must be reconciled to the harsh fact that even if Russia should ratify the treaty as proposed, they would reserve the privilege to repudiate their sacred obligations.

Strong and compelling evidence to this effect comes in a speech by Representative Louis B. HELLER, of New York (Brooklyn), before the House early in June of this year, a speech entitled "Russia's Violations of Its Agreements With the United States." Here, in adequately documented manner, Representative HELLER charged and proved that:

1 Although all other countries beneficiaries of lend-lease during World War II have made some settlement or agreement to settle for lend-lease materials, the Government of Russia has refused to agree on any settlement on aid totaling more than \$21,000,000,000. Moreover, the Russians have refused to consider the return of 670 vessels provided under lend-lease, the reason given being the United States does not need them.

2 At the Tehran Conference Russia agreed with other nations to guarantee the maintenance of the sovereignty, independence, and territorial integrity of Iran. Stalin agreed to withdraw all Soviet forces from Iranian territory not later than 6 months after the cessation of hostilities. Instead of withdrawing Red forces, Russia then proceeded to use armed power to set up a puppet government to oppose the National Government in Tehran. The Russians withdrew only after United Nations protests.

3 In direct violation of terms of the Yalta agreement, Russia blocked the formation of a democratic government in Poland. Elsewhere in Central Europe the Russians violated the agreement by nefarious activities in Yugoslavia, Rumania, Bulgaria, Czechoslovakia, and Hungary.

4 Under the Potsdam agreement, the Russians undertook to join with other allies in considering Germany as a single economic unit. Then the Russians set up their blockade to hinder the flow of goods between east and west, while the United States and other allies kept their part of the bargain. This Russian move eventually took the form of a blunt and undisguised attempt to freeze the United States and other allies out of Berlin, in shameless violation of the agreement.

There are other instances, but these are the most shocking. Throughout this long succession of postwar violation of treaties and agreements, the Soviet Union has made it clear that they take the coldly realistic, Machiavellian attitude in diplomacy, that agreements are made and maintained for the sheer convenience of one party, and the moment it becomes inconvenient to abide by them, they are bypassed, discarded, violated, and repudiated in fact.

Representative HELLER performed a service to his country and to diplomats at the San Francisco peace meeting by listing and documenting these and other examples of Russia's cynical attitude toward honor and decency. The speech has been made available in pamphlet form, so that all delegates may have ready access to this record of infamy.

Fantastic Weapons

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. VAN ZANDT. Mr. Speaker, the following editorial from the October 16,

1951, issue of the Altoona (Pa.) Tribune, on the subject of fantastic weapons, discusses a subject that is of paramount importance to the American people.

The editorial follows:

FANTASTIC WEAPONS

* Two men who know considerable about America's armed strength gave warnings Monday against overconfidence in the "fantastic weapons" mentioned by President Truman, and the Air Force some time ago.

Representative JAMES E. VAN ZANDT, of Altoona, a member of the House Armed Services Committee and of the House-Senate Atomic Energy Committee, and Defense Secretary Robert A. Lovett Monday struck warning notes on the "fantastic weapons" idea.

The President recently spoke of the strange and deadly new devices this country is developing. He gave no indication as to whether they were ready for action, in production, or drawing-board models.

Shortly thereafter, the Air Force made its announcement of Matador, the guided missile, a bomb with wings, which can attain great speeds, and be delivered without a pilot to its target.

Immediately, demands were made that this country draw up a new defense program, based upon these "fantastic weapons." It was said that we could save money on national defense by building these "concentrated horrors," the idea being that a few of them would be the equal of vast numbers of the conventional type of high explosive and normal weapons.

But, Congressman VAN ZANDT told the House Monday that the United States does not have atomic tactical weapons or guided missiles now ready for use.

"Recently," he said, "there has been in high places much irresponsible talk about fantastic weapons, when the fact is that most of them are either on the drawing board or in experimental stages."

Secretary Lovett told the Legion national convention in Miami that the United States does not yet have a stockpile of atomic super-weapons which can bring a cheap victory in war.

He said there is grave danger the American people are pinning their hopes for security on new weapons which haven't even been proved to be reliable.

It is worth our remembering, then, that wars still are fought by the GI toting a rifle, and the pilot flying the fighter and the bomber.

Repeal of Obsolete Laws

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a news item from the Evening Star of October 11, 1951, regarding the repeal of archaic laws. Mr. Julius Silverstein, a member of the faculty of National University School of Law, supervised the study of the Government's property laws to determine what laws should be repealed and cooperated wholeheartedly with the Congress in obtaining legislative action.

The news item follows:

**ARCHAIC, CONFLICTING UNITED STATES LAWS
UP FOR WHOLESALE REPEAL**

The United States Commissioner of Education no longer may be charged by law with selling male reindeer and buying female reindeer to be distributed to the natives in Alaska.

And there will be no excuse in the future for applying to the Secretary of Agriculture for "one American bison."

Obsolete laws relating to Federal property are in process of being repealed, and when Congress repeals laws instead of enacting more of them—that's news.

The reindeer herds, which the Commissioner of Education used to have in his jurisdiction, now are under the Bureau of Indian Affairs. The buffalo—about 4,000 of them—are the property of the Fish and Wildlife Service and the zoo wanting one of the animals applies there.

Earlier this month the Senate, after study by its Expenditures Committee, passed an act repealing 174 sections of laws and amending 63, all relating to Federal property. A similar bill is before the House.

STABLES GOING LEGALLY

Another section of the laws which would be repealed in one charging the Army quartermaster general with the duty of maintaining stables in the District for the President's horses and carriages. President Wilson was the last President to have a horse-drawn carriage.

The legislation now before Congress is the result of much work, by a staff of attorneys headed by Julius Silverstein, member of faculty, National University School of Law, chief counsel of the legislation and regulations division of the General Services Administration.

The last real revision of the Nation's statutes occurred in 1873. Meanwhile there has been a codification of the laws, but this chiefly calls attention to conflicts in them. The present legislation, therefore, is regarded by lawyers as a milestone in clearing the statute books of deadwood.

The work which Mr. Silverstein headed was directed to be done by Congress when it passed the Federal Property Act of 1949. That act set up GSA and made it responsible for the procurement and administration of Government supplies and the disposal of Government surplus.

The staff of attorneys examined more than 25,000 sections of laws, paying particular attention to more than 3,500 relating to the purchase and disposal of Government property to weed out those which have been superseded by the 1949 act or which are obsolete.

1798 ACT FACES REPEAL

The earliest act facing repeal goes back to 1798. It provided that all purchases for the Army or Navy shall be under the direction of the chief officers of those services.

Mr. Silverstein explained that at the start the Government had central purchasing, carried out by the Treasury. The Army and Navy in 1798 were able to break away, followed by other agencies. Central purchasing was not reestablished, at least to some extent, until 1933, when it was again placed in the Treasury.

The act of 1949 placed all purchasing in GSA. But to take care of the special needs of the military, the Defense Department, GSA and the Budget Bureau have agreed on areas where the military may operate on their own.

The Senate also has approved a measure repealing sections of laws dealing with Federal records. Records management is another duty assigned to GSA and carried out chiefly through the National Archives.

One of the sections to be repealed is an act of 1892 directing that the records of the

Revolution and the War of 1812 be transferred to the War Department from the Treasury. Since then Congress has directed that the records be placed in the National Archives.

The Training of Soldiers

EXTENSION OF REMARKS

OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. CORBETT. Mr. Speaker, herewith is an exchange of letters between the commanding officer, the chaplain, and the parents of a boy in the service. These letters portray a fine sense of duty, devotion, and patriotism. They stand in sharp contrast to much of the activities and attitudes of contemporary life. It is my hope that other commanding officers are following the fine example of Maj. Gen. R. C. L. Graham and corresponding with the parents of the boys that serve with and under them. They will find that America contains many people like the Parkers that are happy to do all that is rightfully expected of them if they are treated as fellow human beings and citizens.

The letters follow:

HEADQUARTERS, FORT LEE, VA.

DEAR "MOTHER" OF A SOLDIER: You may be the mother, aunt, or sister of the soldier I am writing about, or perhaps this letter should be more properly addressed to you as his father, uncle, or brother. But as far as he and I are concerned you are the one at home who thinks of him most often and wonders most frequently what he is doing here at Fort Lee.

He was sent to the Quartermaster Replacement Training Center to learn to be a soldier. First he will receive basic training where he will learn to drill along with the other skills that all soldiers must know whatever their military assignment might be. After completion of basic training he will be classified by expert personnel specialists to determine what his aptitudes are and how he might best serve the Army. Prior to his selection for any specific school training, close attention will be paid to his previous record both as a soldier and a civilian and he will be interviewed to determine his interest in any of the fields mentioned below. If possible, he will be assigned to the course which he requests. We teach many trade specialties, including shoe repair, tailoring, canvas and leather repair, operation and repair of field laundries and bakeries, supply handler, supply records specialist, bath processor, subsistence clerk, and utility repairman. Upon completion of his training here, he will be available to a unit for further on-the-job training in the specialty for which he has been schooled at Fort Lee.

The course of training he receives will be given by select instructors well versed in their subjects. It incorporates the most up-to-date doctrine and methods obtainable and I feel that he will be better qualified to successfully face the future, whether it be in civil or military life, as a result of this training.

Life at Fort Lee will not be all work and no play. We have planned an extensive recreational program as well. Our theaters have the latest movies, and plays by both soldiers and civilians are shown frequently. The service clubs at Fort Lee are some of the

model clubs in the country. There soldiers can attend dances, read a book, or engage in any of the dozens of activities we have planned for them. Also, the Fort Lee Hobby Shop offers opportunity for those interested in woodworking, leathercraft, photography, ceramics, and many other fields.

Nor have we forgotten the physical and spiritual well-being of our soldiers. The food they eat is the finest the Army can buy, its preparation is supervised by expert dietitians. They receive the finest medical care, Army doctors and dentists will keep them in tip-top physical condition. To fulfill the soldier's religious needs, Fort Lee has fine chapels; our chaplains are carefully selected from all leading denominations.

Soldiers have the opportunity of living with other young men of their generation, from all walks of life and from every corner of the United States. They will get to know young men from Texas, Oregon, New York, Alabama, young men, who after their Army service is over, will become businessmen, political leaders, and husbands and fathers of America. By working with these young men, by sharing with them the experiences of military service, they will come to know their fellow Americans better—and by so doing learn to know America better. I feel that this is most important, and I know that you as a patriotic American, will think so, too.

Some reasonable restrictions will be placed on your boy's movements. Except for emergencies, he will not be granted a leave during his training period. Upon completion of 6 weeks training, however, he may be granted a pass. These passes are issued for Saturday evenings, Sunday, holidays, and evenings preceding holidays. He must get up and go to bed at regular and early hours. You can help him by letting him know frequently that his family and friends are thinking of him. When you write be sure to include his rank, full name, Army serial number, company and battalion in the address as listed below.

I know that the letters written you from Fort Lee by your boy will keep you informed about his life here at the Quartermaster Replacement Training Center better than any words of mine. We hope that when he returns to you, you will find that his Army training has made him physically fit, mentally alert, and imbued with those democratic principles upon which the whole structure of our American life is based.

Sincerely yours,

R. C. L. GRAHAM,
Major General, United
States Army, Commanding.

PARKER CHEVROLET,

Pittsburgh, Pa., September 20, 1951.
Maj. Gen. R. C. GRAHAM,
United States Army, Commanding Of-
ficer, Quartermaster Reserve Train-
ing Center, Fort Lee, Va.

DEAR SIR: Today I received a letter signed by you in regard to the treatment and care given to the soldiers under your command at Fort Lee. I have read and reread the letter several times. In fact, I have passed it along to some of my department heads for them to read. This letter is so all-inclusive as to just what we, as parents, can look forward to in the training of our sons to be good soldiers in the Army of the United States.

Your letter also points out to me as a businessman that you and your group in command in the Army have realized the same thing we are realizing on the economic front—that is, the price of freedom is service—service to our fellow men, regardless of race, color, or creed.

My son has written several letters during his short term in the Army. His letters are a pride and show the highest esteem and regard for his commanding officers, his sergeant, and his lieutenant. His call on the

phone, which we requested he do, and his enthusiasm for the training he is getting really surprised me until I got your letter today. Now, I can better understand why his enthusiasm is so great. As he said on the phone to me, "Dad, I'm going to do my best to be a credit to the outfit to which I belong."

We here on the home front can be thankful we have officers of your caliber and I sincerely hope this attitude and understanding is borne throughout all branches of the service. As you well know, those young men are those on whom we must depend to carry on the future of our country and to fulfill properly the leadership of the world, with the care and understanding that is necessary to have our main goal fulfilled—that of peace on earth—good will to all men.

It is letters such as yours and the understanding behind it that will do much to make this aim of all time come true in the not too distant future.

Thanking you for your fine letter of understanding, I remain,

Very truly yours,

S. H. PARKER.

THE QUARTERMASTER REPLACEMENT
TRAINING CENTER,
Fort Lee, Va.

DEAR MR. AND MRS. PARKER: I had the pleasure of meeting Private Samuel Parker at the Replacement Training Center Chapel at Fort Lee, Va., and personally welcomed him to this post.

Your letters to him will be of great importance while he is away from home. I encouraged him to write home often, attend church regularly and to take an active part in all recreational and athletic activities of his unit. He will have ample opportunity to further his education.

Our whole program can be summed up in one phrase: "The Army builds men." I am sure I was speaking for both of us when I said to him "Work hard, play hard, live clean and your record will be the measure of a man."

Every officer on this post stands ready at all times to serve you both. We trust that you will remember us in your prayers as we daily remember you.

Sincerely,

ORAN E. A. BOLLINGER,
Chaplain (Captain), USAR.

When Economy Is Not Economy

EXTENSION OF REMARKS
OF

HON. TOM MURRAY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. MURRAY of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the October 1951 issue of the National Municipal Review, which is a publication of the National Municipal League:

WHEN ECONOMY IS NOT ECONOMY

A year ago the National Municipal Review reported the good news that Congress had passed, and the President approved, a new law providing for a "census of governments" in 1952 and each fifth year thereafter. The enactment presumably provided an improved statutory basis for periodic reporting of basic statistics on State and local governments—a

vital information service regularly provided by the Federal Government since 1850.

In accordance with this law the Federal Budget this year included a proposal for funds to conduct such a census. To help prepare for this job the Census Bureau enlisted the advice of such recognized authorities as William Anderson, Frank Baue, Frederick L. Bird, Carl H. Chatters, Rowland Egger, Luther Gullick, Simeon E. Leland, and Clarence E. Ridley. Associations of governments and public officials such as the Municipal Finance Officers Association, the National Association of Tax Administrators, and the National Association of County Officials pledged their cooperation.

It now develops, however, that no funds have been provided to carry out this important task, which Congress explicitly authorized a year ago without a dissenting vote and on which much important preliminary work had been invested. The only reason given is in the comment by the House Appropriations Committee:

"In view of present world conditions and the amount of expenditures necessary for defense purposes, the committee is of the opinion that there are many more urgent undertakings at this time and has therefore denied the budget estimate of \$2,250,000 for this purpose."

By rather similar reasoning, a business firm, hard put to keep up with current orders, might decide to save money by dispensing with its periodic inventory or with its auditing of accounts. Or, on such reasoning, Congress might eliminate the Budget Bureau or the General Accounting Office to free employees for work in Federal defense agencies.

The unfortunate fact is that less basic statistical information is available about State and local governments than about any comparable segment of our economy. These governments provide a wide variety of vital services; their cost approaches one-tenth of the national income; they employ about 1 out of each 15 persons gainfully occupied; they receive over \$2,000,000,000 a year from the Federal Government. Yet the Government, now and in recent years, has issued far more statistical information about literally scores of fields of industrial, commercial and agricultural activity than it has regarding State and local governments.

The most recent census of governments was for 1942. Limited figures available indicate that State and local governments have more than doubled their expenditures and have increased their indebtedness to an all-time high since then. But, unbelievable as it may seem, there is no official source of information for any of the past 8 years as to the nation-wide total of spending by local governments, nor as to comparative totals of State and local revenue, expenditure and debt. To find such totals for local governments by county, one must go back 20 years to the census of governments for 1932.

As State and local officials and civic groups know only too well, the present period of chronic crisis and national preparedness greatly increases the problems and difficulties that confront State and local governments. Up-to-date information as to their status will surely not solve these problems. But the information that could be provided by a new census of governments should permit savings, through better public policies and administration at all levels, far exceeding the project's cost.

Our system is necessarily a complicated one. Complexity frustrates the citizen with the result that ultimate control slips farther and farther from his hands. For this reason, a continuous flow of accurate up-to-date information about all our governments and their activities is the very breath of life to our democracy. With each passing year, the

need for affirmative action by government to supply relevant information about itself becomes greater. The heavier the load imposed upon government, as in the present emergency, the greater the need.

Elimination of the appropriation for the census of governments is not a measure of economy but rather one of improvident extravagance. Neither is it a measure to reduce the Federal establishment. Rather it will tend to expand it, because the less information there is available to citizens about State and local governments, the more they will be drawn as by gravity to dependence upon the central government. Any believer in real economy or in keeping as much as possible of the business of government at the State and local levels should insist upon adequate appropriation for the census of governments.

The Federal Government Should Not Sue States Without Their Consent

EXTENSION OF REMARKS
OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. YORTY. Mr. Speaker, on October 17, I introduced a bill, H. R. 5773, which prevents a suit by the Federal Government against a State without its consent or specific authorization by Congress. This bill writes into our statutes what many lawyers considered to be the law before the so-called tidelands cases resulted in a ruling by the Supreme Court which allowed the States to be sued by the Federal Government without their consent.

A State cannot sue the Federal Government without its consent and since under our constitutional system the States are sovereign entities retaining all powers not delegated to the Federal Government, it appears to be contrary to legal logic to hold the Federal Government immune from suits brought by sovereign States while permitting the Federal Government to sue States without their consent.

The need for this bill appears to be increasing. The tidelands decisions deprived the States of property, the ownership of which was never questioned throughout our history until the recent agitation for greater Federal power resulted in the filing of the tidelands suits by the Federal Government against the States. Such suits asserting new and novel Federal rights are a threat to every State in the Union. They are brought in Federal courts and these courts are drifting toward an ever closer relationship and association with the executive branch of our Government. Supreme Court Justices are too often selected because of political activity favorable to the executive branch if not on the basis of activity actually within that branch of our Government.

This close association of the courts particularly with the Department of Justice, which Department has great influence upon appointment and promotion of judges, presents a real threat to

our constitutional system. The States are at a real disadvantage when sued by the Federal Government in Federal courts. Suits that are justified can, pursuant to my bill, be filed with consent of the States or of the Congress. If the bill is enacted, future contracts between the Federal Government and the States can provide for a waiver of immunity where disputes involving the contracts arise, but of course no coastal State would consent to a suit calculated to deprive it of its historic ownership of submerged coastal lands or the products thereof.

Foreign Aid

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks, I am including at this point in the Record five tables prepared for me by the

U. S. Government foreign aid, postwar period

SUMMARY

	Fiscal year 1952 estimate ¹			1945-51 aid provided ^{1 2}					Total 1945-52 ¹			Population	Aid per capita
	Military	Economic	Total	Military	Economic			Total 1945-51	Military	Economic	Total 1945-52		
					Grants	Loans (gross)	Total						
Europe.....	5,212,943	977,000	6,189,943	934,653	13,841,118	8,416,185	22,257,303	23,191,956	6,147,606	23,234,303	29,381,809	254,500,000	\$115.00
Near East and Africa.....	255,783	205,000	460,783	090	214,156	274,390	488,546	488,179	256,443	692,516	948,959	92,550,000	10.25
Asia and Pacific.....	535,250	282,150	817,400	190,502	2,738,110	195,803	3,253,919	3,430,480	741,812	3,536,075	4,207,887	652,000,000	6.55
Latin America.....	38,150	21,245	59,395	---	139,375	488,079	627,454	674,454	38,150	598,690	636,840	138,200,000	4.61
Total.....	6,042,126	1,485,401	7,527,527	1,131,875	16,932,765	9,623,127	26,556,192	27,708,067	7,174,001	28,001,593	35,235,594	1,137,250,000	30.98

¹ Aid provided figures do not include undetermined amount of assistance in pipeline. During this period in excess of \$1,050 million principal was collected on loans and \$874,000,000 was received as reverse grants and returns on grants.

² In thousands of dollars.

Doorway to Slavery

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. CLEMENTE. Mr. Speaker, under leave to extend my remarks, I am inserting in the Appendix of the RECORD 12 newspaper articles on drug addiction written by Edward J. Mowery, of the New York World-Telegram and Sun.

The articles follow:

[From the New York World-Telegram and Sun of June 18, 1951]

THE TEEN-AGE DRUG PERIL—CHILD DOPE SLAVES BEG CARE, NOT JAIL—OUR CITY, TWENTIETH CENTURY MARVEL OF SCIENCE, IS FAILING ADDICTS; HANDS OF AUTHORITIES ARE TIED

(Narcotics addiction used to be associated almost exclusively with shadowy figures who

existed more in fiction than in real life. Today it is a grim problem confronting more people than the authorities can count accurately, and a startling percentage of them are teenagers. This article is the fifth of a series telling the scope of the scourge, the chances of your own child becoming an addict, and what you yourself can do to fight the menace.)

(By Edward J. Mowery)

A weary squad attached to the police narcotics bureau filed into headquarters annex, slumped into chairs, and grinned at Detective Sgt. John Cottone.

"Yep, pretty good bag," one sleuth observed. Sergeant Cottone, wily nemesis of underworld scum, nodded.

"But what are we going to do with these kids?" he asked. "Most of 'em aren't criminals. They're sick. Desperately sick. What are we supposed to do with the kid addict who pushes a couple of caps of 'H' (heroin)?"

"That's our most baffling problem. We take this child into special sessions. The court is empowered to do only one thing—send him to a penal institution (Rikers Island Penitentiary.) You know what that means. It's cold turkey withdrawal.

"The Lexington Hospital in Kentucky? That's run by the Federal Government. Should we fill our jails with these unfortunates?"

"The bona fide peddler is another matter entirely. We're flushing these bums out by the hundreds. The department has easily made 2,000 arrests since January 1. The kids—that's our headache."

OFFICIALS HELPLESS

Down Centre Street, in the magnificent Criminal Courts Building, we asked Dorris Clarke, the magistrates courts chief probation officer, for her opinion of this vicious cycle.

"The Federal, State, and city governments," she stated, "have closed their eyes to the teen-addict problem for a year. It's a crying shame that in the face of vastly increased addiction and an avalanche of publicity on this evil that not a single facility is yet available to treat these kids.

"The court or public official faced it—a detected young dope addict is utterly helpless. There is no adequate solution. We're flooding correctional institutions such as Elmira and the New York City Reformatories.

"We've sent 50 girls to Westfield State Farm during the last several months. Of

course, all these people have both addiction and delinquency histories. But what happens when they get into these institutions? There's no adequate facility for treating and rehabilitating them, even if they've undergone cold-turkey withdrawal.

"It's fantastic. Hundreds of adolescents need the right medical care now. There's no answer to the problem."

A BITTER JUDGE

Society's callous disregard for human life received another jolt in the chambers of Special Sessions Justice Matthew Troy.

"Of course, we're frustrated," he said bitterly. "The city of New York, the State, the Federal Government must bear the onus for this tragedy. This city is swimming in illicit narcotics."

"Many of the kids who came into this court are now pleading for us to discharge them so they can go into the Army. Imagine. The addict-peddler would spread the poison to our Armed Forces. It's already started, in fact. Heroin was being sold inside one Army camp."

"The Army doesn't want them. As for the Federal addict farm, the Lexington Story is a farce and has been for years. Addicts pour in and out of Lexington. Now it's being sought as a refuge for those facing the draft."

"We haven't medical facilities even to screen the peddler from the peddler-addict."

"They shudder at horse rooms, bookies, cop graft. Profits from these rackets are peanuts compared with the untold millions pouring into the international dope cartel. The human equation? Children are dying."

SPIRIT OF FUTILITY

These are the opinions of responsible, realistic public officials trying honestly to appraise society's disregard for the tragedy that is teen-age addiction. Their hands are tied.

This spirit of futility hovers like a wraith over New York fully 14 months after the World-Telegram and Sun first warned that addiction would prove a curse unless checked.

Early last fall, in a grim recital of deaths from narcotics, this newspaper again alerted public officials that medical care of addicts was of vital importance. Children—from your own neighborhoods—were in agony.

Later came the ghastly narcotism toll: 1946 deaths, 11; 1950 deaths from dope, 58. A 500-percent increase.

In March, Bronx Assistant District Attorney David Blatt shocked the faculty of Junior High School 51 with this statement:

DOPE LEADS TO CANCER

"Kids are using crude devices—home-made syringes, cotton filters, and match-box covers—to get their heroin dosage. The 'snorters' who sniff the powder aren't aware that this practice leads directly to nose cancer. Dependence on heroin is a compulsion impossible to break."

New York City, the educators learned, is acclaimed as the 20th century marvel of science. But there is no medical hospice available to child dope addicts killing themselves with deadly heroin.

The United Parents Association, in a bitter press release, said its membership of 250,000 parents would use every communication facility at its command to drive the tragic story of teen-age addiction home.

"Cases have been reported to us," the UPA spokesman declared, "where attempts to deprive children of their accustomed drugs resulted in such violent reactions they had to be sent to Bellevue's emergency ward. It's imperative that the city provide some place where these unfortunates can get medical and psychological treatment found effective to cure drug addicts."

This indignant protest was filed in January.

On April 14, a group of grief-stricken mothers of teen addicts took up a vigil at the very steps of City Hall in their mute plea for help.

A lamp was lighted there symbolizing a vigil of prayer to be kept for 48 hours, which is the average time addicts suffer the physical agonies of withdrawal in the prisons of New York.

Then the small band of parents disbanded. Their efforts were futile.

On May 25, a Bronx committee of outraged citizens scoffed at the statement by Superintendent of Schools William Jansen that only 154 young addicts could be found in the school system.

Carl Colodine, of 3165 Decatur Avenue, Bronx, spokesman for the group, said a meeting would be called to high light the city's apathy toward child dope addicts.

"We will also protest," he said, "New York's penal approach to the sickness that is drug addiction leading to such tragic deaths as that of Edwin Gonzales, 17, of 1004 Simpson Street, Bronx, a possible addict recently shot dead by police while stealing 30 cents worth of candy."

"We'll meet in repentance for our share of community responsibility in this tragedy."

Society has had ample warning of the dope scourge. An army of sick, bewildered children still await the answer.

[From the New York World-Telegram and Sun of June 19, 1951]

UNCLE SAM PLEADS BEFORE U. N. TO STOP FLOW OF DOPE—SMUGGLED HEROIN POURS INTO COUNTRY

(By Edward J. Mowery)

Uncle Sam, whose generosity has gone out to virtually every nation in the world, stands as an abject international beggar on the dope problem at the portal of the United Nations.

Not a single ounce of opium is produced in the United States. Yet, opium-producing countries are pouring this drug's most deadly derivative, heroin, into this country.

At this moment, American taxpayers are being asked to underwrite \$7,200,000,000 in foreign aid. And in Lexington, Ky., the Government's only hospital for addicts has cut its personnel and juggles a waiting list of pain-crazed victims of foreign-grown narcotics. No money.

New York City, experiencing the worst dope scourge in history, puts child addicts with the mentally ill or with criminals. No hospital. The State, cross-hatched with hospitals and clinics, plans an emergency haven for addicts at a women's penitentiary.

MAKES PLEA TO U. N.

On May 1, Federal Narcotics Commissioner Harry J. Anslinger virtually begged Italy, Turkey, Greece, North China, and Manchuria to destroy their stocks of diverted (illicit) drugs and reduce their production to strictly medical needs. He made his eloquent plea before the U. N. Narcotics Commission at Lake Success.

He stressed that Chinese Communists in Hong Kong are trying to dump 500 tons of raw opium on the world market. He revealed that heroin, the terror drug, is pouring from underworld laboratories in Tientsin to Japan, where thousands of American troops are exposed to the danger.

The U. N. Commission reportedly agreed to exert every effort in destroying diverted drug stocks which have made addiction a world-wide crisis.

Mr. Anslinger, appearing before the Senate Crime Investigating Committee, said ominously:

"Large quantities of heroin * * * smuggled from China to Japan, will be coming to the United States. This is a disturbing matter and the Chinese Communists should suppress this traffic. Through the

U. N. and other channels of international cooperation, our Government has been exerting every effort to eliminate external sources of narcotic drugs."

"Chinese tongs are becoming active again after several years of relative quiet, and we intend to take care of that situation."

Then Mr. Anslinger added this shocker:

"A number of draftees are claiming drug addiction to escape the draft. We are working with military authorities to break up this racket. The narcotics traffic is a vicious, commercial racket which lives on the slow murder of its customers. It must be dealt with more drastically and realistically."

URGES SPECIAL SQUADS

As evidence of this country's inability to halt the flow of foreign drugs which has made thousands of youths unfit for military service, the official continued:

"We've been endeavoring for many years to have police departments in the larger cities set up specialized narcotic squads. We've succeeded in several localities."

"This leaves our Bureau free to concentrate on large-scale traffickers. With our small force of less than 200 men (actually 138) to cover the entire United States ' ' ' we cannot do everything."

Was New York City—the Nation's prime reception and distribution point for drugs—one of the cities with sufficiently large narcotics squad?

"Los Angeles (a squad of 28 men) is the Nation's only city which has taken the initiative and established an adequate narcotics squad," he said.

In closed session before the Senate committee, the Federal official revealed that fully one-fourth of America's top gangsters are reaping the dope harvest.

"Of the list of 800 (top mobsters) I furnished your committee in closed session," Mr. Anslinger stated, "200 have narcotics records."

None will say how many key gangsters were among the 6,163 arrested by Federal agents last year—the highest bag in the Bureau's history.

CARE FOR ADDICTS

While Mr. Anslinger made no reference to wholesale traffic in marijuana, another Federal expert declared that the deadly hypnotic can be waded across the Rio Grande for hundreds of miles with little fear of detection by either United States or Mexican border patrols.

Customs?

Again it's a case of too little and too late. The force of agents could be tripled without making a serious dent in the international drug fiasco.

As to medical aid available to the thousands of desperately ill adolescent addicts, Mr. Anslinger commented at a later date:

"For the past 20 years, we've recommended that each State set aside wards in State hospitals to take care of addicts. California was the only State to respond. It established a separate institution to hospitalize addicts but it discontinued it some years ago."

Concerning dope's inroads on draft-eligible youths and the current trend toward phony addiction by would-be evaders, the World-Telegram and Sun learned from a former addict in Connecticut that this practice is rampant.

"Nonusers by the score," he declared, "are using this artifice to keep from serving their country. They plant a few caps of 'H' (heroin) in their pockets, get arrested and a commitment to Narco (the Lexington, Ky., addict farm)."

"Such commitments mean a year's probation. They get off a bus or train in Lexington, pay a local doctor \$5 for a shot of 'H' and present themselves at the hospital's gate. They'll pass the physical tests as addicts and they're out of the draft."

The former addict added grimly:

"However, the joke's on them. Hospitalized with bums and criminal addicts, they learn how to use the stuff in short time and come away junkies."

The joke's not on them. The shame is on America. Even Mr. Anslinger, who formerly characterized 10 addicts as "hoodlums," now excludes high school kids from this stigma.

WHAT'S THE SOLUTION?

What's the solution to the wholesale bondage of dope addiction?

Certain conclusions are obvious.

On the Federal level, Congress must cope with smuggling from Europe and Asia with every facility at its command. Federal narcotics bureau manpower should be immediately tripled (600 men) and this agency's budget (\$1,750,000) increased by \$3,000,000. These are minimum requirements.

The States—especially New York, New Jersey and California—should improvise hospitalization for teen addicts now and formulate plans for long-range medical care and rehabilitation.

New York City is faced with a double emergency. Immediate hospital facilities for addicted children and a vastly enlarged narcotics squad. In the early twenties, the late Dr. Carlton Simon fought an upsurge in the dope traffic with a squad of 125 men.

Before his death, the founder of New York's narcotic squad told the writer New York needs "at least" 250 trained men to track down the vicious dope rings now plaguing adolescents. The squad currently totals 49. Finally, parents of this city can send up a crescendo of protests against New York's greatest disgrace. The chips are down.

[From the New York World-Telegram and Sun of June 13, 1951]

IT'S 1 IN 50 YOUR CHILD TAKES DOPE—BUT THAT'S ONLY A GUESS—OFFICIALS ADMIT THEY DON'T KNOW REAL ODDS.

(By Edward J. Mowrey)

Can your child become a dope addict? Exactly what are the chances of your boy or girl joining the legion of youngsters now hooked on heroin or marijuana?

The answer, as nearly as experts can estimate, is that 1 youngster in 50 between the ages of 16 and 18 could become an addict.

However, since child addicts are extremely secretive and normally induce three to five of their friends to try illicit drugs, police probation officers and court officials frankly concede no one can safely estimate the number of New York City children currently taking dope.

The estimates have run as high as 20,000. Police, who have made thousands of narcotics arrests in the last year, say there are a minimum of 5,200 teen-agers in the city on heroin and reclus. The recent report of Superintendent of Schools William Jansen that there are only 154 known addicts (requiring or having received medical care) promptly brought indignant protests that the figure was ridiculously low.

Attorney General Nathaniel L. Goldstein, conducting the State's teen-age addiction probe, replied that at least 5,000 New York youngsters were addicted. The school's own enrollment figures of children in the 16 to 18 age group (the most popular age for neophyte addicts) clarify the issue.

They are. Age 16, 88,641; age 17, 95,727; and age 18, an estimated 90,000, for a total of 274,368. If 5,000 of this number are dope addicts, it means that the evil has claimed 1 child out of 50.

No one, to repeat, can truthfully gage addiction's devastating impact upon adolescents. Narcotic rings using cunning, migratory tactics, have enslaved 11-year-olds on rare occasions. And court records disclose many children of 12 and 13 exposed to the menace.

BOROUGH ESTIMATES

The police narcotics squad under Lt. Bernard Boylan and Sgt. John Cottone has blueprinted concentrations of teen addicts throughout the city. Manhattan has 2,000; Brooklyn, 1,500; Bronx, 1,000; and Queens, 700.

Addiction has made negligible gains on Staten Island, but it has become a serious problem in virtually every other part of the city. Police estimate that half of the junior and senior high schools have been hit in varying degree. Pushers—dope sellers—are working close to elementary schools, all of which have been alerted to the danger.

Heavy use of heroin and marijuana has been reported in some vocational high schools in Manhattan and Brooklyn. And the incidence rise in child addiction generally follows activity of underworld rings in specific areas.

Parents, residing in east and west Harlem, the lower East Side and the old San Juan Hill area of the west side of Manhattan are warned that peddlers have done a lush business near their homes. Other danger zones include the east Bronx, especially the Westchester Avenue zone, the Brownsville, Bedford-Stuyvesant, and east New York sections of Brooklyn, and the vast Jamaica area of Queens.

PAD JOINTS FLOURISH

Teen-age addiction in these areas has mirrored the sharpest rise. Pad joints, where reeler smokers and "mainliners" (addicts using needles for injections) congregate, flourish in direct relation to ability of police to abolish them.

Children have lately been enlisted as dues-paying members of addict clubs. The fees insure a minimum dosage of heroin. Their insignia, like the hip flask of prohibition days, is a hypodermic needle and a bent spoon.

It's a popular fad in numerous teen-age groups to take a shot of "horse" (heroin) before going to the community dance. The fad has even touched college campuses.

PARENTS DECEIVED

Addict paraphernalia has been found in school rest rooms and peddlers have brazenly operated in school cafeterias. Gym teachers have been alert for months for needle marks in physical education classes. Detectives have been assigned, in some cases, to actual posts inside schools.

Even parents who realize dope's inroads on youth and use every precaution in protecting their children are often fooled. Child addicts have been known to secrete their paraphernalia in a bullet-shaped missile in toilet bowls. They may meet their "connection" (peddler) on the street when the family has retired.

Heroin capsules have been known to be camouflaged in bubble-gum wrappers and brazen pushers will even accost groups of kids on sand lots. One shot, they promise, will make Johnny play ball like Babe Ruth.

EATING AT UNITED STATES DEFENSE

After Johnny is hooked, he may rendezvous with his pusher in a theater, cellar club, hotel lobby, or across the street from school. Johnny will find him. Johnny would be in agony without him.

This is the child narcotics addiction picture today, a problem which Senator ESTES KEFAUVER, Democrat, Tennessee, former chairman of the Senate Crime Investigating Committee, calls the most pernicious, most insidious evil facing America.

Erie Cocke, Jr., national commander of the American Legion, who will appear in New York at the Legion's 3-day clinic on adolescent addiction this week end, declared:

"Organized traffic in illicit drugs is eating at our defense potential and destroying our moral fabric."

The odds on your child being addicted may be 50 to 1. However, there is no doubt about

dope's murderous grip on our children. Five teen-agers died from addiction in recent months. Fifty-eight New Yorkers (23 under 25 years of age) succumbed to this blight in 1950.

A veteran police official put it this way: "Like the fisherman who runs into a school, all we're sure of are the ones we caught. Who knows how many got away?"

[From the New York World-Telegram and Sun of June 14, 1951]

CHILD ADDICTS HARD TO SPOT, BUT BEHAVIOR CAN BE CLUE—DOPE VICTIM OFTEN DUCKS FAMILY, PALS

(By Edward J. Mowrey)

The mother of a teen-ager phoned the writer and said softly:

"My boy is in his bedroom banging his head against the wall. He wants us to kill him. Please, in God's name, what can we do?"

She sobbed for a few moments, then continued:

"My child is a heroin addict. He's a good boy and we've tried to help him. We waited 3 hours at a hospital before an intern gave me some pills and sent us home. Later my boy went into spasms."

This mother was witnessing what doctors describe as the most pitiful sight human eyes can endure—a child narcotics addict undergoing "cold turkey" or sudden withdrawal from drugs.

But the symptoms of child addiction aren't always so patent. In fact, they sometimes defy expert diagnosis. Authorities on narcoticism agree that the day-by-day behavior pattern of a child introduced to drugs is nature's initial signal of impending disaster.

ADDICT'S IRON CURTAIN

Addiction's iron curtain is furtiveness. The child will deviate from his or her usual routine. The thrills of TV or a stickball game may fade. Johnny will disappear and keep his destination a mystery. He may be gone for hours or far into the night. When questioned, he'll evade, lie.

In many cases, he'll eschew old pals (whom he couldn't get to try dope) and meet in cellar clubs or on street corners with questionable companions. Parents should immediately investigate both Johnny's haunts and friends.

Johnny won't wash his hands before another member of the family if he has gone to the needle. And if he's been dragooned by a dope peddler into the role of "pusher," he may blossom forth in "sharp" clothes, expensive shoes and flashing neckwear. Johnny's pockets may also jingle.

LIKE BURGLAR TOOLS

If the child successfully masks the needle marks on his arm, he will guard his addict paraphernalia like burglar tools.

The advanced addict's rig consists of heroin capsules, hypodermic needle syringe, rubber arm band (tourniquet), medicine or eye dropper, and a teaspoon (the handle usually bent and the bottom burned). As Johnny's bodily tolerance for the drug increases, however, he becomes ingenious in administering dope.

Police have found numerous cases where child addicts puncture the skin with a bent pin or nail to get at the main artery. The enslaved adolescent ignores the possibility of gangrenous infection. But the records of narcoticism deaths in the medical examiner's office don't.

As effects of the drug wear off, the child has no alternative. He must continue. And the more he takes, the more he needs.

"If the drug is suddenly withdrawn, a medical authority warns," acute illness develops. The victim will stop eating, may vomit, develop diarrhea, suffer intense muscular pains of the arms and back. Considerable weight

may be lost in a single day. Sleep is out of the question.

"The person dependent on drugs cannot take it or leave it. Since self-control is lost, the situation presents a state of slavery."

INHIBITIONS SHATTERED

The tragic aspect of child addiction is the victim's utter isolation from society. Cut off from his loved ones, his doctor, his minister and teacher, little Johnny becomes reckless, amoral. His inhibitions shattered, delinquency and crime become his bedfellows under the iron mastery of the infamous peddler who seduced him.

The child is deadened to the gradual moral deterioration that made him an outcast. And he's dangerous. One New York adolescent told horrified probation officers she would kill her mother or father "if they stood between me and a shot."

How did our hypothetical Johnny get on drugs? What is heroin or marijuana?

ADDICT'S PARADISE

Like the thousands of others who became hooked, Johnny may have had to maintain face by accepting a dare. Psychologists call it status. A brave teen-ager put it this way in a composition: "Most of the boys and girls I know said if I didn't try heroin, they'd call me a punk."

A classmate, neighbor or even a stranger may have asked Johnny to try a reefer (marijuana stick), a sniffer or a shot. The neighborhood, Johnny learned, was wallowing in the stuff. All the kids want the kicks.

Johnny may have flunked an exam, experienced a disagreeable home squabble. He welcomed such a lift or bang. The gang on the corner may have jeered: "Be a regular guy. Don't be chicken. It won't hurt you."

So Johnny accepted a free reefer and sucked its acrid fumes into the pit of his stomach. Marijuana—the key to an addict's paradise.

And a passing word to all parents about marijuana:

While the habit-forming aspects of this intoxicant are occasionally challenged, there is virtually no disagreement concerning the acts of bestiality resulting from marijuana's persistent usage.

THE TERROR DRUG

Marijuana (the Mexican name) comes from the upper leaves and flower of the hemp fiber plant (Asiatic). Its viciousness as a drug is highlighted by the fact that the English word "assassin" is derived from Hashashina, the name of a murderous Mohammedan sect which used the drug in their wild orgies. It can be grown in window-boxes or cultivated in empty lots.

Marijuana has little or no use in medicine.

Heroin—the terror drug—is an opium derivative with no medical value which is currently pouring into the United States from China, India, Iran, Turkey, and the Soviet Union. Its powdery granules undergo numerous adulterations through the underworld market to reach the New York youngster at about 5 percent purity. A cap (capsule) of 1½ grains sells from \$1 to \$2.

The child, first approached by dope peddlers, may get a free shot for a few days. He can snort the powder, mix it with water over a match in a spoon for "skin popping" (injected under the epidermis) or main-line the deadly concoction into the main forearm artery.

Heroin is the most dangerous of drugs and the most popular among criminal addicts. Its jolt on the system is more severe than that of morphine and because it is outlawed, its victim must look constantly to the underworld for dosage.

The heroin addict is truly hooked.

Our Johnny, victimized by greedy criminals, can become society's lost child unless his parents are realists. And it shouldn't happen to Johnny. He's the bulwark of our future generation.

[From the New York World-Telegram and Sun of June 15, 1951]

DOPE SLEUTHS FACE JUNGLE CUNNING—ONE VENDOR USED PET FERRET TO FITCH HEROIN PACKETS FROM CACHE UNDER FLOOR OF ROOM (By Edward J. Mowery)

When veteran New York narcotics squad detectives compare notes on the cunning of dope rings the classic tale of the Manhattan retriever bobs up.

Police made four abortive raids on a tenement visited by numerous suspected addicts. The occupant stonily professed his innocence and invited a search. The siege went on. Finally, one addict was caught with a container of dope in his pocket.

"Don't know where he hides it," the victim expostulated, "because he never lets anyone inside."

From the vantage point of a fire escape, the cops learned why. The peddler had a confederate. A pink-eyed trained ferret on a leash sat at his feet. When a patron knocked on the door, the ferret darted into a floor aperture, brought back a container of dope soaked in liver blood and was rewarded with a chunk of liver.

CHILD CARRIES DOPE

Drug rings preying on teenagers haven't resorted to animal training as yet, police declare, but they're using every artifice known to the underworld in keeping the junk flowing. An upper Manhattan peddler with scores of adolescent customers strolled near schools with a 3-year-old girl.

Her pockets were stuffed with heroin capsules. He was clean.

Peddlers in one school posted a girl "connection" beside the cafeteria coffee urn at lunch time. A nod or a wink meant that "H" (heroin) was in plentiful supply around the corner. One school child told officials that heroin was administered by the shot on a Manhattan street at fixed times.

Addicts lined up for their dose like unfortunate in a depression bread line. A veteran addict who loses an army of teenagers dying on the heroin vine told the World-Telegram and Sun that New York now has about 10 big narcotics rings fighting for the children's business.

TWO THOUSAND KIDS A YEAR

One ring, he said, will use 10 runners to distribute drugs to 90 pushers. Its constant aim is to make a peddler out of an addict.

The monthly gross in New York alone runs into untold millions. As to addiction:

"At least 2,000 kids are indoctrinated each year," he explained. That's an entire college enrollment swung into the use of junk and on the way to potential criminality. What can these kids do? Their constant fear is a hospital with bars. So they slink off with their gang and try to recruit other kids.

Children introduced to heroin for the first time are amazed at the dog-eat-dog frenzy of peddlers fighting for dope's ever-ready dollars. Pushers are not only working two to the block in some localities, but laboring overtime to reap the harvest. Their routes frequently take them to the very steps of school buildings.

"The average peddler handles three pieces (2½ to 3 ounces) each day," this addict declared. That means he's selling around 700 caps, mostly to school children. Sure kids are dying. I'd say more than 500 have died in New York since the early forties from overdosage or chemically impure heroin.

MESSAGES IN CODE

How does a dope peddler, a perfect stranger—accost your child?

He may give Johnny a cops-and-robbers pitch on the sandlot, in a hotel lobby or at a community dance. This may consist of coded letters and a telephone number. The peddler may meet Johnny at the appointed time and flash heroin capsules from a hat box or a grocery bag.

It's more than likely, however, that Johnny's connection will appear through a mutual friend. If Johnny calls the right number and has the right password, he may meet the peddler in a bus terminal or hotel lobby. The peddler will take the money and disappear.

In Johnny's hand will be a slip of paper with another phone number. That of a booth in the lobby. Johnny's heroin will be taped to the bottom of the arm rest.

Many successful peddlers selling to children rarely approach their victims directly. They may patrol neighborhoods in flashy cars and carry a load of nylon stockings in the trunk to prove they're "salesmen." The heroin cache may be secreted far away in a rented apartment in a respectable neighborhood.

GANG POPPERY

They patrol certain areas to see how their addict-pushers are making out. They have even set up district headquarters in the mezzanine of a theater.

Adolescents, intrigued by this air of mysticism and intensely loyal to their clique of fellow addicts, frequently adopt forms of behavior which identifies them as dope users.

They may use a special type of slang, affect special haircuts, or wear bizarre clothing ensembles. Other teen-agers, impressed by this array of gang popper, may plead to join up. They're initiated into "horse" (heroin) and the constant fear of arrest insures their loyalty to the group.

Police have learned through hundreds of interviews with child addicts that the duplicity of organized dope rings must be met in similar vein. Detectives have posed as blind men in accompanying teen-agers to the "plant" (rendezvous point). Peddlers have no fear of being identified by one who cannot see.

So Johnny buys his "H" from the pusher while the "blind" cop watches. Then the dragnet closes.

CRIMINAL AFTERMATH

Women detectives have taken jobs as maids in apartments, manned switchboards and posed as molls to smash vicious gangsters in the dope traffic. And when a ring is suspected of expansion to other States, phone taps on court order provide a monitoring system that functions day and night.

What's been the aftermath of this wholesale enslavement of youngsters?

Muggings, robberies, prostitution, assaults, and murder.

Two teen-agers allegedly murdered a matron strolling in Central Park for the few cents they found in her pocketbook. They were starved for another shot of heroin.

Medical cabinets in schools have been rifled for hypodermic needles and medicine droppers. Physicians on night mercy calls have met, instead, dope-starved youths who would kill for the little black sachet.

Kid addicts have stolen and pawned untold thousands of dollars' worth of clothing, radios, and home accessories to get the needed dosage. In New York and across the country addicts are amassing thousands of mail boxes and stealing checks of old-age pensioners, disabled veterans, and recipients of welfare doles.

DEATH PENALTY DEMANDED

This is one facet of the unsavory child addiction picture which has motivated Representative L. GARY CLEMENTE of New York to introduce a bill providing for the death penalty for peddlers selling to teen-agers.

Representative CLEMENTE, praising the World-Telegram and Sun's 14-month anti-dope campaign, told the writer:

"No crime, in my opinion, is worse than this exploitation of our young people, but I believe it would stop almost immediately if we put forth the same effort that was necessary in stamping out kidnaping in this country."

"I have introduced legislation that will, if enacted, bring death to the racketeer who enslaves our children with dope."

PUBLIC CRUSADE OFFERS NEW HOPE FOR DOPE VICTIMS—LONG YEARS OF OFFICIAL APATHY SHATTERED BUT VICTORY IS STILL FAR AWAY

[From the New York World-Telegram and Sun of June 16, 1951]

(By Edward J. Mowery)

What's being done to protect your child against dope rings spreading deadly heroin into every section of New York City? What happens if your youngster is hooked?

There are no full, immediate answers to these questions. But indications of action to come may be found in the outburst of public horror that finally has rocked the city after sordid revelations about the dope evil began in the World-Telegram and Sun on April 15, 1950.

First disclosures ran into a wall of public apathy. But through the months this newspaper kept up its fire. Revelation followed revelation. And although officialdom remained indifferent—or at least inactive—the truth became more generally recognized by citizens.

Finally, about 9 months after depravity and crime among teenagers, brought on through the enslavement by narcotics, were fully documented, the lid blew off. Public alarm culminated this week in the current State investigation by Attorney General Nathaniel I. Goldstein.

He and his staff of expert investigators have startled New Yorkers with "flesh" and wire-recorder testimony of youthful victims of the drug pushers and of experts on the peril that threatens to make one out of every 50 children a victim of dope.

Mr. Goldstein is only digging into the mounting morass. It will take the legislature months to cap his disclosures with a solution.

But the battle is on. Peddlers must be crushed and victims salvaged.

Your youngster, if he is hooked, must be saved. He needs immediate and adequate hospital care and rehabilitation.

A drive to obtain the necessary hospital facilities is being pressed vigorously by the American Legion and Irving Geist, philanthropist and realist. They declare children must not be lost in a sea of official and nongovernmental apathy.

1946 WARNING IGNORED

As early as 1946 efforts to protect the city's youth from its present mushrooming danger were rebuffed. That year a group of eminent physicians tried to warn city hall that teen-age dope would become the city's scourge.

But Dr. Lester C. Spier and other members of the New York County Medical Society committee received a brush-off. "We were sent home like schoolboys without seeing Mayor William O'Dwyer," Dr. Spier disclosed.

As this newspaper revealed the alarming rise in adolescent drug addiction, officials parried the blows and shrugged. Finally, as 1950 wore on, the truth dawned on a cluster of indignant, militant citizens. Then it swept to the organization level.

The State Chamber of Commerce adopted a resolution calling for official action, parent groups, doctors, social workers, bar associations, veterans' units, and scores of frantic mothers and fathers whose children were jeopardized deluged city hall with protests.

On December 12, Mayor Vincent R. Impellitteri called a meeting of his department heads, told them to study the problem and make a report. The report never materialized.

However, 5 weeks earlier an interoffice memo in the magistrates' courts heralded a revolutionary move to cope with the flow of teen-age addicts.

The Youthful Offender Act would be activated. And in the youth part of Special Sessions Court, Justice Matthew Troy left the bench after surveying a line of kids on heroin.

"It makes you sick to see them," he declared. "We're completely frustrated."

Justice Irwin Davidson said the problem was appalling and District Attorney Frank S. Hogan expressed shocked indignation.

DEATH RATE CLIMBS

While State Senator Seymour Halpern hastily prepared legislation to cope with the evil, teen-agers were dying on Manhattan stoops, in hallways, in hospitals. Two pals of one boy rushed him to a Brooklyn hospital—and ran. He died.

Mass meetings, investigations, studies by two-score groups of the Welfare Council. But no affirmative, high-level action to stem the tide.

What's being done now by city and Federal agents?

A totally inadequate narcotics squad is rabbit hopping over New York in frenzied effort to round up dope peddlers. In many cases, the men and women of this unit work around the clock.

The Federal narcotics agents?

NOW FOR THE VICTIMS

With only 188 men to police all the Nation, they're pecking at the tidal wave of dope's overlords who make New York the Nation's prime distribution point. Sparsely manned, the task of this force seems hopeless.

Stop smuggling?

The customs service has 200 agents to police New York harbor's 600 piers per shift for all types of contraband. Dope is cascading in.

But what about the child who already has succumbed to heroin's slavery? He has bypassed the splendid efforts of FAL, the Settlement House vigilante committees, the school system's delayed syllabus of instruction.

Where can this child go for medical aid?

At present he has three ways to reclaim his respectability. None offers much refuge. Johnny can brave the wrath of his parents and appeal for treatment through the family physician. It means iron-clad restrictions on his movements, gradual, safe withdrawal from the drug, eschewing his former addict friends.

But the doctor will tell Johnny's parents he doesn't run a clinic. He can't police Johnny's actions. And dope, plenty of it, is just around the corner.

THE FEDERAL ANSWER

Private sanitariums? Yes, if Dad can stand the tariff. Proper treatment takes 4 months.

What about the city's answer?

Johnny may be committed before a magistrate. If he goes to Rikers Island Penitentiary, he writhes out his "cold turkey" withdrawal agony with felons. If he goes to Bellevue or Kings County Hospitals, he's placed with the mentally ill and he may stay about 2 weeks. After that he's freed—possibly to return to dope.

What about the State? There's no succor there.

And the Federal Government's answer? Johnny's parents would shudder at this solution.

On February 12, 1951, the World-Telegram and Sun disclosed that the United States Public Health Service Hospital, Lexington, Ky.—known to thousands of addicts as Narco—was caring for 135 patients beyond its maximum capacity of 1,300.

Dr. Victor H. Vogel, the hospital's medical chief, frankly conceded that children from 14 up were hospitalized with criminals and perverts. Segregate them? Walls don't bulge even for Uncle Sam.

Despite revolting conditions at Narco, parents of adolescent addicts, seeing their children sinking into a life of depravity, told

the writer they were planting heroin on their children and giving them up to Federal agents.

CRYING NEED FOR ACTION

"It broke my heart," one mother said tearfully, "but my boy won't die in a gutter from heroin if he's behind bars at Lexington."

Demands for adequate hospitalization for young dope victims descended on Washington. A Bronx group petitioned United States Public Health Service officials to make use of hospitals in the New York area being closed. The pleas were fruitless.

On January 18, 1951, this newspaper reported 2,000 dope pushers enslaving an estimated 30,000 New Yorkers. And the Fathers' Club of Public School 90, Bronx, continued to plead with five top city officials to "rescue our children from the precarious predicament of becoming hopeless drug addicts."

Then came mass meetings for hospitals (Public School 52, Bronx), open-air dramas (Manhattan), clinics (Association of the Bar of the City of New York), radio discussions of New York's dope crisis, raids on "pad joints" and lairs of underworld traffickers. But dope, now a social blight, has continued.

Now the State has launched full warfare. The strategy, the tactics, remain to be decided. But at least the public and its servants are aroused, and the parents of victims—and prospective victims—are demanding nothing less than full victory.

[From the New York World-Telegram and Sun of August 6, 1951]

PEASANTS HARVEST 11 TIMES MORE OPIUM THAN ENTIRE WORLD NEEDS FOR MEDICINE - FARMERS IN EUROPE AND ASIA DEPEND ON HUGE POPPY CROPS FOR LIVELIHOOD

(By Edward J. Mowery)

(Dope addiction can be controlled—when the nations of the world agree to limit production of narcotics for medicinal needs only. The problem is complex. It involves peace, international intrigue, racketeers and the daily bread of European and Asiatic farmers. This is the first in a series pointing to the solution.)

In the great subtropical belt stretching from the coast of China to the Adriatic Sea papaver somniferum is a highly-esteemed, tenderly reared plant on which hundreds of thousands of peasant farmers depend for their bread.

The fact that the plant produces opium, the wrecker of untold thousands of lives, means little to the men, women and children toiling in the hot, dry fields of Turkey, Iran, India or China.

To them it means ready money, not only for the opium but also for the millions of tiny poppy seeds whose oil brings back 66 cents for every dollar obtained for the drug.

It is a way of life.

From its humble beginning in the well-drained, rich soils, where swaying poppies dot the country-side in red and white array, opium and its derivatives follow a tortuous and ever more criminal course. Eventually it slips past customers and border guards and fattens the wallets of the underworld.

To stop pushers here in New York, experts agree you must go back to the fields half-way around the world and plow under the crop which brings a living to peasants . . . and misery and crime in America.

DRIVE BEGUN IN 1783

Meeting this week in Geneva is the United Nations Economic and Social Council, which will study proposals of the U. N. Narcotics Commission to limit world opium production to legitimate needs.

It isn't the first time that nations of the world have tried to break the shackles of the narcotics habit. As far back as 1783 Warren Hastings of the British East India Co. said the drug should be strictly limited "in compassion to mankind."

But it wasn't until 1909 that President Theodore Roosevelt proposed the interna-

tional investigation that led to the first opium convention drawn up at The Hague 3 years later.

It was a slender reed and soon was honored more in the breach than in the observance. Because the peasants in India, Burma, Greece and Iran needed papaver somniferum to market their fields pay their way. And others, more venal found the trade richly rewarding.

What relief may be expected from the UNESCO sessions?

How long can the United States—experiencing the worst addiction scourge in history—parry the blows of criminal bands against our youth?

Not even the most optimistic U N delegate believes that a global opium control will come in a year or two. Yet most nations recognize the dope crisis and want sincerely to solve it.

WANT SUBSIDIES

One U. N. spokesman from an opium-producing country put it this way:

"We'd gladly eliminate cultivation of the poppy overnight. But what revenue could we be assured of to replace our profits from opium? And unless we do replace this revenue we face national bankruptcy."

At the U N Commission on Narcotics Drugs hearings recently concluded producing nations failed to adopt a monopoly plan to curtail harvests and control prices. What they wanted, in effect, was a subsidy if they cut their opium crops and sacrificed vital governmental revenue.

Yet, it would take another Marshall plan to underwrite the losses of such producing nations.

The humanitarian aspects of the cause fell under the weight of dollar-and-cents realism.

How much opium is the world producing? How much is necessary for scientific and humane needs?

None can safely estimate current production. Where the drug is cultivated under so-called national monopolies, the admitted harvest exceeds 2,000 tons annually.

This estimate excludes production in Red China, Manchuria, Eastern Russia, Siberia (western areas), and Russian Asia. One expert believes that opium produced under the Soviet might approximate the admitted world production of 2,000 tons.

Another barometer is available in the total seizures of illicit opium as reported to U N. by various countries. These figures, compiled by the U. N. Secretary-General for the fiscal year ending May 31, 1950, were submitted by 32 nations.

ELEVEN TIMES THE NEED

The totals indicated 1950 opium production hovered around 3,200 tons, with a vast quantity of the contraband of unknown origin.

A U. N. spokesman explained that illicit drugs falling into the hands of authorities make up less than 10 percent of the illegal trade. Thailand alone confiscated 13½ tons of contraband opium, with Burma and Egypt sharing an additional 8½ tons.

High medical authorities, however, say flatly that the current global opium harvest is 11 times the world's medical needs.

Those needs are 450 tons.

Somewhere between these totals lies the true production. Perhaps around 4,000 tons. And the significance of this stupendous opium production when applied to the heroin needs of addicts is breath taking.

Diverted from legal channels or harvested clandestinely in Asiatic mountain areas, 4,000 tons of raw opium become the chemical equivalent of 8,000,000 ounces of heroin. One ounce of this opium derivative is extracted from every pound of the poppy drug.

In terms of the addicts' daily needs, 8,000,000 ounces of heroin provides 242,426 kilograms at 100 percent purity. Through systematic cutting in the underworld, the cache of powder destruction supplies more than

16,000,000,000 capsules (2 grain) at 5 percent purity.

In other words, today's opium production, translated into the outlaw drug heroin, is sufficient to provide 20,000,000 addicts with three caps per day for a year.

TRAIL OF DEBAUCHERY

This is the key to the trail of debauchery addiction is blazing throughout the civilized world.

The extent of the production and traffic in marijuana—heroin's indoctrinating agent—defies research. Indian hemp, whose leaves make the heady reefer, flourishes over millions of acres in virtually every country in the world.

Indicative of its prodigious growth, nearly 20 tons were confiscated last year in 17 countries stretching from Zanizar to Australia. Mexican marijuana, pouring across the Rio Grande, spews through a transcontinental network to the most remote sections of the United States.

The Federal Narcotics Bureau's agents last year confiscated 46,000 ounces. During the same period in the heart of the hashish belt, Egyptian police impounded 17 tons of the hypnotic.

Cocaine, entering the American market principally from Peru and Bolivia, has almost disappeared on the illicit market. This dearth has been attributed to the smashing of a giant cocaine ring by the Peruvian and American authorities 2 years ago.

While the coca shrub is also cultivated in Java and Ceylon, natives of Peru and Bolivia have chewed its stimulating leaves for centuries.

This approximates the picture of illicit drug production which has led to the worst dope addiction epidemic in world history.

[From the New York World-Telegram and Sun of August 7, 1951]

CONTROL OF WORLD DOPE TRAFFIC HOPELESS AS LONG AS SOVIET MENACES FREE WORLD—ONLY PEACE CAN SAVE NATIONS WHICH RAISE OPIUM FOR CASH

(By Edward J. Mowery)

The world needs peace to halt the international drug traffic.

It needs peace to cure the financial ills of war-ravaged countries and to bring the recalcitrant Soviet bloc back into the family of nations.

For the poverty of many lands, makes opium and its derivatives a prime source of foreign exchange, which they require to restore their prewar economy. And refusal of the Reds to play ball, blocks an ironclad global limitation of production of narcotics to medicinal needs.

This was the core of the thinking of a man who has served for years on the United Nations Narcotics Commission. Before that, he was a member of his country's foreign service.

DIM VIEW

He took a dim view of events. "Let's not kid ourselves," he explained. "The world is not at peace. And this attempt to agree on the illicit narcotics menace is almost hopeless."

If the world were at peace, our diplomat ventured, the United States with its prestige and dollars probably could whip the rest of the world into line through international agreements.

If there were peace, for instance, Uncle Sam could advise Iran and Turkey, the two biggest opium producers in the world, that they could expect no favors from us unless they really got down to business and cut their opium production.

But the United States needs Turkey—and Greece and Yugoslavia, other important opium producers—as the eastern anchors of their wall against Russia. And the Atlantic Pact nations need the oil of Iran to power their war machines and industry against the feared attack from behind the Iron curtain.

"So how," this diplomat asked, "can the United States now put pressure on opium-producing nations to stop the flow of narcotics with Russia menacing the free world?"

Aside from blocking international agreements on virtually every proposal found on the U. N. agenda, Russia is strongly suspected by experts on the world dope crisis of using narcotics in the cold war.

K. W. Yu, of the Chinese U. N. delegation, flatly accused the Soviets of deliberately flooding dope into southeast Asia and encouraging addiction.

MAKING ADDICTS

"It is a diabolical plan, well conceived," he declared, "to soften up these peoples. Their countries will undoubtedly become the Communists' next objective."

Making dope addicts of millions of potential serfs, he explained, has two prime objectives.

"The Reds mulct fabulous amounts of money from their prospective victims of aggression and simultaneously wreck them, physically and economically. The pattern first took shape in the Orient when the Japanese poured opium into occupied China."

"Shikichuan, the city and rail juncture between Honan and Shensi Province, was the focal point for opium distribution. As the deadly drug entered prostrate China in abundance, the Japanese actually encouraged both civilians and the military to use it freely."

"Who could offer less resistance to a conqueror than a populace inert from hypnotics?"

The Reds, this statement charged, are cultivating huge amounts of opium in Shansi, Szechuan, and Jehol, northern China areas adjoining the Manchurian border. The traffic is moving to Hong Kong over inland routes to Burma, Indochina, and Malaya.

Hong Kong opium, American authorities have reported, is also cascading into Japan, where our troops may be jeopardized.

The Soviet Union, however, maintains strict internal controls over its opium production in east Russia, western Siberia, and Russian Asia. Russians never become dope addicts . . . within their own borders.

A few weeks ago a report echoed through the United Nations majestic building in New York that 100 tons of opium showed up in Saudi-Arabia or Afghanistan. Could this enormous cargo have originated in Soviet Asia?

None could tell.

CAN'T BE ESTIMATED

Rafko Pleic, counselor of the U. N. Yugoslav delegation, characterizing the illicit drug traffic as the "world's greatest social problem," said there was no way possible to gauge Russian opium production.

God only knows what this figure would amount to. You can't even make an estimate of Russian steel production.

"How could one possibly arrive at the total Russian production of opium that is flowing into the world market?"

Aly Fahmy, first secretary to the U. N. Egyptian delegation, told this newspaper that Red China "is morally obligated" to limit poppy cultivation and abide by U. N. proposals to combat the illicit drug traffic.

"This vicious problem can't be solved by one or two countries," he said. "It's international, and Red China and all opium-producing nations should vigorously curtail and police their harvests."

Mr. Fahmy also praised Narcotics Commissioner Harry J. Anslinger for his "competent, helpful aid in appraising the world narcotics evil."

Mr. Anslinger himself put the finger on Red China for cascading opium and heroin into Japan and the islands of the former mandate.

On May 1, before the U. N. Narcotics Commission, he pinpointed contraband drug

movements by the Reds and reported that former heroin factories in Tientsin, North China, and Manchuria have been reactivated.

HEROIN VIA JAPAN

"There is evidence that some of this heroin is getting into the United States and other countries via Japan," Mr. Anslinger declared. "Japanese agents seized 20 pounds of heroin in Kobe. Four of the 19 packages bore labels of the Drug-Well Pharmaceutical Laboratory, Luck Street, Tientsin."

"Previous large seizures in Japan have probably originated from this factory. This traffic should be suppressed by Chinese Communist officials."

While an occasional shipment of illicit drugs may be traced to a specific poppy field or laboratory, the vast bulk of the world's opium production cannot be laid specifically to an offending producer nation.

The U. N. Narcotics Commission hopes to end this aura of dope's mysterious origin shortly.

Early in 1950 international collaboration in laboratory research on the origin of opium began modestly under the direction of the opium distribution center. It has twin goals: To pinpoint cultivation centers of opium and determine its morphine content.

Opium samples have been coming in slowly and at least two more years will elapse before the laboratory gets positive results.

Meanwhile, the civilized world writhes under the impact of dope addiction, with the lives of thousands of children hanging in the balance.

[From the New York World-Telegram and Sun of August 8, 1951]

LOST OPIUM FINDS ITS WAY TO ADDICTS—LEGAL CROPS NOT ALL USED FOR MEDICINE

(By Edward J. Mowery)

It's a hot, cloudless day in the Turkish countryside as the small army of peasant farmers, armed with Amasya knives, approach fields of opium poppies.

There's no mirth in this corps of tireless men, women, and children. And they realize they have only a few hours to harvest the dark, gummy substance which is their life-blood.

They had ploughed their fallow fields in the spring, weeded them with hammers and sewn the seeds immediately after the first rains.

They nurtured their crops carefully through the 3-week germination and smiled as the first delicate leaves appeared. Yes, the stems looked sturdy. Varicolored flowers, Providence permitting, should mature in 50 days. And then, the knob-like, plumed capsules.

This was the day

JUICE HARVEST

The peasant foreman scanned the sky. No sun. Just heat. He waved to the others as they skirted the rows—poppies imbedded in volcanic soil. The workers handled their knives like surgeons with scalpels.

They drew the knives two-thirds around the capsules, taking extreme care that the incisions did not penetrate to the interior. This was to prevent the opium juice from flowing inside and becoming lost. If this happened, the seeds probably wouldn't ripen and yield oil.

For 72 long hours they toiled. Slashing and gathering the coagulating juice. If the night became humid, they rested away from the odoriferous fields. Otherwise they'd become dizzy from the fumes of the potent gum.

The next morning they scraped the capsules, transferring the partly coagulated juice to poppy leaves they held turned up in their hands. They continued to collect the juice, wrapping one leaf over the top of another as the leaves filled up. Then they placed the leaves in the shade to dry for several days.

When the brownish cakes were finally tabulated at the Soils Products Office, each worker was paid 17 cents per hour for the kilogram of opium harvested.

This kilo of pure opium was produced under strict governmental supervision predestined for humane use in the field of medicine. It wasn't diverted at the farm level or raised clandestinely to feed greedy dope rings here and abroad.

However, untold thousands of kilos have been diverted from the 35,000,000 acres under Turkish poppy cultivation. And bands of dissident farmers in mountain regions never declare their harvests with the central monopoly.

FORTUNE AS HEROIN

The practice is also rampant in India, China, Mexico, Yugoslavia, and Iran. Many officials of these countries admit it.

And 1 kilo of pure opium—which reimbursed the peasant a paltry \$12.24—is worth a fortune when translated into heroin in the underworld market of America.

Ilhan Savut, counselor to the Turkish U. N. delegation, told the World-Telegram and Sun his Government is doing everything humanely possible to police the harvests and comb the mountains to halt illicit opium traffic.

"We think we can account for 97 percent of our authorized crops," he declared, "and severe penalties await those who divert opium or raise it clandestinely."

"However, there's no doubt that some opium is lost during harvest and unauthorized cultivation may be under way in mountainous regions."

Turkish farmers, he explained, report the areas being cultivated, the expected yield and harvest progress. It's mandatory that their entire crops be sold to the Government. Turkey is the world's largest opium producer.

"We have no way to estimate illicit production or diversion into illegal channels," Mr. Savut added. "You realize, however, that heroin or morphine may be extracted from opium with simple implements in a home kitchen. We've outlawed heroin in Turkey, and we're constantly on the lookout for heroin traffickers."

"Of course, opium can be carried over our border from Syria in a basket or it can be smuggled from Istanbul by seamen."

He agreed that all nations must reach international agreement upon crushing the illicit drug traffic "if mankind isn't to be enslaved."

WHOLESALE DIVERSION

Dr. Djafar Abdoh, deputy Iranian representative to the U. N., also deplored wholesale diversion of opium and said the addiction phase of the dope menace is now being closely studied by his country.

In 1949, Mr. Abdoh stated, Iran cultivated 10,000 acres of opium which yielded 1,000 tons of opium, twice the world's medical needs.

"We exported (legally) 145 tons of the harvest," he said, "but we do not know, frankly, where the other 851 tons went. We're fighting against smuggling and we've recently established a special narcotic police force."

Would Iran be agreeable to halting opium production if adequate means of substitute revenue were available?

"We certainly would," he said. "In fact, we're limiting our opium cultivation until some satisfactory solution to this problem comes along. I believe that if cotton were grown in much of the opium acreage, it might solve our economical problem."

Opium revenue from Iran's 1949 crops totaled 98,000,000 rials (35 rials to the dollar).

While both Turkey and Iran admit to serious diversions of their opium crops into illicit channels, Ratko Pleic, councillor of the Yugoslavia U. N. delegation, denied that any of his country's opium enters the underworld market.

"In 1949, in Ankara," Mr. Pleic declared, "our opium production quota was set at 63 tons annually. We've never produced that much and our highest prewar yield never exceeded 30 tons. Last year our harvest was about 11 tons."

DON'T USE OPIUM

"Yugoslavs don't use opium and the surrounding countries don't. Our farmers cannot sell into the illicit trade because their harvest is under vigilant, air-tight control. We cultivate opium mainly along the Serbian border and in Macedonia."

Yugoslavia, the diplomat stated, has actually offered premiums to opium farmers as an inducement to greater effort.

"But," he explained, "we have insufficient manpower to realize this objective. We're studying ways to stimulate production so we can meet our international quota (for medicinal needs)."

Urging immediate decrease in opium production "by the big opium growing nations," Mr. Pleic conceded that huge amounts of opium are flooding the world from Asia and that more stringent international police measures should be taken to strangle the illicit traffic.

"But," he said haltingly, "we're now fighting against a consequence when we should be eliminating the cause of the consequence."

The consequence isn't too alarming for Yugoslavia, which has no addiction problem. America, faltering under the weight of illicit drugs, sees its consequence in the pasty faces of untold thousands of kid dope addicts.

The consequence may prove America's greatest social curse.

[From the New York World-Telegram and Sun of August 9, 1951]

SECRET LABS NEAR WORLD PORTS PUSH HEROIN INTO UNITED STATES AT FANTASTIC PROFITS—ONLY 20 PLANTS MAKE DRUG LEGALLY

(By Edward J. Mowery)

Heroin and morphine can be extracted from raw gum opium with the simplest of equipment.

They can be produced with the utensils any housewife has in her own kitchen.

It admittedly takes know-how and care, but the process which yields 1 ounce of heroin from 1 pound of opium is—scientifically speaking—one of the most elementary.

Morphine, one of the 19 alkaloids extracted from opium, is derived through chemical processes. Heroin is extracted from morphine by the addition of acetic acid radical. Compared with the tricky process of making nylon from coal, air, and water; it's like brewing a cup of tea.

Heroin has been outlawed in the United States as having no medicinal value. It is used legally in various European countries, however, as an asserted aid in fighting tuberculosis at childbirth, etc.

In 1949, 20 plants authorized to manufacture heroin by the Permanent Central Opium Board, Geneva, produced nearly a ton of this terror drug.

FACTORIES NEAR PORTS

The factories, in most instances, are easily accessible to large ports where illicit drug cargoes have been pouring into the underworld traffic. The factories:

France: Paris (two), Nolsley-le-Sec and Glos-sur-Lizieux; England: Edinburgh (two), Switzerland: Basle (two) and Zurich; Italy: Turin, Milan (three) and Como; Sweden: Stockholm and Sodertalje; Hungary: Budapest; Finland: Helsinki; Belgium, Brussels.

Nobody knows the extent of diversion of heroin from these plants into the illicit market, although gigantic amounts of the drug have admittedly been diverted from the Italian factories.

This is the legal aspect of heroin production.

On the clandestine side are huge plants which have flourished sporadically in Marseille, Hong Kong, Istanbul, Barat, Tientsin, Trieste, and Mexico City.

These factories, plus the thousands of tiny laboratories set up near the world's great ports, are pouring the deadly drug into the United States. Rotterdam, Marseille, Milan, Athens, Bombay, and Tientsin have been acknowledged rendezvous points for international dope-ring couriers.

In many cases, the plant's output has an assured market and predestined itinerary.

INNOCENTS SUFFER

Adding to the mountainous stockpile of illicit drugs being bartered throughout Europe are stocks impounded by the German armies and dumped indiscriminately when the Allies closed in.

As a result, nations which produce no opium are wallowing in it. And criminal bands are combing the European market for a sure bonanza.

What happens to the countries that do not produce opium but are caught in the vortex of the transcontinental dope traffic?

Egypt, the crossroads of the Middle and Far East, is undergoing the worst smuggling evil in its history.

"Our battle against the illicit drug evil," Aly Fahmy, first secretary to the U. N. Egyptian delegation, declared, "is hopeless unless the entire world cooperates. Without this assistance, dope threatens to become a permanent curse."

"Egypt doesn't grow opium. Yet, it's being smuggled into our country from Turkey, Persia, everywhere. Last year we seized 3,680 kilos (nearly 4 tons) which indicates terrific overproduction with harvesters trying to jettison it on all sides."

EGYPT FIGHTS EVIL

"To combat this menace, we've coordinated the authority of our health, defense, justice, and finance ministries. We've set up a central narcotics bureau—a branch of the security department—with specialized squads to fight the traffic."

"We've instituted a special camel corps of trained narcotics police to patrol our desert borders on the east. And last October, we set up a central narcotics agency for the Arab League which resulted in whole harvests being destroyed in Syria, Lebanon, and Palestine."

Egypt, Mr. Fahmy conceded, has always had its hashish problem. At present, about 130,000 adult addicts smoke the pulverized hemp in the odd-shaped bowl and tube known as the "nargilas."

Egypt's perennial fight against hashish addiction, however, has been complicated by the opium smuggling upheaval.

"We know that Egypt is not a transit country for hashish. But since few if any Egyptians smoke opium, we also know that we're an international dumping ground for this drug at the moment. If we catch anyone selling illicit drugs, he may be fined up to £6,000 and imprisoned at hard labor for 5 years."

"If he's a foreigner, he serves his sentence and is then deported. Like the profits in illicit opium, the reward for the hashish smuggling is terrific. A kilo of hashish on the farm level is worth \$1,650 in the underworld."

MUST RESTRICT HARVESTS

Hard labor, the diplomat explained, is just that for the dope trafficker. He breaks stones under the broiling desert sun. As for a solution to the opium-smuggling throughout the Middle East, Mr. Fahmy said crisply:

"It's not enough to mobilize armies to patrol the borders of nonproducing nations. Opium poppy harvests must be severely restricted and illicit stocks destroyed if

the world is to survive this terrible evil. I'm optimistic that the U. N. will find a way to accomplish these goals."

Mr. Fahmy's optimism, to date, has foundered on the rocks of international protocol.

As to destruction of illicit opium stocks, few realistic nations will obliterate a marketable commodity. Only the United States plows under a harvest.

Last year, nearly 21 tons of illicit opium were seized by authorities of Thailand, India, Singapore, Hong Kong, and Burma. No word has come from these dope traffic centers that this fabulous cache has been destroyed.

No such word is expected even if humanity, itself, is at stake.

[From the New York World-Telegram and Sun of August 10, 1951]

WHY NOT STOP HEROIN PRODUCTION?—DRUG CALLED NONESSENTIAL FOR MEDICINE LUCIANO LINKED TO ILLICIT TRAFFIC

(By Edward J. Mowery)

Is Italy the world headquarters for the narcotics rings pouring heroin into the United States?

Is Charles (Lucky) Luciano, erstwhile vice lord, the behind-the-scenes director of this dope combine?

Two men of widely divergent interests gave the World-Telegram and Sun startling answers to these questions. And documented them.

"There's not the slightest doubt in my mind," declared Marco Francisci, secretary of the U. N. Italian observer's office, "that Luciano is the connection between Italian dope mobs and American hoodlums engaging in this abominable racket."

AFTER LAST WAR

"Italy's narcotics problem started to be acute at the end of the last war. In the 3 years after Allied liberation of Italy, the United States expatriated several hundred gangsters to Italy. It's my opinion that most of these hoodlums are in the lucrative dope racket and that Luciano is their guiding force."

Mr. Francisci, a slender, pensive man reminded the writer that his country lost the war and was beset in the mid-40's with the usual internal upheavals of the vanquished.

"The Italian police organization was functionally weak during this period," he continued. "It's prewar stamina was shattered. It just could not cope with the problems arising out of this influx of hoodlums from the United States. In fact the police force as a unit was virtually helpless."

"These people ran the gamut of undesirable—white slavers, gamblers, thieves, and racketeers. In some instances, they came back to Italy with complete organizations to carry on their nefarious work. They had lots of money to bribe and corrupt. Oftentimes, morality is a question of money."

DOPE RING PARADISE

Italy—largest producer of heroin—was a dope ring paradise, Mr. Francisci declared, with five heroin laboratories operating (adjacent to Milan) under license of the Italian health commissioner. Heroin, outlawed in the United States, is used to ease the ravages of tuberculosis in Italy.

Italy, importing double the amount of raw opium needed for its legitimate heroin quotas, quickly became the international headquarters for a gigantic underworld heroin cartel. Mobsters flocked to the vicinity of the heroin laboratories like homing pigeons.

"In 1947-48," Mr. Francisci explained, "we imported 17,100 kilos of raw opium, 11,430 the next year, and 10,000 in 1950. Our importation this year won't exceed 8,000 kilos."

"With our huge heroin production, there was and is a terrific amount of smuggling and diversion of the drug. In addition, Italy is in an extremely difficult geographical po-

sition with extended coast lines and numerous ports easily accessible to smugglers."

ANOTHER CRUCIAL PROBLEM

Another crucial problem in northern Italy was to ferret out untold amounts of illicit drugs dumped there by the Germans during the 1943-45 occupation.

So the army of racketeers moved in and tremendous cargoes of illicit drugs began to flow into the United States. Couriers made connections in Antwerp, Rotterdam, Marseilles, Liverpool. Murders—gang style—stalked dope's spoils in America. The notorious One Hundred and Seventh Street mob—Luciano's own—became a potent underworld combine.

An undermanned Federal Narcotics Bureau tried desperately to chart and intercept the mob's activities.

Prostrated by war, Italy became involuntary host to Luciano's international syndicate—Dope, Inc.

"How can we legally imprison Luciano?" Mr. Francisci asked. Then he added: "We have him under 24-hour surveillance. I'm told, too, that Interpol (International Police, Geneva) never lets him out of their sight. But what can we charge him with? I believe he maintains two homes. One on Capri, the other in Rome. He's rich, clever. He knows all the answers. He's an old hand at dealing with the law."

WHAT CAN WE DO?

"He can corrupt. He can travel. His current passport, I believe, has visa privileges in France, Switzerland, Spain, and Great Britain. Capri, you must realize, is a strategic port for racketeering in the middle of the Gulf of Naples. But how can we arrest him? He's broken no Italian law yet."

What can the United States do to protect its youngsters against dope rings operating in Italy?

"We have reduced our annual heroin output to 50 kilos (from 200)." Mr. Francisci said, "and we're working closely with American narcotics officials to crush this ghastly racket. I'd say, though, the United States must strengthen its internal controls against the dope menace."

"This is a poor substitute for sniffing out the source of the trouble, but there will be no solution until opium-producing nations rigidly limit their production to world medical needs."

LUCIANO THE ABSOLUTE

Downtown in the Federal courthouse, Charles Siragusa told the World-Telegram and Sun:

"I agree that Luciano is the absolute head of the crime cartel now functioning in Italy. And there's no doubt that expatriation of Italian-born gangsters has complicated Italy's internal problems."

Mr. Siragusa, a Federal narcotics agent loaned to the Senate Crime Investigating Committee for the last 5 months, returned last month from a tour of Europe. He combed narcotics rings' operations in Italy, France, Greece, and Turkey.

FOUR OUT OF FIVE

"About 50 of the deported mobsters form the core of the international dope ring which Luciano rules. He's their absolute boss. And every consignment of dope from Europe bears Luciano's O. K. Sure the Italian police are working hard to track down these bums."

"But Italy could deal a death blow to the heroin traffic with one move. Halt heroin production. They say it's beneficial in fighting TB. The United States gets along without it. Why can't Italy? They've curtailed production. Why not stop it? Heroin is being diverted from four of Italy's five factories."

"This is the stuff that's flowing into the United States. Why Milan, where most of the drug is made, is Luciano's international dope-ring bastion."

Mr. Siragusa, small and wiry, methodically ran off Luciano's dope cartel board of directors on his fingers.

"There's Joe Picl, Lucky's prime contact man for the American branch, now on the lam in Italy after he smuggled himself back into the United States, made a killing in a single drug consignment, and left. He served 30 years here as a white slaver, was deported in 1946 when Luciano returned to Italy and the big dope operation started to function.

A DIRECT CONNECTION

"Picl, closely linked with the Kansas City Mafia mob, actually tested the American dope market before the gang started its big-time smuggling. And there's Frank Callace, alias 'Chick 99,' keyman of the One Hundred and Seventh Street mob who fled to Italy after an FBI indictment. He and his nephew (same name) established a subheadquarters for dope in a Milan hotel where packages were exchanged with other Luciano henchmen.

"This was a direct connection between the One Hundred and Seventh Street mob and Lucky."

Mr. Siragusa pondered a moment and continued to list the Luciano dope hierarchy:

"Niccola Gentile, under a dope indictment here, set up the Naples branch; Ralph Li-guori, manager of the Rome office; Gaetano Chiofalo, who may be using GI's as dope couriers in the Udine-Trieste area, Giacomo Giometti and Carmine (Peanuts) Tufarelli, pals of Picl and big wheels in the Rome office; Michael Cerani, now in an Italian jail, but a key Luciano mobster.

"We knew that Meyer Lansky visited Lucky in Italy and so did Sylvester Carollo (deported in February). Other American racketeers check in with the boss at intervals.

"We [Senate Crime Committee] have been trying to locate another man who visited Luciano some time ago. He's Joseph Blondo, 54, of 77-12 Thirty-fifth Avenue, Jackson Heights. We haven't anything against this gent. Just like to ask him a few questions."

Mr. Siragusa smiled grimly and observed:

"Let the Italian police work out a little more on Luciano. Ask him where he gets his money, why he refuses to list the names of his pals who go to Italy, why he travels consistently to Milan where heroin is made.

"And, if they get the answers to any of these questions, we'd be more than interested."

[From the New York World-Telegram and Sun of August 11, 1951]

UNITED STATES PINCHES PENNIES, DOPE POURS IN CUSTOMS PATROLS ARE ALERT, BUT THEY'RE UNDERMANNED

(By Edward J. Mowery)

Aboard a small passenger ship en route to New York from San Francisco via the Canal Zone an old messboy died of a heart attack. The captain and a seaman, in accordance with tradition, searched the effects of the dead man.

In his footlocker was the usual assortment of oddments collected over the years by a \$30-a-month sailor. Then the skipper's eyes opened wide. Three bankbooks showed balances of \$100,000. And deep in the personal belongings were neat packages—heroin and cocaine.

Joe, the shoddy, unobtrusive messboy, methodically enriched himself on the misery and enslavement of young dope fiends. Like hundreds of other treacherous seamen, Joe knew an army of guards protect American shores and borders against hoof-and-mouth disease. But not against deadly narcotics. The Government has no money for that—it says.

"Our investigative unit," a high customs official explained, "has only 188 men in 9 districts to police the entire Nation. (The

Federal Narcotics Bureau, ironically, has the same personnel.) The customs border control just doesn't exist.

"The port of New York? Exactly 338 men in the port patrol are charged with screening the 700-mile water front. Fifty-eight of these posts aren't filled. Sure, dope is cascading in. We're using pea shooters to halt a major invasion."

The official, consulting the latest customs roster, drew forth two ominous dates in America's war on the international dope front.

PATROLS HANDICAPPED

"We had fairly decent patrols along the Canadian and Mexican borders up to July 1, 1947. Then the Canadian detail was abolished. A year later, the Mexican unit crumbled. And look what has happened to the United States in the 5 years narcotics rings have flooded us with poison.

"Dope has addicted thousands of kids in every major city in the country. What can we do about it? They're wading it across the Mexican border at scores of points. We have a total of 63 men to screen the Texas-Arizona-California region. And they're not patrolling the border.

"They're stationed in fixed posts in El Paso, Eagle Pass, McAllen, Del Rio, Brownsville, San Antonio, Nogales, and other strategic points. Because they're few in number, they must wait for tips of smuggling operations and try to corral their major strength for the zero hour."

WHO PROTECTS CHILDREN?

The official's eyes narrowed as he declared: "Our men are pretty bitter about these bums addicting kids. And especially when they see 500 border guards attached to the Bureau of Animal Husbandry riding horses in search of animals with hoof-and-mouth disease.

"Immigration, too, has a large border patrol—around 800 men—to grab aliens squirming across the Rio Grande. These units are necessary. But who's protecting our children against vicious dope rings?"

Heroin, this spokesman admitted, is pouring into the United States but only small amounts—if any—go through the port of New York, where an average of 105 active ships are tied up daily. His list of suspected seamen-smugglers is "a mile long."

"Seamen are giving New York a wide berth these days," the spokesman said. "But heroin can be coming into such ports at Philadelphia, Chester, Pa., Norfolk, Savannah, and Charleston. We have 14 investigative unit inspectors to guard against contraband in these ports.

CUSTOMS EVER ALERT

"We made three grabs in a row at Charleston, and the collector there had to augment his inspector squad. Of course, customs boarding squads are hitting ships coming into New York pretty hard. The investigative unit processed 329 narcotics cases here for the year ending June 30. The total was identical in 1949."

The herculean task of customs in screening cargo and passengers of hundreds of ships—2,263 were boarded by searching squads last year—is intensified while ships are loading for a week. Longshoremen, crew members, and visitors pour on and off the vessel and pier by the hundreds.

"There's a new development in the dope menace," the official warned. "A South American mob may be planting cocoa seeds in the hills of Cuba. If that materializes, watch out. Cocaine has been absent from the underworld market since six Peruvian laboratories were closed and a big ring smashed in 1949."

NEW MARIJUANA THREAT

Down at 54 Stone Street, where crack members of the customs searching squad

wallow in the gimmicks seized from would-be dope smugglers, Herman Lipsky, squad chief, voiced another warning:

"Marijuana seeds that are germinating have been coming in the past few months from South America and Spain. They're potent, and as you know, may be cultivated wholesale. We're watching this phase of the racket closely.

"I agree that big dope shipments are missing New York. We're getting seizures but not quantities. And they're burying the stuff deeper. We find dope under bulkheads, anchor chains, engine-room floor plates, and coils of rope.

DOPE IS BARTERED

"They plant the stuff in ceiling electrical hook-ups, in oil drums (cellophane bags), hand-carved book ends, built-in life-belt pockets, and hollowed-out logs lying conspicuously in the hold. One clever smuggler used magnetized metal boxes which he stuck on any steel surface."

Is dope a bartering commodity on the other side?

"Certainly is," Mr. Lipsky said, "but thieves fall out. Some seamen take gold to Europe and bring narcotics back. Others deal in nylons, canned goods, and clothes. Then, a short time ago, sailors discovered they were getting phony money abroad for their contraband. Now they insist on the payoff being in dope."

Over at the customhouse, Collector Harry M. Durning said emphatically that the big narcotics shipments were bypassing New York.

Yes; Congress cut customs appropriations some time ago and this trimmed his port patrol force more than a third.

"But our men are working hard and I'm satisfied dope isn't coming into the United States through the Port of New York," Mr. Durning explained. "Where is it coming through? We've got long coast lines."

THE SOLUTION

This is the essence of the dope addiction scourge that is gripping young America today. What can be done to banish a menace that threatens to haunt coming generations?

First, international agreement to limit opium production to bare medicinal needs must be forthcoming.

Second, every agricultural resource must be exhausted to replace poppy cultivation with substitute crops of adequate earning power, such as cotton, etc.

Third, producing nations must guard rigidly against opium diversion in the field and clandestine cultivation.

We now come to trafficking by underworld mobsters who have apparently made their international headquarters in Italy.

Italian police must crush these rings with the aid of other nations' and smash their laboratories as they appear.

CONGRESS MUST HELP

The United States, which buys half the world's legitimate narcotics production, seemingly has a strong voice in arriving at an equitable solution of the problem.

However, a niggardly Congress cannot expect tireless bands of Federal agents to halt the flow of narcotics into our ports with their hands tied. Nor crush international dope cartels now terrorizing America's major cities.

Customs and Narcotic Bureau personnel must be tripled immediately to halt dope's tidal wave. And hospitals for dope's tragic victims must be readied without delay.

These are musts—even if a high U. N. official told the writer that the narcotics problem doesn't compare with other matters facing the U. N., including the possible carnage of world war III.

The dope crisis is a matter of life or death to our children.

Adequate Schools**EXTENSION OF REMARKS**

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following:

THE COMMONWEALTH
OF MASSACHUSETTS,
SCHOOL BUILDING
ASSISTANCE COMMISSION,
Boston, October 17, 1951.

Representative THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE LANE: Is it important to build schools?

If you think it is, you had better plan to do something about it. Consider these facts:

1. The National Production Authority allocated 21,000,000 tons of steel for the fourth quarter of 1951 for all purposes.

2. For this period they allocated 3,300,000 tons of this amount (15 percent) for automobiles.

3. They allocated 100,000 tons of steel (one-half of 1 percent) for school construction.

4. The steel now allocated for schools will barely complete projects now under construction. The outlook for needed new projects is dismal.

5. Allocation for schools of 1 percent of national steel production each quarter would enable America to meet its educational-plant needs.

Do these figures show that the people, their Congress, and the organization set up to allocate essential materials believe in education? Do they reflect your feeling about the importance of housing our children for effective education? Do you consider education a definite part of the over-all defense effort?

There is evidence that steel is available for needed schools without handicapping defense. The difficulty seems to lie in obtaining recognition by the National Production Authority of the importance of adequate schools.

Massachusetts schools need your help.

Key men are Manly Fleischmann, Administrator of the National Production Board, and Charles E. Wilson, Chairman of the Defense Production Authority. Will you let them know that you believe schools can be built without hampering defense?

Very truly yours,

JOHN E. MARSHALL,
Administrator.

Tax Suspension on Zinc Imports**EXTENSION OF REMARKS**

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. PATTERSON. Mr. Speaker, the action of the Ways and Means Committee in reporting tax suspension legislation on zinc imports is most gratifying.

I am pleased that this was done in a

short period of time subsequent to my introduction of this measure.

There is unanimity of opinion as to the need for tax suspension. Every defense agency of the Government concerned with zinc supplies acknowledges the need for the importation of additional zinc without tariffs. The domestic supply cannot hope to meet the needs of industry in this period of accelerated production for defense.

Brass industries in the Naugatuck Valley have already felt the impact of the zinc shortage. This metal must be combined with the available copper to produce many brass products essential to our security.

I had contemplated an amendment to the bill providing for automatic reimposition of the tax when the price of domestic zinc fell to 17 $\frac{3}{8}$ cents per pound for 30 days. Inasmuch as the committee saw fit to use the figure of 18 cents per pound in this same manner, I have no objection to passage in that form. The difference is not substantial enough to chance any hopes of congressional adoption during this session.

The acceptance of this bill will materially assist in overcoming the zinc shortage which has retarded production efforts of Naugatuck Valley industries.

The National Advisory Committee for Aeronautics**EXTENSION OF REMARKS**

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. SALTONSTALL. Mr. President, on behalf of the junior Senator from Illinois [Mr. DIRKSEN], I ask unanimous consent to have printed in the Appendix of the RECORD a brief statement by him, together with a letter addressed to him by Mr. Louis E. Leverone.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

Mr. DIRKSEN. I should like to include a letter received from Mr. Louis E. Leverone, former president of the National Aeronautic Association, past president of the Illinois State Chamber of Commerce, present governor of the National Air Council, and one of the outstanding businessmen of Illinois, who makes some very appropriate and timely observations on the National Advisory Committee for Aeronautics and its work:

OCTOBER 15, 1951.

HON. EVERETT M. DIRKSEN,
Washington, D. C.

MY DEAR SENATOR DIRKSEN: Within the last few days the writer was a guest of the National Advisory Committee for Aeronautics at the biennial inspection of the Lewis Flight Propulsion Laboratory in Cleveland. This laboratory is one of three such scientific proving grounds operating under the National Advisory Committee for Aeronautics. Several hundred of us were included in this inspection group, and numbered among the guests were representatives of all branches

of the armed services, high governmental officials, aircraft and accessory manufacturers, scientists, and a number of businessmen, such as myself.

The methods and experiments which we were permitted to see were an impressive tribute to the diligence of those who direct the policies of this effort. Certainly one could leave the laboratory with a feeling that all steps which are necessary for the preservation of our national security in aviation were being very capably handled.

Many of us, I am sure, received a comprehensive education in such matters as atmospheric altitudes, supersonic speeds, and other fantastic developments which are almost beyond the bounds of imagination.

As a taxpayer it was my very definite impression that this is the type of Government expenditure which pays tribute to the wisdom of those who have fought for these objectives. It would probably be very safe to say that after this inspection had been concluded it was the consensus of opinion of those who were privileged to attend that even greater appropriations would be justified to further these splendid efforts.

To keep America first in the air has been the lifetime vocation of a select few of our leaders in aviation thinking. Certainly the efforts of the National Advisory Committee for Aeronautics are the objective means to such an end.

Finally I should like to pay my humble tribute to Dr. Jerome C. Hunsaker, Chairman of the Advisory Committee for Aeronautics, Dr. Hugh L. Dryden, director of these wonderful efforts, and to Dr. John P. Victory, who, as coordinator, has performed a fine and outstanding public service in bringing about these constructive results.

Please be assured that you have my complete support on any decision which you may make concerning further development or expansion of the National Advisory Committee for Aeronautics. Their efforts are a step in the direction of progress, and as such will receive support of all patriotic citizens.

With best wishes, I am, believe me,

Cordially and sincerely,

L. E. LEVFRONE,
President.

Administration Costs Overseas**EXTENSION OF REMARKS**

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 16, 1951

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks, I am including at this point in the RECORD three tables prepared some months ago by the State Department, the first showing, for the ECA European program, the number of American and local personnel, and estimated expenditures for administration and information projects for the fiscal year 1951; the second giving a comparative statement of the staffing pattern and annual salary rates for the State Department and other United States Government units in certain European and near-eastern countries; the third giving a comparison of ECA, USIE, and German-Austrian public affairs costs.

¹ Annual rate means full salary for full year. Actual costs will be less owing to existence of vacancies occurring in some positions.

² Figure include 27 positions paid from funds allocated to Public Health Service from Displaced Persons Commission

³ 2 positions (annual rate \$13,160) financed from USIE funds. Balance from appropriation "Government in occupied area of Germany."

⁴ Financed from appropriation "Government in occupied area of Germany." Not a charge against USIE appropriation.

Attorney General J. Howard McGrath

EXTENSION OF REMARKS

OF

HON. CLAUDE I. BAKEWELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. BAKEWELL. Mr. Speaker, it is a very serious offense to interfere with the administration of justice. The Attorney General is the chief law-enforcement officer of the United States. J. Howard McGrath, as Attorney General, sought to interfere with the administration of justice when he attempted to divert a grand jury in St. Louis from its investigation of charges against the former collector, James P. Finnegan. When the man charged with enforcing the law seeks to prevent its enforcement, he is absolutely unfit for his position.

The position of Attorney General of the United States is one of great honor. It must be filled by a man of discretion and dignity. Like Caesar's wife, he must be above suspicion. Certainly this is not the case with J. Howard McGrath. He stated that one of the most distinguished and revered Federal judges in the United

States was guilty of damnable and contemptible lies when that judge, the Honorable George H. Moore, stated that McGrath had called him on the telephone regarding the Finnegan investigation; and yet on the very next day he retracted this statement, saying he had called Judge Moore. Certainly these are not the actions of a man of discretion, of candor, of dignity, or of impeccability.

J. Howard McGrath is a self-discredited Attorney General. He is a discredit to the legal profession. It is within the power of the President to demand his resignation. I think that the Congress should immediately make known to the President its sentiments. Therefore, I have introduced a concurrent resolution which would make known to the President these views.

Unfortunately, Congress is about to adjourn. In the last-minute rush, it probably will not be possible to have action taken on this concurrent resolution. I am requesting the chairman of the Judiciary Committee of the House, of which I am a member, to immediately appoint a subcommittee to investigate McGrath's actions and to make a report on this resolution. The investigation should commence immediately and continue during the recess. If that is done,

the Congress will be in a position to act on this resolution when it reconvenes in January unless the President has seen fit to remove McGrath in the meantime.

Obligations of Citizenship

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. HENNINGS. Mr. President, recently Col. John J. Griffin, vice president of the Bank of St. Louis, made an excellent address on the responsibilities of citizenship. All of us, I think, are inclined too readily to take for granted the privileges and protection conferred upon us by reason of our being citizens of the United States, and to give only lip service to the obligations which this imposes upon us. Colonel Griffin has pointed up some specific instances in which many of us are delinquent. His address is well worth reading, and I ask unanimous con-

sent that it be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

CITIZENSHIP

The definition of a "citizen" that I like is the one given in Webster's: "a person, native or naturalized, who owes allegiance to a government and is entitled to protection from it." I think that definition probably fits everyone in this country so qualified. Let us look into the record and see how we who are today enjoying the blessings so abundantly showered upon us repay them.

There is no doubt in my mind that if anyone were to accuse over 50 percent of our population of the crime of not being good citizens, they would find a reaction from those so accused that would be not at all pleasant. But are they good citizens?

My definition of a good citizen is one who not only accepts the protection that this great Government offers to him, but realizes that with such acceptance there comes a responsibility to meet the obligations imposed by the acceptance of such blessings. What are these responsibilities? Under the laws of this land you are entitled to the protection of the rights that are yours, and it is the duty and the obligation of the Government to so protect your rights from infringement. But that places upon you as good citizens the direct obligation of obedience to the laws as prescribed in your particular community, State, and Nation, so that you shall not violate the rights of other citizens.

Unfortunately, today there are too many people in this country who have disregarded completely the laws of the land, and are living a lawless and selfish existence for their benefit and their benefit only, in defiance of both the moral and legal law. That, you may say, is a far-fetched statement. Nevertheless, the record shows the statement to be true. So let us again consult the record.

Uniform Crime Reports, published by J. Edgar Hoover, Director of the Federal Bureau of Investigation, reports that every 5 minutes during 1950 someone in the United States was feloniously assaulted or killed; during each day of the year 1950, 146 persons were robbed; 458 cars were stolen; 11,029 places were entered by burglars; and every 30 seconds throughout the year a larceny was recorded. During that period of time the crime record had increased in percentage figures from $1\frac{1}{2}$ percent to 10 percent above the 1949 figures. But the sad part of the record is that 41 percent of those arrests were for major violations, that age 21 predominated in the frequency of arrests, and, believe it or not, 9.6 percent of the total were females.

I am merely outlining and sketching this report. If you wish to make a more detailed study by city, town, and State, you can write to J. Edgar Hoover, and I am sure that he will be happy to send you a copy. A study of the figures in these reports shows an alarming trend to utter disregard of the law. This indicates that there is much opportunity and need for an education program to bring people back to living under the laws honestly and decently, which, after all, is the only worth-while way of living.

Of course, you can say to me, "I do not violate any law—this doesn't apply to me." That may be true. Perhaps there is no record of your having violated the law. But examine your conscience and you will find that there are many, many times that you have been violators and have not been apprehended. When you drive your car, are you considerate of your fellow travelers on the highway? Do you observe the speed laws? Do you observe the stop signs, and are you careful of the safety of the pedestrians, particularly in the observance of the traffic regulations surrounding the schools?

Now, there are many ways in which you can become an indifferent citizen and therefore, by inference, not a good citizen, by failing to do the things that good citizens should do.

It is alarming to realize that in the last national election only approximately 50 percent of the people of this Nation eligible to vote for the President of the United States were sufficiently concerned to go to the polls and cast their ballots. Therefore, by their indifference and neglect, the other 50 percent of eligible voters disfranchised themselves. They failed to take advantage of the blessings that are theirs in America in being able to go to the polls, and, without fear of reprisals of any kind, cast a ballot of free men. They failed to participate in the process of picking and choosing public officials who, in their opinion, were qualified, competent, and able to assume the tremendous responsibility of operation and control of this Government as we face one of the greatest crises in our history.

There has never been a time in the history of our Nation was it more necessary to elect men to office, whether it be in high or low places, who are more concerned about the safety and security of this Nation than they are with personal gain or party success. And to my way of thinking, the people who were eligible to vote and did not vote, either through indifference or neglect, failed to fulfill their obligations and thus cannot be called good citizens. Remember, you will get the type and kind of government you ask for—no better, no worse. You, as an individual, are responsible and must answer, not only to yourself, but to your fellow-citizens for any and all disappointments that come through your indifference and neglect.

As a good citizen, voting is not only a duty and responsibility that you should not shirk but one that you should perform with pride, and with a prayer of thanksgiving in your hearts that today you still have the right to express your likes or dislikes at the ballot box. There are millions of people behind the iron curtain who would gladly and willingly change places with you, and who, I am sure, would not fail in their responsibility in this respect.

You may say that you are not interested in politics; that all politicians are crooked, that all politics is dishonest; therefore, you do not vote. By your very neglect and indifference you are contributing to whatever fault you may find in the operation of your government, whether it be local, State, or National, because you have done nothing to protect it. Of course, you may say, "I have not violated any of the law. I have not failed to exercise my right of suffrage at the polls, so this doesn't apply to me."

Now, there is another duty of good citizenship that it is equally important to exercise, and that is jury duty. I would venture to say that were an officer of the law to appear in this room tonight and serve jury summons on everyone here, requesting that they present themselves before a court to qualify as jurors in a trial, more than 50 percent of those present would make every effort to avoid such jury service. The judges of your courts can give you the answer to that. Efforts to be excused from jury duty may not be as prevalent in the small community as in the large city, yet, repeatedly, we find people who are too busy, who haven't the time, who are going to be out of town, who use political influence, and who even attempt to get medical certificates to avoid jury service. That, in my opinion, is not a mark of good citizenship.

If and when you are served with a summons to appear to qualify for jury duty, before attempting to avoid such service stop and ask yourself this question: If I, personally, were on trial would I want the better class of citizens avoiding the duty imposed

by law of granting to me a trial by a jury of my peers? Why is it that your professional men, your businessmen, your outstanding citizens, are too busy to give the few hours a year they would be called upon to give to uphold the laws of the land, in granting to a fellow citizen, regardless of his social or financial status, an opportunity of a trial, of being judged by twelve men, chosen by the court for such purpose, without any attempt by any of the twelve to evade the responsibility?

I have just scratched the surface of how one can, through indifference and neglect, take unto himself the title of bad citizenship. This description, of course, could be expanded and would require, not only hours, but probably days and weeks, to go into in its entirety.

You might say, what are we going to do about it? One of the first things we must do is to take our place on the firing line, and assume willingly the responsibilities imposed upon us by our acceptance of the great privilege of citizenship in this country. Let us not forget that if every community in America were to clean up its own local situation, and if each and every citizen in each small community in America were to assume the responsibility of citizenship, then the major problems in America would become minor because the Government is you. The United States is merely a gathering together of all the small communities into statehood and of all the States into the national picture. As each community meets its responsibility, then the State must meet its responsibility, and that, in turn, assures us of a national picture that is healthy and wholesome and secure.

We must, in our system of education, train the youth in such a way that they will have a thorough knowledge and understanding of the responsibilities that are theirs as citizens. Teaching the youth in our schools to recite the Declaration of Independence and the Bill of Rights verbatim, word for word, does not answer the question, because you could teach a parrot to do that. But teach them the meaning of that Constitution and that Bill of Rights, what it means to them, what it cost in the sweat and blood of the forefathers of our Nation to preserve it intact as a heritage to hand down to us—that is important and will instill the seeds of good citizenship in the youth of this land.

It is a peculiar situation today, that in these times of increasing crime and violence of our Nation, it has been declared unconstitutional to teach a child in the schools that there is a God, and the things that that God stands for. But it has not been declared unconstitutional to teach them there is no God.

Looking toward the future of this country, we realize we are in great danger today of losing everything that we hold sacred and dear. The enemy must feel a tremendous consolation, as they look at the crime record, as they examine the sorry spectacle of our indifference and neglect in exercising our right of suffrage, as they gleefully enjoy our avoidance of jury service. Adding these things up and taking it for granted that there is a complete breakdown of the moral law in this land—what pleasure they must derive from it. To them it looks as though the democracy of free men has failed, that it has disintegrated. And they look with joy and glee to the day when they can become victors, not by force and violence, but by the disintegration of the moral fiber of our people, and by that most insidious enemy—defeat from within.

I think it would be well if all of us were to obtain one of the small circulars that Uncle Sam is distributing to promote the sale of savings bonds—to bring into our homes the message of a soldier in Korea, who asks us to look out the window into our front lawn, and see there, in a fox hole, a cold, tired, and hungry soldier, alert, defending

our home. That is exactly what every man in Korea is doing. Now, what a mockery it would be if you and I, through our neglect, lose here what those defenders of our homes are fighting for over there.

It is your community. It is your State. It is your government—yours, personally and individually. It will be as honest, decent, and great as you wish to make it. Or it will degenerate into the depths you force upon it through your failure to exercise your citizenship intelligently and to participate in the operation and support of your government.

Proposed National Arts Commission

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES
Friday, October 19, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by me with regard to Senate Joint Resolution 105, providing for the establishment of a National Arts Commission.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MURRAY WITH REGARD TO SENATE JOINT RESOLUTION 105, PROVIDING FOR THE ESTABLISHMENT OF A NATIONAL ARTS COMMISSION

It was my privilege within recent days to introduce Senate Joint Resolution 105 under the cosponsorship of four distinguished colleagues who have long been widely known for their championship of significant social and economic reforms. I refer to Senators HUMPHREY, LEHMAN, DOUGLAS and KEFAUVER.

This resolution provides for the establishment of a National Arts Commission as the citadel of those basic American cultures which form the foundation of the very civilization which we are spending precious lives and untold billions of dollars to preserve as the heritage of free men. We are presently engaged in the greatest sales campaign in history; we are striving to convince hundreds of millions of people around the world that the American way of life is superior to the slave existence that the totalitarian aggressors would thrust upon them. And our very existence as free men may well depend upon the success of our sales effort.

But while we have been promoting the American system, we have neglected to safeguard at home the cultural pursuits in the field of fine arts that are the very cornerstones of the civilization that supports our American way of life. Our swiftly changing economic picture and the technological progress that made America strong enough to resist successive armed aggressions have, strangely enough, weakened our promotion of the fine arts and worked hardships upon the skilled practitioners in those fields. High taxes have all but eliminated the contributions of our erstwhile wealthy private patrons of the arts; mechanical reproduction of cultural artistry without continuing reward for those who performed has decimated the ranks of artists and discouraged would-be newcomers to these pursuits. They are the forgotten men and women who need desperately the help that our Government can give them through the agency of a National Arts Commission such as is provided in Senate Joint Resolution 105.

This resolution provides for a Commission of 19 members, comprising the President as

ex officio chairman, the President of the Senate, the Honorable Speaker of the House, four members each from both Houses of the Congress, and representatives of national nonprofit organizations fostering various fine arts endeavors. It would be responsible for the preservation and development of our cultural pursuits at the National, State, and local levels.

There is nothing new or revolutionary in this procedure. Such commissions have been the cornerstones of the cultural heritage of other nations for centuries. Only recently, a Royal Commission recommended the establishment of such a national body in Canada because it found "that it is entirely impossible for the Canadian composer to gain a livelihood by his art, and that earning a living for either the Canadian concert artist or the Canadian professional musician is extremely difficult."

In this connection it is interesting to note that while the plight of the musician in these United States is equally serious, he and his Canadian neighbor have done something affirmative to help themselves. Theirs is an interesting experiment that began several years ago when Mr. James C. Petrillo, president of the American Federation of Musicians of the United States and Canada, was able to cushion somewhat the effects of mechanical music by creating, in agreement with the recording and transcription industry, a royalty fund that spends about \$1,500,000 annually for the employment of live musicians in hundreds of localities to perform free music for the public.

I was particularly interested last May when I was in Geneva as a United States delegate to the International Labor Organization to find that organization studying the Petrillo formula in working toward a world-wide convention that would establish the rights of artists to payment for work done when their performances are multiplied mechanically for profit. Unlike the author and composer, these entertainers have no protection under the copyright laws, and I sincerely hope such a convention will be adopted.

If you will inspect our Economic Cooperation Administration program in Europe you will find that this government is investing in the preservation of the culture of the Old World. This is sound business because it recognizes that man does not live by bread alone.

But, while we carry out our responsibilities as missionaries to a foreign land, let us not neglect our own souls.

Therefore, I commend to my fellow Senators Senate Joint Resolution 105.

Summary of Work of First Session, Eighty-second Congress

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Friday, October 19, 1951

Mr. JOHNSON of Texas. Mr. President, in the October 22 issue of Newsweek magazine, published yesterday, there appears an interesting and informative summary of the work of this session of the Eighty-second Congress. It pays a high, and in my judgment, a well-deserved tribute to our majority leader, the junior Senator from Arizona [Mr. McFARLAND]. I ask unanimous consent that it be printed in the Appendix

of the RECORD for the information of Members of this body.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

CONGRESS. BEHIND THE RECORD

Tongue in cheek, Senate Majority Leader ERNEST W. McFARLAND picked up his desk phone and called Speaker SAM RAYBURN last week. The Senate, said McFARLAND, was considering a 30-day recess while conference committees haggled their way to agreement on the few vital bills not yet delivered.

RAYBURN was outraged; invariably, it had been the House which rested while the Senate toiled. He summoned CLARENCE CANNON, stubborn and uncompromising chairman of the House Appropriations Committee. RAYBURN's comments pierced the thick walnut doors of his office; soon afterward, House lobbies and cloakrooms were abuzz with indignation at McFARLAND's hint.

House hurries: Wednesday evening, the Appropriations Committee hurriedly reported out the \$7,482,527,790 allocation for foreign economic and military aid. At 10 a. m. the next day, the House met to consider the measure. Though ordinarily it would have spent a week on the job, it finished the task by 7:48 p. m. The Senate Appropriations Committee, simultaneously taking up the same measure, miraculously concluded its hearings in the same single day after listening to Secretaries Acheson and Lovett and ECA chief Richard Bissell, Jr.

Tax-bill conferees, bogged down for days and talking darkly about putting off final action until next year, astonished the press galleries by announcing at a Thursday afternoon briefing that they had reached agreement.

This Tuesday, however, the House voted 203 to 157 to reject the tax-bill agreement, and adjournment this week seemed unlikely.

If McFARLAND wanted to assess his stewardship in figures, then the first session of the Eighty-second Congress had been a slug-gard. The "do nothing" Eightieth, in its first session, passed 395 public laws, the Eighty-first, 440. For the Eighty-second, the first session's total would approximate 180.

Security wins. But its accomplishments included, in addition to the Mutual Security Act (the foreign-aid bill), authorization for Army, Navy, and air bases all over the world, for construction of 140 major naval vessels and conversion of 292 others, and for transfer of 24 destroyer escorts to six nations as part of the mutual-defense program; authorization of universal military training and an extension of the draft to mid-1955; establishment of a policy governing United States aid to nations trading with the Soviet half of the world; provision for eliminating excess profits from defense contracts; and Senate approval of four additional divisions of troops for Europe. Of total appropriations of approximately \$96,000,000,000, the staggering sum of \$80,884,538,928 would go for defense and mutual security.

Wage and price controls had been extended through June 30, 1952, export controls to June 30, 1953, and reciprocal-trade agreements to June 12, 1953. A billion and a half dollars had been allocated to Government-insured mortgages for housing, community facilities, and services related to defense. India had been lent \$100,000,000 for food.

Postal rates had been readjusted to trim the deficit, Government employees had been granted pay rises, the RFC had been reorganized, the copper tax had been suspended, and \$10,000 free life insurance had been granted to each man in the armed services.

There had been 133 congressional investigations, ranging from the Kefauver and McCarthy to-do's to examinations of consumer

price indexes. Midwest floods, communism in the movies, industry, and Hawaii, tin stockpiling, boxcar supply, 5 percenters, color television, Senator JOE McCARTHY, the Katyn massacre, and monopolies in aluminum and baseball.

SIGNIFICANCE

From President Truman's point of view, the Eighty-second's record thus far is far from satisfactory. Mr. Truman has made 57 specific requests for legislation and Congress has approved 22 of them—in varying degrees. The matter of degree is important. For example, the President first asked for a \$16,000,000,000 tax increase, then for \$10,000,000,000; this week Congress was still debating an increase of \$5,750,000,000.

Similarly, the President asked for a stiff economic-controls bill and got a weaker one than had been enacted when the Korean crisis first erupted. The Reciprocal Trade Agreements Act, as renewed, is much worse—in the President's opinion—than the one the Republican-controlled Eightieth Congress passed.

Civil-rights bills have not even received a hearing. Neither have the President's proposals for compulsory medical insurance, increased unemployment insurance, or Federal aid to education. Expansion of medical-school facilities has been quietly pigeonholed after reaching the Senate floor. The Brannan plan is very dead. The President's public-power projects are either—like the St. Lawrence seaway—tied up in committee or forgotten. Though Mr. Truman has not specifically asked for the repeal of the Taft-Hartley Act, he has urged "improvement of our labor laws." He has obtained only a single modification, permitting union-shop negotiations before union-shop elections.

The truth is that the Democrats control the Senate by 50 to 46 and the House by 235 to 199, but the administration doesn't control the Democrats. In domestic affairs, the Republican-southern Democratic coalition is singularly effective, and the Fair Deal is comatose.

But in the field of foreign policy, the coalition ceases to exist; Southern Democrats present a solid front with the rest of the party, whether the issue is more troops for Europe, foreign aid, or the dismissal of General MacArthur, and whether or not they are in personal agreement with the President. (Many southern Democrats believed the foreign-aid bill should have been cut much more than it was, yet doomed all serious efforts to slash it.)

For these blessings, the President can thank MCFARLAND—whose selection as majority leader originally caused Mr. Truman little joy. Unlike his predecessors since the first days of President Roosevelt's regime, MCFARLAND has refused to function as a White House messenger who tries to ram Presidential proposals down the Senate's throat. He doesn't hesitate to tell Mr. Truman—politely but firmly—that certain bills or nominations don't have a chance. He won't push foredoomed legislation simply to "make a record" for the next election.

Therein lies the secret of MCFARLAND's effectiveness as majority leader—a point even the liberals concede.

Even with MCFARLAND's help—and the Arizona voted for 96 percent of the administration's proposals—the President can expect little more from the Eighty-second's next session than he got from this one. Where defense is concerned, there will be small argument. Congress is determined to face and fight a cold war for a quarter of a century, if need be. It made the point clear when it authorized construction of barracks designed to last 25 years. But on domestic issues, Congress will pay attention to the President only when it agrees with him. And it will agree with him no more frequently after a recess than it did before.

The Rochambeau Road

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a broadcast over WMBG, Richmond, Va., by Charles Farmer, of the Senate Radio Gallery, on the subject the Rochambeau Road.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FARMER FROM WASHINGTON

(By Charles Farmer)

On this day, October 19, 170 years ago—that makes it 1781—Lord Cornwallis surrendered the British forces to General Washington at Yorktown, Va. This final American victory in the Revolution established the independence of the Colonies and brought a new nation into being—the United States.

That victory was due, in large part, to the valiant support of our French friends. For, as Senator A. WILLIS ROBERTSON has just reminded me, "General Washington had more French troops than Americans under him at Yorktown." Quite true. Our Continental Army numbered only 5,500 men; and the Virginia militia but 3,000 rifles.

The French lieutenant general, Count de Rochambeau, commanded a total of 7,600 foot soldiers, and Comte de Grasse's French fleet of 28 ships of the line and six frigates were manned by 19,000 seamen and marines. Even one Continental force at that siege was headed by a Frenchman—the illustrious Marquis de Lafayette.

Not so long ago this Nation was praising General Douglas MacArthur for the success of Inchon landing—for MacArthur's brilliant synchronizing of land and sea and air forces at that point in the Korean theater. Yet a far more important military movement—one calling for equally flawless timing—was directed by Gen. George Washington at Yorktown when he coordinated two armies by land—initially hundreds of miles apart with a fleet starting out from its base in the West Indies—that in a day when ships were propelled by vagrant winds, and riflemen slogged through unpaved mire.

So well made were Washington's plans, so skillfully were they executed by our allies that Rochambeau marched 4,000 French regulars through Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, and into Virginia in time to bottle up the British on the Virginia Capes.

Just when Cornwallis was looking toward a sea escape, into the Chesapeake came Admiral de Grasse with his French ships. In answer to Washington's plea he had sailed in from the far-off Caribbean, bringing 3,000 more foot-soldiers, some field artillery—and a large sum of money he had borrowed from Spanish sources in Havana. First, he vanquished British Admiral Graves' armada in the Battle of the Chesapeake, then hemmed in Cornwallis' men on the Cape—Cornwallis sent his sword to General Washington.

Stephen Bonsai tells in his historical work, *When the French Were Here*, that France's fighting premier, Clemenceau, planned to revisit America and follow the trail taken by Rochambeau's men in that famous march from Narragansett Bay to the Virginia Capes. Death came to the "Tiger" before he could return to America and make the historic pilgrimage.

It is just as well; for Clemenceau would have been chagrined at our failure to mark the route of one of the great military marches of history—on the success of which the destiny of our new nation swung.

Why not mark out that route, now? It winds through many a picturesque hamlet—it can become one of the great highways of history—the Rochambeau Road. I asked Senator ROBERTSON what he thought of marking the route—knowing his deep knowledge of the founding of our country. He highly approved, saying, "I think the marking of this route would be appropriate, and a fitting memento to the spirit of those fine French who came to our side in those dark days."

Senator HARRY BYRD said this victory way should be indicated at least by markers "a march by friends that we should never forget."

Representative TOM STANLEY suggested that the historical societies of the States in question might mark the route through their borders.

Why not the appointment—by the President—say of a National Rochambeau Road Commission, composed of civic leaders, to coordinate and direct this work from Narragansett Bay to the Virginia Capes? His Excellency the French Ambassador, M. Henri Bonnet, should be appointed honorary chairman. What do you think of the idea? asks Farmer from Washington.

Dental Services to British Children

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement I have prepared regarding a story carried in the Washington Post of October 16 regarding treatment of school children by dentists under the British nationalized health services, together with an excerpt from the pamphlet National Health Service, distributed by the Ministry of Health, Whitehall, England.

There being no objection, the statement and excerpt were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MURRAY

Many readers of the Washington Post were undoubtedly confused by a story carried October 16 headlined "London dentist says 9 out of 10 school children are denied dental care under British nationalized health services." The dentist in question was Dr. Cyril de Vere Green, of London. He was reported as speaking to the annual meeting of the American Dental Association as an official representative of the British Dental Association. He was quoted as warning American dentists "to take your lessons from our experience."

Undoubtedly American dentists would do well to look at the experiences of the British program. At the same time, they should scan a lot more closely the credentials of Dr. Green himself. American dentists and American readers have a right to ask how representative of the views of the British dental profession itself are Dr. Green's statements when, by his own admission, he is one of the few dentists who declined to serve in the dental service plan.

How unrepresentative Dr. Green is likely to be is best evidenced by the fact that 9,500 dentists—more than 95 percent of the profession in Great Britain—serve voluntarily in the program. Dr. Green is one of those dissenting 5 percenters. Opponents of the British Health Service certainly had to search far and wide to uncover him, bring him to America, and then blow up his views as those of the British dental profession.

This procedure is grossly unscientific. It works great harm to the British program and, even more important, to American dentists and the American people. We are all entitled to the facts, not to propaganda. Have we heard the facts from Dr. Green or propaganda?

Now, as to the warning brought by Dr. Green—this British 5 percenter. The first warning, as I see it, is that no amount of complacency, slogans, and million-dollar propaganda barrages can fill one neglected cavity, save one infected tooth, or restore to fitness the teeth of a single person, whether child or adult.

What we need is not propaganda, but constructive plans to enable people to pay dentists for needed service. What does the British experience show us?

The British experience shows that the money barrier can be stripped away from dental or medical care. When money is no longer an insurmountable barrier, people are desperately anxious to avail themselves of the expert care hitherto denied them. The British experience shows that by stripping away the money barrier, every family—not just the very wealthy and perhaps the very poor—can benefit from medical and dental advances. Under our present backward, out-moded, fee-for-service system, the average middle-class family must all too often forego these benefits or take them at the risk of being plunged into debt.

There is a second lesson which British experience can teach our American doctors of dentistry—and incidentally their colleagues, the doctors of medicine. The lesson is this. If we are to take care of the health of our people properly, we must greatly increase the supply of trained health professionals.

The American Dental Association, I rejoice to say, is well aware of this fact. American dentists vigorously support the bipartisan bill, S 337, to help our professional schools train the added numbers of dentists, physicians, and nurses we need so badly.

Unfortunately, that emergency health training measure was blocked October 4 by two forces: the medical lobby and its new-found ally, the senior Republican sponsor of the bill itself, Mr. TART.

Those of us who have sponsored a comprehensive National Health Program have always stressed the need to build up our supply of trained personnel. But we have always insisted with equal force that insured purchasing power must also be available if people are to benefit from the build-up of more medical personnel and health facilities. The two go hand in hand toward building up our supply of health professions. The bipartisan Emergency Health Training Act of 1951 encourages the education of dental hygienists. The dental hygienist is the dentist's valuable ally—and particularly useful in extending preventive dental services to children.

Outstanding American dental authorities have urged the Senate to help the dental schools train more dental hygienists and allied technicians. In view of their considered judgments, it is strange to read in the Washington Post that this British dentist, Dr. Green, speaks harshly of special training programs toward the end of speeding dental care for British children. He appears against the very steps which our American dental authorities are urging as sound.

I will go along with the views of our American dental authorities—not those of a single British dentist, however much publicity may be drummed up for him.

Those of us who have sponsored the comprehensive national health program have looked long and hard at the British program. We have watched and know its history. It was conceived by the Liberal Party. It was formed by a wartime coalition government under Winston Churchill. Finally it was set into motion by the Labor Party. We note that now all three parties claim credit for it, and that it is so universally popular with the British people that no public figure would advocate its abolition.

Here, for example, is the position of the Conservative Party: "We pledge ourselves to maintain and improve the health service." This is the road, conservative election manifesto.

And here is the position of the head of the Conservative Party, Mr. Churchill: "All parties are equally desirous to maintain the social services and, where necessary, improve them." Electoral Broadcast, February 17, 1950.

The British Health Program, despite Dr. Green, is accepted and endorsed by the professional societies which speak for the average British doctor and dentist—the British Medical Association and the British Dental Association.

Indeed, such endorsement by the British health professions is most damaging and embarrassing to the medical lobby in this country. Through its multi-million-dollar campaign, the medical lobby seeks constantly to hide the fact that British doctors and dentists support and approve the broad outlines of the British Health Program and have said so again and again.

But to obscure that support, the medical lobby, for example, has hired—actually hired—an erstwhile British physician to parade up and down the United States and misrepresent the program. In him, the medical lobby has found and is exploiting a man so disgruntled, so embittered, and also so lacking in professional devotion to the scientific spirit that he is willing, for a fee, to renounce the major canons of his profession. This erstwhile British physician, according to the medical lobby's own reports, filed with the Congress, was paid \$19,000 in salary and expenses for his propaganda activities.

Among the informational data he palmed off on Americans, in return for \$19,000, is that under national health programs operating abroad, witches fly on broomsticks, drugs are bootlegged, and there is black-market practice of medicine.

Dr. Green, the British dentist, is obviously a man of less imagination than the AMA's hired man, Dr. Ralph Campbell.

Let us eschew propaganda and look at the facts.

Some of the facts that are at hand reveal that Dr. Green has exaggerated the problems of the British Health Service to a rather surprising degree.

Consider these facts: that since July 1948, when the program started, to June 1951, 23,600,000 patients were treated—children as well as adults.

And the figures for 1949—the only year available to me—show that 2,807,000 British children were inspected and roughly 60 percent were referred for treatment. And the children actually treated numbered 1,422,000. Thus, 1,422,000 British children were treated of the 1,761,000 referred for treatment.

By American arithmetic, I make that out to be about 80 percent were treated, which hardly sounds like the 90 percent Dr. Green said were not treated.

My figures of 80 percent treated are for 1949. It may well be that the number of British dentists serving in the school program has dropped. Some have undoubtedly been lured into general practice under the national health service because of the high

rate of compensation. But Dr. Green might also point out that these same dentists are still available to school children, regardless of the office set-up at the moment. A British child can be taken by his parents to any practicing dentist under the national health service and be treated. The treatment would be made, not by a salaried dentist connected with the school service, but by the private dentist of the family's own choice.

How, under these circumstances, Dr. Green can make the statement that 90 percent of Britain's children are denied dental service is somewhat of a mystery.

Our study of the facts of the British operation convinces us that while it has scored major successes, it is a program designed to meet British needs. Its successes and its shortcomings are not a model for our own use.

The national health program, of which I have the honor to be a sponsor, and which the President has repeatedly endorsed—is a far more conservative program—designed to meet American needs. We have realistically assessed the trained professional health manpower of the country, and have provided that priority shall be assigned to the needs of our children in particular. Thus, well in advance of the introduction of any program, we have already provided safeguards against some of the temporary shortcomings of the British program.

A system to remove the dollar barrier which now separates dentist and patient takes thought and cooperation on all sides. Progress will not be advanced by one-sided propaganda sessions such as those referred to above. Progress will come quickest when we in Congress can sit down with bona fide representatives of the health professions—with doctors, dentists, and nurses, not their lobbyists and propaganda directors.

We made such progress in dental health legislation which resulted in a dental research act thoroughly acceptable to the dental profession and holding great promise for the children of this country. At the time of its enactment in 1948, it was most gratifying to me that the American Dental Association saw fit to give me "special credit for * * * exceptional service." I recall that Dr. Flagstad, chairman of the ADA's committee on legislation said, "Senator JAMES F. MURRAY, from Montana, also merits the association's appreciation because he introduced the original dental research bill 8 years ago and has reintroduced it in every succeeding session of Congress. Senator MURRAY has consistently and energetically fostered our dental research bill and secured its passage through the Senate in two different sessions of Congress."

This proves progress can and has been made in the health field with government assuming its rightful responsibility in helping our free, unfettered doctors, dentists, and nurses care for our people.

We have made such progress particularly in the field of heart disease, cancer, mental hygiene—to cite but a few.

Now we must move on and tackle the broad economic questions. The piecemeal approach is not good enough. To advance our people's health we must develop a comprehensive national health insurance program. We need the help of our doctors and dentists in perfecting that program as an effective alternative to socialized, State-controlled medicine and the regimentation of patient and doctor which we all abhor.

To help our 83,000 dentists and their 154,000,000 patients, here are authoritative statements on the dental program provided under the British National Health Service.

I attach herewith an excerpt from the pamphlet, National Health Service, distributed by the ministry of health, Whitehall, England, April 1949, page 2:

"DENTAL SERVICES

"Dentists, like doctors, are free to serve whole-time or part-time and to have private

as well as public patients. Up to mid-February 1949, 9,252 out of 10,000 dentists had joined the service. Patients do not have to register with any particular dentist but are free to go to any dentist in or out of their area who is taking part in the service and is willing to accept them.

"The dental service has also proved very popular and up to the beginning of February 1949, about 4,150,000 people had applied for dental treatment, complete treatment had been given in 2,710,000 cases, and of these about 40 percent were for dentures. It is thought that about 8,000,000 people will apply for dental treatment within the first year.

"There is no need for the patient to obtain a dental form or authority before seeking treatment. The dentist is able to carry out at once all normal conservative treatment (i. e., fillings), emergency treatment, and ordinary denture repairs. He only needs to get prior authority before undertaking treatment when it involves the removal of teeth necessitating replacement by dentures; the provision of dentures; extensive and prolonged treatment of the gums, gold fillings, bridges, crowns, special appliances, and aural surgery. Prior authority of this kind is given by the Dental Estimates Board, consisting of a dental chairman, six dental members, and two lay members. The Board also authorizes all claims for payment submitted by dentists. A dentist can also, with the approval of the Board, charge his patient extra for gold fillings, or metal dentures where these are not clinically necessary, but the patient wishes to have them."

The Responsibility of Congress to the Banking System

EXTENSION OF REMARKS OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. SALTONSTALL. Mr. President, on behalf of the senior Senator from New York [Mr. Ives], I ask unanimous consent that there be printed in the Appendix of the Record an address by William A. Lyon, superintendent of Banks of New York, and president of the National Association of Supervisors of State Banks.

The Senator from New York assures me that this address is worthy of study by Members of the Congress of the United States, and is most timely.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE RESPONSIBILITY OF CONGRESS TO THE BANKING SYSTEM

(By William A. Lyon)

These annual conventions afford us an occasion for looking back over recent years to see whether any new tendencies are coming into view that seem likely, as they grow and mature, to cause marked changes in banking and bank supervision. No institution, including banking, is really the same today as it was yesterday. Today does not grow out of nothingness; its roots are set in yesterday. We are not helpless before these evolutionary forces. We can mold them if we will. But we should know that the forces are never at rest; they are dynamic, not static.

I should like to use the time set aside for the president's report to talk about how some of the new tendencies may affect the dual system. The dual system is a well-worn phrase that is, I am convinced, absolutely meaningless to the public. It is not self-defining. We might better speak of our State-Federal banking system.

If any dangers exist today threatening the State-Federal banking system, they do not arise out of openly acknowledged efforts to undermine the system. Practically everyone who mentions the dual system does so to include himself among its supporters. Frequently actions are proposed which, upon analysis, seem likely to invade the States' sovereignty in banking. But they are usually accompanied by protestations of belief in and regard for the dual system. Any threats to the system right now are pretty largely threats of inadvertence. I am afraid, however, that there are occasionally developments which are not less threatening because they are not admittedly hostile to the system.

I have a few such developments in mind. Their common denominator is that they spring from neglect by Congress of the field of banking for a decade and more because of its absorption in wars and the problems growing out of wars. When Congress does not follow closely and shape the trend of banking powers, it permits a vacuum to be created. The vacuum does not remain unfilled very long. It is being filled with policies and developments and powers that have not been reviewed and approved by Congress. Some of the new developments proceed from mystic interpretations of statutory language used years ago before applications now made of it could possibly have been thought of.

I should like to talk to you about three such developments. The first involves the extent to which States can authorize banking organizations to be established that differ in their powers and functions and can forbid the use of terms by federally chartered institutions that would blur the distinctions between them. New York State has believed for half a century that it could reserve the word "savings" for the use of savings bank and savings and loan associations. Over a century and a quarter the people of New York State have come to associate the use of the word "savings" with mutual institutions, having closely circumscribed loan and investment powers. Since they do not do a demand-deposit business and therefore have a more stable deposit level, they were permitted to become more fully invested than commercial banks and to have their funds employed at longer terms. Since they do not create money as commercial banks do, they were exempted from reserve requirements. All these things make it possible for them to earn a higher average return on their assets and in the main, year in and year out, to pay a higher rate on the funds entrusted to them by the public. Commercial banks, of course, were given full freedom to accept passbook accounts, but in the interest of minimizing confusion with mutual savings institutions the law required that they should not call those accounts savings accounts.

For half a century national banks doing business within our borders have respected the State's preference in this matter. Now, however, our right to insist on compliance by national banks has been challenged. In those States that have no well-developed system of savings institutions, the problem is of scant importance. But it is an issue grounded in tradition and history in some States. One of the advantages of the dual system has been the opportunity it afforded to recognize these regional conditions and preferences, without at the same time weakening the banking structure. It is too much to ask the courts to read a clear expression of congressional intent into a statute adopted

long ago when there was no reason to believe that the merits of the point at issue were being passed upon. If that principle is to be changed, if in our case 125 years of banking history are to be cast aside, then I strongly believe it should be only after Congress has considered what is at stake and has, in full consciousness of all the implications, made its decision.

My second point concerns the difference between the organization of State and Federal supervisory powers. In the States it is the usual policy to concentrate in one banking department responsibility for various types of banking organizations. The Federal system does not provide the means for weaving policies for the different types of institutions into a consistent pattern.

The watertight compartments in which Federal commercial bank agencies function, on the one hand, and the Federal savings and loan regulatory body functions on the other, could exist only in the vastness of the Washington scene. There is a sharp difference in the design of the Federal and State supervisory structures. For the most part, the States have gone in for putting banking organizations of all kinds under one supervisory jurisdiction. The banking laws in a majority of the States do not provide for a superintendent of commercial banks, a superintendent of savings and loan associations, and a superintendent of savings banks. This arrangement is in direct contrast to the Federal system of independent supervisory agencies, each concerned with only a highly specialized phase of the supervisory picture.

The question that I raise is whether Congress is leading from strength or weakness when it fails to provide means of coordination among the various scattered agencies to which it has delegated powers in the lending and banking fields. I believe the unconnectedness of the Federal supervisory plan does not make for strength. It is pretty easy to show that it makes for opportunities to play one institutional type off against another. A tendency is appearing among some institutions, and perhaps by or on behalf of one or more of the agencies, to exploit the uncoordinated status of the Federal agencies to the disadvantage of the unified State supervisory structure.

I can furnish some examples from New York State's experience. One of our institutions converted to a Federal charter not long ago. Among the reasons given was the following:

"We prefer the Federal charter because the governing authority is primarily concerned with the interest and development of savings and loan associations rather than in the supervision of a number of different types of financial institutions with the rivalries that inevitably appear from time to time."

What this says is that the Federal system permits the supervisor to act as champion of the rights of its special type of institution, with no responsibility to consider what the position of other institutions may be. The independent status of the agencies is not in this instance put forward as a means of dealing with these rivalries in accordance with a settled national policy. Unfortunately there is no genuine national policy for banking that sets out plainly the role which the different types of institutions are to play. There is only confusion. While Congress looks the other way, one type of banking organization conducts itself as the competitor instead of the complement of another, and the separate Federal types then seek to take advantage of the coordinated design of the State financial structure.

I do not see how any lasting good can come from efforts of banking institutions of any one type to try to gain advantage over other types by playing off one supervisory agency against another. Nor do I believe the agencies themselves should hold out that they

can, because of their specialization, offer more benefits to their institutions than other agencies with broader responsibilities can hope to match. An instance has recently come to my attention of what competitive rather than coordinated agencies will sometimes do to attract institutions to themselves if their desire to expand is their chief motivating influence.

There are no federally chartered savings banks. This situation has been leading to some interesting developments. On the one hand, some of the commercial banks have been, in effect, aggressively challenging the wisdom underlying New York State's traditional policy of maintaining a savings bank system. A number of national banks appear to be the leaders in this movement. Against the opposition of the commercial banks the savings banks have been having difficulty in advancing their plans to make savings bank facilities available in communities in the State now without them. Their problems on this score are very different from the relatively smooth sailing with branches that the Federal savings and loan associations have encountered. With the Federal Home Loan Board deciding to ignore State laws on branches, the Federal associations have gone ahead opening up branches on the broadest kind of assumption of power.

While the savings bankers are wrestling with their branch problem, an official of the Federal Home Loan System has injected himself into the scene by strongly intimating that Federal savings bank charters might be the answer to it all. The implication here is that, under Federal charter, savings banks might have all the branch powers Federal savings and loan associations now enjoy. No doubt this is true. We now have, therefore, this extraordinary situation: Institutions operating under one kind of Federal charter—that is, national banks—are opposing the grant of power to a type of State-chartered institution—savings banks—which they themselves enjoy and which another kind of federally chartered institution—savings and loan associations—is already exercising.

This is not a dual system we are talking about. It is a double standard. Under it Federal institutions would have maximum powers, and State institutions would have minimum powers. Obviously this does not promote the well-being of the dual system, the State-Federal system, of banking.

To describe this state of affairs is to expose its absurdity. Federal banking is able to squeeze the State system in this fashion because Congress has been preoccupied with other interests for the last decade and has not itself been the coordinating influence that it ought to be. Nor has it set up any other device for accomplishing this coordination between the parts of the Federal banking apparatus.

One of the oldest responsibilities of Congress, specifically set forth in the Constitution, is money and banking. In earlier days, when the number of Federal agencies was smaller, Congress kept tabs closely on how the agencies it created were living up to specifications. The Federal Reserve, for example, has frequently come under the congressional microscope. But in the creative abundance of the depression days Congress brought into existence agency after agency, with their powers set out in large outline only. Little thought was given as to how any one agency was to work with others in related fields.

I submit that some person or body in the Federal Government should have direct responsibility to see that the interests of the different types of banking institutions are respected and reconciled. Agency rivalry is not healthful, and the more thoughtful Members of Congress would recognize this situation if their attention were not being so completely engaged elsewhere. The State

type of broad responsibility and the Federal type of narrow responsibility are not compatible. Either the States will have to work toward the Federal system, which fosters institutional rivalries by types, or the Federal banking policy will have in some way to provide for the kind of coordination which the States believe to be essential.

The Hoover Commission proposed that a National Monetary and Credit Council be appointed and that such a council become the medium through which the Federal agencies thresh out a consistent and coordinated policy. The proposal for such a council deserves more careful consideration by Congress than it has so far received. At least it is worth a trial. In addition, the Banking and Currency Committees, through their vigilance and continuing interest in banking matters can encourage and promote better agency coordination. Clearly, the present chaotic situation must give way to an orderly and consistent handling of banking policy under the guidance of Congress or an agency that Congress sets up.

The third and last point about our State-Federal system that I'd like to talk about has to do with branch power. There is an inconsistency in Congress' approach to branches. On the one hand, it has rightly required national banks to hold to State policy in branch establishment. The arrangement on commercial bank branch powers is one of the keystones of the State-Federal banking system. It permits variations in branch powers according to the preferences of the various States growing out of the nature of their economies, the character of their banking structures and the historical development of their institutions. This policy on commercial bank branches has not kept the national banking system from growing in strength and from meeting the needs of the public for banking services.

On the other hand, the branch powers of Federal savings and loan associations have grown up in an entirely different way. As it now stands, the Federal home-loan statute is silent as to respecting the policies of the States in the matter of branches. Indeed, the statute is silent about branch powers. The United States Court of Appeals for the Third Circuit has said in an opinion¹ this year.

"The statute does not give explicit authority to the Board to permit branch offices for associations set up under its guidance."

After considering the arguments on both sides of the question as to congressional intent with respect to savings and loan branches, this same court said:

"But it may be granted that a microscopic examination of the statutory words alone does not bring one to any conclusion not open to reasonable differences of opinion."

In drawing up the Home Loan Act in the early thirties Congress was silent about savings and loan branch powers. I daresay, because branches at that time were pretty far from the minds not only of Members of Congress but of the savings and loan field as well. New York State was one of the leaders in the savings and loan movement and our statutes exerted wide influence through their example. It was not until 1939 that our laws were amended to permit the opening of savings and loan branches.

For the first decade and more of its existence the Home Loan Board gave little thought to branches either. Only in recent years has it really begin to devote itself to branch establishment. Now the Board is showing an increasing amount of interest in branches and is by statement of policy alone affecting the financial structure of the

country. It is trying to shape the relationships between Federal and State power in a fashion that should be the exclusive prerogative of Congress.

The Home Loan Board is going ahead with the expanding of its branch powers, without consulting anyone, because Congress is so preoccupied with other matters. We have come to the extraordinary pass of the third circuit court of appeals reading significance into the failure of Congress to give attention to savings and loan branch bills that were introduced. The court seemed to think that Congress was pretty well satisfied with the way things were going since it refused to put any limitation on the Home Loan Board's authority.

Some of us will not find it easy to square this interpretation with certain other facts regarding the bills that we know about at first hand. After the branch bills were introduced in the Eighty-first Congress at the request of our association, several of our members urged the chairman of one of the Banking and Currency Committees to permit the bill to be reported out of committee so that it could be debated and considered on the floor.

He wanted to know whether the Home Loan Board approved the bills. When he was told that it did not, he said he would not allow the bills to be reported out. It was a rule he always followed, he said, that bills must be approved by the Federal agency concerned before they could come out of his committee. And he has been as good as his word. Under such an arrangement, it was not Congress but the Home Loan Board which acquiesced in the Board's assumption of branch powers.

I offer two reasons why Congress itself should consider and approve what it believes to be the savings and loan branch policy best suited to the requirements of our people. First, the Home Loan Board, now setting its own rules, is not equipped, and because of its very specialized responsibility is not disposed, to pass objectively on the part which savings and loan branch establishment should play in our banking structure.

Because the Board itself and the pressures behind it are not prepared to take a broad view of our banking system, and because the Board in its isolation appears to regard the rest of the banking world as unfriendly and acts accordingly, there is a need for Congress to review the whole savings and loan branch picture. Congress must decide affirmatively, and not merely by keeping hands off, what the course of future development should be.

The second reason why Congress should lay down our Federal savings and loan policy by statute rather than let it be developed by agency determination is the lack of consistency that now exists between what is being done with national bank branch powers and what is being done with savings and loan branch powers. By a law passed in 1927 Congress gave national banks the right to open branches where State laws permitted State banks to establish branches "affirmatively and not by implication or recognition, and subject to the restrictions as to location imposed by the law of the State on State banks."

The Home Loan Board has, without reference to any other interested party, worked out its own branch policy. In a statement of policy made available to the States last February, the Home Loan Board said " . . . the Board has concluded that, in passing upon branch offices for Federal savings and loan associations, it will not approve their operation in a State where the State statutes or the State constitution expressly prohibit the operation of branch offices by both savings and loan associations and banks chartered by the State."

¹ *North Arlington National Bank v. Kearny Federal Savings and Loan Assn.* (187 Fed. 2d 564 (C. C. A. 3, 1951)).

This is without doubt one of the most important policy declarations on branches ever arrived at in the banking history of this country. So far as I know it has not been made public. Since it is purely an administrative decision, it is subject to change—that is, to enlargement—without notice. The application of the policy is interesting, not to say startling. The Board appears to take the position that when any State banking institution, be it commercial or savings, can open a new branch under any condition, no matter how circumscribed, then its own branch approval power is deemed to be unlimited.

Reading the policy statement I have just quoted, one might have a hard time figuring out that by that language the Board was asserting its right to approve a branch across State lines. Of course, the Board never derived that power by analogy with State laws anywhere. We do not know in New York whether the Board would respect our banking district lines. Already it is brushing aside various provisions in our statutes, such as those having to do with population, which limit the right to establish branches.

Clearly we need to know in banking and in State supervision where the Federal Government stands on savings and loan branch power. We need to have it determined by Congress whether consistency should be achieved by adopting the national-bank-branch approach. This would preserve the right of the States to choose the kind of branch power best suited to their needs. It would be more conducive to the respecting and preservation of the sovereignty of the States in certain aspects of banking. It would prevent the State-Federal banking system from being despoiled by indirection and without express authorization of Congress.

Or we need to have it determined by Congress whether we should achieve consistency by abandoning the national-bank-branch approach and by according to the Comptroller of the Currency the same wide latitude as to branch powers that the Home Loan Board now enjoys. I think that Congress should delve deeply into all phases of branch establishment and set our course for the future with full and conscious knowledge of what is involved. If Congress wishes to recapture from the States the privilege they have had—and used wisely, I believe—to decide whether they wanted to have branch banking and under what conditions, that should be a decision openly and consciously arrived at. This is too important a policy to be determined by one Federal agency strictly on an ex parte basis. This is no time for Congress to permit the long-established position of the States to be uprooted without giving them a chance to be heard and without weighing what dangers of overestablishment of branches may be found to exist in the present course.

These I take to be the three outstanding problems in the State-Federal banking relationships today.

One is the decision of national banks to disregard a State law a half century old. Another is the narrow and uncoordinated responsibilities of the Federal agencies and the failure of Congress to see our banking system steadily and see it whole. The other is the need for an all-embracing review and determination of our branch policy. Each in its own way has a direct bearing on our dual system. Whatever comes from the interplay of present forces should come from decision, not drift. The responsibility for that decision lies with Congress. The dual system—the State-Federal banking system—has served us well. It has earned the right to expect that Congress will guard it against the inroads of neglect.

The British-Egyptian Problem

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "State Department in a Dilemma," written by Constantine Brown and published in the Washington Evening Star of October 16, 1951.

There being no objection, the article was ordered to be printed in the Record, as follows:

STATE DEPARTMENT IN A DILEMMA—EVEN SKIRMISHES BETWEEN BRITISH AND EGYPTIAN TROOPS AT SUZ CANAL WOULD START UPROAR FROM INDONESIA TO MOROCCO

(By Constantine Brown)

The State Department is in a serious dilemma over what to do in Egypt. The Cairo Parliament has taken action and the government cannot be budged from its demands that British troops immediately evacuate the Suez Canal zone. Neither the promise of economic aid nor the offer to Egypt of a key role in a middle eastern defense pact was sufficient inducement to change Cairo's determination.

The problem which faces our diplomats is whether to invite serious trouble in the Middle East by taking a strong stand against Egyptian national aspirations or to urge the British that it would be wiser to "compromise" with a government which makes expulsion of British troops the primary condition for a compromise.

The situation is entirely different, our top policy makers admit, from that in Iran when we were able to induce the British not to use force.

Britain's military prestige was not involved in the evacuation of Abadan. Quite the contrary, the London government was able to say to its people and the world that it preferred losing important economic interests to using strong methods which might have precipitated another war.

The task of our diplomats is far more complex now. It is no longer a question of a dispute over economic concessions or privileges. Britain's prestige throughout the world is involved. There are upward of 10,000 British troops along the Suez Canal today. It is no longer a matter of ordering 300 civilian engineers and oil experts to withdraw to avoid trouble with the Iranian Government. It is a question of a British army leaving Egyptian territory, bag and baggage, under peremptory orders of the Cairo Government. And neither the Laborites nor the Conservatives in Britain want to accept this humiliation.

The State Department already has indicated to Cairo that the United States stands firmly behind Britain. But this diplomatic indication is not taken seriously by the Egyptians. They know that the American people, who already have their hands full in Korea, will not allow their Government to draw them into another military adventure, much as they dislike a further humiliation of our strongest ally in Europe.

It is true that the military forces of Egypt, which were supposed to be organized and equipped by the British under the 1936 treaty—but were not—are not in a position to fight even the small British naval and air forces in Egypt and in the immediate neighborhood. But the State Department is

also aware that if even skirmishes occur between the British and regular Egyptian forces, the whole of Islam from Indonesia to Morocco would be in an uproar in a few weeks. And this represents a population of some 350,000,000 occupying some of the most important strategic lands in the world.

Moscow is only indirectly involved in the present disturbances. Its agents have been preaching nationalism, not communism, since the end of the war. Their words have fallen on receptive ears. Colonialism received a death blow at the end of the war when a number of Asiatic countries heretofore controlled by Britain, France, and the Netherlands received their full freedom.

Egypt, which was supposed to have been a sovereign country since the end of World War I, feels today that it is still under British control, since British troops are garrisoned on its territory. The problem which faces our policy makers is whether to help Britain and take a chance of alienating the whole Islamic world in which case the Kremlin will have an opportunity to step in and replace the west—or to insist that Britain get out of Egypt, under duress, and thus cause the collapse of what is left of that empire.

Washington and London have bungled the situation in Egypt much as they have bungled it in Iran with the "too little and too late" policy. The Cairo government has asked since 1946 for a revision of the 1936 treaty which provided for a condominium in the Sudan and the withdrawal of British troops from the Suez Canal in 1956. An agreement was actually initiated in 1946, but London found loopholes to reject it. The matter was brought before the United Nations in 1947, but that body shoved it aside, urging the two parties to continue their discussions and find a solution by themselves. The British indicated that they did not wish to "precipitate matters" until the expiration of the treaty in 1956.

There is no doubt that the defeat of Britain in Iran encouraged the Egyptian Parliament to act for immediate solution. The wave of nationalism is on the rise now from the Persian Gulf to the western Atlantic. The Cairo government feels that the tense international situation will not permit the Western Powers to create another explosive zone in the Middle East. Last year, soon after the outbreak of the Korean war, there was a strong possibility of reaching an agreement between London and Cairo on the basis of a voluntary withdrawal of the British troops within 1 or 2 years. Today this seems impossible. And unless the west wants to face the hostility of 350,000,000 Mohammedans, the British may have to leave Egypt under coercion.

Statement of Policy by Board of Directors of Indianapolis Chamber of Commerce Relative to Withholding of Federal Social Security Funds

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to insert in the Appendix of the Record a statement of policy by the board of directors of the Indianapolis Chamber of Commerce relative to the withholding of Federal

social-security funds from the State of Indiana by the Federal Security Administrator.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF POLICY REGARDING STATE WELFARE PROBLEM

The General Assembly of the State of Indiana has decisions of considerable national importance to make during the special session now called to meet a financial crisis surrounding the public-welfare program, brought about by withdrawal of Federal matching funds.

The denial by the Federal Security Administrator of \$20,000,000 annually of Federal funds on the basis that the Indiana anti-secrecy law violates a Federal requirement for safeguards restricting disclosure of information concerning welfare recipients to purposes directly connected with the program, raises basic issues that transcend in importance any arguments pro and con concerning the opening of welfare records.

The real problem, which has broad national implications, is that of Federal control over locally administered governmental programs. As applied specifically to this special session of the Indiana Legislature, the issues surrounding the basic problem are:

1. Should the State of Indiana be interested only in regaining Federal aid?
2. If Federal aid is accepted, to what extent should there be Federal controls?
3. Or is Federal aid for the welfare program wrong in principle?
4. If it is wrong, is Indiana willing to disclaim such aid and accept full financial responsibility?
5. Are the consequences of full financial responsibility the transfer from the Federal Treasury to the State and local units of that part of all welfare costs previously borne by the Federal Government?

6. Or, has public welfare grown beyond all real need, and large sums of public funds being spent to provide assistance where it is not needed and where it results in pauperizing individuals and families?

7. If this be true, should not full effort be made by every State and local official who has responsibility—the Governor, the legislature, State and county welfare boards, and welfare administrators—to adopt changes in policy which will apportion public assistance on a more realistic basis of need, and deny such charity to those who have the ability and the opportunity to provide for themselves?

The cold figures of today's outlay for public welfare and relief—Federal, State, and local—as contrasted with the amounts spent during the worst of the depression, lends credence to the belief that today's welfare costs are excessive. In Indiana, current expenditures for welfare and township poor relief are at the rate of \$48,000,000 annually, as contrasted with approximately \$16,000,000 spent during the depths of the depression, when the WPA program was in full swing. Even today, at a time of peak employment and business activity, more than a billion dollars are being spent annually by the Federal, State, and local governments for public welfare purposes. Never before were so many people employed, with unemployment at its lowest ebb since 1943, the peak year of war production during World War II.

The public-assistance feature of the social-security program adopted by the Federal Government in 1935 was adopted as a stop-gap measure to the old-age and survivors insurance program. As the social-security insurance program developed, public assistance on a needs basis was supposed to disappear from the Federal scene, with public relief programs existing only at the State or local levels. However, current Federal commitments based upon policies of the Federal

Security Agency appear to point to an indefinite postponement of that possibility.

Current relief rolls may be justifiably high, or they may be entirely unjustifiable, in that numbers of people actually are being pauperized—deprived of individual incentive and made permanent wards of the State—by finding it easy to live off government bounty. If this be true, it would be the result either of laxity on the part of the administrators or of a determined policy of the administrators themselves.

The latter may be a more important factor in current extreme relief costs than the administrators would be willing to admit. The secrecy provisions of the Federal social-security law are, themselves, an example of the existence of a policy to spend without caution or limit. Throughout the burgeoning growth of the whole Federal relief program beginning in 1933, it has been a principle of the administrators to make the acceptance of relief, if not attractive, at least honorable and dignified. There is ample documented evidence of administrative policies which made it incumbent upon the administrators to seek out all who might even be thought to be eligible for public assistance and make sure they applied for it and received it, whether they initially desired it or not.

Full acceptance of the principle that the community of citizens as a whole should conduct a public-assistance program which prevents suffering does not mean going to the extreme of making relief so easy and permanent that many people are pauperized and lose all incentive for self help.

Involved also in this problem is a real concern as to the end result of skyrocketing public spending. In spite of some reassurances from high places, few Americans can look with composure on a situation where one-third of the national income is required for public spending, and even that tremendous burden is minimized by the expanding ideas of governmental departments for many billions more within the next year. There is a limit to public spending. This country cannot go on forever spending more and more, with the amounts increasing by arithmetic progression. The hazards of inflation spurred on by Government spending may cause today's 50-cent dollars shortly to become 10-cent dollars or 1-cent dollars or dollars of no value whatsoever. This country is not any more immune to the laws of economics than have been all the nations before.

If present Federal spending is to be curtailed and kept within bounds, there must be a beginning point. In this situation, Indiana has an opportunity to lead the way for the whole Nation in the field of spending for relief and welfare. Instead of accepting as inevitable the substitution of State and local money for the loss of Federal aid for this purpose, a first attempt should be made, at least, to determine if there is waste in this field that can be eliminated. There is now a good opportunity to apply the brakes to public spending.

The general assembly and governmental leaders should be encouraged to pursue the following course:

First, contest the right of the Federal Government to dictate local policies. That principle should be tested in the courts to the fullest extent. If the courts finally uphold the right of the Federal Government, such dictation should be taken away by congressional action.

Second, hold the line on policy. The Indiana law lifting the veil of secrecy of the relief rolls is right in principle. It should not be compromised or withdrawn under Federal pressure.

Third, before any move is made to appropriate more State or local money to the local welfare departments, each one should re-examine its policies, as well as its rolls, and be required to operate to the fullest possible

extent, without causing suffering, within their existing appropriations.

Fourth, if more State and local money then is needed, legislative bodies must face the fact with courage and provide the money.

Fifth, these efforts should be regarded as the starting point to cut away dependence upon the mirage of Federal aid and the effects of Federal controls, which grow out of a system that is basically wrong and foreign to fundamental concepts of a Federal Government.

BOARD OF DIRECTORS,
Indianapolis Chamber of Commerce,
SEPTEMBER 13, 1951.

The Wetback Problem

EXTENSION OF REMARKS OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Dead Ashes of Bright Promises," written by Thomas L. Stokes and published in the Washington Evening Star of October 19, 1951. It deals with the wetback problem in the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEAD ASHES OF BRIGHT PROMISES—BOTH PRESIDENT AND CONGRESS HAVE FAILED TO MEET WITH VIGOR PROBLEMS AFFECTING SEVERAL MILLIONS OF PEOPLE

(By Thomas L. Stokes)

At about this stage of events, when Congress comes toward the end of a session, you can—if you are curious and not easily discouraged—sift the dead ashes of once bright and glittering promises held up before you by the gentlemen of Congress when they were campaigning for election.

There are, of course, the inequities in the more publicized major measures affecting all of us. Such, for example, as the revenue bill that jumps up the little fellow's taxes, even including his beer and cigarettes, while doing nothing about the big oil corporations' excessive depletion allowance, a fat deduction—just a symbol of numerous other inequalities. Or, for another example, the failure of Congress to protect the consumer properly in the inflation control law.

Those are obvious. Not so obvious are lesser publicized matters.

Among these is the failure of both the President and Congress to meet with sufficient vigor a big human problem that affects directly a large section of our country and several millions of people, and ramifies in its indirect effects to the whole Nation.

This is the problem dramatized in newspapers and magazines in recent months involving the wetbacks, that army of Mexican migrant workers who cross the Rio Grande illegally and follow the crops in the big ranches and plantations of the Southwest and South. They are herded together in insanitary hovels and shanties, exploited on low wages, and create conditions that not only are hazardous to their own health and well-being and that of the communities where they subsist, but lower wage and living standards of native American farm workers, many of whom are driven from their natural habitats to find work elsewhere.

You may recall that, when President Truman several weeks ago reluctantly signed a bill passed by Congress to regulate the wetback traffic, he found it so inadequate that he summoned congressional leaders to the White House and announced afterward that they had promised to seek enactment of supplementary legislation to help meet the wetback invasion and its harmful derivatives. These included increased appropriations for the Immigration Service to hire more agents for the border patrol to tighten enforcement; for the Labor Department's Farm Placement Division to improve domestic recruitment of farm workers; for financing reception centers for entry of legal Mexican workers, and a bill fixing penalties for hiring illegal workers. As for the last, you'd be surprised at the substantial and prominent plantation and ranch owners who work illegally admitted Mexicans.

This penalty measure is safely buried, beyond chance of action. As for the appropriations, that for the Immigration Service had been cut more than half, from \$6,500,000 requested to \$3,000,000, when last heard of in the pell-mell rush for adjournment, while the \$386,000 for domestic recruitment had been slashed to \$75,000, and \$2,800,000 for reception centers had been cut in two. Final results may show even further reductions.

So much for promises—though how anything else might have been expected by President Truman is hard to see. For, on this problem, he was facing a skillful southern Democratic faction which is seeking to protect big plantation owners on cheap labor. The southerners were able to enlist enough Republicans in the familiar coalition pattern.

Meanwhile, something else very interesting has occurred to reveal the belligerent resistant attitude of the big farmers. This is creation of the South Texas Association which is raising a \$50,000 fund to lobby against the appropriations and the penalty bill, assessments being fixed at 10 cents an acre, or higher if necessary. Affiliated with it are local chambers of commerce, Farm Bureau units, and the Texas Citrus Commission, a State agency. The aim of this move is to prevent the Immigration Bureau "from fully enforcing the immigration laws along the Texas-Mexican border," it is charged by Representative EUGENE MCCARTHY, Democrat, of Minnesota, who led the fight in the House for a stronger wetback control bill originally. He said that if the lobby is successful the result would be "a relatively freer flow of illegal wetback Mexican labor into Texas," a complaint echoed also by the National Farm Labor Union, A. F. of L., headed by H. L. Mitchell, which has fought an uphill battle to protect exploited farm workers.

The South Texas Association also announced its intention to lobby with the Mexican Government. This has been called to the attention of the Justice Department by Representative MCCARTHY as a possible violation of the Logan Act, which forbids an American citizen from carrying on intercourse with foreign governments to defeat measures of the United States.

Behind the Scenes With Jesse Jones

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BENDER. Mr. Speaker, Jesse Jones' observations in his new book, Fifty

Billion Dollars, are certain to draw fire from the ardent supporters of the late President who regarded him as beyond criticism. Mr. Jones suggests that Mr. Roosevelt was basically a political opportunist who used every possible circumstance to ensure his continuance in office. The world-wide situation which led to World War II was used by President Roosevelt to further his ambitions, and on a lower plane, Mr. Jones declares that the President was not averse to using RFC funds for the relief of such political friends as the late Al Smith, who was worrying over the operation of the Empire State Building. Jones declares that the President asked him to investigate the possibilities of buying the entire building for Federal purposes, and describes Mr. Roosevelt as a total politician.

A many-sided public figure like the late President undoubtedly presented many phases of his personality to many different people, but Jesse Jones was close to him in the crucial years of his Presidency, and it will be difficult for the defense to minimize his contribution to the biographical record.

Truman Fails To Make a Case on News Control

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Peoria Star, Wednesday, October 17, 1951, issue, entitled "Truman Fails To Make a Case on News Control":

TRUMAN FAILS TO MAKE A CASE ON NEWS CONTROL

President Truman has been trying to justify his recent Executive order on suppressing news from civilian Government departments for security reasons. But his efforts have made his case worse.

He cited to newspaper reporters a survey which declared that newspapers and magazines have published 95 percent of the Government's secret information. The President said that was sufficient justification for the security order.

But reporters quickly established the fact that the secret stories to which Mr. Truman referred had all been authorized for publication by Government officials. He appeared to be blaming the press for not exercising judgment that ought to have been exercised in the first instance by responsible Government officials.

Mr. Truman was urged to give an example of the kind of information leak he was trying to prevent. The President then referred to Fortune magazine's use of maps showing the location of the Nation's atomic energy plants.

It happens that this particular information was cleared for publication by no less an agency than the Atomic Energy Commission, generally reputed to be the tightest security agency in Washington. The Atomic Energy Commission is under strict statutory control on security and other matters. It represents a special case. Being a defense

agency, it would have been placed under careful security regulations long ago if it did not already have other safeguards in force.

So on two counts, the information from the Atomic Energy Commission was the poorest illustration the President could have chosen. The new Executive order has no bearing on it whatever. And in addition to that, the Commission had approved the maps in question.

Is President Truman being honest in implying that the press ought to exercise a voluntary censorship over information previously approved by Government officials? Not even in wartime was that burden imposed upon the press. We see no reason why newsmen should be expected to substitute their own judgment on security questions for the judgment that ought to be exercised by Government authorities.

Or is Mr. Truman's defense of his order to be interpreted as a blanket indictment of the judgment of heads of Government departments and agencies? If so, something more than a censorship order is needed to correct the situation.

Information that is really vital to national security must be protected. No one disagrees with that. But whether we have an effective system for protecting it is an unsettled point. And the President's highly confused and improvised defense of his security order is a dubious contribution to the solution of the problem.

The American people have a right to expect more logical and coherent argument from their President, even if his aides have to supply the reasoning. In this instance, Mr. Truman has not made out the barest elements of his case.

Red China's Plan to Destroy the United States

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, Edward Hunter, writing in the New Leader for October 15, 1951, says that General Chu Teh, commander in chief of the Chinese Red Army, has declared that the United States must have its head smashed by China in the Far East. When we are defeated then Chu Teh says that the Soviet Union will defeat America in Eastern Europe.

Mr. Speaker, this article by Mr. Hunter should be read and understood by every citizen. Under leave to extend my remarks, I am including the article:

RED CHINA'S PLAN

On March 11, 1950, Chu Teh, commander in chief of the Chinese Red Army, gave the principal graduation address at the Northern Revolutionary University of Peiping, a prime center of the Communist indoctrination program. His speech lasted 3 hours. Talking before a gathering of what he presumed to be thoroughly indoctrinated Communists who would participate in the party's future, he frankly outlined its global program. He discounted fears that the United States could not be overthrown, and in a very succinct manner outlined the strategy by which, he said, the Asian and European Hemispheres would work together as a pincer to crush the United States, utilizing and fanning racial antagonisms for this purpose. The Chinese

did not have to worry about American obstacles to communism, Chu Teh said, because "America is lame; one of its legs is held tight in Eastern Europe by Soviet Russia."

"With the union of 700,000,000 to 800,000,000 people, achieved by bringing Soviet Russia and China together, we can smash in the tiger's head," my informant, Chi, heard him boast. "When we succeed in smashing the tiger's head in the Far East then we can return to Eastern Europe and cut off its legs. We are on the eve of the destruction of American imperialism."

Chu Teh outlined the military program of the Chinese Communists. "Communism constitutes one entity—a united country," he told the graduates. "Capitalism, in spite of the fact that the capitalist countries have the same general ideas, is like the blowing sand. Countries such as India, Burma, and Indochina are striving to learn from the experience of China. Burma and India formerly thought that China's revolutionary tactics were wrong. But now they are learning that we were right. So these countries are coming to know that to start a revolution you have to gather a revolutionary force, and for this you need the farmers. In India and Burma it will be easier to create a people's revolution because those countries were under imperialist oppression."

This allusion to a race revolution, with its fearsome connotation, was startling to me but not to Chi. He had heard it often. Later I was to come across it frequently in Communist Chinese indoctrination textbooks and in the standard school books put out by the new regime. They frankly referred to China's "national racial revolution."

Here, in Chu Teh's talk, he was referring to an anticipated "people's race revolution" in Southeast Asia and the Middle East, clear evidence of Communist policy to arouse and exploit latent racial feelings between the white and yellow races.

Inside China, and in the area of insurgency in Asia generally, the Communists have given a yellow-race-against-the-white-race coloration to the struggle. This was all the more callous and irresponsible in China itself, for there the people have been brought up to consider themselves a race, distinct from the other peoples of Asia.

How did this propaganda twist affect Soviet Russia? Wasn't this just as much a threat to her as to Europeans generally? "Oh, no," said Chi. "Everyone knows that the Russians are Asians. Didn't Stalin himself say, when he met the Japanese envoy before World War II broke out, that he, too, was an Asiatic?" Indeed, while the West interprets the risings in the East as mere nationalism, in the minds of most Asians nationalism is confused with race. The national revolutions in Indochina, Indonesia, and elsewhere were started as part of a racial movement, encouraged by underground means for half a century by the Japanese ultranationalists as part of their pan-Asia movement. The Communists, when it became evident that Japan was to be defeated, quickly moved into the race field in Asia, and in numerous instances worked together with the Japanese agitators. Whether this was farsightedness on the part of the defeated Japanese extremists or infiltration on the part of the Communists is purely academic.

In his graduation speech, Chu Teh went on to tell the students, who were about to go out themselves on their assigned missions, that many Communist students from Southeast Asia and the Middle East were coming to Red China to learn how to succeed as the Chinese Communists did and how to coordinate policy.

"Many students have already come to North China from those countries to study our experience," he said. "Some have come to learn our experience in the economic field, others in politics, and still others in the military sphere. Some have already taken an active part in our work in every part of

China. They are learning from experience by working alongside us in China."

"They will have much to offer to the revolutions in their countries, and meanwhile we have many men working in their lands. I am speaking frankly before you because you are all standing in the same front line of the world Communist revolution. Our men working in those countries do not have any titles, but they hold very important posts. If America wants to start world war III, all of Southeast Asia will be under the leadership of China. This I can guarantee."

A few months later, a Chinese newspaperman, dressed as a coolie, wandered about the countryside outside his home in central China to get the feel of the land. He happened to hear a high-ranking officer addressing his troops. It was the early fall of 1950.

"They were the warmest-dressed Chinese soldiers I ever saw," this reporter told me shortly afterward, when he had managed to leave Red China. "I stood on the roadway among villagers and listened to what the soldiers were being told. Imagine my surprise when I heard the speaker exclaim, 'When we were in need, before our liberation, our big brother came to our assistance. Now our big brother needs our help. We are going to Soviet Russia, therefore, to give him the aid he asks of us.'" ("Big brother" is the label used by the Chinese Communists referring to Soviet Russia. Korean Communists use the same expression in referring to either the Chinese or the Russians.)

"Of course, I knew, and the speaker knew, that his troops weren't going into Russia," the Chinese reporter said to me. "But his soldiers didn't know it. North Korea, North Manchuria, or Siberia; it was all the same to them."

SENSE AND NONSENSE

The Red officer's statement just didn't seem to make sense. At first hearing, it sounded as if this political officer had simply lied to his men. This wasn't necessarily so, however. Outsiders would evaluate his words in the framework of their own normal lives and put their own sense of values on them. Then, of course, what he said sounded like a lot of nonsense. The Chinese troops were not crossing the Soviet frontier, and Moscow was not yet engaging in any overt war with anybody. But this wasn't what the Chinese officer meant when he made his statement. He was thinking in terms of the North China People's Revolutionary University, in the language of discussion meetings and the Question of Thought, and in the mental framework of guerrilla camps in Indochina, Malaya, and Korea. Then what he said made sense, a great deal of sense.

This was because we were thinking in patches, but the Communists were not. Americans were talking about the Korean war. Englishmen were speaking about the Malaya war. Frenchmen were referring to the Indochina war. But neither the Chinese Communists nor any other Communists in Asia used that terminology. They spoke of the all-Asia war, of the Korea-China-Indochina-Philippines front, of the anti-imperialist war. What was more, they weren't just thinking of the fighting in those broad terms, they were planning their operations and implementing them on that basis. While non-Communist authorities outside the Communist sphere were thinking and acting locally, the Communists were operating globally. Asia was one front to them. Korea, the Philippines, Indochina, and the other lands of Asia were only sectors on that front, and this strategy gave the Communists decisive advantages in the military sense. It was the equivalent of many divisions to the Reds. Handling Asia as one big front meant that the Communist high command could keep the pressures going indefinitely, allowing a lull in one sector when tactics required it and putting on the heat somewhere else.

CHENNAULT'S WARNING

What that Red officer, deep inside China, said to his troops also made real sense when considered in the context of the history, literature, and science books of Red China's schools. He was brushing aside all trivialities and make-believe. After the ideological defeat that Stalinism had suffered in Yugoslavia, world communism simply could not allow a territorial defeat in Korea. It was as simple as that.

About that time, eyewitness reports were coming from China proper telling of Communist divisions being dispatched to Manchuria for service in Korea. I had an interview with Maj. Gen. Claire Chennault on July 4, 1950. He told me that he had been informed by his old wartime friends inside China that several hundred thousand Communist troops had been moved to the border of Korea and were ready to join the fighting. "And I hear that more are being sent all the time," he told me.

Americans didn't want to believe this, though, and neither did the Europeans. We preferred wishful thinking. I was with the ill-fated Thanksgiving Day drive in Red Korea that was going to send the boys home by Christmas. I was witnessing—had been witnessing for some time—as extraordinary an effort at self-deception as I had ever seen in my more than a quarter century of journalism around the world.

America's worst enemy was not the Communist troops. As I sat in a command-post tent, one night, listening to the mortars swoosh overhead, the generals of the Twenty-fifth Division explained their offensive to a small corps of newspaper correspondents. America's worst enemy that night was wishful thinking. Wishful thinking about the scope of the warfare and about the duration of the war. Wishful thinking that first had the enemy folding up after the masterful Inchon landings. Wishful thinking about whether we could terminate the warfare at the thirty-eighth parallel; wishful thinking about whether the thirty-eighth parallel meant anything more to the enemy than did the thirty-seventh or the thirty-ninth. Wishful thinking about whether the Chinese Communists were actually participating.

There was a dirty word, a hush-hush word, at press conferences in Tokyo and at the front. Nice people just didn't mention the Chinese. When the subject was brought up, a pained silence would fall over the assembly, that heavy sense of disapproval that silences a boor who utters a nasty word. Outside of this theater of war, a state of mind had been created that made you seem a very backward individual indeed if you fell for such sensationalism as the reports that Chinese Reds were moving into the war in force. A cynical "Did you hear the latest Formosa rumor?" was the tone required in mentioning such a touchy subject if you didn't want to lose face with your friends.

After the set-back in North Korea, everyone blamed someone else for the strange psychology that had made Americans fool themselves. This again was an unrealistic approach. Every sort of American I met was taken in by this, from my fellow colleagues in the press corps to the diplomats, the military, and the businessmen. With a few notable exceptions, they were all using their own frame of reasoning in judging what the Chinese Communists were going to do, instead of the point of view expressed in such basic Communist textbooks as *The Modern World Revolution History* and *The Chinese Modern Revolutionary Movement History*.

DRAINING OUR BLOOD

The reasoning that seemed mainly responsible for our belief that the Chinese Communists would not join the Korean fighting in force was an argument I heard always when I did succeed in bringing up the subject. It was the clincher, and it made sense to all "practical people." This

was that if the Chinese Communists had intended to come into the Korean War, they would have done so in the beginning when they could easily have flung us into the sea and occupied all of Korea.

But if they had done this, they would not have been Communists. They would have been us, and there would have been no war in the first place. The entire Soviet strategy in Asia, the strategy which it is confident will win, has been, since VJ day, a delaying tactic, a bleeding operation. Anything that interfered with that slow draining of our physical and economic blood interfered with that fundamental Communist program and so had to be avoided.

Either an all-out victory or an all-out defeat for the Communists in Korea would have been such an interference. The former would have brought the entire world conflict to a head, the last thing Moscow wanted at that time, and the latter would have been too costly a setback in morale—and either would have ended our bleeding on that sector of the Asia front.

Is There No End to Crookedness?

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Is There No End to Crookedness?"

This editorial appeared in the Haviland Journal, Haviland, Kans., October 12, 1951, and is most timely, in view of the disclosures being made in the various collectors offices of the Bureau of Internal Revenue.

Our citizens have a right to expect honesty and efficiency in the collection of their taxes. This must be especially true at a time when we are collecting approximately one-third of the Nation's income for Federal, State, and local taxes.

There must be a thorough house cleaning in the collectors offices over the Nation and our people must have their confidence reestablished in this agency. The payment of taxes to the Federal Government on the basis of bribes and adjustments must stop. The faith of our citizens in their own Government is determined by the integrity of those who hold positions of honor and trust.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS THERE NO END TO CROOKEDNESS?

As if there had not been a plethora of scandal, crookedness, and skulduggery, and undue sale of political influence in Washington, an epidemic of corruption and graft in the tax collecting department of the Government is being disclosed. It has developed that one internal revenue collector, who has now resigned, was drawing a salary on the side from firms who had tax difficulties with his department. Another has been dismissed for embezzlement. Still another, who had sent notices to delinquent taxpayers, was found to be delinquent himself and he shrugged it off by saying he did not have the money to pay it. Evidently he was not

as hard-boiled with himself as he was with other taxpayers.

And then, just as this latest scandal broke, President Truman came up with an Executive order that hereafter the heads of all Government agencies including the tax department—shall be the sole judges of what information shall be released for publication. It appears to be nothing more nor less than a censorship to keep the public from knowing what is going on. Peron of Argentina has never clamped on a more stringent cover-up order.

President Truman, with his usual stubborn haughtiness and scorn, passes it off by saying what a small percent of Government employees are involved, and then goes on to say that the critics of his administration would have the people believe that all of them are crooks. No one has made any such charge, but if there is only 1 percent crooked, it is too many. It is not the honest, hard-working employees who are being indicted; it is the heads of departments, practically every one of whom was appointed by the President himself, and a number of them are from the Missouri crowd. His boasted loyalty to his friends is a typical demonstration of the workings of a political machine, for the operation of which Mr. Truman got his training in Kansas City under Tom Pendergast. He, too, was loyal to his friends, but he ended his political career in the penitentiary.

Loyalty is a commendable trait, but not when it is at the expense of the country.

F. J. C.

Federal Power Commission Fails To Curb Hazards

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BENDER. Mr. Speaker, there is pending before the Congress a bill to authorize the Federal Power Commission to prescribe safety requirements for natural-gas companies. This is House Resolution 88. I am for safety improvements in the transmission of gas. We have witnessed one accident and disaster after another over the period of the past year caused by gas explosions and fires which resulted from lack of proper safety precautions. Why, in Ohio alone, one gas-transmission company had four serious line breaks between May 6, 1949, and July 15, 1950, all of which resulted in explosions and one created a fire of serious proportions. Another company operating in Ohio had 30 pipeline breaks in a period of less than 4 years—June 12, 1946, to December 10, 1950, and all of these created serious hazards to the communities in which they were located. We have got to correct and improve this situation, but in view of the record of the Federal Power Commission, I have grave doubts that it would effectively use any such authority that we might give it in this connection.

I refer to the recent decision of the Federal Power Commission in relation to bringing natural gas to the area of northeastern Ohio. That decision is embodied in the opinions of the Federal Power Commission, Nos. 205 and 205-A, the latter being issued on September 20,

1951. There the Commission granted certificates of convenience and necessity to a company that proposes to use as part of its transmission system 17 miles of 27-year-old pipeline located in the Fairport-Ashtabula, Ohio, area. This old pipeline was never constructed to handle natural gas, and was built to transmit manufactured gas at relatively low pressures. The condition of this line is subject to serious doubt, and even after some tests were conducted, is still subject to serious doubt. This old line has a history of leaks, and at the request of my constituents, I appeared before the Federal Power Commission as a Member of Congress in accordance with the Commission's rules, and specifically pointed out the great hazard to the health and safety of the people living in the Fairport-Ashtabula, Ohio, area that would result from the use of this old line. Other Members of the Congress from Ohio brought this same point before the Commission. Our protestations on safety were ignored.

This area in northeastern Ohio is thickly populated. It requires natural gas, and it, like all areas where natural gas is to be used, needs that gas delivered with a maximum of safety and protection against explosions, fire, and other hazards which may result from the use of improper facilities. I told the Federal Power Commission that this old line was an incubator of disaster, and I repeat it here.

In the town of Brighton, a suburb of Rochester, N. Y., during the week of September 24 of this year, there was a hideous gas disaster that required 35 fire companies and 475 firemen to control. Five city blocks in Brighton were reduced to shambles. Forty-four houses were demolished or damaged. Twenty-three people were injured, and three killed. We do not want this repeated in northeastern Ohio or any other place. We must find a way to prevent these things, but the Federal Power Commission does not seem to want to avail itself of the opportunities that it presently has to guard against disaster. This matter deserves immediate study, and if the Federal Power Commission will not attempt to use its present powers to protect the people living in areas where gas is used or is going to be used, then we had better look for another solution to this problem.

Are Federal Employees Being Reduced to Second-Class Citizens?

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I include an address delivered by Dean George M. Johnson, of Howard University Law School, to the convention of the National Alliance of Postal Employees, Houston,

Tex., August 20, 1951. This address appeared in the September issue of the Postal Alliance, official organ of the National Alliance of Postal Employees, whose editor is Mr. Snow F. Gingsby.

Dean Johnson's speech deals with three problems of vital interest, not only to the Federal employees they so intimately affect, but also to every American. These problems are instances of the eternal conflict of a free society between that society's interest in its own well-being and preservation on the one hand, and the economic, social, and political rights of the individual on the other.

Howard University's dean of law poses the question:

"Are Federal employees being reduced to second-class citizens?" The manner in which we resolve the difficulties he has pointed out will answer this question and I commend Dean Johnson's analytical and reflective approach to the reading of my colleagues.

The address follows:

ARE FEDERAL EMPLOYEES BEING REDUCED TO SECOND-CLASS CITIZENS

Four years ago it was my distinct privilege to address the convention of the National Alliance of Postal Employees assembled in Cleveland, Ohio. Well do I remember that a popular Congressman from the Buckeye State took sharp exception to some of my remarks. Those of you who were present that evening will recall that the Congressman exercised the prerogatives of his high office and made a lengthy extemporaneous speech in which he sought to minimize the seriousness of some of the problems that troubled us then. I got the impression that he was trying to assure us that God was in His heaven and all was well with the world, as he led us in singing hymns.

Tonight, I am more disturbed about some of the problems that troubled me, then, than I was 4 years ago. I venture to suggest that if that affable Congressman were with us tonight he might agree with me that while God is still in His heaven, all is not well with the world. The present international crisis which is essentially a struggle to establish and preserve the democratic way of life against the growing menace of communism, threatens to explode any day into world war III, with all its catastrophic consequences. In this colossal struggle our country is cast in the role of the staunchest and most powerful champion of the democratic way of life. In my humble judgment, it is the duty of every loyal American to assist in making this Nation what it professes to be, in the international arena.

The democratic way of life is frequently championed without too much thought as to what it involves. Gunnar Myrdal in *An American Dilemma*, uses the term "the American creed" to describe American ideals, and points out that, the essential dignity of each individual, the belief in his equality and the recognition of certain fundamental rights, liberties or freedoms for every person, as basic to the American ideal or the democratic way of life. Whether one subscribes to Myrdal's thesis or not, it is generally agreed that the democratic way of life embraces the concept of equality and the absence of second-class citizenship, as well as the notion that certain rights are essential to full citizenship.

With this admittedly general and perhaps somewhat vague description of the democratic way of life, which all loyal Americans want to establish and preserve, I should like to direct your attention to a large group of

Americans—over 2,000,000 in number—whose status may well be degenerating into that of second-class citizens. I refer to the employees of the Federal Government, a substantial number of whom are represented by the National Alliance of Postal Employees. The frequently uncritical assumption that because Federal employment is a privilege and not a right, the Federal Government has unlimited discretion to restrict the activities of Federal employees in various phases of our own national life. I should like to refer briefly to three areas of activity and at least raise certain questions for your possible consideration.

The first area is that involving labor organizations.

The second concerns political activities, and

The third embraces the nebulous area covered by the present loyalty program of the Federal Government.

LABOR ORGANIZATIONS

Under date of August 10, 1951, the following statement appeared in a syndicated column in newspapers throughout the country:

"SHOULD CIVIL SERVANTS BE ALLOWED TO JOIN BIG UNIONS?"

"The effort now being made on the organization of the police force in New York City into a regular union affiliated with the A. F. of L. or the CIO brings up a question that a great many of us must have considered many times in the past

"Is it possible for civil-service employees who work for government or for police or firemen to join any of the large unions and make themselves subject to general rules which apply to people working in industry?"

"It seems to me the situation between civil servants and industrial workers is entirely different. There is no question but that Government employees should have representation, and the Government should appoint representatives to hear complaints. But even in peacetime is it possible for this particular type of employee to go on strike? He can resign, of course, and in the original contract there should be provision made whereby the rights of an employee who does resign should be safeguarded. But it seems to me a very difficult question as to whether there can be affiliation within a large association of unions

"Logically, if a fireman or policeman can form a union, then soldiers who are professional soldiers, could form a union. And this would, I think, be a very difficult situation to plan for.

"I am really not much interested in whether the A. F. of L. or the CIO succeeds in organizing any group of Government workers, but I am interested in the fundamental question of whether you should work for city, state, or National Government and actually belong to one of the big union organizations.

"I think the whole question deserves very careful thought and I would like to hear some of the more thoughtful people in the labor movement and in Government express their views on this subject."

In view of the current attitude toward civil-service workers generally, the fact that this question is being raised is probably surprising to few, but when I tell you that the author of this column is none other than our beloved Mrs. Eleanor Roosevelt, I am sure that you will agree with me that it is occasion for deep concern.

It is reasonably apparent that Mrs. Roosevelt's principal concern is as to the propriety of Government employees going on a strike, but she raises the broader question as to the propriety of Government employees affiliating with large unions such as the A. F. of L. and the CIO, even though they do not possess the right to strike.

Strikes by Government employees are objectionable from several points of view, and

although strikes are doubtless the most effective weapon available to labor organizations in collective bargaining, labor organizations of Federal Government employees without the right to strike, do exist, and have been effective and beneficial in representing their members.

As early as 1912 Congress expressly recognized the right of postal employees to belong to labor organizations "not affiliated with any outside organization imposing an obligation or duty upon them to engage in any strike . . . against the United States." This recognition, set forth in section 652, title 5, United States Code, seems to say that so far as Congress is concerned it is proper for a labor organization of postal employees to affiliate with the A. F. of L. or the CIO, provided only that such affiliation does not obligate postal employees to strike against the United States. As a matter of fact the two largest organizations of postal employees, the National Association of Letter Carriers with a membership of 70,000, and the Federation of Post Office Clerks with 60,000 members, are both A. F. of L. affiliates. I am not aware of any instance where the legality of such affiliations has even been questioned by the United States Supreme Court, although the question was raised in the celebrated *Corsini* case involving the racial exclusion policy of the Railway Mail Association. It will be recalled that the *Corsini* case involved the question whether the Railway Mail Association was a labor organization and, therefore subject to the provisions of the New York State civil-rights law, forbidding racial or religious discrimination in membership by labor organizations. In the lower court (the State supreme court) it was held that the Railway Mail Association was not subject to the Civil Rights Act; that it was not and could not be a labor organization, because a labor organization of civil-service employees "is contrary to public policy" (see Opinion of Justice Murray, 44 N. Y. S. at 607) and that acceptance of A. F. of L. affiliation was an ultra vires act. The Appellate Division of the New York Supreme Court reversed this decision as to the applicability of the Civil Rights Act, but ignored the lower courts holding that civil-service employees were prohibited from forming labor organizations. The New York Court of Appeals affirmed, ruling among other things that the United States Government has recognized the right of mail clerks to organize for collective action in the presentation of grievances though not for collective bargaining (293 N. Y. 324; 56 N. E. 2d 725). When the *Corsini* case reached the United States Supreme Court in 1941, that court not only recognized the existence of the Railway Mail Association as an affiliate of the A. F. of L., but held that it was a labor organization subject to the New York civil-rights law. In reference to the broad question raised by Mrs. Roosevelt, Mr. Justice Reed, for the court, simply said, "Under customary practices Government employees do not bargain collectively with their employer." As a significant group of Federal civil servants, the National Alliance of Postal Employees has a vital interest in this question as it seeks ways more effectively to represent its members. I am sure Mrs. Roosevelt will welcome the results of your considered judgment on the broad question she has raised.

A final decision by the Congress, the President or the United States Supreme Court, that Government employees may not affiliate with the Nation's large labor organizations, even though such affiliation does not include an obligation to strike, would deprive Government workers of a right enjoyed by other American workers. Since, however, the right of workers to organize and to deal with employers through their chosen representatives is, generally speaking, not a constitutional right, it may be argued that this right, though important, is not a right essential to

the exercise of full citizenship. A more serious problem is presented, however, by depriving Government employees of the right to engage in certain types of political activity associated with the basic constitutionally protected freedoms of speech, press, assembly, and petition.

POLITICAL ACTIVITY

In a democratic government such as ours, which was so ably defined almost a century ago as a government of the people, by the people, and for the people, political activity on the part of all loyal citizens is more than a right, it is a patriotic duty.

Of course, the right to engage in political activity, that has its roots in the right to freedom of speech, press, assembly, and petition, guaranteed by the first amendment of the Federal Constitution, like other constitutional rights, is not absolute. It can be curtailed in the interest of good government. The United States Supreme Court has developed rigid tests for determining whether limitations on basic constitutional rights are justified. In the minds of many thoughtful men and women today, there is serious doubt as to the justification for some of the limitations existing with respect to political activity by Government employees.

As early as 1907 the solicitation of political contributions from Government employees was interdicted. In the nature of things, such a limitation can be justified as a reasonable method of preventing political corruption. Since that time more doubtful limitations have been added. The Hatch Political Activity Act of 1939 which was greatly extended by the 1940 amendment thereto has accomplished what one writer has described as the "political sterilization" of most Federal employees. Under the Hatch Act, the Federal employees to which the act refers, and incidentally, it refers to most of them, may not take active part in political management or in political campaigns. To be sure, the act provides that Federal employees are free to express their political opinions publicly and privately, but how is the employee to know whether or not his expressions will be construed as taking an active part in a political campaign?

The provisions of the Hatch Act to which I have just referred, were held constitutional by the United States Supreme Court in a 4-to-3 decision, in the Mitchell case in 1947. I will not burden you with an analysis of that decision further than to point out that Mr. Justice Reed, speaking for the majority, held that Congress felt the prohibited political activity on the part of Federal employees was "a menace to the integrity and competency" of the Federal civil service and, therefore, the curtailment of the rights of Federal employees was constitutional. On the other hand Mr. Justice Black in a vigorous dissenting opinion pointed out that "there is nothing about Federal and State employees as a class which justifies depriving them or society of the benefits of their participation in public affairs. They, like other citizens, pay taxes and serve their country in peace and in war. The taxes they pay and the wars they fight are determined by the elected spokesmen of all the people. They come from homes, communities, schools, churches, and colleges as do the other citizens. I think (Mr. Justice Black said) the Constitution guarantees to them the same right that other groups of good citizens have to engage in activities which decide who their elected representatives shall be." Mr. Justice Black described the political activity still available to Government employees as follows:

"They may vote in silence; they may carefully and quietly express a political view at their peril; and they may become spectators at campaign gatherings, though it may be highly dangerous for them to second a mo-

tion' or let it be known that they agree or disagree with a speaker."

Mr. Justice Douglas, in his dissenting opinion, recognized the evils of the "spoils system" and the problems involved in regulating the political activity of Government employees so as to remove those evils. He said:

"The difficulty lies in attempting to preserve our democratic way of life by measures which deprive a large segment of the population of all political rights except the right to vote."

He objected to the failure of Congress in the Hatch Act to recognize the differences in the dangers from the political activities of administrative workers on the one hand, and industrial workers on the other. Here is a suggestion that Congress in regulating the activities of Federal employees, which generally speaking, it has the right to do, is under a constitutional obligation to adjust its regulations and prohibitions with reasonable regard for the obvious differences between the types of employment embraced in the Federal civil service. A partisan political campaign speech by a Federal employee in an administrative or supervisory position might have a coercive effect upon employees under his supervision and thus lead to political corruption, the same speech made by a file clerk could not possibly have any coercive effect upon other Federal employees. As the Justice points out, "The public interest in the political activity of a machinist or elevator operator or charwoman, is a distinct and different problem" from that presented by the political activity of an administrative official. To be sure, it is easier to prohibit all Federal employees from making political campaign speeches and such a blanket prohibition would certainly reach the problem of political coercion by administrative personnel. Simplicity is not enough to justify deferring all Federal employees of their constitutional right to make political campaign speeches. Congressional limitations on basic Constitutional rights of citizens, including, of course, Federal employees, must be reasonably designed to protect a substantial national interest. Congress may not "burn down the barn to get rid of the rats."

A story is told of a frontier community whose citizens were troubled by bears. These citizens hired an expert and gave him authority to use all reasonable means to rid the community of the bears. The expert adopted the simple expedient of placing poisoned food at vantage points on the farms throughout the community. He got rid of the bears all right, but he also poisoned most of the farmers' livestock as well as some valuable hunting dogs.

As previously stated, the United States Supreme Court has developed standards for measuring the constitutionality of congressional and other governmental limitations upon the basic freedoms enjoyed by citizens in our democratic society. The four members of the Court constituting the majority in the Mitchell case differed sharply with the three dissenters, and Congress in the light of the Mitchell case may yet be persuaded to remove some of the existing limitations on political activity by Government employees. It is disturbing, however, to note that the notion that because Federal employment is a privilege and not a right, the "burn down the barn to get rid of the rats" technique which characterizes Government regulation of the political activities of civil servants, is evident in the Government's present loyalty program.

THE PRESENT LOYALTY PROGRAM

In the current struggle between democracy and communism, our Government has adopted a program, the avowed and altogether necessary and proper purpose of which is to prevent the infiltration of disloyal

persons into the Government service and to remove disloyal persons already in Government employment.

As a Negro-American who must daily face the disadvantages, humiliations and deprivations resulting from the undemocratic policies and practices of racial segregation and discrimination, I know some of the glaring inconsistencies between my country's democratic ideals and its actual practices. I intend to continue to use my energies and such talents as I may possess, in opposition to all forms of racial segregation and discrimination. However, I have not the slightest interest in, or sympathy for, communism. I prefer to try to work out the problems I face because of my race, within the framework of our democratic Government. I am opposed to racial bigotry because it is a menace to democracy. I am opposed to communism for the same reason. I am in favor of removing all disloyal persons from Government but I am interested as a loyal American, without regard to my race, in a loyalty program that is designed to expose actual disloyalty and at the same time protect the basic constitutional rights of loyal, Government employees.

Most of the present loyalty program, applicable to Government workers as a class, is embraced in Executive Order 9835 issued by the President in 1947, and the subsequent amendments thereto. Among other things, this order sets up the administrative machinery and procedure to be followed in determining the loyalty of Federal employees. An employee is to be discharged if "on all the evidence there is a reasonable doubt as to the loyalty of the person involved."

Prior to April 28, 1951, the standard was, if, "on all the evidence reasonable grounds exist for belief that the person involved is disloyal."

In *Bailey v. Richardson*, decided in March 1950 by United States Court of Appeals for the District of Columbia Circuit, two of the three circuit judges upheld the constitutionality of the procedures used in bringing about the discharge of Miss Bailey. The record of the case reveals that the only evidence against Miss Bailey was that the FBI reported that certain undisclosed informers, believed to be reliable, had made general statements purporting to connect Miss Bailey with the Communist Party. Miss Bailey denied under oath any membership in, relationship or sympathy with the Communist Party or any activities connected with that party or with communism. The Loyalty Board nevertheless found that on all the evidence, there were reasonable grounds for believing she was disloyal. As previously stated, two of the three circuit judges saw nothing unconstitutional in this procedure. They held that Miss Bailey had no constitutional right to be confronted with the FBI informers because this was not a criminal prosecution and she was not being punished in the constitutional sense. They held that she was not deprived of life, liberty, or property without due process of law, because due process does not apply to the holding of a Government office. These two judges said that if Miss Bailey was discharged because of her political beliefs, no constitutional rights were violated because Federal employment is a privilege not a right. They suggested that arguments based on fair play should be addressed to Congress or the President, not to the courts.

Circuit Judge Edgerton wrote an impassioned, dissenting opinion, in which he took the position that the Executive order gave Miss Bailey the right to be confronted with the FBI informers and to cross-examine them; that dismissal for disloyalty is punishment requiring all the safeguards of a judicial trial, and that Miss Bailey's dismissal violated her basic constitutional right to

freedom of speech and assembly. Judge Edgerton was impressed by the fact that during the course of her hearing Miss Bailey was asked whether she had ever written a letter to the Red Cross about the segregation of blood and what was her personal position about that. In connection with this type of questioning Judge Edgerton makes the following significant statement.

"No doubt some boards are quite aware that unconventional views and conduct have no tendency to indicate disloyalty. But the fact remains that some boards imagine the contrary. This fact is only too well known. It puts Government employees under economic and social pressure to protect their jobs and reputations by expressing in words and conduct only the most orthodox opinions on political, on economic, and social questions.

"A regulation that restrains constitutionally protected speech along with other speech cannot be enforced against either. Legislation is unconstitutional as a whole if it does not aim specifically at evils within the allowable area of State control, but . . . sweeps within its ambit other activities that in ordinary circumstances constitute an exercise of freedom of speech or of the press . . ."

Judge Edgerton was of the opinion that even though Federal employment is a privilege and not a right, in granting Miss Bailey the privilege of working, the Government constitutionally could not impose conditions which required her to relinquish her constitutional rights.

When the Bailey case reached the United States Supreme Court, Mr. Justice Clark took no part and the other eight Justices divided 4 to 4. For this reason the Court of Appeals opinion stands. It must be remembered, however, that one Court of Appeals Judge and four Justices of the United States Supreme Court were, and doubtless still are, of the opinion that the present Loyalty program offends the Federal Constitution. The last chapter in the present loyalty program cannot be written until the grave constitutional questions that have been raised are more satisfactorily resolved either by modifications of the Executive Order or perhaps, another court decision. The National Alliance of Postal Employees may wish to consider joining with other National organizations of postal employees and organizations of employees working in other Government agencies and agree on future strategy. Postal employees might well initiate such a joint endeavor because the close connection between the postal service and freedom of speech and of the press gives postal employees a keen awareness of the importance of the basic constitutional rights involved.

CONCLUSION

The fact that I have not touched upon the numerous handicaps which Negro Federal workers suffer solely because of their race, must not be construed as indicating that I think these handicaps are inconsequential or relatively unimportant. Racial segregation and discrimination in the Federal service are normally, logically, and constitutionally indefensible. So long as they continue, the National Alliance of Postal Employees will have a special function and service to render, not only to Negro postal workers and the postal service, but to the Nation as a whole. In performing this special service, however, I know that those who guide the destiny of the Alliance and formulate its policies, realize that Negro postal employees have many problems in common with all Federal workers of every race and creed. In the solution of these common problems, all Federal employees can and should work together. In working together they will see the irrelevancy of racial differences that seem to separate them, and true democracy within the Federal service can become a reality.

Question of the Week

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

Mr. BENDER. Mr. Speaker, on every previous occasion when Bob Taft has been mentioned, the Democrat bigwigs immediately opened up on him. How come "No comment" now?

Maybe they read the election returns in Ohio for 1950.

Help Daughters of the American Revolution Secure Materials for Memorial Bell Tower at Valley Forge

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the Record, I am inserting a letter which I just received from Mrs. John Morrison Kerr, treasurer general of the National Society of the Daughters of the American Revolution, which is self-explanatory.

It reads as follows:

OCTOBER 18, 1951

Hon. JOHN E. RANKIN,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN RANKIN: Again I am appealing to you for assistance which you are always so gracious to give. Since 1941 the National Society, Daughters of the American Revolution, have been collecting funds to build a memorial bell tower to house the carillon at Valley Forge, Pa. This is a memorial to the men who have fought from the time of our American Revolution through the present conflict. We are now completing the first half of this tower which includes the memorial room in which memorials to our valiant men and women will be placed.

In March of 1950 we signed a contract with Samuel Yellin, of Philadelphia, Pa., to make metal gates for this tower. As these gates could not be made until such time as the contractor was ready to receive them the Yellin Co. was forced to wait until this spring before executing the contract. By this time it was necessary to secure permission from the National Production Authority, Department of Commerce, in order to use this metal for these gates. I am sorry to say that the request was turned down. Copy of letter enclosed. The architect informed us that it would be possible to secure these gates from England where there is no priority on materials and so we have been in communication with an English firm. Within the past few days we have received the estimate and find that the cost would be prohibitive.

It seems too bad that our country cannot spare the small amount of material necessary for executing this contract which is to protect memorials to our national heroes and that a foreign country will have to be

resorted to. As a matter of fact, the funds for the greater amount will not be available as we have already obligated ourselves to erect the gates for the contract price to Yellin Co. Any assistance that you can give us in the matter will be greatly appreciated.

With my very best personal wishes to you and your family, I am

Sincerely,

FRANCES WASHINGTON KERR,
Mrs. John Morrison Kerr,
Treasurer General, NSDAR.

Mr. Speaker, it seems ridiculous to me that these glorious Daughters of the American Revolution cannot get the material in this country with which to construct this Memorial Bell Tower at Valley Forge, without going all the way to Great Britain, the very country our forebears were fighting at Valley Forge to gain our independence, and paying the enormous price demanded for this material.

I am appealing to the National Production Authority of the Department of Commerce to see that this material is provided, and I hope every Member of Congress will take it up and help secure this material for this most worthy cause.

I can say, without fear of contradiction, that there has never been a more patriotic group in this country than the Daughters of the American Revolution, and I think we owe it to them to do everything possible to assist them in securing the materials for this most worthy project.

Report to the People of the Fourth Congressional District of Wisconsin—My Record and Vote on Major Issues in the First Session of the Eighty-second Congress

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. ZABLOCKI. Mr. Speaker, I believe firmly that the people of our country have the right to know exactly how their representatives stood and voted on the various measures acted upon by Congress.

In accordance with that conviction, I have conscientiously tried, from my first week in Congress, to keep the people of my district informed of my actions as their Representatives. I did this through semi-monthly newsletters, through radio and newspaper reports, and by periodic visits to the district.

In addition, knowing that such summaries are not always easily available, I have followed the policy of preparing a brief résumé of major legislative actions at the end of each session of Congress. In the current summary which follows, I included the issues and record of the first session of the Eighty-second Congress, indicating my position and my votes on the most important measures.

A Foreign Affairs subcommittee, of which I am the chairman, will leave shortly for Europe to study conditions

in Germany and in other countries. Because of this assignment, I will be unable to report personally to all the people in my district on the accomplishments of Congress during this session. For that reason, I shall present and circulate as widely as feasible the following report for the scrutiny and judgment of the people whom I have the honor of representing.

IMPORTANT DAYS

As the last days of the first session of the Eighty-second Congress are drawing to a close, the events of the past 10 months are vivid in our minds. This was a year of important decisions, and of far-reaching consequences. While the Western World has enjoyed an uneasy peace, the fires of war have been smoldering in parts of Asia, tension has reached a high point in the Near East, and our ears were struck by sounds of dissatisfaction and rebellion behind the iron curtain.

The American people have enjoyed a year of comparative quiet and prosperity. Unemployment has all but disappeared. Farm and labor incomes have risen to new levels, and even corporation income and dividends are almost at an all-time high. Even with the high level of taxes necessary to meet our defense expenditures, the American people on the whole have bought more, and saved more, than ever before in a comparative length of time.

Underneath this apparent air of prosperity and contentment, however, a feeling of uneasiness has prevailed. During my visits to the district, and from my mail, I have noted how anxious the people are about the war in Korea, and the possibility of preventing the outbreak of world war III. The shadow of uncertainty is hanging over our lives.

FREE NATIONS STAND TOGETHER

For that reason, it was heartening to watch the progress of the free nations in their united effort to discourage aggression and promote peace.

Bolstered by our aid and leadership, these nations have been rapidly gaining strength, both economically and militarily. During the past 5 years, economic recovery was stressed in the Marshall plan and in the individual domestic programs carried by each free nation. Real progress has been made in this field. While most of the nations still have financial and economic problems to cope with, the over-all conditions have improved to the extent that we are now able to start terminating the European recovery program.

The accent is now being shifted to military matters. Faced with the growing Communist menace, the free nations are planning a mutual defensive force. They are creating regional organizations for this purpose, such as the North Atlantic Treaty organization and the proposed Pacific and Near East defensive pacts. The object of these pacts is to combine and strengthen area defenses.

In Europe, under the brilliant leadership of General Eisenhower, the highest officers of the free nations of the North Atlantic community have been working together for several months, integrating the military establishments of the var-

ious countries. General Eisenhower stated that, even in the darkest days of World War II, he had not received as much cooperation in military matters as he is receiving today. The nations have learned that unity and cooperation are the prerequisites of success. They are determined to defend themselves, and they have the manpower to do it. It will be our task, however, to aid them in supplying some of the military equipment for that manpower.

Some people claim that this accent on military matters is driving us away from peace, toward war. With them I cannot agree. Weak nations, when faced with an aggressor, can only talk about peace. Strong nations, on the other hand, are in a position to do something about it. Past events have shown us that might is the only thing which the Communists respect and understand. Therefore we must be in a position to command respect if we expect to talk peace effectively. Otherwise, we would be risking the safety and welfare of our Nation.

THE EIGHTY-SECOND CONGRESS

While the above-mentioned events were taking place, the first session of the Eighty-second Congress was in progress. It was a long session, stretching for 10 months—3 months longer than provided by law. More than in the preceding Congresses, it was a session filled with partisan bickering, with headline-seeking sensationalism, and with disappointingly slow progress in legislative matters.

To better understand its achievements and shortcomings, we must consider the political complexion of the Eighty-second Congress, the problems which it had encountered, and review the major legislative measures which it had approved.

POLITICAL COMPLEXION

On paper, the Eighty-second Congress had a Democratic majority in both Houses. In practice, however, this division crumbled as Members of both political parties deserted their party ranks. A few liberal Republicans consistently supported both the international and domestic programs of the administration. On the other hand, a considerable number of Democrats—particularly from the Southern States—joined with the remainder of the Republicans to form a coalition which steadily opposed all measures favored by the administration.

As a result, Congress did not steer a straight course in legislative matters, but moved at times in one, then in the other direction. Although all the blame for the indecisive results cannot be placed on its shoulders, the Dixiecrat-Republican coalition played an important part in blocking the enactment of several important measures.

CONGRESSIONAL INVESTIGATIONS

There were other factors which contributed to the lack of progress on general legislative matters. The great number of congressional investigations was among them. During the first 8 months of this session, for instance, Congress conducted about the same number of special investigations not connected with pending legislation as it had passed laws.

A report published in September by the Independent Congressional Quarter-

ly News Features showed that, to that date, Congress had conducted some 130 investigations, at the cost of over \$2,000,000. They ranged from the very important Far East policy investigation, to such inquiries as the probe of concert booking agencies. Many additional probes were demanded by Congressmen and various pressure groups, but were not undertaken mostly due to lack of time.

There is no doubt that many of these examinations were much needed and beneficial. Without them Congress could not, at times, have the facts necessary for drawing up, and acting intelligently on, various bills.

REFORMS NECESSARY

There were, however, many features of these probes that were open to criticism. Some of them degenerated into publicity stunts for partisan motives. In others, overlapping of functions was evident. In some, the investigating committees did not have adequate staffs or the help of sufficient expert aid. It was also noted that safeguards against unfair defamation of innocent persons during committee hearings are very much needed. All in all, the entire investigating system in Congress should be overhauled.

APPROPRIATIONS

There is another field of congressional activities which is sorely in need of improvements. I am referring to the congressional function of appropriating public moneys for our domestic and international programs.

For the current fiscal year, \$57,200,000,000 is being appropriated for the Armed Forces, in addition to approximately \$17,500,000,000 for other national and mutual security programs and the Korean conflict. The remaining governmental expenditures, including veterans' benefits, require about \$20,000,000,000 in appropriations. It is estimated that the actual outlays for all these purposes will amount close to \$68,400,000,000 for the 1951-52 fiscal year. And, as you know, Congress has to authorize all these outlays and appropriate funds for them.

At the present time, appropriations are handled in the following manner: First of all, each Federal department and agency estimates its financial requirements for the coming fiscal year. These estimates are compiled by the Bureau of the Budget, which belongs to the executive branch of the Government, and then submitted by the President to Congress.

In Congress, the estimates are reviewed and either cut or approved in their entirety by the Appropriations Committees of the House and the Senate. These vital committees are terribly understaffed, and are physically unable to determine whether each and every estimate, some of them running into millions of dollars, is justified or padded. As a result, both the Senate and the House sometimes have to vote on appropriations not knowing fully whether the taxpayer's money is actually being spent wisely.

ECONOMY IN GOVERNMENT

Even with these handicaps, the Eighty-second Congress has made some real economies this year. A reduction in

Federal personnel is expected to save some \$800,000,000. Graduated vacation leaves for Government workers ought to save additional \$200,000,000. The reduction in the size and weight of parcel-post packages, which have been to all practical purposes subsidized by the Government to the tune of approximately 15 cents per each large package, will cut the postal deficit by \$153,000,000. An increase in certain postal rates will further reduce the deficit of the Post Office Department by over \$200,000,000. In addition, we saved millions through curtailment or elimination of automobiles and chauffeurs for Federal agencies, and through reduction of administrative overhead.

Each and every appropriation bill considered by Congress was cut by the Appropriations Committee and by House action below the estimates submitted by the Bureau of the Budget. These cuts were made in funds for our Armed Forces, for our domestic and foreign policy programs, and for various civil functions.

There were, however, many economies which should have been made, but were not. Proposals were advanced for cuts in rivers and harbors, agricultural price, and overhead costs appropriations which could have saved hundreds of millions of dollars. These, unfortunately, were overridden.

As in the past, I have given my full support to all realistic measures intended to keep governmental expenditures to an essential minimum. I have not, however, favored some demagogic proposals which would deprive us of needed medical research, public health, or veterans services; which would do away with programs intended to protect our natural resources; or which would jeopardize fair treatment for post office and classified civil-service employees. I do not believe in such false economy, and I would like to point out that savings in the above instances are meager in comparison with the cuts which were fully justified, and should have been made, in other places.

WAYS TO SAVE MORE MONEY

More stringent economy in governmental expenditures is necessary. In my opinion, the only way in which we can achieve it is through closer congressional control over all appropriations. Such control should be attained by more effective cooperation with the General Accounting Office, which is a congressional agency. This office checks expenditures and could also consider pre-examination of estimates. Further, there should be more adequate staffing of congressional committees on appropriations. These suggestions have been advocated by economy-minded representatives, and ought to be put into practice.

LEGISLATIVE SUMMARY: INTERNATIONAL AFFAIRS

Glancing briefly at the legislative record of the Eighty-second Congress we notice that measures pertaining to foreign policy fared out better than did the domestic bills. Bipartisan support of some of these measures, contrasted with frequent bipartisan opposition to domestic programs, was the reason.

The Mutual Security Act of 1951 constituted the major legislative act in the field of foreign affairs. This bill emphasized military assistance to free nations. Provisions for foreign economic aid were considerably reduced in conformance with our earlier expectations, and it is anticipated that the Economic Cooperation Administration, which supervised the Marshall plan for Europe, will be liquidated next year.

EUROPE

The act carried \$5,028,000,000 for military and \$1,022,000,000 for economic aid to Europe for fiscal year 1951-52. As I mentioned earlier, the free nations of Europe are beginning to build their military strength, and they expect to have a fully effective military defense by 1954.

In the meantime, they are in a precarious position, lying in the direct path of possible Communist aggression. Their defenses are weak, since they had to devote their primary effort in the past few years to economic reconstruction. While they possess the manpower for defense, they lack military equipment and they are as yet in no position to manufacture that equipment themselves in sufficient quantities. Without our aid in this instance, the mutual security program would face insurmountable obstacles.

NEAR EAST

This area is of grave importance to our Nation and to the entire Western World. If it should fall into Communist hands, it would give the Soviets enormous oil resources for their industrial and war machinery, control of the Suez Canal, and virtual mastery of the entire Mediterranean. In addition, such a misfortune would isolate the Near East, parts of Africa, and all of Asia from the Western World, giving the Communists a "go" sign for the extension of their domination over those vast areas.

The Near East problem is aggravated by the existing social, economic and political conditions. High rate of illiteracy, poor health conditions, depressed standard of living, fanatical animosity toward the west in some circles, and the absence of forceful leadership—all offer fertile ground for subversive Communist activities.

The admission of Greece and Turkey into the North Atlantic Treaty Organization, or the formation of a Near East Defensive Pact, would establish good basis for defense of that area. In addition, peace must be preserved there, particularly in the Israel-Arab relations, and the development of the entire region should be advanced.

The Mutual Security Act provides, for refugee relief, \$50,000,000 to Israel and the same amount to the Arab States, as a part of the \$160,000,000 for the economic development of the entire region.

THE FAR EAST

The Far East is the scene of active Communist expansion at the present time. In Korea, Communist aggression has been met, and stopped, with the aid of United Nations' forces. In China, it is ruthlessly destroying all opposition under the dictatorial rule of the Communist dominated regime. In Indo-

china, the Communist forces have engaged the French in a full-scale war. There are also other regions in the Far East which are in imminent danger of open Communist expansion.

Although at present limited to a series of defense agreements with various Pacific states and the treaty with Japan, our policy in the Far East is tending toward the consolidation of the whole Pacific area in a mutual-defense pact. The Mutual Security Act provides for \$535,-250,000 in military, and \$237,500,000 in economic aid to this region.

NATIONAL DEFENSE AND INTERNAL SECURITY

In the field of domestic affairs, the record of the Eighty-second Congress is not to date very imposing. The major bills which were approved had many shortcomings. In addition, a number of important measures is still awaiting congressional action.

For instance, Congress approved the extension of the Defense Production Act, providing for price, wage, and rent controls. This legislation is, however, inadequate and contains many loopholes. Agricultural prices, which basically determine the cost of food, were given continued and extended preferential treatment. Provisions guaranteeing profit margins to distributors and manufacturers, and special restrictions on imports of fats and oils and other dairy products, brought in new inflationary pressures into play. Further, prohibition on meat roll-backs and on slaughtering quotas, intended to control black market in meat, add to the difficulty of keeping the prices in line.

NATIONAL ECONOMY

The Revenue Act of 1951, approved after much debate during the closing days of this session, will not be very popular. Personal income tax increases are expected to raise about \$2,280,000,000; additional corporation taxes, \$2,-207,000,000; and new tax rates, \$1,204,-000,000. The law is far from being perfect and may be charged as inequitable. These facts are enough to arouse critics who will perhaps neglect to remember that, in passing the bill, the majority of Congressmen placed the economic welfare of the entire Nation above political expediency.

There are two points we should keep in mind when speaking of this tax legislation. First of all, that Congress and the many civic, educational, industrial, and labor organizations and committees which studied the national budget with great care and detail, realized that we could not meet our defense expenditures without raising taxes and recommended such increases. Secondly, that many industries and individuals are today reaping special benefits from our defense effort through increased production, reduction in unemployment, and greater over-all business activity.

Unless we want to add to the burden of future generations, and unless we want to resort to inflationary deficit financing, we must pay for our defense expenditures on a pay-as-you-go basis. Those who receive unusual benefits from defense production should be the first to pay their just share, with each one of

us being willing to contribute a bit more in proportion to our means. Surely the preservation of our nation, and of all the benefits of freedom which we enjoy each day, should be worth that much.

GOVERNMENTAL REORGANIZATION

In this field, the record of Congress during this session is very poor. The remaining recommendations of the Hoover Commission, which were not enacted during the Eighty-first Congress, are still gathering dust in various committees. Time and time again, the President and those of us who supported governmental reorganization have urged the chairmen of these committees to take favorable action on these measures. For motives which may be political, the pleas were ignored.

VALUE OF SENIORITY

This is just one more instance where the value of seniority in Congress strikes one's eye. The majority of important positions in Congress, and all the chairmanships of the committees, are allocated on the basis of seniority. As a result, the southern Representatives, who are repeatedly reelected to office, have captured most of those choice assignments, while the North and the West are direly underrepresented in important posts.

It may be indicated for all of us, when voting for our national Representatives, to keep in mind the value of congressional seniority. The retention of good Representatives in office, can further the cause of good government.

SOCIAL SECURITY, HEALTH, AND WELFARE

In this realm, the Eighty-second Congress has achieved very little. As the schedule which appears below shows, only a number of minor bills were approved. A bipartisan opposition to the administration's program as well as the need for curtailing all nondefense expenditures, prevented the enactment of any substantial measures.

AGRICULTURE AND NATURAL RESOURCES

The same applies to this field, in which the public interest has chiefly lost out two scores. In the first place, no action was taken on the St. Lawrence seaway project, which is considered very important to our national defense and economy, and which would aid tremendously in the industrial and shipping development of the Midwestern States.

In addition, the House had voted to give to the individual States the permanent possession of lands and natural resources, such as oil deposits, located under marginal sea and navigable waters. These tremendously rich deposits are at present considered to belong to the people of the entire Nation. Fortunately, the Senate has not taken any action to confirm this "steal."

LABOR

I am pleased to report that legislation in-reasing the salaries of postal and classified civil-service employees has been approved. Postal employees will receive a flat \$400 raise, while classified civil-service employees will obtain 10-percent increases, ranging from a minimum of \$300 to a maximum of \$800.

This legislation was long overdue, and it acknowledges the increase in the cost of living since 1949, the year in which the last salary increases were granted to Federal employees.

A graduated vacation leave is also replacing the former uniform leave allowances of postal and civil-service workers. The annual vacations will now range from 13 days for employees with up to 2 years of service, to 26 days for those with 15 or more years to their credit.

In addition, increases in benefits under the Railroad Retirement Act have been approved. The benefits for pensioners and annuitants were raised 15 percent. A 33½-percent increase for survivors of deceased workers, and a 25-percent increase in lump-sum survivorship cases, were also provided. Further, the taxable base would remain the same and a spouse-benefit provision of not to exceed \$40 per month is included.

Congress also approved an amendment to the National Labor Relations Act, validating certain union-shop elections, and rejected a proposal to reduce the position of labor on the Wage Stabilization Board, which today has equal representation in tripartite structure composed of management, labor, and the public.

SERVICEMEN AND VETERANS

For servicemen and veterans, Congress acted upon a considerable number of measures. All the members of our Armed Force were provided with a free \$10,000 service life-insurance policy, which expires 120 days after they leave service. It is estimated that if we had this system in effect during World War II, the taxpayers would have saved approximately \$500,000,000 on administration costs.

Congress also extended the time for admission of alien spouses and minor children of citizens who are members of the Armed Forces, and passed the Armed Forces Reserve Act to establish a unified Reserve program, eliminating many inequities in the calling up of reservists.

Under this act, which would become effective 6 months after it is signed by the President, the reservists would be divided into three groups: The Ready, Standby, and Retired Reserves. The President could call upon the Ready Reserves at will. Before issuing a call for the Standby Reserves, the President would have to obtain from Congress the permissive number of such Reserves that could be summoned and they could only be called up upon the declaration of war or emergency by Congress. The retired reservists could only be called after all members of Ready and Standby Reserves have already been taken.

Readjustments were made in the compensation and pension of veterans and their dependents. The presumptive periods for veterans with psychoses, and multiple sclerosis were liberalized, and a study was authorized of the effects of malnutrition and starvation of prisoners of war and civilian internees of World War II. Further, overriding the President's veto, Congress granted \$120 pension to veterans of World Wars need-

ing full-time attendants because of non-service-connected disabilities.

Total roll calls.....	217
Not voting.....	7
Paired.....	2
Absent on roll and quorum calls.....	13

Voting record--82d Cong., 1st sess.

INTERNATIONAL AFFAIRS

Stand	Issue	Status
Voted for...	Mutual security program...	Approved.
Voted for...	Extension of reciprocal trade agreements	Approved.
Voted for...	Emergency loan to India to alleviate famine	Approved.
Voted for...	Ban on export of strategic items to Russia and satellite lines	Approved.
Voted for...	Termination of state of war between United States and Germany	Approved.
Voted for...	Resolution asking U. N. to declare Chinese Reds aggressors in Korea	Approved.
Voted for...	Suspension of import duties on certain critical materials	Approved.
Voted for...	Expression of our people's friendship for all people of the world	Approved.
Voted for...	Resolution opposing admission of Red China to the U. N.	Approved.

NATIONAL DEFENSE AND INTERNAL SECURITY

Voted for....	Extension of Defense Production Act.	Approved.
Favored.....	Strengthening of controls law and closing of loopholes	Pending in Senate.
Voted for....	Universal Military Training and Service Act	Approved.
Voted for....	Navy Ship Conversion and Conversion Act	Approved.
Favored.....	Strengthening of Marine Corps and promotion of Commandant to membership of Joint Chiefs of Staff (sponsor)	Pending.
Voted for....	War-risk insurance	Approved.
Favored.....	Development of our merchant marine	Pending.
Voted for....	Construction of military bases and essential access roads.	Approved.

NATIONAL ECONOMY

Voted for....	Revenue Act of 1951.....	Approved.
Voted for....	Increases in certain postal rates	Approved.
Voted for...	Limitation on size and weight of parcel-post packages.	Approved.
Voted for....	Study of overlapping and duplication of taxes.	Approved.
Voted for....	Creation of Select Committee on Small Business.	Approved.
Favored.....	Investigation of crime and racketeering in interstate commerce	Approved.
Voted for....	Prohibition on frauds by radio and TV advertising	Pending in Senate.
Voted for...	Increase in penalties for criminal violation of Sherman Antitrust Act	Pending in Senate.
Opposed....	Making "good faith" a complete defense against charge of price discrimination	Pending in House.
Favored.....	Antigambling legislation...	Pending in both Houses.

GOVERNMENT REORGANIZATION

Favored.....	Hoover Commission's recommendations.	Pending in both Houses.
Voted for....	Reorganization of RFC under one head	Approved.
Voted for....	"21 day rule" in the House	Rejected.
Favored.....	Creation of Commission on Ethics in Government.	Pending in both Houses.
Favored.....	Separation of subsidy from air-mail pay.	Pending in House.
Favored.....	Creation of Joint Congressional Committee on the Budget.	Pending in both Houses.

Voting record—82d Cong., 1st sess.—Con.
SOCIAL SECURITY, HEALTH, AND WELFARE

Stand	Issue	Status
Voted for...	Aid to housing and community facilities in defense areas	Approved.
Voted on...	Renewal of direct loans to veterans for housing	Approved.
Voted for...	Flood disaster relief	Approved.
Voted for...	Grants to States for public assistance	Approved.
Favored.....	Aid for development of public health units, medical and nursing education	Pending in House.
Voted for...	Increase in penalties for illegal traffic in narcotics	Pending in Senate.

AGRICULTURE AND NATURAL RESOURCES

Voted for....	Increase in limitations on Bankhead-Jones Farm Tenant Act	Approved.
Favored.....	St. Lawrence seaway.....	Pending in both Houses.
Opposed....	Giving individual States title to oil and other resources found under marginal sea and navigable waters	Pending in Senate.

LABOR

Voted for...	Increase in benefits under Railroad Retirement Act	Approved.
Voted for...	Pay increase for postal employees	Approved.
Voted for...	Pay adjustment for classified civil-service workers	Approved.
Voted for...	Graduated system of leave for Federal employees	Approved.
Favored.....	Amendment to National Labor Relations Act validating certain union-shop elections	Approved.
Favored.....	Repeal of Taft-Hartley Act	No action

SERVICEMEN AND VETERANS

Voted for...	Free service life insurance to members of Armed Forces	Approved.
Voted for...	Reorganization of military reserves	Approved.
Voted for...	Hospital and medical benefits for veterans of Korean war	Approved.
Voted for...	Uniform pensions for Spanish-American War veterans	Approved.
Voted for...	Adjustment of monthly compensation and pensions to veterans and dependents	Pending in Senate.
Voted for...	Extension of presumptive period for veterans suffering from certain diseases	Approved.
Voted for...	\$120 pension to certain totally disabled veterans needing full time attendant.	Approved.

Restore the Crosses to the Graves of Our
Veterans

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. RANKIN. Mr. Speaker, I have today received communications relative to the removal of the crosses from the graves of our patriotic dead in Hawaii, containing a resolution adopted by the

Veterans of Foreign Wars in New York, which reads as follows:

RESOLUTION PERTAINING TO REMOVAL OF THE
WHITE CROSSES FROM THE VETERANS' GRAVES
IN MILITARY CEMETERIES

Whereas the military cemetery in Hawaii known as sacrifice hill contains some 13,000 graves of veterans; and

Whereas, the removal of these crosses is deemed by the members of this Sixth District, Department of New York, Veterans of Foreign Wars of the United States of America, as a most despicable, unpatriotic, and most disrespectful act, ever shown to veterans who have made the supreme sacrifice for the honor and glory of God and the Stars and Stripes of our country: Therefore be it

Resolved, That we, the members of the Veterans of Foreign Wars of the United States of America, do hereby demand the immediate replacement of these white crosses to the graves from which they were removed; be it further

Resolved, That this cemetery, and all cemeteries, and graves of our departed comrades the world over, shall be (perpetually) and (respectfully) maintained by the Government of these United States of America.

Respectfully submitted.

R. V. WINDRATH,

Commander, Sixth District, Department of New York, VFW.

Retreat From Victory

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. DONOHUE. Mr. Speaker, I should like to bring to the attention of my colleagues a very thought-provoking article, by William H. Chamberlin, appearing in the October 18 issue of the Wall Street Journal. Mr. Chamberlin's practical and wise analysis of our current foreign policy is well worth reading by every student of our foreign-policy objectives and their progress thus far. The editorial follows:

RETREAT FROM VICTORY

(By William Henry Chamberlin)

A main trend in American foreign policy today is the attempt to escape from some of the undesirable consequences of victory in the late war. Within the last few months there have been four conspicuous examples.

A peace treaty which excludes crushing reparations and provides for restoration of Japanese sovereignty, with no further outside interference in Japanese internal affairs, has been signed with Japan. A contractual agreement aiming at the same objectives is in process of negotiation with the West German Government at Bonn. One hears no more of that empty, if mouth-filling phrase, unconditional surrender. There is certain to be a good deal of hard bargaining over a good many conditions before a satisfactory inclusion of Germany in the general West European defense scheme is achieved.

America, Great Britain, and France have urged other signatories of the Italian Peace Treaty to lift the arms restrictions and promote Italy's adhesion to the United Nations, and Franco Spain is being seriously

reckoned with in European defense plans, after being subjected to a period of sterile and futile boycott.

There is certainly no merit in persisting in a proved blunder. The whole conception of a ruthless, punitive peace, to be imposed on the Axis Powers of the late war and maintained by the combined strength of the United Nations, became untenable from the moment when Soviet ambitions proved irreconcilable with the interests and security of the Western Powers. It would have been the height of suicidal folly and a clear case of playing the Kremlin's game to have carried on a permanent feud with Germans and Japanese, Italians and Spaniards, at a time when Stalin was feverishly arming every population group under his direct or indirect control, from North Koreans to East Germans.

REALISM VERSUS SENTIMENT

It is, however, fair to ask whether this swing in policy may go too far; whether a policy of building up Germany and Japan may backfire, in time, like the policy of giving unlimited trust and support to the Soviet dictatorship in the last war. It would certainly be an illusion—and it might be a disastrous illusion—to assume that our assorted new allies and associates, from Franco to Tito, are 100-percent champions of democracy.

Attempts to remake German secondary schools in the American high school image have not been successful. The Japanese, in their overpopulated islands, on their 1- and 2-acre rice farms do not and cannot perhaps be expected to have an American psychology regarding individual opportunity. One should not bank too much on the effectiveness of a writ of habeas corpus in the domains of either Franco or Tito.

But when one turns away from sentiment and considers the promptings of national interest, a much more reliable determinant of national action, the prospect does not seem so dark. Those who think of Germany and Japan as reviving "menaces" overlook the very great weakening of both countries as a result of the war.

Under the contemplated arrangement with the Lonn regime substantial Allied forces will remain on German soil. It is highly significant that both the German Government and the representatives of the leading opposition party, the Social Democrats, are eager and even insistent on the proposition that more foreign troops should be sent to form a shield behind which German rearmament can take place. This is not the attitude of men who are scheming to turn against the west at the first convenient moment. The security arrangement with Japan provides for the maintenance there of American sea and air forces.

ATTITUDE OF FORMER ENEMIES

Moreover, if there were not a foreign soldier on German or Japanese soil, a severance of economic ties with the Western World would be a catastrophe for both these countries. West Germany is far more dependent on imported overseas foodstuffs and raw materials than the Germany which existed before the war. Japan has lost overseas sources of food and raw materials in Manchuria, China and also in Korea and Formosa. It is most unlikely that the Soviet Union would have either the will or the ability to supply the deficits in the German and Japanese economies which would be the result of breaking off economic relations with the United States, Great Britain, and the Commonwealth area.

Still another consideration of elementary self-interest tends to weld Germany and Japan with the western powers, regardless

of differences and grievances on some subsidiary issues. Assuming that the men who are politically active in Germany and Japan today possess the most elementary instinct for self-preservation, they must know that they would be marked for prompt liquidation in the event of a Communist seizure of power.

The fact that Russia today is not only a national state but the center of an international revolutionary conspiracy has its handicaps as well as its advantages. The Communist fifth column in other countries are an asset to a Soviet foreign policy. But men like Adenauer and Yoshida can hardly miss the significance, for themselves, of what happened to Jan Masaryk and other non-Communists who sincerely tried to get along with the Communists in the iron-curtain countries.

WHERE THEIR INTEREST LIES

The range of choice open to Germany and Japan is not as wide as some Germans and Japanese may dream. To attempt to pass over to the Soviet side in the world duel for power would mean first a tremendous worsening of already low standards of living, secondly, the elimination, probably physical as well as political, of all who had been actively identified with politics since the end of the war. Of course the measure and heartiness of German and Japanese political and military cooperation depend a good deal on the farsightedness and intelligent self interest of America, its Atlantic Pact allies and the friendly powers in the Pacific.

It would be bold and rash to predict that Germany and Japan will never cause international concern in the future. After all, anyone who predicted when Japan surrendered in August 1945, that America would be fighting again in Asia within 5 years—against North Koreans and Chinese—would have probably been shrugged off as a crackpot. But for the predictable future the danger is remote that Germany and Japan will be able to set out on new careers of international conquest—certainly they cannot unaided by other foes. The greater danger is that these two countries will prove to be so shattered militarily, economically, and morally that they cannot play any effective part in their own defense. America's retreat from victory did not begin a moment too soon.

Open Relief Rolls

EXTENSION OF REMARKS OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Monday, October 15, 1951, issue of the Peoria Journal entitled "Open Relief Rolls":

OPEN RELIEF ROLLS

The States have won a victory over Federal bureaucracy, and the people of Illinois automatically are now assured of their right to know where their tax money earmarked for public relief is going. This was accomplished last week when the Senate-House tax conference committee agreed to drop a 1939 Federal restriction which forbade publications of names of recipients of relief payments originating in part from the Federal Treasury.

When the House Ways and Means Committee, about 3 weeks ago, rejected by one vote the Jenner amendment designed to remove this restriction, we thought that the issue would be dead for this session of Congress. We are glad that we were wrong. The new action by the joint committee assures removal of the old Federal ban. Now, States like Indiana, which fought hardest for it and suffered a withdrawal of Federal relief payments, by opening her relief rolls to public inspection in defiance of the Federal regulation, will be jubilant. The \$20,000,000 withheld from her now will have to be shelled out by a reluctant Oscar Ewing, Federal Security Administrator, who ruled to deny the money to the State.

The Illinois General Assembly, at its last session, passed laws making public the old-age assistance, blind assistance, and other public welfare rolls which did not involve Federal subsidies. In addition, a law was passed also making public the poor relief rolls, if and when the Federal requirement of secrecy was removed. General relief funds are derived jointly from State and Federal sources. As we understand it, the new Illinois law automatically activates itself immediately upon repeal of the Federal ban.

Thus it appears that Illinois now has, or will shortly have upon completion of legal formalities, completely open public welfare books. The day of reckoning has come for the chiselers—those who have been illegally attached to the relief rolls when they had no need of public assistance. The State department of public welfare uncovered a good many cases of chiseling on its own several months ago. How many more will come to light in view of the new open-books law remains to be seen. Now that the taxpayers who foot the bill can determine where their money is going, it is less likely to be wasted from now on, and the total cost of the relief program should show a substantial drop as a result.

The Schuman Plan

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. FLOOD. Mr. Speaker, the signing in Paris of the Schuman-plan treaty is an act of historical importance.

It is, above all, a long step toward world peace.

The ministers of six nations signed the treaty—Belgium, France, Western Germany, the Netherlands, Italy, and Luxemburg.

A little over 6 years ago these same nations were locked in a deadly struggle. Four of them had been occupied over a period of years. The dead on both sides were numbered in the millions.

Those of us who have been in Europe during World War II or since have grim memories of what that war meant to these nations and their peoples. I think we have wondered, many of us, whether or not the scars could ever heal. I have asked myself sometimes if I personally, under such circumstances, could forgive or forget. Frankly, I am not too sure.

And yet these countries, 6 years later, have put aside their bitterness. They have turned their backs on memories.

In the Schuman plan they have set the framework for an enduring peace between their peoples. To grasp its full significance, we cannot consider the plan solely from a technical point of view, as a particular solution to the particular problems of two particular industries, steel and coal. In the final analysis it is a plan for the construction of a new and peaceful Europe.

Mr. Speaker, we ask what the Europeans are doing for peace. Here, I think, is the answer.

The author of the plan, Robert Schuman, is, to me, an exciting and dramatic figure. A modest man, M. Schuman would, I am sure, blush to hear himself so described. I doubt if he sees himself as dramatic.

And yet—think of the man. Born in Alsace, twice in his own lifetime he has seen his homeland devastated by war. A Frenchman, he was inducted into the German Army during World War I and forced to wear the uniform of his country's enemy. In World War II he saw his country again invaded, again devastated. Truly, if any man could be forgiven for bitterness, Robert Schuman is that man.

And yet, last August in Strasbourg, before the assembly of the Council of Europe, Mr. Schuman said:

I accept the principle of the renunciation of sovereign rights not for itself, not as an end in itself, but as a necessity . . . as the only means we have of rising above the national egotism, antagonisms, and narrowness which is killing us.

He told the Council members:

In this way . . . we will give to our anxious people . . . the assurance that side by side with our legitimate concern for security, there does exist hope and the will to live and work in peace and for peace.

No drama, note. And yet there are trumpets in those words.

Robert Schuman believes that the peace he seeks—the peace sought today by all men of good will—can be won. But only if the measures adopted are bold and imaginative. Only if they are commensurate, in their scope, with the dangers today threatening peace.

For the vision and leadership he has given us, the name of Robert Schuman deserves to be listed for all times among his country's—and the world's—great. He stands in the forefront of the crusaders for peace.

Nor do I think we should forget the other names connected with the plan. The farsighted Jean Monnet has worked for it. André Philip, Karl Arnold—there are dozens of others.

The West Germany Chancellor, Konrad Adenauer, deserves particular mention. Adenauer was among the ministers signing the treaty in Paris, the first German chancellor to visit the French capital since the war.

In supporting the Schuman plan, Adenauer is risking his own—and his party's—political neck.

And he is taking that risk. He is putting the peace of Europe—the peace of the world—first.

Mr. Speaker, there has never been a time in all history when the world needed

more desperately this type of leadership. This is true statesmanship—the 1951 model.

In his recent book, *Peace Can be Won*, Paul Hoffman has this to say of the Schuman plan:

The very idea would have been unthinkable a generation ago.

True enough. But if there had been a Schuman plan a generation ago, there might have been no World War I and II. Paul Hoffman sees the plan in its broader aspects. He says:

Its political aims are bold and far reaching enough to become stepping stones toward that European federation which many believe is the next necessary step in Western Europe's political evolution.

The French, themselves, see the plan in this light. In first announcing the proposal, the Quai d'Orsay declared:

This proposal will lay the first real foundation of an European federation which is essential to the preservation of peace.

Many of us in this country have been impatient with the progress of this proposed federation. The French, always a practical people, remind us:

A united Europe will not be achieved all at once nor in a single framework. It will be formed by concrete measures which first of all create a solidarity in fact.

The heart of the plan is that the coal and steel industries of the member countries are to be treated as if no national boundaries existed among them. These boundaries are, in fact, to be eliminated as far as these two particular industries are concerned.

The member countries are to abandon all narrow nationalistic interests and allow these industries to develop and to operate in a common market.

To an American, accustomed as we are to the free interchange between our 48 States, this does not seem to be so very extraordinary.

But there is a difference.

Suppose, let us say, that New York and Pennsylvania were different countries. That they spoke different languages. That their people cherished different traditions. That there had been wars between them for centuries.

We know what the Civil War did emotionally and economically to certain sections of our country. Even today—seventy-odd years later—the scars are there.

Multiply that feeling a thousandfold. Throw in the language differences. Custom differences. Habits of thought. And you have the European problem.

But these men—Schuman, Monnet, Adenauer—see the possibility—no, the probability—of overcoming these obstacles. They are going ahead with the first great step.

The plan is so new—so overwhelming—that it has, not unnaturally, created a certain amount of suspicion. It is, for example, denounced as the forerunner of a new vast cartel of selfish interests. It is said to be a policy of social reaction. The Communists, of course, have branded it as just another scheme of Wall Street—an imperialistic plot.

None of this is true.

The fact is that, far from being a cartel, it is just the opposite. Paul Hoffman says:

The . . . Schuman plan will be empowered to abolish not only national trade barriers but also private restrictive agreements. This approach should be compared to that behind the formation of the European steel cartel in the 1920's under which producers and sellers divided markets, rigidly pegged and protected prices and held back production . . . The Schuman plan, on the contrary, is an anticartel plan to fuse and expand rather than to divide and restrict the coal and steel resources of Western Europe.

The cartel system, by its very nature, is opposed to economic progress. Thanks to it, factories badly managed, badly equipped, badly located are kept alive. Productivity stands still since producers either refuse to modernize or direct modernization solely toward increased profits.

The plan, in reestablishing competition, could, no doubt, eventually drive out of business some marginal producers. That it will do it now, with the emergency demand for steel at its height, is not probable. Under the treaty signed last month, in fact, transition measures are provided which will give the inefficient time, and some help, to catch up. They will be required only to shed their complacency and indifference and get in step with contemporary methods.

There can be no reasonable objection to such a procedure. It is indispensable if general productivity in the industries is to be raised.

The plan—and let me emphasize this—seeks not to close down enterprises but to modernize them.

As to social reaction—well, the fact is that European labor leaders have worked closely with the authors of the plan. They endorse it as a means of bettering labor's working and living conditions. Increased productivity, as European labor is finding out, means higher standards of living. It means better wages. It means more jobs.

The attainment of higher productivity means—and this, too, European labor is learning—labor and management working together. It means the free exchange of information within the industries themselves. It means, in short, the kind of cooperation proposed under the Schuman plan.

One of the principal objectives of the plan is improving the standard of living of the European workers. It means giving them the benefits of high productivity in a vastly expanded market.

Full employment is one of the goals. Under the treaty, the member nations will be committed to the elimination of virtually all restrictions in the hiring of experienced steel and coal workers who are nationals of the other countries. Particular emphasis will be placed on removing barriers to the reemployment of displaced workers.

The treaty makes special provisions for the care of workers affected by shifts in coal and steel facilities. These workers will be assisted in making the necessary readjustments, either through liberal separation pay, retraining courses, or payment of resettlement ex-

penses. The financing of new industries to absorb these workers is contemplated.

There are other positive objectives for labor. The plan proposes, for one thing, the elimination of the deliberate use of wage reductions as a technique of competition. The treaty, in fact, prohibits any reduction of wages except in certain clearly defined circumstances, such as, for example, when living costs have declined. Abnormally low wages, already in existence, will be given consideration and steps taken to adjust them.

The Communist charge that the Schuman plan is a "Wall Street scheme" is untrue on its face. The plan is not even an American plan. It has our hearty approval, but it was born in the brains and in the hearts of the Europeans themselves.

Back in May of last year, when the plan was first proposed, Paul Hoffman, then ECA Administrator, said:

The French proposal . . . shows real determination to achieve a high degree of economic integration among the free nations of Western Europe. It is the principle and not the exact methods which ECA considers of the utmost importance. The ways and means, as I have told the Organization for European Economic Cooperation, must be determined by the countries themselves.

He said further:

Americans who fully appreciate the technical and political difficulties involved admire the spirit and determination of the free peoples of Western Europe to preserve their freedom by the way we have preserved ours . . . through closer union. A free united Europe and a free united America, standing together, can discourage future aggressors and lead the way to lasting peace.

The Schuman plan, in short, was born of the determination of European leaders to find some other answer than war to their age-old problems and to bring to the masses of their peoples the benefits, social and economic, of modern technological advancements.

The French see very realistically that the peace of Europe depends upon peace between France and Germany. Any action taken, they declare, must first of all concern those two countries.

Let me read you this—an excerpt from the French announcement of May 10, 1950:

The community of production which will in this manner be created . . . will clearly show that any war between France and Germany becomes not only unthinkable but in actual fact impossible.

This, remember, from a country just victorious in its second war in less than 50 years. The victor, not the vanquished, proposes a scheme to make future wars impossible. Who could know better than the French that in modern wars there are no victors?

The French did not, however, limit their plan solely to these two countries. In the first announcement an invitation to participate was extended to all European nations. As you know, four others—Belgium, Italy, the Netherlands, and Luxembourg—responded.

Work on drafting a treaty began. The draft was initiated March 19 and the final treaty signed April 18.

The preamble of that treaty states the purposes of the plan:

To substitute for historic rivalries a fusion of their national interests, to establish, by creating an economic community, the foundation of a broad and independent community among peoples long divided by bloody conflicts and to lay the bases of institutions capable of giving direction to their future common destiny.

A unique feature of the treaty is a supernational authority—the high authority, it is called—created to handle the operation and problems of the two industries.

The creation of this high authority will, it is hoped, overcome one of the principal obstacles in the way of European federation—the sensitiveness of the national states.

The plan gives this sensitiveness full consideration. Instead of building on ground already occupied by existing governmental structures, which would require tearing down to make room, it proposes the foundation of a new but common structure on ground almost untouched.

Like any other government, this high authority would have an executive body. It would have a legislature to which the executive would be responsible. And it would have a court to hear cases rising from the problems of the industries involved.

In addition, the treaty calls for a special council of ministers, the primary function of which would be to insure the coordination of the activities of the high authority with the over-all economies of the nations involved. The impact of the plan upon such national problems as defense, inflation control, balance of external accounts, and so forth, was early recognized. This special council was proposed to prevent any difficulties in these areas.

I will not attempt to discuss the treaty in further detail. It has yet, as you know, to be ratified by the legislative bodies of the member countries. It could be rejected.

Personally, however, I am quite optimistic as to its chances. I have great confidence in the ability of the European people to subordinate their concept of sovereignty and the interests of special groups to the grander concept of unity and peace.

This is, I repeat, not an American plan. It is completely European. However, it will affect the United States in the same degree to which it will affect all members of the Atlantic community. On its successful conclusion and, more importantly, on its faithful execution will depend not only the lasting recovery of Europe but the peace and security of us all.

The immediate benefits of the plan may be economic, but the alternative will be political. It is, in fact, the political significance of the plan that raises it to the global supernational level. It is the political implication that concerns the United States.

For this reason, and for this reason above all, the people of the United States take a profound interest in the early ratification of the plan. It is our peace as

well as that of Europe that is in the balance. It is our future as well as theirs that is at stake. Two world wars in which we became involved have taught us the extent to which our peace and future are involved in the peace and future of Europe.

Nothing could cause greater disappointment and greater disillusionment to me, personally, than to see the people of these six nations fail their leaders on this issue. Nothing, I am sure, could more dishearten Americans generally.

As an American, I am deeply interested in the Schuman plan. I am even more deeply interested, however, as a citizen of the world community, which has been—twice in my lifetime—dragged into war because of the failure of politicians and statesmen in the past to take such concrete steps as the Schuman plan to make war impossible.

Need for School Construction

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 13, 1951

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the Washington Star of October 18 with reference to the allocation of critical materials for the construction of schools. I also include a resolution adopted by the Texas Association of School Administrators on need for critical schoolhouse building materials. The expansion of our school facilities is essential and calls for a more realistic allocation of critical materials for that purpose. The editorial and resolution follow:

[From the Washington Star of October 18, 1951]

A PRICE WE SHOULD NOT PAY

If the defense program means that we are arming ourselves and the rest of the anti-Communist world at the expense of failing to provide necessary school facilities for millions of American children, we need some new evaluation of the net losses involved in saving democracy.

There were about 28,230,000 children enrolled in schools throughout the Nation (through the twelfth grade) in 1940. By next year that total will have increased by 2,400,000. By 1960 the total will have grown to 37,138,000. There were many shortages of school buildings in 1940. But with the unavailability of building material during World War II, which postponed so much construction, and with the new shortages threatened now by the defense program and the great increase of school population, we are not providing either for current needs or for those that lie ahead.

For the first quarter of 1952, communities throughout the Nation have made requests for 255,400 tons of steel for school-building construction. The National Production Authority has allotted, in the face of that demand, only 81,000 tons. The demand, and the allocations, cover all types of construction in the field of education. But the greatest need for school construction is in the primary grades. Unless this need is more

adequately met, there are going to be millions of young children who will be forced to use makeshift schoolrooms, on part-time schedules, throughout all of their school days. Some way should be found to increase the allocation of steel in this field particularly. The communities affected are paying for the construction. What they need is the steel. The allocations must be increased, regardless of where they come from. We can get along without many things. But adequate school construction is not one of them.

RESOLUTION OF THE TEXAS ASSOCIATION OF SCHOOL ADMINISTRATORS ON NEED FOR CRITICAL SCHOOLHOUSE BUILDING MATERIALS

The NPA has allotted only one-third of the actual need of structural steel and other critical materials for schoolhouse construction in the United States. As matters now stand, buildings presently under construction will require the major part, or all, of the 1952 allotment of such materials. That means the schoolhouses now on the planning boards cannot be contracted for in 1952, and that accordingly, no new schoolhouse construction will be available in the falls of 1953 and 1954. This action on the part of NPA shows a lack of understanding of the need for schoolhouses in America. If all the structural steel needed for school buildings were allotted, it would equal less than 1 percent of the total steel production of the industry, and would not, accordingly, hamper the defense program or the civilian economy. In Texas alone there will be an increase of 100,000 school-age children from September 1951 to September 1955. In Texas today 180,000 children are housed in temporary buildings and rented churches. The immediate need in Texas is for 5,300 new classrooms; an additional 3,400 will be needed by September 1955.

Since the NPA apparently does not understand, as demonstrated by its allocation of critical materials, that schoolhousing is at such a premium, and that it will be at a greater premium from year to year for the next decade, and since to neglect the education of the children now is to negate the possibility of an educated, democratic citizenship of the future; be it

Resolved by the Texas Association of School Administrators, assembled in Austin, Tex., this fifteenth day of October 1951, That our two Senators and Representatives in Congress from Texas be urged to sponsor or support legislation which will assure to the schools of the Nation an adequate amount of structural steel and other critical materials necessary for schoolhouse construction.

EDWARD T. ROBBINS, President,
Alamo Heights, San Antonio, Tex.

Attest.

FRANK W. RICHARDSON,
Secretary, Henrietta, Tex.

Put None but Americans on Guard Tonight

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 15, 1951

Mr. WOOD of Idaho. Mr. Speaker, many patriotic organizations are springing into being, fully armed, as did Athena from the head of Jove, whose only excuse for existence is to bend every effort to get America out of our iniquitous

and ill-judged adherence to the United Nations.

This tremendous ground swell of public opinion, the surges of which are even now impinging upon this Congress, shall yet become the tremendous tidal wave of indignation which shall sweep into innocuous desuetude the Members of Congress who have either rendered lip service or wholehearted support to this alien monstrosity, which is designed to destroy America and transplant us into a world state wherein we shall be outvoted 51 percent by population.

To these patriotic minutemen I seek to herewith transmit the word of the father of our country, George Washington, when his nebulous country was in the forming: "Place none but Americans on guard tonight."

It has been the history of many organizations in the United States, which were originally formed for very wise and patriotic reasons, that the subversives have infiltrated such groups, and later have taken them over lock, stock, and barrel. There is every reason to suppose they shall attempt the same tactics with ours.

Consequently, do not accept for membership anyone who cannot pronounce the "Shibboleth" of true American patriotism. Accept no subterfuges. Refuse membership to cranks of any sort, or any group which would attempt to place other aims side by side with that of our liberation from the United Nations, "Put none but Americans on guard tonight."

Tioga County Is in the Broome Orbit

EXTENSION OF REMARKS OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, according to Gauleiter Pfeiffer's plan to gerrymander me out of Congress, Tioga County will be in my new district.

Tioga County is almost as desirable a balliwick from my standpoint as the counties now in my district.

In the first place, Tioga is in the Broome orbit. All of the news out of Broome County filters into Tioga and I know that I am as well known in that county as I am in the rural part of western Broome County.

Tioga, therefore, will be fertile field. I have always had a lot of friendly mail from there and a lot of folks down in Owego think your Congressman is their Congressman. It is all right with me too.

The best part of Tioga's being brought into the fold is its close proximity to the Endicott Johnson and IBM plants. Hundreds of people who live in Tioga County commute daily to the Triple Cities, where they earn their living.

That is why I have always answered the heavy mail I get from Tioga. It would be easy to represent this great

American county because it is right in my own front yard.

I have never turned down a request from Tioga and I never will.

The following letter is an example of what I mean:

APALACHIN, N. Y., October 11, 1951.
Congressman EDWIN A. HALL,
House Office Building,
Washington, D. C.

DEAR ED: Thank you for the opportunity to obtain some useful booklets. I have marked those which I need and would very much like to have; although I found I could not hold it down to a smaller number I hope you can send all those checked.

We moved here in Tioga County a year ago, from Broome County (Vestal). Am a Republican, and always voted for you back in Broome County, and if this area is included in the new district and you are on the list, will be pleased to do so again but try to keep down those taxes a bit, will you?

Yours respectfully,

DON WYKSTRA.

Address of Gen. Douglas MacArthur

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address made by Gen. Douglas MacArthur before the national convention of the American Legion at Miami, Fla., on October 17, 1951:

I am deeply grateful for this opportunity to address those who brought victory to American aims in the past two great wars of world history. I do so as a member of this Legion holding no public office, advocating no partisan cause, and animated by the sole desire to help restore, preserve, and advance those great American principles and ideals of which we have been beneficiaries ourselves and are now trustees for future American generations.

No fraternity of men ever rested upon a more noble concept than does the American Legion. The indestructible bonds which unite its members were welded in a heat of battle by those who laid life and limb upon the altar of self-sacrifice. From its very inception, it pledged itself to those high principles which form the preamble to its constitution "For God and country" it reads, and to these it has remained invincibly faithful. It has written a record of service to the Nation which commands the gratitude of every citizen.

To me it is a source of added inspiration that the women's auxiliary has joined us here today. None will dispute the strength they have brought to the Legion in the fulfillment of its tasks. In these challenging times, they stand as a mighty spiritual force to inspire faith that we may maintain in American life the moral base upon which our true greatness has always depended.

Of all the issues which today confront our people, possibly none is of more immediate concern to the Legion than is the direction of our military policy. That policy necessarily and traditionally has found its general orientation in the political thinking which has guided our foreign affairs. But so closely interwoven have our military and

foreign and even domestic policies become that it is impossible to ignore one when considering the others. To understand the general direction of our military policy, we must therefore understand the animating impulses which guide our domestic and foreign affairs. Both, under the leadership now administering our Government have departed sharply from tradition and constitutional mandate.

At the birth of the Nation, Washington counseled strongly against our entering upon entangling alliances abroad lest we find ourselves involved in Europe's wars. This was sound advice then, but has been necessarily outmoded by the progress of civilization. For with the development of means of rapid communication, existing gaps between the several continental land masses have been narrowed and ocean barriers in themselves no longer set the stage for continental isolation nor offer an assured degree of protection for continental shores. As a consequence, it is impossible to disassociate ourselves from the affairs of Europe and Asia. Major warfare in either has become our immediate military concern, lest they fall under the domination of those hostile to us and intent upon predatory incursions against our own land. To counteract the potentiality of this danger, we have acted both in the east and in the west. In the Pacific we and our friends maintain an island defense chain off the coast of continental Asia which must be preserved inviolate at any cost. Despite some public statements to the contrary, there is reason to fear that it is still the overriding purpose of some of our political leaders, under the influence of allies who maintain diplomatic ties with Communist China, to yield the island of Formosa at an opportune time to the Chinese henchmen of international communism. The effect of such action would be to breach our island defense chain, threaten peace on the Pacific, and ultimately endanger the security of our Pacific coastal area. There is little doubt that the yielding of Formosa and the seating of Communist China in the United Nations was fully planned when I called upon the enemy commander in Korea on March 24, to meet me in the field to arrange armistice terms. This I did in view of the fundamental weakness of his military position due to the lack of an industrial base in China capable of supporting modern warfare. The opposition I expressed to yielding Formosa and seating Red China, with the overwhelming support it received from the American people, unquestionably wrecked the secret plan to yield on these issues as the price for peace in Korea. There followed the violent Washington reaction in personal retaliation against me for what was actually so normal a military move.

Across the Atlantic we have no similar island defense chain; but, in view of the openly flaunted intention of international communism to destroy throughout the world the concept of freedom and bring peoples everywhere under the subjugation and terror of police rule, it has become necessary to help the free nations of Western Europe prepare against the threat of predatory attack by Communist forces now occupying Eastern Europe. And generally, throughout the world, our policy has been enunciated to extend a helping hand to others whose freedom is threatened and who have the will but lack the entire resource essential to their own defense. The soundness of this concept will depend upon the wisdom with which it is administered. Recklessly and abnormally applied, it could encompass our own destruction. This country obviously lacks the resource militarily to defend the world. It has the resource, however, reasonably to assist in that defense. But such assistance must be contributory to, rather than in place of maximum local national effort. It should be extended only upon condition that assist-

ance to others be really for defense and that it should be so limited as not to deplete our own resources to the point of imperiling the survival of our own liberties; and that those we would assist be animated by the same love of freedom as we, and possess the will and determination to pledge their own lives and full resource to secure their own defense.

On the strict observance of these conditions, rests our hope that present efforts to bolster Western Europe may justify the additional burden it places upon our own people. There are, however, many disturbing signs and reports to the contrary. There are many of the leaders and people of Western Europe who mistakenly believe that we assist them solely to protect ourselves, or to assure an alliance with them, should our country be attacked. This is indeed fallacious thinking. Our potential in human and material resource, in alignment with the rest of the Americas, is adequate to defend this hemisphere against any threat from any power or any association of powers. We do desire to retain our traditional friends and allies in Europe, but such an alliance must rest upon spiritual bonds fabricated from a mutuality of purpose and a common heritage of principle—not an alliance to be secured at a price.

There are other disturbing signs that some of the peoples we seek to bolster are showing a lack of will to muster their own full resource in their own defense. There appear to be many among them who feel that their defense is, and should be, our sole responsibility and that beyond a token military collaboration they should confine their own energy and resource to the building of their civilian economy—some indeed who go so far as to advocate that money appropriated by our Congress for their military defense should be diverted to civilian purpose. The startling thing is that such viewpoints are not lacking in support among our own leaders. Apparently, some of them, more in line with Marxism philosophy than animated by a desire to preserve freedom, would finance the defense of others as a means of sharing with them our wealth. This wealth, accumulated by our own initiative and industry under the incentives of free enterprise, would then serve as the means of covering Socialist or Communist deficits abroad. The ultimate effect, whatever the intent, would be to reduce our own standard of life to a level of universal mediocrity.

We have committed ourselves to contribute six ground divisions to Western Europe, notwithstanding that only a small fraction of the great masses of its peoples have been called to the colors. Indeed, if the human resource and industrial potential of the Western European nations were effectively employed for defense, there would be minimum need for American ground forces or even great quantities of American munitions—air and naval power, yes, but little honest necessity for ground troops—unless it be solely for morale purposes. Actually, if the European nations have the will to defend themselves, no question of morale would be involved. Our efforts to whip up enthusiasm among the Western European peoples for the defense of their own liberties find neither precedent nor support in common sense or logic.

One thing we must clearly understand is that the very course on which we are now embarked carries within itself grave risks to our own survival. The exhaustive effort to build our own military power and supplement that of other free nations, however justified, is probably more or less in accord with Soviet planning. For just as we expend our resources to build military strength, inversely we progressively reduce ourselves to economic weakness, with a consequent growing vulnerability to the internal stresses and strains manipulated by Communists and their agents in our midst. It may indeed

prove that the preparation for a war which may never occur will exhaust us materially as completely as would such a war itself. Our leaders must throw off the complacent belief that the only threat to our survival is from without. All freedoms lost since war's end have been the result of internal pressures rather than external assault.

What action then do we propose to take against those Communist nations whose provocations have brought upon us so sad a state of affairs? We now hear talk of force as bulwarking our foreign policy, but in Korea we restrain the use of the very force we possess where challenged on the battlefield. And, while we hear such talk of force and our soldiers fight against our self-imposed odds, we and our allies continue to give the Soviet and its satellites the aid and comfort and immense satisfaction of full diplomatic relations and, with but limited exceptions, the rights, privileges, and opportunities of trade and commerce normal to friendly international intercourse. We negotiate and negotiate and negotiate, never seeming to learn that you cannot profitably negotiate with Communists any more than you can with any other type of malefactor in civilized society. The only persuasion that will move them is the resistance to their abusive pressure by adequate counterpressure.

Recent events points to a startling and dangerous shift in our basic military concept. After Communist China committed itself to war against our forces in Korea, our political and military leaders set aside our traditional military policy calling for the employment of all available power and means to achieve a prompt and decisive victory and adopted instead the doctrine of defense. Every distinguished military leader of the past and all military experience from the beginning of time warns this but invites failure. Under this new conception, novel indeed to American military character, we are required in the midst of deadly war to soften our blows and send men into battle with neither promise nor hope of victory. We have deprived them of supporting military power already on hand and available which would blunt the enemy's blows against them, save countless American lives, fulfill our commitment to the tragic people of Korea and lead to the victorious end of a war which has already left so many thousands of American soldiers maimed or dead. More than this, it could and would have removed the Chinese Communists as a threat to freedom in Asia and the peace of the world for generations to come.

The reason given for such a course has little validity. It has been argued in justification and seemingly to soothe the public concern that the application of conventional war measures against our enemy might provoke the Soviet into launching the third world war. Yet, since the end of the Second World War, without committing a single soldier to battle, the Soviet, aided by our own political blunders, has gained a dominion over territory and peoples without parallel in all history—a dominion which it will take years for it to assimilate and administer. What then would be its purpose in provoking a war of most doubtful result to the Communist cause? I have strong doubt that the start of a major war anywhere enters the Soviet plans at this stage. If and when it does, it will be at a time and place and under circumstances dictated with scarce regard to the incidents of Korea.

Could there be anything more discouraging and shocking to our soldiers on the line than the deprecating reference to their fierce and savage struggle as a police action? Could anything be more agonizing to the mothers of their dead than the belittling reference to it by the Joint Chiefs of Staff as the "Korean skirmish"? What a lack of perspective. What a failure to place first things first.

What a complete callousness to human feeling and soldier dignity. Two great questions about Korea still remain unanswered. First, why did they start the war if they did not intend to win it? And second, what do they intend to do now?—go on piling up our dead indefinitely with no fixed purpose or end in sight? Hardened old soldier though I am—my very soul revolts at this unnecessary slaughter of the flower of our youth.

I recall so vividly the American Legion's warning to the country at the close of the war some 6 years ago. Its resolution read as follows:

"The only present guaranty of our Nation's safety and freedom and the best presently available assurance of world peace is to have in the hands of this great peace-loving Nation the mightiest armament in the world."

Sound and far-sighted advice which considered the present and drew upon the lessons and experience of the past. Had it been heeded by our political and military leaders, we would have been able to consolidate our great moral and military victory and lead the world to an enduring peace. We would not now be frantically endeavoring to restore our dissipated military strength. The Soviet would be but a negative influence upon world affairs, and the earth would be a much gentler place on which to live. But our leaders failed to heed that advice. They failed to recognize the opportunity for leadership which victory had cast. They failed to see the enormity of the Communist threat to an impoverished postwar world. And, failing this vision, they became animated solely by what appeared to be the political expediencies of the hour. They disarmed and demobilized our military power with reckless haste. They disposed of our vast stores of military equipment with such irresponsible abandon that, when I sought to arm and equip a modest military reserve of 75,000 Japanese to help fill the power vacuum left in Japan when we moved our occupation divisions to the Korean front, I was informed that it would take 18 months, at a very minimum, before the requirements could be filled.

After reducing our military strength to possibly the lowest relative degree in American history, they suddenly reversed the process, to rearm with no less precipitate haste under the pressure of an artificially aroused fear psychosis throughout the land. It is quite natural that such sudden changes in basic policy have left our people confused and bewildered, and have lost us the faith of many other peoples. The issue of war or peace is not based upon any sudden and unexpected change in the course of world events, or even direction of Soviet policy. Long before even the Second World War, the Soviet was known to plan suppression of the concept of freedom and the advance of communism throughout the world, as rapidly as conditions would permit. We, ourselves, molded these conditions to the Soviet's plan by providing extraordinary facility for it to so deploy its military forces as to permit direct and decisive pressure upon many of the free nations of Europe and Asia.

This is now, of course, past history. The immediate problem calls for a dynamic political and military policy designed to secure the future and regain the lost faith of others in order that our moral influence may reassert itself to guide the world toward reason and right. And, in the formulation of such policies, it is well that we understand that battles are not won by arms alone. There must exist above all else a spiritual impulse—a will to victory. This can only be if the soldier feels his sacrifice is to preserve the highest of moral values.

The American Legion, composed of men who know and detest war for the scourge that it is, is peculiarly well fitted to stand guard over our heritage of American liberty. It must exercise unrelaxed vigilance. It must

insure that neither political expediency nor foreign infatuation influences the expenditure of the vast sums now under contemplation for freedom's defense.

It must exercise its great influence to the end that we rearm, as rearm we must, in an atmosphere of confidence in our inherent strength, not under the hysteria of an artificially created fear; that it is our implacable purpose to retain undisputed control of the seas, to secure undisputed control of the air, to vigorously implement our atomic program with a full commitment to the use as needed of the atomic weapon, and while maintaining a well-balanced and highly developed ground force, to charge to our allies the main responsibility for ground operations in defense of their own spheres of territorial interest; to curb the growing tendency of political and military leaders to publicize for political advantage classified data concerning scientific developments incident to our military effort, and thus to yield the all important element of surprise; to do all, reasonably within our power, to help preserve freedom for those who have the will and determination to do all in their power to defend their own freedom, to avoid being drawn into unreasonable and unnecessary expenditures for armament to create an artificial domestic prosperity for political ends, to avoid contributing the fruits of our system of free enterprise to support socialism or communism abroad under the spurious pretense that it serves our own military security, to avoid allying ourselves with colonial policies in Asia and the middle East, lest we invite the enmity of the traditionally friendly peoples of those vast areas of the world; to give primary concern to our own security and the well-being of our own people; to avoid distributing our wealth for the purpose of buying the loyalty of others, or of sharing with others the wealth and security which we hold in sacred trust for our progeny; to apply all possible pressure, short of war, upon the Soviet or any associated power which by abuse and pressure upon us forces the expenditure of such vast outlays of our energy and resource as a measure of self-preservation, to avoid a protracted and indecisive war in Korea with its endless slaughter—the Chief of Staff of the Army recently testified before a congressional committee that it might last for 10 years, to regain military faith in ourselves and the policies upon which our victories in past have always rested, to do all, reasonably within our power, to assist the Filipino and Japanese people to advance and fortify their liberties, and the Chinese people to regain theirs; and, above all else, to preserve inviolate those great principles and ideals of moral authority upon which is based the American way of life, and the nobility of the cause for which our soldiers fight.

I do not associate myself with those who believe that world war III is imminent or inevitable, nor do I associate myself with those who hysterically talk of American cities being laid waste. I believe that this Nation has such potential strength, both spiritual and material, that no power or combination of powers would dare directly to attack it. We must rebuild the military power, wantonly dissipated despite your warning and the clear portents of the situation in 1946, calmly and wisely and with sole regard to military requirements—not political expediency. We must not again permit our leaders to gamble with the national security to serve political ends. We must rebuild our power, not so much as a measure of defense against any imminently threatened attack, but as a means to regain the faith of those peoples of the world—traditional friends of our country—who now languish in the chains of Communist slavery or whose wills are controlled by Communist threat, treachery, coercion and brutality and to whom only the

relativity of force no longer has practical meaning.

The complexity brought about by dislocations in the wake of two world wars has caught our beloved country in the vortex of a confused, distressed, and frightened world. It has been a time when the lack of a strong and positive and wise leadership—a leadership capable of rising above the level of petty politics with moral courage, self-effacing conviction, and resolute patriotism—has been most sorely felt. I have faith that the wisdom and determination of the American people are not going to permit our country to continue down the road to national jeopardy. They will insist that American policy be reoriented to American tradition, American thinking, and American needs—and will stop our headlong plunge toward socialism and economic disaster. Americans will not be fooled by the bombast of violent propaganda and vulgar language which inevitably meets every honest criticism directed at the Government. They were neither fooled nor their confidence impaired in the gallant marines committed to battle in Korea when that fighting body of men of such illustrious tradition and fame was so grievously and unjustly assailed. They will not be ensnared by a sly Pied Piper technique which says one thing but does another.

The issues now confronting the Nation call for American solutions. They should interpret the national need and be responsive to vision and moral courage. The voice of the people must be heeded. Counsel such as yours must not again be disdained. The implacable guide must be faith in those immutable principles and ideals which give spiritual strength to our Constitution. There must be reflected that degree of humility which recognizes the religious base upon which our Nation was founded, with an indomitable determination to preserve it. The threat to freedom in peace is no less sinister than in war. Our country's future must not go by default. The veteran must not fail the Nation's trust.

Rascality of Political Morality

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including a timely article by Mr. George Morgenstern which appears in the current issue of Human Events. I commend this very interesting article to all Members:

ON POLITICAL MORALITY

(By George Morgenstern)

I

"Character," said Thomas Paine in *The Crisis*, "is much easier kept than recovered."

The profound simplicity and truth of this observation will appeal to the more sensitive of the citizenry who watch with trepidation the present tortured struggles of the Republic. On every hand the cry is for elevation of the moral plane of government, for a rediscovery of ethics to meet the moral crisis of our political life, for the creation of a commission of ethics in the Federal Government, or for the enunciation of a congressional ten commandments. Every second Senator has possessed himself of an old suit of armor and is busy shining it up in order to parade his superior pretensions to virtue before his fellows and the public. Even Mr. Truman has come forward in the

role of moral monitor. The accusing finger is invariably pointed at the next fellow.

The most resounding breast-beating comes from the President and members of his party, for the evident reason that the rascals who get turned out are necessarily those that are in. Temptation assails the party in power because it possesses motive, means, and opportunity. These are the conditions prerequisite to successful crime. The motive is political or financial profit, or both. The means consist of command of the easy money and of influence to turn the desired trick. The opportunity resides in a position of dominant political power, which has not been successfully challenged in almost 20 years.

Thus, widespread evidence of crookedness and corruption has accumulated against the administration. It encompasses the Reconstruction Finance Corporation, the Bureau of Internal Revenue, the Democratic National Committee, numerous other officials and agencies of Government and the White House itself.

II

Mr. Truman and his party associates, although morally calloused by long apprenticeship in the tutorial school of the late Pendergast and its Chicago, New York, and lesser branches, suffer an understandable anxiety. It cannot be called embarrassment, for that feeling is not possible in a climate of total moral imperviousness, the distinguishing characteristic of the present era of grafters. Even a Fall and a Daugherty were not entirely lacking in a sense of shame, and a Denby though innocent of wrongdoing, could die of a broken heart when scandal touched his office. Today, when somebody is caught, the rejoinder is, "I didn't do nothin' illegal, and, if I did, prove it."

So Mr. Truman, after his national chairman finds himself in hot water, his departments, bureaus, and agencies are caught in cahoots with crooks, and his family fortunes and the fortunes of his hand-picked candidate in the crooked Jackson County Democratic primary of 1946 are improved by the judicious locating of a military air base, thinks that it would be salutary if politicians disclosed their incomes each year.

"Attempts," he says, "have been made through implication and innuendo, and by exaggeration and distortion of the facts in a few cases, to create the impression that graft and corruption are running rampant through the whole Government. . . . I am told that people all around the country are getting a mistaken and distorted impression that the Government is full of evildoers, full of men and women with low standards of morality, full of people who are lining their own pockets and disregarding the public interest. This is a terrible distortion of the real facts about our Government."

Compare that with the statement of President Coolidge on Teapot Dome, January 26, 1925: "If there has been any crime it must be prosecuted. If there has been any property of the United States illegally transferred or leased it must be recovered. . . . Counsel will be instructed to prosecute these cases in the courts so that if there is any guilt it will be punished, if there is any civil liability it will be enforced; if there is any fraud, it will be revealed; and if there are any contracts that are illegal, they will be canceled. Every law will be enforced, and every right of the people and the Government protected."

Mr. Truman obviously feels that justice, honesty, and decency are beside the point. He feels that attack is the best defense. White House aides, furnishing copies of the message to reporters before it was read at the Capitol, obviously were delighted, we are informed, with the President's political strategy.

III

On the same day that Mr. Truman demonstrated this subtle sense of strategy, Sena-

for WILLIAM BENTON, of Connecticut, former partner of the inefable Chester Bowles in the allied huckstering arts of advertising and ballyhoo, presented himself before a stacked subcommittee to call for the expulsion of Senator JOSEPH R. McCARTHY, of Wisconsin. Mr. BENTON had qualified himself as an expositor of moral standards in Government in the receptive columns of the New York Times Magazine, issue of August 12, wherein he registered well-simulated indignation over Senator McCARTHY's efforts to obtain something approximating an investigation of charges that various people in and about the State Department were not unsympathetic to the Communist cause.

Mr. McCARTHY, who used to fire a machine gun out of the tail end of a Marine Corps plane, has a positive gift for upsetting the sensibilities of Communists, members of the Truman persuasion, and refined intellectuals not above sharing martinis and scones with the first two classes. Besides, he had had a part in giving dear old Millard Tydings the dear old heave ho in Maryland. The very mention of McCarthyism will cause a legion of editorial writers in a hundred scattered Fair Deal riosques to start beating out standardized denunciations.

To give Mr. McCARTHY his due, he is somewhat rough in his approach, but he fought his country's enemies in one war and he is fighting those he conceives to be its enemies now, and it is not a job to be undertaken wearing a velvet suit and a Buster Brown collar. The Senator has the belief that Communists are rather more dangerous even than crooks in government, and that neither would be tolerated unless fared by a moral corrosion in high places.

Mr. BENTON, pursuing the Truman line that aggressive action may at least result in a blocked kick, offered a brief against Mr. McCARTHY founded on the premise that although there may be nothing necessarily wrong about Communists, or those who protect Communists, or those who, consciously or unconsciously, play the Communists' game, there is everything wrong about Senators who are so indelicate as to discuss these matters. Mr. BENTON is most righteous in his posture, but the public is not informed what Sunday-school medals he is entitled to wear. All that appears in the record is that, in his advertising days, he fostered a large number of radio operas occasioning a vast corruption of the public taste, and that as a promoter of piped-in music and encyclopedia sets he added to a very large fortune, most of it accumulated before he began imposing the present tax rates on his fellow citizens.

The activities of Mr. Truman and Mr. BENTON demonstrates a very real concern over the issue of morals now before the country. They have adopted the standard legal maxim, "If you have no case, abuse the prosecuting attorney." By this device, the defendant seeks to convey the illusion that he is the plaintiff.

It may work, but only if the people forget the maxims laid down by that great master of the moral law, Mr. Roosevelt. On February 24, 1932, long before his \$200,000 telephone conversation with the late John Hartford, Mr. Roosevelt delivered himself of various dicta in reference to the removal of Thomas A. Farley as sheriff of New York County.

"Passive acquiescence by unthinking people in the actions of those who shrewdly turn to personal advantage the opportunities offered by public office," said he, "is out of step with modern ideals of government and with political morality. Such personal gain is not to be excused because it is accompanied by the respondent's popularity of person and great public generosity. Public office should inspire private financial integrity. . . . The State must expect compliance with these standards because if

popular government is to continue to exist it must in such matters hold its stewards to a stern and uncompromising rectitude. It must be a just but a jealous master. Public office means serving the public and nobody else."

IV

Mr. Roosevelt could hardly have expressed the indicated sentiments better, and it is a pity that he and his clan did not keep them sufficiently in mind to restrain themselves from commercializing the White House as never before. One phrase in particular stands out: the thought that the venal conduct of officeholders is in no wise extenuated by displays of public generosity.

When one contemplates the record of a political succession now extending through its fifth term in office, the thought inescapably occurs that no voting segment useful to the formation of a majority amalgam has been neglected in the distribution of favors. The administration has paid the people a commission for the privilege of robbing them, and to date both sides seem satisfied. This is the really terrible consequence of the decay of political morals. The victim has been corrupted by the victimizer.

As Paine remarked, virtue is more easily kept than recovered. If it has been lost, it is because the people have forgotten that the politician is their natural enemy. Of all evils, according to Cicero, ambition and the disputes to public posts are the most deplorable. The man who seeks position, power, and privilege will promise anything and stop at nothing to attain his desire. Once installed, he will defend his advantage with every blandishment and bribe which the people themselves have placed within his reach.

GOP Must Fashion Program in Interest of All Americans

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following editorial which appeared in the Morning Herald of Hagerstown, Md., on October 16, 1951:

GOP MUST FASHION PROGRAM IN INTEREST OF ALL AMERICANS

Any American who wants his democracy to flourish must wish for the continued health of at least two major political parties. For if he has only one, that great lever of the democratic system—the right to choose among alternatives—is missing.

Consequently, whether you are a Republican or a Democrat, you ought to be troubled about what might happen to the Republican Party should it go much longer without winning the White House in a national election. Power is life-giving sustenance to a political organization; and the GOP has not held supreme power since 1932.

Thomas Jefferson was a stout believer in the idea of rotation in office. After him the notion developed strongly that it was wise to change the leaders of government from time to time. The fear was that men who held power too long grew lax and irresponsible and corrupt. Occasionally, the unfolding of American history provided evidence in striking support of this philosophy.

It is furnishing that kind of evidence right now. A Democratic administration nearly

20 years in control of the White House is pockmarked with corruption. The RFC, the Internal Revenue Bureau, the Federal Power Commission, these may be but samples of the full story. The concept of honor in the public service is sadly frayed and torn.

Unquestionably a feeling of revulsion against scandal and confusion grips many Americans. Probably a good share of them would like a change. This would seem to be the moment, above all, for the Jeffersonian doctrine of rotation to come into play, for the good of Republicans and Democrats alike.

Yet the Republican Party can have no guaranty that it will ride back to power on this wave of revulsion. It may, but again it may not. The rules of modern political life are not so simple as "throw the rascals out." In the early 1920's, the GOP itself was rocked by the Teapot Dome scandal, an affair easily dwarfing in magnitude the messy doings of today's Democratic regime. But the Republicans were resoundingly reelected in 1924.

The point is that elections are decided by a variety of factors. To rely wholly on your adversary's shortcomings is risky, they may not finally be dominant in the voters' minds.

In short, the Republicans, as has been said many a time, cannot count on winning with a purely negative approach. They must have a program—a program for all elements of the American population. It need not be a plan for appeasing everybody with Government hand-outs. But it must be one which will appeal to Americans in every walk of life as genuinely in their interest.

Public opinion polls offer the GOP no encouragement that it has yet devised such a program. Too many people still regard the Republican Party as the advocate of the rich and the privileged. It has a hard fight to overcome this popular notion, and it can only do it with solidly fashioned weapons.

Time is running fast. American voters hitherto have shown themselves impatient of popular programs whipped up for election years only. As a service to their own cause and to the Nation, the Republicans should lose no moment in preparing their party for the kind of positive, purposeful, and normal Government the people yearn for.

A Timely Statement on Current World Conditions

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following statement from one of my constituents, Mr. Eugene P. O'Grady, wherein he has given serious thought to and ably analyzed current world conditions, and I consider his observations well worth perusal:

Amid the turmoil and confusion of a world madly preparing for another world holocaust of even greater proportions than either the First or Second World Wars, or the results of both combined, there is ever that unanswered question piercing the heavens, the hearts, and the minds of men, "have all the peoples of the world gone mad?"

Today all mankind is divided into two armed camps, bent upon annihilation. Factories are working overtime in all countries beating plowshares into weapons of destruction; the best minds and genius of man are working around the clock, planning and

designing new weapons of war far more destructive and devastating than any we have invented or used in the past; slaving, as it were, against the time when the zero hour will come upon the human race and the inevitable disintegration of civilization will have arrived.

While this maddening race is on, the common people of the world shudder with the fear of what the consequences shall be, the suffering and death, and they try in wonderment to answer that question racking their hearts and minds—why? Yes, why this suicidal race by a supposedly enlightened and civilized world? And, the answer that comes thundering back, "The wages of sin is death." The world refuses to obey God's eternal law.

Within the hearts of all mankind is embedded a belief that man is subject to a spiritual or divine power, that is truth and right, that controls and operates this universe and everything within it. Consequently, it follows that there must be a right side to all these vexed questions that have brought the human family to such a state of mind that hope seems crushed for a peaceable solution. That which is opposed to the right side must logically be the wrong side so that we might arrive at a right or wrong answer to our question depending upon whatever promise we use in seeking a solution. It would further follow that a division of mankind would place it within two categories, the right and the wrong, and an analysis of the philosophies emanating from these two categories should prove interesting.

First. There are the governments and people who refuse to acknowledge a supreme or spiritual relationship. It is their philosophy that they are supreme within themselves, that the code of laws is established upon the principle that might makes right, that citizens are slaves of the state, that man is not immortal, that recognition of divine or spiritual leadership is superstition, that man is a machine to be used as dictators order; that rights of the individual are subject only to material power, that love of neighbor is foolish and that your neighbor's property belongs to him only as long as he is able to hold it by superior force. Such is a brief sketch of an atheistic government and her people, such is the philosophy of Russia and her satellite states.

Second. There are the governments and people that recognize a divine relationship between God and man. It is their philosophy that man is a creature of a spiritual power that rules the universe, that all men are children of God; they believe that the code of laws given by God to Moses should be the basis for all world governments and peoples, they believe that love of neighbor is next to the love of God, and that in all relationships in this world, man, being a child of God, in his faith in a supreme being, is in direct contrast to the atheistic tenets of Russia and her satellite states. It is further believed by these governments and people that every man has a soul that will not die and which God has, in His goodness, given to man that he might become a part of His eternal kingdom—which is again in contrast to the philosophy of the atheistic governments that man is a machine without a soul, without a relationship between himself and God, and that existence ceases for him with death as it does in the animal kingdom. Such is the philosophy of the governments and peoples who align themselves against Russia and her satellite states.

Without delving into the various proofs of a divine power and basing our discourse upon the dictates of man's conscience, we would, after analyzing the foregoing philosophies, have to place the philosophy of those believing in a divine power on the right side and those believing in the philosophy of the atheistic governments on the wrong side.

I would venture to state at this point that 95 percent of the people of the world would feel insulted if you were to place them among those on the wrong side as we see it in our relationship to a divine or spiritual power.

Now taking the above analysis as being correct and recognizing that the vast majority of the world's inhabitants believe in the supremacy of a divine power, why should we fear a world catastrophe or a third world war? If God created this universe, and everything within it, if He gave a code of laws to follow in operating our Governments and our peoples, if He holds the power to win or to lose in the palm of His hand, then why should we be afraid of the outcome were we to become engaged in a world conflict?

Perhaps we fail to obey God's laws. Perhaps we who claim to be on the right side are hypocritical in our expressions of belief and weak in our faith in that divine power which may bring to us much suffering and death as a just punishment for our unfaithfulness in obedience to His laws. Since we are not Simon pure, we should expect to pay in atonement for our disobedience and lack of faith.

But in our acknowledgement of God's supremacy, even if our effort is mediocre, we still can rely upon our all-powerful Creator to help us crush the enemy whose sole purpose is to blot out the light of Heaven from our world.

However, we cannot expect, though we be on the right side, that God is going to perform a miracle in our behalf. We, the governments and peoples on the right side, must make a sacrifice, for nothing worth while is ever obtained without sacrifice. We must be materially prepared to meet the foe. We must have an ample supply of material forces to meet the enemy and engage him in his own method of warfare. And, when I say, "we," I mean all governments and peoples who have aligned themselves against Russia and her satellite states. To materially prepare our side will demand great expenditures in money and supplies from our own Nation. But to guarantee our way of life, the sacrifice must be made. Generations yet unborn need our sacrifices now to protect them against the slavery to which they would become heirs if we are negligent in our defense of freedom. Our dollars and our blood are not too much, if necessary, to pay for victory against such a damnable enemy.

Above and beyond the material forces we must have today in order to banish fear, crush our enemies in short order, and bring all our people to a firm belief in a Divine Power, we need dynamic leadership. Leadership with faith, with courage, with trust in God, and with the will to make an honest effort to apply God's laws to man. That then is the right side, the winning side.

Constantine did not fear the onrushing hordes of the barbarian foe when he beheld that symbol of man's redemption, the Cross, in the morning sunlight. And with that immortal slogan, "In this sign, you shall conquer," he led his armies into battle and won a glorious victory. In the eleventh century, the High King of Ireland, raising a crucifix before his troops, bade them drive the invading Norsemen out of Ireland. Before sundown that day, he had won a great victory, with the enemy crushed and fleeing from his native land.

Nor should we forget the immortal Joan of Arc leading the people of France to victory, proving, if proof is necessary, that on the right side is God, the Author, the Creator, the Divine Power that rules the universe, and that in every age, those who put their trust in Him were never disappointed. Christ said, "Fear ye not them that kill the body, and are not able to kill the soul" (Matthew 10: 28).

The philosophy of Russia and her satellite states would deprive man of a soul, would place man on a plane with the dogs in our streets. Yet, we enlightened citizens of the world who recognize and believe in an omnipotent God, who consider ourselves His children, have so little faith that we have to deal and even surrender ourselves to some of the policies enunciated by those atheistic governments. We should bow our heads in shame.

Why not now, even at this late hour, have the courage to proclaim by formal pronouncement our policies and principles on the side of right, on the side of God, on the side of justice, on the side of equality for all men, on the side of law as given to man by our Creator—then, go forth with such a proposition supported wholeheartedly by the United Nations who stand on the right side to a weary world. The enemy will crumble, as enemies of God and man always crumble when faced by a force on whose banner is emblazoned in golden letters, "Love of God and love of neighbor," and peace—yes, a real and lasting peace—will be ours because it will be a peace patterned upon God's eternal law.

Integration of Migrant Farm-Worker Families Into Community Life

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the August 1951 issue of the Labor Information Bulletin published by the United States Department of Labor. It describes the success of the city of Hollandale, Minn., in integrating migrant farm-worker families into the community life.

I believe this article will be of interest to my colleagues, and I believe it is a real tribute to the men and women of Hollandale.

There being no objection, the article was ordered to be printed in the RECORD, as follows.

MIGRANT WORKERS FIND BETTER WORLD IN MINNESOTA TOWN—HOLLANDALE CITIZENS JOIN TO AID CHILDREN AND PARENTS

Things are looking up this year for the 800 migrant farm-worker families who annually help gather the crops around Hollandale, Minn.

All groups in the community of 355 persons—school officials, church leaders, growers, farm worker recruiters, and other citizens—have joined together to see that school-age children of the migrant workers are not employed during school hours, as required under regulations of the Federal wage-and-hour law, and that they actually attend school.

In May of this year, the State department of health sent a mobile X-ray unit to Hollandale and examined both migrant and local children and adults.

NEW STATE BILL

Under a bill introduced in the Minnesota State Legislature by State Senator Earl L. Engbritson, who resides in Hollandale, the State board of health is authorized to regulate the construction and maintenance of equipment insofar as they concern sanitary

conditions in the migrant-labor camps. The bill was approved in April of this year by the Governor.

Hollandale is surrounded by an extensive area of intensive farming. Potatoes, cabbage, onions, and asparagus are the major crops. Sugar beets and spinach are also grown. During the agricultural season, which extends from June to early November, the 800 migrant families more than double Hollandale's population. Most of them come from Texas and are of Mexican origin.

Few of the children in these families attended school. They worked in the fields instead. Housing was poor and sanitary facilities in many cases nonexistent.

During the 1950 season investigators of the Department of Labor's Wage and Hour Division, with the help of Minnesota State labor-law inspectors, launched an educational program to get the cooperation of school officials, church groups, growers, and those who recruited labor for the growers in providing school facilities for the migrant children—and seeing that they attended school. The Fair Labor Standards (Wage-Hour) Act provides that no one under 16 years of age may be employed at agricultural jobs during school hours by a producer who ships directly or indirectly in interstate commerce.

GROWING INTEREST

At first the community was resistant to the idea of taking migrant children into school, but increasing insight into the many problems that beset the migrants has resulted in a growing interest in these families and a local action program to help work out answers to their problems. School officials made plans for them. One minister urged more than 100 growers in his congregation to tell the migratory workers that their children should be in school. In another church attended by many of the migrants, the priest gave his congregation the same information.

REMAINED THROUGH WINTER

During last winter several families from Texas, whose earnings had been very low because of poor crops, stayed on in Hollandale. The 25 children in these families continued to attend school. The small amounts charged for school lunches were provided by donations from churches, the parent-teacher association, and other groups. The families were supported by public funds.

Then, this spring, one local grower, who recruits in Texas for himself as well as for other growers, prepared contracts in Spanish for the workers to sign. These contracts included a clause informing the workers of the Minnesota school-attendance law. Another clause explained the Federal minimum-age provision.

Copies of these contracts were left with the Texas State Employment Service offices. Families migrating to Hollandale were told to bring birth certificates and school records of their school-age children.

Early in May, representatives of the Department of Labor's Wage and Hour Division and the Bureau of Labor Standards, as well as representatives of the Minnesota State Industrial Commission, visited Hollandale. They found 65 migrant-family children in the Hollandale elementary and high school that day, though the influx of workers from Texas had just begun. They expected an enrollment of not less than 120 before the end of the school year. The principal of another school was preparing to take in children from other districts where space was lacking.

The investigators were agreed that things were looking up, particularly for the migrant children, and they believe that what Hollandale is doing, and what its citizens plan to do, can be adapted to thousands of like communities throughout the Nation.

The William B. Bankhead National Forest Is a Great National Asset From Which the People of the United States Are Receiving Big Returns; the People of the Seventh Congressional District of Alabama Enjoy Many Local Benefits From This Forest

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. ELLIOTT. Mr. Speaker, a Presidential proclamation on January 15, 1913, created what is today the William B. Bankhead National Forest, located in parts of Franklin, Winston, and Lawrence Counties in Alabama.

When he issued the proclamation, President Woodrow Wilson named the area of 198,426 acres of land the Alabama National Forest.

Eighteen years later on June 19, 1936, President Franklin D. Roosevelt signed another proclamation increasing the boundaries of the forest to include 560,604 acres, and changing the name from Alabama National Forest to the Black Warrior National Forest.

In June 1942, legislation enacted by Congress changed the name of the forest once again. This time it was designated as the William B. Bankhead National Forest, named in honor of William B. Bankhead, who had for many years before his death on September 15, 1940, represented the Seventh Congressional District of Alabama which I now have the honor to represent in Congress. Approximately one-half of the forest is located in this district.

Mountainous in its topography, the William B. Bankhead Forest is typical of the Southern Appalachian Highlands. It is composed of mixed pine and hardwood, to which efficient methods of fire protection and planned management measures are being applied.

Within the boundaries of the forest the Government actually owns 178,184 acres of the total 560,604. Located in the Seventh Congressional District are 88,921 acres of the Government-owned property, or 139 square miles.

NATIVE WILDLIFE DEVELOPMENT IN THE FOREST

With its abundant streams and plentiful food supply, the forest is an ideal breeding ground for native wildlife. This fact was recognized early in the history of the forest, bringing about establishment of the 16,000-acre Sipsey River Game Refuge. A deer herd of 100 was released, and since then the deer have multiplied rapidly.

In 1938 this game refuge was expanded to 98,800 acres by a cooperative arrangement between the United States Forest Service and the State Conservation Department of Alabama. A full-time game warden protects the increasing wildlife population. The area has been posted and improvements constructed to aid in the proper management of the refuge.

HUNTING, FISHING, AND PUBLIC RECREATION IN THE FOREST

Recognition is given the fact that if the number of wild animals grows so large as to cause a food shortage, unhealthy animals will be the result. Thus hunting is permitted in order to provide control over the size of the wildlife population.

Annual hunts are held under the control and direction of the United States Forest Service and the Department of Conservation of Alabama. Hunters are governed by State laws, and by hunt rules designed for the protection of the hunter and the game.

In 1938 a dam was constructed across Owl Creek in the forest, thereby creating an artificial lake of approximately 40 acres. Known as Brushy Lake, it is located about 4 miles northeast of Moreland near the center of the forest. It was built as a part of the program of the Civilian Conservation Corps which was functioning then.

Brushy Lake has been stocked with game fish, and year round fishing is permitted, subject to State laws, upon payment of a nominal fee to defray the cost of management of the lake. A swimming area is also provided. Many people visit the lake during the summer months to enjoy the opportunities for fishing, swimming, and picnicking.

SIPSEY RIVER RECREATIONAL AREA

Another outstanding feature of the forest is the Sipsey River recreational area located on the Sipsey River at a point where it is crossed by the Cranial Road. Picnic tables, shelters, and outdoor fireplaces have been provided for the convenience of those who enjoy picnicking under beautiful primitive forest conditions. Several thousand persons visit this area each year.

ROADS AND TRAILS IN THE FOREST

A well-planned road and trail system prevails throughout the forest. It is maintained to permit year round travel in connection with management of the forest. Ten percent of the gross income from the forest is spent for road work within the forest area.

ADMINISTRATION OF THE FOREST

The forest area is under direct supervision of a district forest ranger with headquarters at Haleyville, Ala. Excellent fire look-out towers have been erected. Telephone lines stretch over 100 miles to provide prompt communication with fire-fighting crews. These crews are equipped with tools and food supplies to enable them to stay on the job until a fire is put out. During dry seasons, lookouts watch night and day for the start of a fire in order that immediate dispatch of a fire-fighting crew may be made.

Many buildings have been constructed in connection with development of the forest. Some of the more important buildings are located at the administrative site at Central Tower on the Cheatham Highway, south of Moulton, Ala.; the Turkey Foot game warden dwelling on the Sipsey River; and dwellings and other buildings at Basham, Black Pond, Moreland, Kinlock Towers, and at Grayson.

All of Alabama's national forests, the William B. Bankhead, the Talladega, and the Conecuh, are supervised by Mr. C. F. Burnham, with offices in Montgomery, Ala. All of these forests are located in region 8 of the operations of the United States Forest Service. Mr. Charles A. Connaughton, with headquarters in Atlanta, Ga., is regional forester for region 8. The United States Forest Service has jurisdiction over all national forests. It is a part of the United States Department of Agriculture, and is headed by the Honorable Lyle F. Watts, as Chief, with offices in Washington, D. C.

INVESTMENT OF THE PEOPLE OF THE UNITED STATES IN THE WILLIAM B. BANKHEAD NATIONAL FOREST

Everybody in the United States has an investment in the William B. Bankhead National Forest.

Since establishment of the forest 34 years ago, a total of \$2,089,120.86 of Federal Government funds has been spent in maintaining the area. The money has gone toward forest improvements, such as purchase of land and timber, tree planting, road construction, recreational facilities, communications, guard dwellings and other buildings, fire towers, warehouses, and shops.

It is interesting to note that the average price paid by the Government for land it has bought for the forest was \$4.66 per acre.

Equally as interesting is the fact that over half the total investment has been spent on roads in order to make the forest accessible for purposes of administration, for logging and sale of lumber, and for the use of people who desire to use the area for recreational purposes.

Statistics show that 10 percent of the gross returns from timber sales is expended on road work within the forest. Since 1937, the year in which timber sales started, the Government has, under this provision, expended \$95,845.77 on the forest roads.

RETURNS ON THE INVESTMENT

The people have received something in return for their investment in the William B. Bankhead National Forest.

The Government has sold, through the United States Department of Agriculture, \$905,926.93 worth of timber. In addition, it has collected, as a part of the purchase price of timber sold, \$128,019.73 for what is called "betterment" of the area from which the timber is cut.

"Betterment" funds are used by the Government to pay the cost of planting new trees and removing undesirable trees or other growth on the land where trees are cut for sale. To do this work the United States Forest Service hires local labor, thus contributing to the support of the people who live in the forest area.

However, if we disregard entirely the income of \$128,019.73 paid by timber purchasers for betterment of the land from which they cut their timber, the stumpage value of the timber sold—\$905,926.93—equals a total return to date of 43 percent. Average returns on the money

invested for the past 3 years have been 9 percent annually. I do not know of many better investments.

RETURNS TO STATE

The State of Alabama also shares in the returns from the forest. The law provides that 25 percent of the proceeds of timber sales be paid to the State. Since tree cutting began in the forest, the Federal Government has paid the State of Alabama a total of \$239,614.43 under this provision.

Based upon location of the timber, \$2,202.13 of this return has come from timber sold from that portion of the forest lying in Franklin County, \$120,095.46 from sales from the part in Lawrence County, and \$117,316.94 coming from timber sold in Winston County's share of the forest.

LOCAL EMPLOYMENT

The William B. Bankhead National Forest provides an excellent source of local employment.

The United States Forest Service has 19 full-time employees and 31 part-time employees, the latter averaging 10 months employment annually.

The Clancy Lumber Co., a large sawmill at Grayson, Ala., in the center of the forest, is engaged in cutting national forest timber on a large part of the area. This operation is planned on a long-range basis, designed to harvest the mature timber and place the forest in the best condition for continued growth.

Clancy Lumber Co. operations account for approximately 230 employees. One hundred and ten of these work in and about the operation at Grayson, and 120 are employed by the company's timber contractors or woodsmen.

Numerous other smaller sales to private operators are made from time to time, and it is estimated that at the present, these lumber production firms afford employment to approximately 85 additional persons.

The game management area furnishes employment for 3 State game wardens full-time and 3 part-time. In addition, some 18 farmers have agreements with the United States Forest Service which allow them to put small portions of the forest to agricultural use.

Therefore, we are justified in saying that, at the present time, the William B. Bankhead National Forest accounts for the employment of approximately 350 people, and in all its operations has the effect of being, within itself, one of the largest industries in the entire area.

REMAINING VALUE OF THIS NATIONAL ASSET

Significant conclusions can be drawn from a study of the Bankhead National Forest.

Approximately \$2,000,000 has been invested in the forest, with almost \$1,000,000 of this already returned. One-quarter of a million dollars has been paid to the State of Alabama.

Operation of the forest furnishes employment to 350 people of the vicinity.

However, this is not the full story, because the land itself, since its purchase

by the United States Forest Service, has increased in value from year to year like everything else. My estimate is that this land, excluding merchantable timber, is worth more than the entire amount which the Government has invested in it.

But, regardless of the value of the land itself, the forest now has approximately seven and one-half million dollars worth of saw timber and pulpwood.

To state the matter in another way, all the people of the United States own, as a national asset, the William B. Bankhead National Forest which cost \$2,000,000. Nearly \$1,000,000 has been returned. The asset is worth, not counting the value of the 178,184 acres of land about \$7,500,000.

Of the 178,184 acres owned by the Government in the three counties, about one-half lies within the Seventh Congressional District of Alabama. Besides this, the Seventh District embodies 701 square miles of proclaimed forest area. I think it might reasonably be expected that the future growth of Government land ownership in this proclaimed forest area will occur largely within the Seventh Congressional District.

Mr. Speaker, under leave to extend my remarks, I include the following letters and documents, which chiefly comprise the sources for my remarks about the William B. Bankhead National Forest.

First. My letter of May 30, 1951, to Mr. C. M. Granger, Assistant Chief, National Forest Division, Forest Service, United States Department of Agriculture, dated May 30, 1951;

Second. Reply to foregoing letter, by Hon. Lyle F. Watts, Chief, United States Forest Service, dated June 4, 1951.

Third. Letter from Mr. Charles A. Connaughton, Regional Forester, Southern Region, dated July 6, 1951, to which is attached a report on the William B. Bankhead National Forest, and a tract styled "The Alabama National Forests," and another styled "William B. Bankhead National Forest."

Fourth. My letter of July 17, 1951, propounding additional inquiries to Mr. Charles A. Connaughton, Regional Forester.

Fifth. His answer to the foregoing letter, dated August 20, 1951.

MAY 30, 1951.

MR. C. M. GRANGER,
Assistant Chief, National Forest Division,
Forest Service, Department of Agriculture.

DEAR MR. GRANGER: I am engaged in an intensive study of the William B. Bankhead National Forest in northern Alabama, and would appreciate your sending me information to answer the following questions, at your convenience:

1. How many square miles, how many acres of the Seventh Congressional District of Alabama are in the William B. Bankhead National Forest?

2. Are lands presently being acquired in the Seventh District for addition to the William B. Bankhead National Forest, and if so, at what yearly rate and under what laws?

3. What is the value of all merchantable timber in the Seventh District portion of the William B. Bankhead National Forest?

4. How much value is added each year by natural growth?

5. What is the total investment the United States has in the William B. Bankhead National Forest? Please include the investment in everything, including land, timber, telephones, fire towers, roads, and recreational facilities.

6. What is the value of the timber sold from the forest since its establishment? Please list sales for each fiscal or calendar year.

7. Please send me a general history of this forest if one is available.

Thanking you for supplying this information, and with kindest regards, I am
Sincerely yours,

CARL ELLIOTT.

UNITED STATES DEPARTMENT
OF AGRICULTURE,
FOREST SERVICE,
Washington, June 4, 1951.

HON. CARL ELLIOTT,
House of Representatives.

DEAR MR. ELLIOTT: Reference is made to your letter of May 30.

Much of the detailed information which you desire is not readily available here and therefore it is necessary to ask the Regional Forester at Atlanta to assemble the data. Some searching of the records will be necessary in order to complete the report, but I am sure the work will be done as expeditiously as possible.

In order to avoid any unnecessary delay we are asking the Regional Forester to send the information directly to you, with a copy to this office.

Sincerely yours,

LYLE F. WATTS, Chief.
By C. M. GRANGER.

UNITED STATES DEPARTMENT
OF AGRICULTURE,
FOREST SERVICE, SOUTHERN REGION,
Atlanta, Ga., July 6, 1951.

HON. CARL ELLIOTT,
House of Representatives,
Washington, D. C.

DEAR MR. ELLIOTT: Reference is made to your request for information regarding the Bankhead National Forest.

C. F. Burnham, forest supervisor at Montgomery, Ala., assembled the information which is attached. I have reviewed the supervisor's report and feel that it will give you the information you desire. I would like to call your attention to the value figures for the standing timber and value of the annual growth. As pointed out in the report, these were derived by applying unit rates received for stumpage in relatively small, short-term sales during fiscal year 1951. Not knowing the use you plan to make of these figures, I have no suggestion for revising them, but 1951 stumpage rates are probably too high for use as a base in determining investment values.

If we can be of further assistance in this matter, please feel free to call on us.

Very sincerely yours,

CHAS. A. CONNAUGHTON,
Regional Forester.

REPORT ON WILLIAM B. BANKHEAD NATIONAL FOREST

1. The tabulation below shows the acreage for both the William B. Bankhead National Forest and the Seventh Congressional District portion of the forest. The gross acreage represents the total area within the forest boundary as set by Presidential proclamation and the net acreage is that owned by the Federal Government.

	Seventh Congressional District		William B. Bankhead National Forest	
	Gross	Net	Gross	Net
Acres.....	448,841	88,921	500,004	178,184
Square miles.....	701	139	876	278

2 Because of presently high land values and decreased appropriations, there has been no acquisition on the William B. Bankhead by purchase since fiscal year 1941. Acquisition of desirable tracts by exchange of national forest land or timber for privately owned lands under the General Exchange Act of March 20, 1922 and the Weeks Law Exchange Act of March 3, 1925, is contemplated for the present.

From July 5, 1913, when public lands in this area were withdrawn from entry (the Alabama National Forest, now the William B. Bankhead National Forest was proclaimed as a national forest on January 15, 1918), through fiscal year 1939, lands were acquired in the William B. Bankhead Forest from the following sources:

Source	Seventh Congressional District	William B. Bankhead National Forest
	Acres	Acres
Public domain.....	8,876	21,872
Purchase, Weeks law (act of Mar. 1, 1911) (36 Stat. 981), as amended.....	79,761	151,891
Donation.....		40
Total.....	88,637	178,703

Acquisition and source by fiscal years, 1940 to date

	Seventh Congressional District	William B. Bankhead National Forest
1940: Weeks law purchase.....	109	1,166
1941: Weeks law purchase.....	80	80
1942: Dropped.....	132	48
1943-50, inclusive: No acquisition.....		
1951: Exchange.....	127	127
Total to date.....	88,921	178,184

¹ Dropped because of insufficient title.
² 159 acres acquired in exchange for 32 acres national forest land or a net increase of 127 acres

3. The volume and value of the timber on the Seventh Congressional District portion of

the forest and the William J. Bankhead National Forest, as a whole, is as follows:

	Seventh Congressional District		William B. Bankhead National Forest	
	Volume	Value ¹	Volume	Value ¹
Saw timber.....	247,667	\$3,292,565.67	543,522	\$7,156,163.10
Pulpwood.....	97,800	146,700.00	200,000	300,000.00

¹ Value of timber is based on the average rate per unit paid by purchasers for timber cut during fiscal year 1951.
² M board feet.
³ Cords.

4. Each year approximately 108 board feet per acre is added to the growing stock through new growth, which at the current average value per million board feet would equal \$255,368 on the forest as a whole and \$127,432 on the Seventh Congressional District portion of the forest. In addition, it is estimated that stands containing timber of pulpwood size are producing a total additional volume of 5,000 cords annually having a value of \$7,500 for the forest as a whole, half of which is in the Seventh Congressional District.

5. The present total investment that the United States Government has in the William B. Bankhead National Forest is itemized as follows:

Land and timber.....	\$728,209.78
Tree planting.....	38,210.00

¹ No investment value is assigned to acquisitions from public domain to donations. The investment in land and timber was determined by applying the average purchase price of \$4.68 per acre to the 156,185 acres purchased.

Roads.....	\$1,126,750.49
Recreational facilities.....	127,201.55
Guard dwellings and buildings.....	30,285.25
Communications.....	23,428.57
Fire towers.....	10,911.87
Warehouses and shops.....	4,117.35

Total investment..... 2,089,120.86

6. The volume and value of the timber actually cut from timber sales is given below. The cut prior to fiscal year 1937 was negligible. Records permitting a breakdown by counties has been maintained only since 1947, therefore volumes and values for the Seventh Congressional District are shown only for fiscal years 1947 to date. Values for stumpage are the gross returns to the United States Treasury. Values shown under sale area betterment represent additional funds collected under the Knutson-Vandenberg Act of June 9, 1930 (46 Stat. 527).

Fiscal year	Seventh Congressional District			William B. Bankhead National Forest		
	Volume, M board feet	Value, stumpage	Value, sale area betterment	Volume, M board feet	Value, stumpage	Value, sale area betterment
1937.....	72	\$430.98				
1938.....	262	1,540.27				
1939.....	798	7,381.01				
1940.....	1,548	4,041.78				
1941.....	2,078	12,263.19				\$224.80
1942.....	910	4,851.83				42.50
1943.....	2,057	20,080.62				545.48
1944.....	7,319	59,235.41				1,405.00
1945.....	4,332	31,062.68				1,808.93
1946.....	4,896	33,250.22				2,381.70
1947.....	6,251	\$34,443.30	\$1,628.42	11,532	63,518.36	3,063.92
1948.....	14,255	86,708.88	12,611.47	17,183	104,030.40	15,090.43
1949.....	12,668	86,380.14	17,764.31	16,822	139,650.92	25,501.38
1950.....	12,096	154,271.36	25,208.27	20,100	245,929.15	40,185.26
1951.....	9,543	107,855.02	22,818.24	17,191	188,361.02	39,850.05
Total.....	56,623	481,748.70	79,980.71	108,220	905,925.93	128,019.73

7. A copy of the historical information sheet on the Alabama National Forests, a part of which describes the William B Bankhead Forest, is attached. Recreation map of the national forests in Alabama is also attached.

THE ALABAMA NATIONAL FORESTS

Forests comprise more than one-half of the total land area of the State of Alabama. These forest areas have played an important role in the development of the State and the Nation. During World War II, when enormous quantities of lumber and other forest products were needed, the Nation turned to the South with its vast timber lands for these materials. The demand for wood products has continued since the war years.

The part which the State of Alabama has played in furnishing these forest products is outstanding. Reliable estimates indicate that more than 9,000,000,000 board feet of lumber were cut in the State during the 5-year period 1944 to 1948, inclusive. This production of lumber is even more remarkable when we realize that essentially all of this material was cut from second growth timber stands. The original forest had long since been cut and used. We were harvesting a second and sometimes a third crop of trees from our forest land. The wartime demand for forest products imposed a drain on the timber resources of Alabama which was considerably in excess of the material being replaced by annual growth. The need for housing and industrial building in the postwar period is making additional demands on our forests. The need for wise planning to restore and improve the forests of Alabama must be apparent to everyone concerned with the continued development and prosperity of our State.

The United States Forest Service is under the direction of its Chief, Lyle F. Watts, Washington, D. C., and the Service as a whole is divided into 10 regions. The southern region in which we are located includes 11 Southern States and is known as region 8. Charles A. Connaughton, with headquarters in Atlanta, Ga., is the regional forester.

The United States Forest Service is dedicated to the task of developing and demonstrating the best methods of managing forest lands. There are three national forests in Alabama with a total Government-owned area of well over a half million acres of land. On these national forests owners and managers of timberland can find answers to many of the problems which are confronting them in growing a crop of trees. Also available on the national forests are facilities for hunting, fishing, swimming, hiking, and other types of outdoor recreation. These facilities have been developed for public use and offer a splendid opportunity for healthful outdoor recreation.

The three national forests in Alabama are the William B Bankhead National Forest in the northern part of the State, the Talladega National Forest in central Alabama, and the Conecuh National Forest in the southern or flatwoods section. All of these areas are administered from a forest supervisor's office located at Montgomery, Ala. A district forest ranger is in charge of each unit or ranger district. The William B. Bankhead and the Conecuh National Forests are each a unit or ranger district in themselves. The Talladega National Forest, due to its large size, is divided into three ranger districts. There follows a brief description and history of the Bankhead National Forest area in Alabama.

WILLIAM B BANKHEAD NATIONAL FOREST— WILLIAM B BANKHEAD RANGER DISTRICT

The William B Bankhead National Forest first came into being as the result of a

Presidential proclamation on January 15, 1918. It was called the Alabama National Forest and existed in Franklin, Lawrence, and Winston Counties. There were 198,426 gross acres within the proclaimed boundary and the area was administered as a part of the Cherokee National Forest with headquarters at Athens, Tenn. On June 19, 1936, President Franklin D. Roosevelt signed a proclamation increasing the gross area to 560,604 acres and changing the name to the Black Warrior National Forest. In June 1942, legislation was enacted by the Congress of the United States changing the name from Black Warrior to William B. Bankhead in honor of one of Alabama's distinguished native sons. As it now stands, the William B Bankhead National Forest has a proclaimed gross area of 560,604 acres, 177,976 acres of which are Government-owned or controlled lands.

The area is under the direct supervision of a district forest ranger with headquarters at Haleyville, Ala. The area is of mountainous topography typical of the southern Appalachian highlands. The forest is composed of mixed pine and hardwood species and is responding in a very satisfactory manner to the fire protection and planned management measures which have been applied.

During the period July 1, 1947, to June 30, 1948, over 17,000,000 board feet of lumber were cut from the forest. This represents the largest annual timber-sales business in the history of the unit. The lumber is harvested by private timbermen who buy the timber from the Government on a stumpage basis. At present, a large sawmill at Grayson, Ala., in the center of the forest is engaged in cutting national forest timber on a large portion of the area. This operation is planned on a long-time basis designed to harvest the mature timber and place the forest in the best condition for continued growth. Numerous smaller sales to private operators have also been made. Plans for the current year call for the cutting of 19,000,000 board feet of timber. This amount of cut is needed to give room to healthy younger trees which are growing for future use. After sale, 25 percent of all gross returns to the Government from these operations is returned to the counties within the forest for their use. During fiscal year 1948 this return to the counties amounted to \$27,806 on the Bankhead National Forest. An additional 10 percent of the gross income is expended by the Forest Service in road work within the counties. The William B Bankhead National Forest is well on the way toward a sustained management basis. This will mean a permanent dependable source of profitable employment to local labor and a substantial monetary return to the counties involved.

The forest affords an ideal breeding ground for native wildlife. The area has abundant food, good cover, and dependable water sources. Soon after the forest was created, the Sipsey River Game Refuge, an area of 16,000 acres, was established and 100 deer were released. This deer herd increased rapidly. In 1938 the Alabama Conservation Department and the United States Forest Service, acting jointly, established a cooperative wildlife management area of 98,800 acres including and surrounding this refuge. A full-time game warden was assigned to the area to protect the increasing wildlife population. The wildlife area has been posted and improvements constructed to make possible the proper management of the refuge. Regulated public hunts for deer, turkey, and squirrel are being held annually. Good game management dictates that periodic hunting must be permitted in order to provide proper control of the size and condition of the wildlife population. If the amount of game increases beyond the point which can be supported by the available food, unhealthy animals result. The annual hunts are administered jointly by the For-

est Service and the State Conservation Department. The hunters are governed by State laws and hunt rules designed to protect the hunter as well as the game.

In 1938, as a part of the CCC program, an artificial lake of approximately 40 acres was created by the construction of a dam on Owl Creek. This lake, known as Brushy Lake, is about 4 miles northeast of Moreland near the center of the forest. The lake has been stocked with game fish and year-round fishing is permitted, subject to State laws, upon the payment of a nominal fee to defray the cost of management. A swimming area has been provided at this lake and many people visit the lake during the summer months to enjoy the fishing, swimming, and picnicking opportunities afforded.

Another point of interest is the Sipsey River recreational area. This area is located on Sipsey River where it is crossed by the Cranial Road. Picnic tables and shelters, as well as outdoor fireplaces, have been provided for the convenience of those who enjoy picnicking under beautiful primitive forest conditions. Several thousand persons visit this area each year.

When the land was acquired by the Federal Government, an organization was assembled to protect the timber from fire. A ranger, guards, and lookout men were employed and trained. Five fire lookout towers have been erected and over 100 miles of telephone line built to provide prompt communication with fire-fighting crews. Crews are equipped with tools and food supplies to enable them to stay on the job until a fire is extinguished. During dry seasons lookouts watch night and day for the start of a fire in order that prompt dispatch of a suppression crew may be made.

A large number of buildings have been constructed in connection with the development of the forest. Some of the more important structures are located at the administrative site at central tower on the Cheatham Highway south of Moulton, Ala.; the Turkey Foot game warden dwelling on the Sipsey River; and dwellings and other buildings at Basham, Black Pond, Moreland, Kinlock Towers, and at Grayson. A well-planned road and trail system has been constructed and is being maintained to permit year-round travel incident to the management of the forest.

JULY 17, 1951.

Mr. CHARLES A. CONNAUGHTON,
Regional Director, United States Department of Agriculture, Forest Service, Atlanta, Ga.

DEAR Mr. CONNAUGHTON: This will acknowledge receipt of your letter of July 6th, enclosing the very excellent information which had been assembled by Mr. C. F. Burnham, forest supervisor at Montgomery, Ala.

There are one or two further questions that I would like to propound to you and they are as follows:

On page 3 you set out some very excellent figures about the forest, but I do not know what the last column of figures "Value Sale Area Betterment" means. For instance, the 1951 figures show "The value sale area betterment" of the William B Bankhead National Forest is \$39,850.05. How is this sale area betterment value measured? What factors are taken into consideration in arriving at this figure? Can I use this figure as being a cash figure, or is it arrived at through some evaluation of intangibles which would require further explanation for my use?

Also, on the mimeograph sheet styled, William B. Bankhead National Forest, there is a statement in the third paragraph as follows: "After sale, 25 percent of all gross returns to the Government from these operations is returned to the counties within the forest for their use."

I would like to have you furnish me with the table of the returns thus made to the counties involved, individually, for the years that you have them available.

In the same paragraph is the statement: "An additional 10 percent of the gross income is expended by the Forest Service in road work within the counties."

Please tell me what amounts under this statement have been going to the counties involved, individually, over the years that you have a record of it.

Also, I would like to know, insofar as it is possible to ascertain, the number of men now receiving employment as a result of this forest being there.

Thanking you, and with kindest regards, I am,

Sincerely yours,

CARL ELLIOTT.

UNITED STATES DEPARTMENT
OF AGRICULTURE,
FOREST SERVICE, SOUTHERN REGION,
Atlanta, Ga., August 20, 1951.

HON. CARL ELLIOTT,
House of Representatives,
Washington, D. C.

DEAR MR. ELLIOTT: Your request of July 17 regarding the information on the Bankhead National Forest previously sent to you on July 6 has been referred to me for reply in the absence of Regional Forester Connaughton.

The last column of figures, "Value sale area betterment," on page 3 of the report on the William B. Bankhead National Forest, are cash deposits made by purchasers of national-forest timber in accordance with the terms of the timber-sale agreements. Those deposits are made in addition to payments for stumpage. Such deposits are covered into the Treasury of the United States as a special fund for paying the cost of (1) planting; (2) sowing with tree seeds; or (3) cutting, destroying, or otherwise removing undesirable trees or other growth, on the national-forest land cut over by the purchaser in order to improve the future stand of timber. As each logging unit is prepared for sale the necessity for sale-area betterment work and its cost are determined by on-the-ground examination of the proposed sale area. When the timber is offered for sale one of the conditions of sale is the deposit of a stipulated sum or sums, in addition to the payments for stumpage, by the purchaser for sale-area betterment work. It is our practice to hire local labor for sale-area betterment work. The sale-area betterment deposits contribute to the support of the local communities.

In reply to the request made in the fifth paragraph of your letter of July 17, 1951, the allocation of the 25-percent fund is not made to the individual counties but to the State. If the allocation were made on the basis of area on the national-forest land in each county, the proration by counties and the total is as follows:

Year	Franklin	Lawrence	Winston	Total Bankhead
1937.....	\$1.49	\$80.82	\$97.18	\$149.20
1938.....	9.91	525.20	455.84	990.95
1939.....	25.32	1,206.24	1,240.92	2,532.48
1940.....	6.37	318.75	312.38	637.50
1941.....	32.19	1,000.40	1,072.22	3,218.81
1942.....	17.46	984.34	959.80	1,961.70
1943.....	71.46	4,026.88	3,928.81	8,027.15
1944.....	87.43	4,026.88	4,906.80	9,021.03
1945.....	82.32	4,638.84	4,527.94	9,249.10
1946.....	78.04	4,397.91	4,262.77	9,708.72
1947.....	129.38	7,290.85	7,116.55	14,536.78
1948.....	247.48	15,946.07	15,612.66	27,806.21
1949.....	342.40	19,248.54	18,851.75	38,459.69
1950.....	508.24	28,650.73	28,001.55	57,170.52
1951.....	562.04	28,127.25	27,564.71	56,254.00
Total.....	2,202.13	120,085.46	117,316.94	239,614.43

¹ Estimated.

In regard to your request in the first paragraph on page 2 of your letter of July 17, 1951, the 10 percent fund is expended by the Forest Service on a State-wide basis for roads on the approved forest development road system without particular reference to ranger district or country boundaries. The amount of the 10 percent fund earned from Bankhead National Forest receipts is as follows:

Year:	Total 10 percent fund, Bankhead
1937.....	\$59.72
1938.....	396.38
1939.....	1,012.99
1940.....	255.00
1941.....	1,287.52
1942.....	784.68
1943.....	3,210.86
1944.....	3,928.41
1945.....	3,699.64
1946.....	3,507.49
1947.....	5,814.71
1948.....	11,122.48
1949.....	15,395.88
1950.....	22,868.21
1951.....	22,501.80
Total.....	95,845.77

¹ Estimated.

The estimated number of men currently receiving employment as a result of the establishment of the Bankhead National Forest is:

	Number of individuals	
	Full time	Part time
Forest Service employees.....	19	31
Clancy Lumber Co.....	230	-----
Other lumber and products firms.....	65	-----
Game management area (State game wardens)	3	3
Farmers with agricultural uses on national forest land.....	18	-----

¹ These employees average 10 months employment per year.

² 110 employees of Clancy Lumber Co. and 120 by the company's contractors.

If we can be of further assistance in this matter, please feel free to call on us.

Very sincerely yours,

CHARLES A. CONNAUGHTON,
Regional Forester
By REZIN E. PIDGEON, Acting.

Mr. Taft States the Case

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 5, 1951

MR. BENDER. Mr. Speaker, no one in the Republican Party is better qualified to state the Republican position on almost every controversial issue before the Nation than "Mr. Republican," Senator ROBERT A. TAFT. His announcement that his hat is in the ring for the Republican Presidential nomination rings as true and clear as everything BOB TAFT has ever done.

Liberty, integrity, and sound judgment are the watchwords of his program. He is opposed to the socialism and excessive Federal spending of the administration

at home. He is ready to wage an all-out attack on the fatal mistakes made by the Truman government in foreign policy, including the Korean war, the build-up of Russia and the faulty judgment of the men who are running the Nation today. He is pledged to the restoration of honesty and integrity in our Government.

Republicans will find millions of Americans lined up solidly behind BOB TAFT in this program. It is clear, it is honest, it is sincere. MR. TAFT has stated the case. Let us win it, not for partisanship, but for America.

What Makes Democracy Worth While?

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

MR. ASPINALL. Mr. Speaker, the real test for the validity of an idea is time—its ability to keep enough support to sustain itself, generation after generation. To no small degree in this day the idea of democracy and individual rights is competing with other ideas for the arrangement of society. Granted that it is extremely difficult for anyone realizing the incomparable attributes of a democratic way to understand how anyone would choose or desire any alternative, we must nonetheless live in a world where the Devil's apostles are finding converts for their theory of a controlled state.

In this regard, I am pleased to call attention to four short essays written by junior and senior students of the Glenwood County High School of Glenwood Springs, Colo. These carefully reasoned articles hold an answer to the question, What makes democracy worth while?

I recommend a reading of these short but expressive essays for they show plainly that American youth has not been fooled, that the idea of democracy has full support from our coming citizens, and that the idea which they, and the rest of us, hold dear shall not perish from the earth.

[From the Glenwood Post of October 11, 1951]

STANDARDS OF FREEDOM JUDGED BY GCHS PUPILS

WHAT MAKES DEMOCRACY WORTH WHILE?
(By Eleanor Graves)

People from all over the world have come to the United States to share in this thing called democracy. Why? What is there about this form of government that makes it so worth while?

In a democracy we, the people, may move about as we please. We may go from our homes to work or to play, wherever we wish, without the constant fear of being seen. We may go to another State without getting official sanction, we secure permission to travel to another country simply by getting a passport. We are not prisoners behind an immovable barrier of a government policy of ignorance.

We who live under a democratic form of government are free to think and to say what

we think. We may use our minds to our own advantage; we may share our thoughts with the entire Nation and with other nations. We may praise or criticize, and do so freely, without representatives of the state accusing us of plotting against it.

Our democracy enables us to be a part of the Government, and we vote for any candidate for a Government office that we choose in the elections. It is important that we take an active part in our Government, because the people are the foundation of democracy. If we are lax in our duties of voting and of keeping ourselves informed as to what our Government and the officials in it are doing, we may lose this democracy and find in its place a Government where the people are controlled by the state rather than being controllers of the state.

I believe there are two definite things that make democracy worth while—the freedoms which it grants, and the importance of the individual in its working structure.

WHAT MAKES A DEMOCRACY WORTH WHILE?

(By Norman Ross)

"A democracy is founded on the theory that the average man is qualified to participate in the affairs of State and that he is particularly qualified to select rulers who will govern in the interests of the Nation." This statement alone makes a democracy worth while. Where else does the common man have so much power? In what other type of government may one express his ideas and thoughts so freely?

Many of us today do not realize that there are many countries that do without these privileges. In fact, we do not even realize that our own country was, at one time, without these same privileges.

The Bill of Rights is the foundation of our democracy. Does anyone ever stop to think what would happen to the ordinary person, such as you and I, if these rights were taken from us and a cheap substitution such as communism or socialism were to replace them? If we realize that today our Armed Forces are fighting in Korea to protect these rights, perhaps our democracy would be even more worth while to us. Through democracy comes progress in many fields: education, industry, yes, and even progress in war to protect our democracy.

In itself, democracy is one of the most powerful educational forces in the world today, lifting entire peoples from the contemplation of their own personal affairs to a consideration of problems of national and international magnitude. Yet, this is only a small part of our worth-while democracy.

WHAT MAKES DEMOCRACY WORTH WHILE?

(By Nadra Benedek)

True democracy is government of the people, by the people, and for the people. It gives us the right to do what we want to do, live as we want to live, and speak the things we want to without fear. America as compared with other countries, has this freedom.

Looking at other nations, we might well evaluate the advantages of our country—a democracy. We have free enterprise, freedom of speech, religion, the press, and other privileges not granted to totalitarian nations.

Were we under such a regime, we would be subjected to questioning and possible imprisonment, whereas, we as a free Nation have the right to express our views and ideas in public without any fear of arrest. We are given the opportunity to think by ourselves and do things of our own will, not of one supreme leader.

Democracy must be founded on a sound basis combining the policies of all political parties, or it will never succeed. Dissension is the basis from which democracy is based, but until all dissenters, after argument, can form a basic agreement, then and then only can democracy succeed.

Today more than any time in our era, we are faced with the complete dissolution

of democracy unless we meet the facts and bring ourselves to realize even through war, it might be necessary to propagate the principles of democracy. The United States has and always will encourage the cause of freedom, justice, and democracy throughout the inhabited nations. By so doing, democracy cannot fail.

WHAT MAKES DEMOCRACY WORTH WHILE?

(By Ken Hubbard)

For many centuries men have fought and died for their personal rights. For our own country, we have fought many wars to keep our personal freedoms and what we call a democracy. Democracy has been defined as "government of the people, by the people, and for the people." Why is this so important? Why have men fought and sacrificed their lives for this system of government?

To begin with, no country using the democratic system can claim a true democracy, but this does not stop men from striving to improve the government and to make it more closely resemble true democracy.

Faith is the most important thing that makes democracy worth while. We have the faith that someday every nation will discover that men can live together in harmony without fighting. But in order to make this come true, we must practice harmonious living ourselves. We must also have faith in God, for our democratic system is based on His work. We must also have faith in our officials, for we elect them and they are supposed to abide by the wishes of the people. If they do not always do this, we say our democracy does not work properly. But we may always criticize and get things changed to the way that we feel they should be. Sometimes the right of criticism seems to be the only democratic right that we have. But when we feel this way, let us consider other countries and compare our rights, freedoms, and living standards with those they have. Then we see that democracy is worth while; and that it is we, the people, who must keep it that way.

Jerry's Second Letter Equals First in Common Sense

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks, I include the following letter:

JOHNSON CITY, N. Y.

DEAR CONGRESSMAN HALL, I was so surprised when I saw my letter in the newspaper. Thank you very much for the copy of the CONGRESSIONAL RECORD and of all the nice things you said about me.

You were very right when you said that propaganda doesn't influence the youth of America. I don't think it can influence the common person either, because he is one that believes in what he sees or experiences and not what he reads or the terrible slams he might hear from very critical people.

People don't believe all they read in the paper or take it seriously. If they believe what they read in the newspapers, these people will lose their faith in mankind.

As for you, Mr. HALL, most everyone can see why the Communists are so against you. The first people they attack are the common people who feel neglected. Now these Communists know that you are interested in every problem, wish, and criticism that the working class may write to you. This makes the fac-

tory worker feel safe and the Communist plotters angry. What can they do? There's only one thing left and that's to spread propaganda, and, in turn, get you defeated. Personally, I don't think it's working because people don't forget easily and most of them have something to be grateful to you for. They know that you're on their side and are fighting for them.

God bless you.

Your teen-age supporter,

JERRY.

The Challenge of Communism

EXTENSION OF REMARKS

OF

HON. CLARE MAGEE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. MAGEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following address which I delivered at Poplar Bluff, Mo., in June of this year:

THE CHALLENGE OF COMMUNISM

May I say to you at the outset that I have never considered myself a Red-baiter. In fact, I speak to you as one who was long sympathetic with Russia. From a reading of history, I know the conditions that existed under the czars. The people were poverty-stricken and in ignorance. They have advanced from less than 25 percent literacy to surpass that in the United States. The peasants of today perhaps have more security, if not as much liberty. I never felt that we were justified in joining with France and England to fight an undeclared war against the Soviets after the First World War. I thought we should have recognized the Soviet Union before we did.

But we did recognize that Government. We carried on trade relations with her. Some of our best engineers went to Russia to assist in building her dams, manufactories and other projects. We allowed her citizens to come here to inspect our plants, study our assembly-line methods and advanced agriculture. They were on their own. We sent no Government men to direct their activities or spy on them. It is true that during all this time, we had many newspapers and many news commentators who criticized her Government. Some of our Congressmen did the same. Perhaps there was some reason for Russia to be suspicious of us. Through it all, I could understand her viewpoint.

Then came the war, when we were allies in a great global conflict. We admired the tenacity of a fighting people who withstood the Nazi hordes. Stilled then were the voices of criticism in our country as we poured tons of armaments to her shores to aid in that defense. Yet, during those war years, Russia failed to cooperate with us or the other allies in the exchange of military information concerning inventions, etc. If any of you served, as I did, in the Air Corps during World War II, you know that we knew less about the aircraft of Russia than we did about the aircraft of enemy nations. Then, toward the war's end, we found that all this time, she had spies in North America. What else happened? We demobilized from 14,000,000 men to 600,000. Russia kept her armies intact and marched them into the weaker countries to enforce her rule.

But this next I consider the most significant of all. We had developed during the war a terrifying weapon—so terrifying, in fact, that when the United Nations was organized we offered to abolish this weapon and never make another—on one condition.

This was that an international board be appointed to inspect the war plants of all nations to make sure that they were not making the bomb that we had agreed not to make. But this former ally of ours refused to cooperate. It refused this generous American offer to abolish the atom bomb. This one country refused to have the United Nations inspect its war plants, even though we were willing to have ours inspected.

When the Soviet Union did this, she aligned herself against all humanity, against all progress and against common decency. Around herself and the world she entwined the bloody hands of Mars. How hollow now sound the words of peace. How hypocritical now sound the words of those who say they entered Poland, Rumania, Bulgaria, Czechoslovakia, and the other nations of Eastern Europe to help the downtrodden and unfortunate of those countries.

What else have we witnessed? We have lately heard the leaders of the Communist Party brazenly declare that in time of war, if that war were with the Soviet Union, they would not support our Government. This statement was made without qualification. In other words, even though the Soviets made an unprovoked attack upon us, we must assume that the allegiance of the United States Communists will be with the enemy. It logically follows that they would engage in espionage and sabotage and that they would use all manner of means to stifle our war effort. We well remember in World War II, when the Berlin-Moscow pact was in force, that certain of our aircraft plants were shut down because of the actions of a small group of Communists. However, when Hitler invaded Russia, the Communist attitude in this country changed overnight.

Let me say here that the word "communism" as exemplified by the Soviet Union is a misnomer. Communism or the Socialist state portends an idealistic system of life and government where the people exist on a plane of social and economic equality, sharing in the work and in the goods produced. It involves common ownership of the agents of production and a fair distribution of the products of industry. But the communism of Russia is none of this. Actually, her system is state capitalism. The standard of living between the ruling class and the working class is as pronounced there as it is between the extremely wealthy and the extremely poor in this country.

Lately, Russia announced price cuts on foodstuffs and clothing. An analysis shows the following: To earn enough to buy a pound of bread, the Soviet worker still has to work 16 minutes, compared to United States workers' 8. A quart of milk, if and when available, still takes 47 minutes of labor in Russia, 9 minutes in the United States. A pound of beef, not often available to most Russians, still takes 41 minutes of labor for a Soviet laborer, compared with 35 here. A pound of sugar calls for 48 minutes of labor there, and only 4 here. A man's shirt in Moscow costs 16 times as much, in terms of the average worker's earning power, as in the United States. Socks cost 24 times as much, shoes 20 times.

Time was in our country when we permitted deplorable conditions for our workers. We witnessed, in the textile mills of the South, in the manufacturing centers of the East, and garment factories of the Middle West, men, women, and children who slaved in despair. We allowed this—in the name of individual liberty and initiative, in the name of free enterprise. We saw the farmer sell the products of his farm at less than the cost of production. We saw undernourished girls working in the sweatshops of our land at 60 cents per day and forced into lives of shame and dishonor because they could not make enough to keep body and soul together. We saw the poorhouses of our country filled with the downtrodden forms of the aged and hopeless. But we have

corrected those conditions, and never again will they return. We did it, not by bloodshed and revolution, but through our democratic processes.

So I cannot understand why we have in this country 43,217 known and active Communists with several thousand more, at least on the fringe, as aiders and abettors.

One midafternoon I walked from the House Chamber and witnessed a crowd of some 3,000 men and women in the corridors of the Capitol. About one-half of them were white and one-half colored. Had one of our penitentiaries been emptied into that space, I believe they would have measured up better in appearance. These folks were said to be Communists from New York City, and they were demanding the right to call upon certain legislative leaders, even though Congress was then in session. They were herded outdoors by Capitol Police amid curses, grumblings of persecution and charges that they were denied their rights as American citizens. No arrests were made. No blows were struck by the police, and I wondered at the time whether these people ever paused to think what might have happened to them had they been residents of the Soviet Union and had tried to storm the sacred portals of the Politburo to demand that certain legislation be enacted. Maybe they never thought about that, or maybe they just didn't give a damn—sorta' like the 11 convicted Communist leaders who would debase and flaunt the Constitution until they were placed on trial; at which time they were quick to invoke all the rights and privileges guaranteed thereunder.

I think none of us would deny the right of any people to live under the type of government which they might choose. We have no fight with Tito. However, the Russian borders do not mark the boundaries of that country's kind of ideology. The writings of Stalin speak of world revolution. By lies, deceit, fraud, and infiltration, they would undermine all democracies.

For many years, Soviet agents have permeated every country in search of converts. Many of the smartest and most promising of these converts have been taken to Moscow for intense training and indoctrination. A little while ago I stood in London's Hyde Park and listened to agitators relieve themselves of their pent-up fury. One evening I saw there a Communist speaker; shabbily dressed, rough in appearance, but earnest in demeanor, with all of the persuasive attributes of a great orator. Finally, as he spoke, some bystander, who was anti-Communist, hurled a question at him. Just then another man, who no doubt was a Communist, shouted at the questioner. "Please keep your mouth shut. Can't you wait until the speaker is through to ask questions?" It was then most interesting to see the technique, the psychology used by the speaker. Instead of agreeing with his champion, he pointed his finger at him and said "You are the one to keep quiet. This is a public meeting. We believe in free expression. Let me say here and now that we welcome questions, and any of you are at liberty to ask them, even though you break in the middle of a sentence which I'm uttering."

The following night I saw there three Negroes from Algeria who took turns in boldly proclaiming the cause of communism. One of them warned in bitter tones that the day would come when they would meet the English with machine guns; that they were soon to be through with slavery and autocracy. Just then a young, fair-headed boy standing near me said: "What could your machine guns do against our atom bombs?" To which the Algerian replied in a sarcastic manner: "Why, young man, you ain't got no atom bombs." The boy was not to be outdone, so he said: "You must remember the United States helped us in two World Wars. Maybe they'd help us again. You'll have to admit they have the

atom bomb." "Oh, yes, a kind of one. It's got a bomb just about like a football that might be taken up high and dropped down on somebody's head. It might hurt some, but not much." Then the boy said: "I suppose you think Stalin has something worth while?" "Yes," said the speaker, "That man ain't a-takin' much, and when a man don't talk much, he got somethin'."

My friends, on every continent, in every land, stealthily march the stooges of Stalin, more dangerous by far than were the beasts of Berlin. A crisis is upon us. Before us stands the most sinister influence the world has ever seen, threatening the conquest of the world. American intelligence tells us they have 5,000,000 men under arms, with 14,000,000 reserves that could be fully equipped and in the field in 2 months.

Today she dominates some 800,000,000 people and 13,000,000 square miles of territory. Some 32 percent of the world's population bows to the whims of the Kremlin.

Our Nation is a great giant, but a giant of only potential strength, a naked giant. To fight effectively, he must be clothed and armed and equipped—not alone with airplanes, guns and ships; but with all the agencies and instrumentalities which make for strength and power. Of course, we must suffer some inconvenience. We must sacrifice some freedom of action and suffer some restraint of our liberties.

It is all very costly. The 1952 budget provides that 59.5 cents will go for national defense. For military and economic aid to other nations, the figure is 9.9 cents. Veterans' benefits account for 6.9 cents. Interest on public debt takes 8.1 cents. Defense production and economic stabilization accounts for 2.0 cents. It will therefore be noted that out of every budget dollar, 86.4 cents is to be used to pay for past wars or the present national emergency—excepting interest on national debt, which was not wholly war-contracted. However, it is a fixed item and cannot be reduced.

I have been most confused about how far we should go in our attempt to contain communism. I have questioned whether we had the ability in men and resources to save the world, especially that part called Asia. I voted against aid to China, because I thought we could never pour enough billions in there to save a regime that, in my opinion, had done little or nothing for its teeming millions. Most of what we did send fell into the hands of the Communists. Our great difficulty lies in the fact that so much of the world's population lives under a freedom of poverty and disease or political and industrial slavery. They live in surroundings of futility and distrust; and it is only human nature to turn to any ideology which may promise a fuller life. The exigencies of the moment may force us to render assistance to a government that is not democratic, as we did in Greece; but we do so as an emergency matter, and with the hope that such nations will gradually become democratized.

It is my judgment that if communism should envelop all of Europe and Asia, we could not long endure as a free nation. In the field of medicine alone, there are hundreds of drugs that we must get from overseas. In industry, we must have manganese to use in steel production. Since Russia has cut that supply, we have turned to India. Stop that, and you see where we would be. We need tungsten from China or Indo-China. We need tin and rubber which comes from Southeast Asia, uranium which comes from the Belgian Congo in Africa. Countless other materials we need. Again, we are a Nation of surpluses and must sell abroad. If Asia and Europe fall, the Soviet Union, by shutting off our foreign trade, could have us in an economic shambles within a few short years, and perhaps without ever firing a shot.

To combat this threat requires the best thought and most earnest consideration of

all our people. In my judgment, our foreign policy must espouse and promote liberal, humanitarian programs for the masses who are underprivileged. We are making a start in that direction with our point-4 program.

Certainly in combatting communism at home, we must retain American fundamentals. We must not be swept away with hate or hysteria. We should never brand a man a Communist simply because he espouses some ultraliberal cause. Nor should we call another man a Fascist because he is ultraconservative.

In March of last year, while walking down one of the streets in Paris, I saw inscribed on a window: "This is the room in which Voltaire died." It brought to my mind a statement that he had once made in speaking of an opponent: "I hate that man's opinions and will oppose them with all my might, but I would fight to the death, if necessary, for his right to express those opinions."

Once we start circumscribing the rights and freedom of others, we have paved the way for a similar abridgment of our own rights.

THIS TOO, under Henry VIII of England, there was a famous preacher named John Bradford. Wherever he preached, great throngs came to hear him. He was the church leader of his time. One day he saw a band of prisoners being led to the stake to pay with their lives for holding beliefs contrary to the religious group then in control.

With sorrow he watched them walk to their doom, and he uttered those words that time soon proved to be a prophetic prayer. "There," he said, "but for the grace of God, goes John Bradford." Time brought changes. Another religious group gained the ascendancy, and the day came when John Bradford was led to the stake to pay with his life for holding beliefs contrary to the mob, and as the flames that bigotry had lighted leaped about him, he saw again the spectacle of those unhappy wretches of years before in whose place John Bradford now stood.

Today, those outside the realm where persecution rages are the John Bradfords of modern times. As they watch the martyrs of today being led away to persecution and perhaps death, they well may meditate. "There, but for the grace of God, go the Catholics, the Protestants, the Freethinkers. There, but for the turn of fate, go all who think their own thoughts, who follow the dictates of their own consciences, who dare to disagree with the bigots who for a brief moment have usurped power."

This is a Republic, founded on the Declaration of Independence, the Constitution, and the intelligence and patriotism of the people. In every republic like ours, there is absolute necessity of free speech. Free speech is the diamond of an American soul. Words are the bodies of thought, and liberty gives those thoughts wings, and the whole intellectual heavens are filled with thought. Every individual has the right to the general air and to give the reason for the course he pursues. When you stop free speech, when you say a thought shall die, shall not be born, it must have the same effect in the intellectual world that stopping springs at their sources would have in the physical. Stop springs at their sources and they cease to gurgle, the stream ceases to murmur, and the great rivers cease rushing to the embrace of the ocean. Stop thought in the brain in which it is born, and degeneration follows, and this Republic would again become a desert of ignorance, peopled by savages.

Our country has been built upon the theory that individuals may have free expression; that they may dissent from the existing order, that they shall not be punished for words or even acts unless they

lead directly to crime. Communism cannot take over in an America well-clothed, well-housed and well-nourished, but all the repression in the world cannot prevent social upheaval if the people perish from bad business and social institutions. The task before the country is to promote the general welfare, not to punish individuals who complain that our system is not promoting that welfare.

The late and distinguished Judge Merrill E. Otis once said: "No intelligent man opposes revolution merely because it is revolutionary. No intelligent man opposes radicalism merely because it is radical. Take the radicals out of science and you go back to witchcraft; take the radicals out of religion and you go back to a world barren of love and hope, take the radicals out of politics and you are slaves again under despotic kings."

Repression has generally increased and strengthened the very evils against which it was directed. It was the ruthless execution of this policy that finally overthrew the French autocracy in the eighteenth century and the Czarist regime in the present century.

You may recall from history that in Germany, Bismarck procured the passage of the famous anti-Socialist laws. At the time the Socialist Party was small and insignificant. Yet in 18 months it had grown to huge proportions. The laws were then repealed and the party soon wasted away.

Again in our memory, the theory of repression was applied to Hitler and the followers of the swastika. The same was true of Mussolini and his Black Shirts. They became martyrs, and the day came when they were the majority.

Every so-called radical thinks he has some grievance or the solution to some wrong. Repression makes him more determined, until he may become a fanatic. Is it not better to let him state his grievance openly; and, if he is in error, refute it with the truth; but if he is in the right, set about to remedy the evils of which he complains? Was not this the primary cause of the establishment of free Government?

If we are to retain democracy in this country, we must be tolerant in thought and act. We must be temperate in speech. Intemperate speech carries with it the cloak of insincerity. It is the garb worn by the professional charlatan. Herod professed the desire to worship, but when the Wise Men were gone he wrote a decree that imbued his kingdom with the blood of the innocents. Peter in one breath exclaimed, "Lord, I will follow Thee even unto death"; but later in the palace said, "I know Him not." Judas Iscariot pledged fidelity to his Savior, but that night, for 30 pieces of silver, betrayed his Master with a kiss; and 2,000 years ago a prophet of Galilee said unto His disciples, "Not everyone who saith, 'O Lord' shall enter the kingdom." Then turning unto the pack of hypocrites that barked at His heels, said, "Ye are like unto whited sepulchres, beautiful indeed on the outside, but inside full of dead men's bones."

In conclusion, let me say that my concern for the future does not make of me a pessimist. The international situation presents terrific problems. No human can know the exact best course to pursue, but I am glad to report to you that my short time in the Congress has convinced me that men of both political parties have sought to do what they conscientiously believed to be best. There has been a minimum of partisanship in this field, and loyalty to country and hope for the world have been the prime motives.

Last year Mrs. Magee and I were on a 30-minute broadcast over the NBC network from Washington. The announcer told me that all the questions excepting one would be at random. However, to end the broad-

cast he would ask me the following question to be answered in 2 minutes. "What do you see for the world in general and for the United States in particular in the coming months and years?" In concluding these remarks, I give you that answer.

"To answer that in 2 minutes, one needs the help of a Delphian oracle. As Thomas Paine once said: 'These are times that try men's souls.' This morning's news is alarming, but I find solace in the words of John Erskine: 'Pessimists who despair as they look at the world, forget the solidarity of our people, the intelligence and wisdom of youth.' It is written in holy script: 'Know the truth, and the truth shall make you free.' I have faith in the ultimate triumph of truth over superstition and ignorance. I believe that goodness and mercy will some time prevail over the forces of sham and greed."

"Since the world began, man has sought a better way of life. I envision a time when our late advances in science will be used solely for the benefit of mankind. If the atom bomb could be abolished and the peacetime secret of the atom shared with the world, it would do more to change the course of everyday living than any happening of the past. Toiling humanity would have lifted from its shoulders much of the burden of physical labor. It would give us the greatest ascendancy over nature, the greatest command over our surroundings ever attained."

"I cannot but believe that some day the iron curtain will be lifted, and that somehow the destinies of the people of the world will be guided by the love and spirit of Him who witnesses the fall of each tiny sparrow."

"I firmly believe that it is the destiny of the United States to lead the way. Victory can never come on the battlefields alone. The fight against false prophets must be finally won in the factories and fields, where men labor and struggle for a full life. Our people must be secure, and we must render assistance to democratic ideals elsewhere. We shall pay taxes until it hurts; but let us ever remember that liberty and free government were purchased at a price. That men might be free, thousands of heroic souls have lain in dungeons, have felt the thumbcrew and witnessed the terrible torture of the gibbet."

"I believe it was Lord Beaconsfield who said 'The man who does not look up, will look down, and the spirit which does not dare to soar, is destined to grovel.' I think the spirit of America is looking upward."

Pensioners Should Be Encouraged to Augment Their Incomes by Part-Time Work

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 12, 1951

Mr. YORTY. Mr. Speaker, it is hard to believe, in times such as these, that we have a law in this country which, in effect, penalizes Americans for looking for the kind of a job they are able to do, and at the same time insists that these same people live on an income which averages less than \$50 a month. Yet, that is exactly what one small clause in our Social Security Act does to some 5,000,000 Americans who, because of age, misfortune, or illness, are now on

our public-assistance rolls. Under this clause, as it is interpreted by most State welfare agencies, every dollar earned by a welfare recipient must be reported, to be deducted from their pitifully inadequate monthly allowance.

In spite of the fact that the demand for workers is at an all-time high; in spite of the fact that the cost of living for all of us has almost doubled since 1939; and in spite of the fact that this restriction discourages assistance recipients from taking jobs; we have allowed this depression-born clause to remain on the books. It is time, I submit, that we look at the facts of this situation as it operates in 1951—and then that we do something about it. To that end I am today introducing a bill which will allow recipients of public assistance to keep two-thirds or \$50, whichever is greater, of the income they receive in any month without having it deducted from their assistance payment.

Such a change in the law is dictated not only by humanitarian considerations but also by the relentless facts of the world we are living in today. The first essential fact which we must face has to do with the starvation payments those people are receiving today. Remember that the average assistance payment throughout the Nation is less than \$50 a month. In August 1951, the average payment for persons on old-age assistance was \$43.67 a month. That, ladies and gentlemen, totals \$524.04 a year. During the same month the averages for other groups receiving public assistance payments stood at \$46.82 for the blind; \$44.46 for the permanently and totally disabled, and \$21.27 for dependent children. Out of these meager allowances must come the cost of the food they eat, the clothing they wear, and the place they live, together with other living expenses. I call on every Member of this Congress to bear in mind, every time he enters a grocery store, that we are, in effect, prescribing under present law that around 5,000,000 of our fellow Americans must try to live on around \$50 a month—and not just for food alone, but for food, clothing, and shelter. More than that, we are saying that if these neighbors of ours who are trying to make out on these amounts can find a little job to help bring that amount up a little, he or she must take a cut in the assistance payment. As Robert C. Townsend has said, such a provision makes "poverty compulsory for millions of United States citizens."

The second essential fact which we must understand, in considering this legislation, is that today's dollar, as compared with 1939, is worth only 53 cents. It was a 57-cent dollar before Korea. It is now a 53-cent dollar. In the last 12 months it has lost more than 4 cents of its purchasing power. Most of us do not need to be told that today's dollar buys just about half of what it would buy in 1939—but most of us are also getting more dollars in each pay check. But for our dependent aged, the disabled, the blind, and for needy children, there has been no such increase. It is true that even the present inadequate payments are slightly higher than they were in

1940. But the extent to which they have lagged behind increases in income for the rest of the population can also be demonstrated by some cold, hard statistics. The facts show that while income for most Americans has increased by 160 percent between 1940 and 1950, the proportionate rise in public assistance expenditures has been less than half of that amount. As a result, the ratio of assistance expenditures to income payments has declined about one-third from 1940 to the fiscal year 1950, and four out of five States are now using a smaller proportion of income payments to meet "need" under the four State-Federal public assistance programs in 1950 than they used in 1940.

Clearly, therefore, in terms of their buying power, and in terms of our ability to share with them, we have actually lowered our standards of "need" to less than a bare subsistence. This is another reason why I call upon the Members of this Congress to act promptly in remedying the situation along the lines proposed in my bill, H. R. 5817.

But, someone will say, why do not the people on public assistance rolls now go out and get a good job which will take them off the rolls permanently? Someone else, I am sure, will label my proposal as a wholesale raid on the Treasury which will make it possible for relief recipients to live in the lap of luxury at the expense of the public. Now I have never been able to understand how any thinking person could maintain that any appreciable number of persons would prefer living on a relief budget—and remember that average of less than \$50 a month—to getting a good job if he or she is able to get a good job. Again, of course, they are simply overlooking the real facts of the case. And the essential fact here is that the great majority of persons now on public assistance rolls would not be considered for a full-time job under present hiring practices. Nine-tenths of all persons on these rolls are at least 65 years of age, or under 18, or blind, or totally disabled. The average age of persons receiving old-age assistance payments is about 75.

The truth of the matter then is that the only persons on public assistance rolls who are affected in any degree by high employment are those who can get jobs and hold them. The reality of the situation is that many of them are quite unable to work; practically all of them are considered "unemployable" by labor market standards, and cannot get a job because they are too old or too young; and all of them are penalized if, by some fortunate chance, they can find part-time employment which would help to bring their purchasing power up to the subsistence relief levels of 1939.

Surely it is sound public policy to lift the ceiling on indigence by allowing those men and women on the assistance rolls who are able to work, and can find a means of supplementing their meager assistance payments up to the level of a bare living, to do so. Here is the way it would work. Suppose for example, that a 66-year-old man has been forced to retire because of his age, and is trying to live on the average of \$43.67 a month paid by old-age assistance. And suppose

that this is the total family income since his wife is not yet 65 and therefore not entitled to old-age assistance. Under my bill, if the husband is able to get a part-time job that pays say \$40 a month, only one-third of that \$40—or \$13.33—would be deducted from his pension payment. His total monthly income would thus be \$70.34, made up of \$40 from his own earnings and his reduced assistance payment of \$30.34. But under present law the entire amount of his earnings would be deducted, in order to hold his total monthly income down to \$43.67 a month. In effect we are saying to such a man that he can't receive more than \$43.67 a month whether he works or not. We are saying that he must be re-investigated if he is fortunate enough to get a part-time or a seasonal job that would pay him around \$45 a month for a short period of time. We are saying that honesty in reporting outside earnings is rewarded by a reduction in an already inadequate assistance payment.

Surely it is only a matter of simple justice to allow the men and women on our public assistance rolls to increase their monthly income to an amount which is still under the minimum required for health and well-being, if they are able to do so through their own efforts. By such means we would be encouraging them to accept part-time jobs without penalty. We would be helping some of them to increase their incomes gradually until they were able to become self-supporting. We would make it possible for many of them to participate in the rehabilitation programs which are training disabled persons to become at least partially self-supporting. We would permit the elderly or disabled person, or a widow with dependent children, to bring the amount of their monthly income up to 1940 relief standards without any increase in the amount they are now receiving from public funds. And we would be facing up to 1951 needs and requirements by allowing these fellow Americans of ours to help overcome the severe handicap they suffer from the rapid rise in the cost of living, at the same time that they can help to do many of the jobs which need to be done today, up to the limits of their ability.

I urge your considered and conscientious support for H. R. 5817 as one practical way to partly solve one of the problems which arises under our existing law. Our social-welfare laws need a complete revision but pending this H. R. 5817 is a step in the right direction.

Sound Democrats and Republicans Should Combine for Country's Sake

EXTENSION OF REMARKS OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. BREWSTER. Mr. President, I ask unanimous consent to insert in the

Appendix of the RECORD an article entitled "Sound Democrats and Republicans Should Combine for Country's Sake," written by James M. Thomson, of Gaylord, Clarke County, Va.

There being no objection, the article was ordered to be printed in the RECORD, as follows.

SOUND DEMOCRATS AND REPUBLICANS SHOULD COMBINE FOR COUNTRY'S SAKE

(By James M. Thomson, of Gaylord, Clarke County, Va.)

Small minorities and splinter parties have set the policies and largely dominated the Government of our great country for 20 years. Our young people, a majority of our qualified voters, who have come of age in that period have not known normal government under the traditional American system. As a result, the healthy and sane, progressive, and balanced American system established by the founders of our Republic is known and remembered only by the older Americans. These younger people have seen emergency piled on emergency, and they have seen emergencies created as a pretext for changing, curtailing, and destroying their liberties and rights. They have seen tax piled on tax until their freedom, their earnings, and their savings are by way of being destroyed.

The shrewd demagoguery by which Mussolini took over Italy, Hitler took over Germany, and by which Lenin and Stalin took over Russia, have been imported, given an American label, and put to work to create an American executive bureaucracy and dictatorship. We all know that the dictatorships of Italy, Germany, and Russia evolved quickly into warlike and bloody tyrannies. America needs a reorganization of parties now if she is to avoid the road which most of the world has traveled since World War I.

Recently a United States Senator, KARL E. MUNDT placed in the CONGRESSIONAL RECORD a speech which he has made in various places pointing out quite clearly some of the reasons for the political distortion of the will of a majority of the people in England and in America. Senator MUNDT from unimpeachable figures shows that the Conservative and Liberal Parties combined could have easily elected a safe majority of the British House of Commons. Both oppose the Socialist dictatorship which is being created in England. They divided their votes and handed England over to socialism. Senator MUNDT's figures on England are irrefutable. From England's example and from the Senator's long fight against communism in our own country he recognizes the danger of the splinter party domination of our own Government in years past. And as a remedy Senator MUNDT, a liberal Republican from South Dakota now advocates the political merger of those Democrats and Republicans of America who believe in constitutional government. Senator MUNDT is no demagogue, no dreamer. He is comfortably situated politically and must be credited with motives of sincere patriotism in the stand he now takes.

THE SOCIALIST-COMMUNIST COMBINE

Senator MUNDT evidently believes a reorganization of parties would result in the Socialist, Communist, and radical political elements of our country assembling in an opposition party. As matters stand these elements are in both our national parties. We have in reality four or even five political parties in our National House and Senate. This constitutes the same danger for the United States that it has constituted for Russia, Germany, Italy, and other European countries—notably France. As politics is a business that now absorbs just about a third of all the wages, profits, and earning power of every American, every major politician knows what has happened to our country.

But as this vast tax revenue taken from the people provides jobs and keeps many politicians in office and power there are many politicians who are neither as patriotic nor as candid as is Senator MUNDT.

The American presidency is the greatest political prize in the world. An Army and Navy of over 3,000,000 men, between two and three million civilian employees, billions of dollars in contracts, judicial appointments, control of expenditures for pensions, relief, subsidies, grants, control of conscription, of income tax, of farm and food prices, power to prosecute great or small business and great or small individuals—all these powers come under the presidency. Also there is control of the radio, of a vast propaganda machine, of moving pictures, television, and control of money and credit through direct Government lending and through Federal inspection and control of banks. The vast Federal executive machine through direct and indirect control of tax money can buy votes, influence primaries and elections of Congressmen and Senators, and through its patronage and party powers can deprive Congressmen of legitimate patronage and can subject them to party discipline. Is it to be wondered at that profit from this system or fear of a growing tyranny paralyzes the spirit of so much of the American public?

THE SOUTHERN ACE IN THE HOLE

How have the minorities been able to control the historic Democratic Party? The answer is simple. Votes in the electoral college determine the presidency. The South and border States of the United States have two-thirds of the electoral votes necessary for a majority of 266 in the electoral college. Southern Democrats normally dominate national elections in these States. They constitute the ace in the hole for any one achieving a Democratic nomination. The Republican Party, running on a Civil War record, was able for three-quarters of a century to count certain Northern and Western States as solidly Republican. But that condition no longer exists. It has not existed for many years. It will not exist again. The result is that the Republicans cut out of this captive Democratic vote have a fighting chance only among two-thirds of the electoral vote in the electoral college. The Democrats outside the South and border States have to fight for only one-third of the electoral votes in order to secure an electoral college majority. For these votes they trade foreign and domestic policies and jobs with the Communist- and Socialist-controlled splinter parties of the North.

If a presidential candidate gets a majority of the electoral college—266—votes he is winner. And the winner takes all. So the Democratic candidates have to seek the electoral vote of only a few States. One of these is New York with about 10 percent of the votes in the electoral college. Add 10 percent to 33 percent and you have 43, that leaves only 8 percent of the electoral votes in order to have a majority. In New York the old-time Republicans have normally about 45 percent of the popular vote. The old-time normal Democratic vote is about 45 percent. Ten percent is independent or doubtful. To win either party must get more than half of this doubtful vote. Result, a few hundred votes more than a popular majority in New York swings about 10 percent of the votes in the electoral college. The Democrats have to win a majority in only a few States to control the electoral college. The Republicans have to win almost all the States of the North and West to control the college.

NEW YORK AN EXAMPLE

Now let us take New York as an example of several States north and west with large populations and large electoral votes. There are several small tightly knit political parties in New York. Separately they appear

unimportant. But united they cast some four or five hundred thousand popular votes. They are composed of voters tied together on racial, religious, or economic lines. Many of these voters cannot speak English. Many have never been west of the Hudson River. What has happened to their former homeland in Japan, China, Poland, Italy, Czechoslovakia, Puerto Rico, or any one of a hundred foreign countries constitutes a voting issue with them. Or putting a relative on relief or getting one a job may be the determining factor. While America slept the coldest-blooded, most unscrupulous country in the world has worked at the top among the leaders of these people. So Russian communistic tyranny has greatly influenced and often controlled these splinter parties in New York.

Space is lacking to go into the now rather well-known Communist technique in dealing with American city and industrial politics. The Old World is run by executive dictatorship. And the men who came into control of the deliverable margin of splinter party voters in New York traded with both parties for jobs and for legislative policies. The Federal service has been filled for a fifth of a century with key men placed by these minority groups. The policies of the Government have been framed and carried out by these people. And Federal legislation has been shaped by them. Communist fellow-travelers, Socialists, radicals, parlor pinks, theorists, and liberals. If you wanted to know the direction of the executive departments of the Government you consulted the organs of these minority groups, the Nation, the New Republic and daily papers in New York and Chicago owned by Marshall Field, PM and the Chicago Sun.

All told these groups in New York and other key States probably commanded a million votes. But this million has been paramount in Federal policy and legislation. To those Democrats who sought the Presidency it gave the margin for victory, the last few inches in the race which put their horse first under the wire. Again these marginal voters have become so important in the minds of politicians that in a State like New York, for example, they virtually write the platforms and select the candidates for both of our great national parties. Willkie and Dewey in platform speeches and policies advocated, were largely "me too" candidates for the Presidency.

CATER TO FRINGE PARTY

Thus in most matters of national policy the votes of America are controlled by this splinter controlled 5 percent in presidential elections. The reason is that the majority are divided into two parties operating under Republican and Democratic labels. And the tragedy of the situation is that a Republican national victory under present party divisions would not insure control of America by a majority of its voters. It would probably be only a temporary thing. For the Republicans to hold office would immediately have to cater to this fringe element in the doubtful States.

To effect a permanent realignment of parties it is necessary for the South and the border States to move into a new party alignment. Three years ago some four Southern States moved away from old-line Republican and Democratic nominees to a States' rights Presidential ticket. States' rights, local self-government, has today more of an appeal North than it has South. For the Communist-Socialist elements in the North are seeking to have the National Government confiscate the earnings and the accumulations of the people of the wealthier States and distribute some of this money where it will buy the necessary margin of electoral votes in the poorer States. They want to use the power over taxes to destroy the initiative and savings of people everywhere. And to this end they have made some converts in the South.

A curious political condition exists in the United States today. Nine out of ten southern Democrats who work for their own living and have no connection with the several million Federal payrollers or officeholders know that they have nothing in common with either New Deal or Fair Deal national policies. The southern lawyer, merchant, farmer, worker in Alabama, Texas, Georgia has identical interests in national economic, social, and political problems with the lawyer, merchant, farmer, and worker of Kansas, Indiana, Iowa, Nebraska. One votes a ticket with a Democratic label, the other a ticket with the Republican label, and thus they cancel out and kill one another's votes and allow a largely socialistic, alien minority element to govern our country.

NEGRO AND FOREIGN BORN

There has always been merit in a political issue which aimed at the protection of the weak and the poor. This issue has been variously used by the Republican Party to help and protect the Negro slaves and by the Democratic Party to help and protect the newly arrived immigrant. It is now being used by the New Deal party to join the Negro, who has been freed for almost a century, and the recently arrived immigrant to oppress old-time Americans, Democrats and Republicans alike. The fact is the old-time party divisions and issues no longer exist. The Negroes of America are better off than are any members of their race anywhere in the world, and our foreign born are far better off than are any of the people in the countries from which they came.

They are welcome to have a party and to vote as they please in this country. They may continue to control the Democratic Party in name. But when the message is taken to the old-time Democrat who votes 10 votes to their 1, the real Democratic Party will move away from them. This it should do. And the real Republican Party members should move away from its New Deal, Fair Deal Republicans and join with real Democrats who think as they do.

The people who can bring this about in the South and among Democrats are the rank and file of independent Democrats. When these independents associate themselves and let their local office holders, their governors, national committeemen, and their Federal Representatives and Senators know that they are in earnest there will be no difficulty in most instances in the South. The office holder naturally wants to hold his office. Moreover most of these southern Democratic officeholders are sick unto death of the things they have been forced to stand for and defend in their party's name. What's more, in a new victorious party they can continue to hold their patronage. That is the practical side. Today these southerners are really people without a party. There are very, very few "reactionary Republicans" who have not been more welcome at the White House and in our executive departments for 20 years past than have genuine southern Democrats. Very few of these real southern Democrats can run for office without either ignoring or repudiating their national administration. Socialism and communism are alien to the southern Democratic voter.

ELECTORAL COLLEGE THE ANSWER

While four out of five Americans will agree that there should be an amalgamation of people politically who think alike, a great many people are under the impression this would be hard or impossible to accomplish. This is not true. Those who spread this idea are those who favor the status quo, who profit from the splinter party racket. What counts for the election of a President is a majority of the national electoral college. And the electoral vote of each State in the Union can be controlled by the people of that State. And not a majority, but a plu-

rality of the voters of each State control the electoral vote. In the opinion of this writer whose lifetime has been spent in the South and Border States an amalgamation of the old-line Democrats and the old-line Republicans can carry almost every State in the Union, thus insuring the election of a President of their choice. This is neither a socialist nor a Communist country. And it may be that the loss of countless thousands of our young men, and safety from destruction of the liberties and the solvency of all the people of this country depends on some such program as this being worked out for our next presidential election.

As a college student I saw Grover Cleveland hand over the reins of government to William McKinley. Nearly forty years ago I attended my first national political convention. Subsequently I was privileged to take part as a delegate in a number of Democratic conventions. Of necessity I acquiesced in Franklin Roosevelt's first nomination. As a matter of conscience as well as conviction I could not support him, nor would I have supported anyone else for a third term. I accepted membership in a delegation to the Chicago Democratic Convention whose objective was opposition to Roosevelt for a fourth term. In that convention were many decent, high-grade patriotic men and women. Yet it represented an all-time low in national conventions. Its music and its program came from the political sewers of Washington and Chicago. In Hitler's palmy days he exerted no more control over the German Reichstag than was exerted by Roosevelt over this allegedly governing body of a once great national party. Roosevelt designated a Russian-born leader of one of New York's political minority blocks to pass on the eligibility of all candidates for Vice President. Roosevelt's payrollers and patronage beneficiaries were sufficiently numerous to insure his own nominations. A great element in the convention felt that Roosevelt was a sick, probably a dying man. The Wallace-for-President leaders acted as if they were convinced that in supporting Wallace they were nominating not a Vice President, but a President. Wallace came within an ace of being nominated. Truman was the only possible alternative choice because barring Wallace he was the only candidate with convention strength who had received the blessing of Sidney Hillman.

BUYING VOTES WITH TAX MONEY

I was born in the Shenandoah Valley. My father was a Confederate veteran. His only brother, a Confederate officer, served throughout the war and was killed in the fighting around Appomattox. I, like many others of southern descent, inherited my membership in the Democratic Party. It is a matter of conviction with me that a citizen should vote. So I voted for Willkie, for Dewey, and in the last election I voted with enthusiasm for the Southern States Rights ticket, Thurman and Wright.

I am now convinced that the next Democratic Convention will be controlled by officeholders, Government contractors, and beneficiaries of the present administration policy of buying alien and domestic influence with American tax money. To the extent of my small personal influence I will join with those independents who will work among the upstanding American elements of both parties to form a soundly progressive political party.

The Civil War should never have been fought. Almost a century has passed since it started. It was precipitated by a minority of hot heads and resulted from a splitting up of parties. Its result was economic slavery for black and white for several generations. If that war had not been fought slavery could not have lasted 20 years.

When America ceases to have in its population a majority of sane, patriotic, and

soundly progressive people this country will go the way of all the world leaders. It won't do for the outs to claim all the virtues and accuse the ins of all the corruption and decay which comes from too long terms of power.

The coalition of sound Democrats and of sound Republicans that exists today in the House and Senate furnishes the basis for a sound political party. For example, GEORGE and RUSSELL of Georgia, WHERRY and BUTLER of Nebraska, are able men, patriotic and independent and politically as well as personally honest. Many other examples could be cited. All men of this type should be kept in office by an amalgamated party. Only by the coalition and organization of independent men of both parties can a new party be brought into existence. Once the will is expressed by enough people the way can easily be found.

Our America at war, loaded with debt, oppressed by unprecedented taxes, threatened with destructive inflation, burdened with a growing executive dictatorship, can no longer afford the destruction of substance and liberty which demagogues and incompetents would continue to heap upon it.

Sound Democrats, sound Republicans and sound independents can no longer afford to be governed by splinter parties and divided by false issues or matters of no moment.

The real democracy of the South and of the Nation should organize and seek association with the real Republicans of the North. And the real Republicans should put aside their present hope of a partisan victory and align themselves with sound Democrats for the sake, not of political office but of the good of the United States of America. For at home and abroad we are in great peril.

The Tax Bill

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. FURCOLO. Mr. Speaker, I voted for the original tax bill passed earlier this year in this House. The Senate, unfortunately, mutilated that bill. For that reason today I voted against the tax bill in its final form.

Today's version raised a billion and a half less in revenue than did the original House bill. That is one important strike against it. And who benefits by that one and a half billion dollar slash? Twenty-three percent of this cut went to the people who earn less than \$5,000 a year. But 77 percent, or \$218,000,000 of this cut, goes to people with earnings over \$5,000 a year. That is not equality of sacrifice.

These are not the only things wrong with this bill which was rejected today. There was the complete exemption from any share of the defense tax load accorded to people with capital gains. These people—if they have net income of \$18,000 a year, if single—or, \$36,000 a year if married, pay no additional tax whatever on their capital gains under this bill. They receive an extra tax dividend of \$54,000,000 that would have been due under the House bill. Whereas people with less income pay an additional 11¾ percent on their capital gains.

There are many other features in this bill which caused a majority of the Members of the House to send it back for further consideration. Now the committee in charge will have to come back with a new report, probably later this week. Taxes should be based on an ability to pay, but my study of the bill offered today proved to me that the "ability to pay" principle was not applied in its writing.

Planning for Hospital and Health Facilities

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr GATHINGS. Mr. Speaker, under leave to extend my remarks, I include a statement by Dr. John W. Cronin, Chief, Division of Hospital Facilities, Public Health Service, at the Christian County Medical Society, Hopkinsville, Ky., on August 28, 1951:

PLANNING FOR HOSPITAL AND HEALTH FACILITIES

Each hour, each moment we stand on the threshold of the unknown. This statement holds true for each of us as individuals and also for all of us as a nation. It is in times such as these that our real worth as freemen becomes manifest.

The foundation upon which all of our great progress as a nation has been built has been our ability to plan for the future. In isolated instances the planning has been done by a single individual, but in the vast majority of times the planning has been the result of the work of many individuals, competent in many skills, getting together, working together, sharing trials and tribulations, but ever pushing forward to achieve the common goal for the betterment of all. That is democracy in action.

All planning is based on recognition of need. One of the greatest needs in our whole country today is adequate health services for our people. We need to maintain and improve the quality of our health services. Equally as important, we must extend the scope of these services so that they will be available to those in need of them. This is true in time of peace, but in time of potential war, hot or cold, it is imperative that the health resources of the Nation be mobilized to meet any catastrophe, great or small. Today atomic, bacteriological, radiological catastrophes are a concern of many of our communities. Those of us who deal with services to our fellow men in time of illness have an even greater duty during the preparation for the defense of our country.

It is well to take stock of some of the important aids available to the Nation in building up our health resources.

In 1946, by the action of the Seventy-ninth Congress and the President, Public Law 725 established the hospital survey and construction program. This program, known popularly as the Hill-Burton program, was designed basically to assist the States to provide needed hospital and health facilities in needy areas. These areas were primarily rural. The mechanics of this act have proven it to be one of the most soundly conceived statutes ever enacted by Congress in providing for local, State, and Federal cooperation in providing hospital services. It is admin-

istered on the State level with the local community retaining the incentive for local initiative and local operation of the completed nonprofit, nondiscriminatory, community-service type of facility. An inventory and analysis by the State of the existing facilities and definition of the need for additional facilities is required before Federal funds become available on a matching basis for construction purposes.

The State establishes the percentage of Federal funds to be made available annually for each project in its borders. The total amount of Federal funds granted to the respective States is determined by a formula in the law. The controlling factors, however, are population and per capita income of the State.

In 1949 the basic law was amended to include Federal aid for research in the field of hospital services. An appropriation to implement the amendment was under consideration at the outbreak of the hostilities in Korea. With the increased demands on the distribution of our Federal funds there has been no appropriation made available for this type of research.

As of July 31, 1951, a total of \$467,500,000 has been appropriated for hospital and health center construction. This has made possible the approval of 1,600 projects which will provide 77,000 additional hospital beds. An analysis of all the State plans shows that there are in existence today approximately 1,100,000 acceptable hospital beds and a deficit of nearly 830,000. In other words we have only about 54 percent of our needed hospital plant in this country at this time.

Of the 1,600 approved projects, 475 are completed and rendering a community service, 1,000 are under construction and 125 are still in the planning stage. Total construction costs are estimated at slightly more than \$1,200,000,000. The Federal share is about 36 percent of this amount.

Of all the projects approved, nearly three-fourths are for general hospitals. This includes new hospitals as well as additions, alterations, or remodeling of existing hospitals. Next in order are public health centers—about 15 percent, then mental hospital projects—about 5 percent, tuberculosis projects—3 percent, with only about 1 percent for chronic disease facilities.

It is apparent that most of the emphasis has been on general hospital facilities. About 55 percent of the general hospital projects are for completely new hospitals. Most of the new hospitals are being built in small towns and in the smaller cities, nearly 61 percent of the new general hospitals are located in towns of less than 5,000 population; only 7 percent are in cities of more than 50,000 people.

This, to me, points up the providential nature of the Hill-Burton program at this time. There is a duality of purpose noted. I pose the question, "Cannot these Hill-Burton hospitals be regarded as evacuation destinations for our potential target areas?" I hope we will never be called upon to put this statement to a test, but we may be. It certainly was not our original purpose.

Of the total Federal funds made available, \$15,551,132 has been allocated to Kentucky. State aid to communities has also been granted. To date, 47 projects have been approved; 28 are for general hospitals, of which half are completely new facilities. The balance is made up of projects that provide for the replacement of old buildings or for additions or alterations to existing general hospitals. Six projects are located in tuberculosis sanatoria and four provide additional psychiatric facilities. Seven health centers have been constructed, three of which are combined with new general hospitals.

Two of the projects are located in Hopkinsville and others in this section are at Clinton, Cadiz, Princeton, Owensboro, and

Leitchfield. With the exception of Owensboro, these projects will provide completely new facilities.

The provision in the Hill-Burton Act for survey and planning has proved to be one of the soundest features of the law. Each community fits into a pattern of service as outlined in the State plan. The community must determine the size of the facility that can be supported and the services to be included. The local community planning features are one of the major reasons why the Public Health Service believes that a program for what we now call defense-impacted areas, with increased populations, should follow the Hill-Burton concept. Service at the local level is the objective of the program for war-impacted areas. Therefore, advice from the communities where the affected people live is essential. Conversely, State and Federal advice to local planning groups is important if the planning is to be really effective. Those involved at all levels should take part in it, not simply be brought into the program after the plans are made.

In addition to the Hill-Burton program, with its obvious limitations for hospital construction in war-impacted areas there are several action programs designed to provide assistance.

The Federal Civil Defense Act does not contemplate the making of grants for hospital construction. It does provide for the incorporation of shelter areas or other construction designed to provide protection of the occupants against enemy attack. Funds, however, are very, very limited.

The bill sponsored by Senator MAYBANK, of South Carolina, and Representative SPENCER, of Kentucky, known as the Defense Housing and Community Facilities and Services Act was passed by this Eighty-second Congress and signed by the President. Title III of his act relates to community facilities and resembles in some respects the Latham Act of World War II. The provisions of this act include hospital facilities and services for the care of the sick, as well as facilities for water, sewage, sanitation, and other community facilities. Federal funds in the amount of \$60,000,000 are provided for the construction, maintenance or operation of community facilities. In the case of assistance for hospital construction these funds will be available only if funds are not available under the Hill-Burton Act. This legislation also provides that maintenance and operation payments will not exceed the portion of the maintenance and operation expenses attributable to the national defense activities in the area. The act also specifies that the function, powers, and duties with respect to health, refuse disposal, sewage treatment, and water purification shall be exercised by and vested in the Surgeon General of the Public Health Service. This latter proviso properly relates the health activities of those existing in regard to the Hill-Burton program. The success of this legislation depends entirely upon local, State, and Federal cooperation and coordination of hospital and health services—the kind of cooperation which has proven so eminently effective to date.

The communities in western Kentucky are affected by the defense activities currently taking place at Paducah, Camp Breckinridge, Camp Campbell, Fort Knox, and in the TVA areas. It is important that plans be made at once for health resources in this general area. Based on successful planning on other areas this may be accomplished as follows:

First form a planning committee. Community health planning has many facets. There is need for teamwork among many groups. The key groups are the medical societies and the trained and experienced local public-health officials. But these cannot do the job alone. The team must have representatives of volunteer health agencies,

other professional and educational groups, organizations concerned with fields related to health, and all those groups which might be called consumers of health services. The physicians properly should lead the way.

Second, gather factual data on existing resources and need. It is estimated that the peak population influx is expected to increase the population of affected communities in this section of Kentucky by about 50 percent. Hopkinsville has already had at least a 12-percent increase. Problems in sanitation, tuberculosis and venereal-disease control have already arisen. Hopkinsville has a sanitary land-fill system of refuse disposal but other communities in this area have less adequate systems.

Such matters as the role of insects as disease carriers and their control must always be considered.

Resources across State lines must be considered. For example, a 125-bed hospital is being constructed in Clarksville, Tenn., which may provide for patients from this area if adequate arrangements are made. Data should also be obtained on the provisions needed for mental, tuberculosis, and chronic-disease patients.

The Public Health Service in cooperation with Commissioner Bruce Underwood, of the Kentucky State Health Department, made a survey for the Atomic Energy Commission in February 1951 and recommended that 80 hospital beds and an additional nurses' residence were needed to care for the influx population in Paducah. These beds were proposed in addition to the expansion planned for Riverside Hospital under the Hill-Burton program. It is possible that a 100-bed Baptist hospital, begun some years ago, may be completed. If the fund drive for the Baptist hospital is successful and it is created, will there be a need for additional beds, and if so, how many?

These are typical questions for which answers must be sought by the local communities.

Third, bring to the attention of local community professional and lay groups for the joint study and solution of the problems and for the correlation of all programs and services affecting health: preventive, therapeutic, and environmental.

One successful method of filling in gaps in hospital services is by coordination and cooperation among hospitals. There is good evidence that the small hospital cannot—by itself—provide all of the services needed by the people it serves. A solution is to develop relationships among hospitals whereby the larger and more completely equipped can provide the smaller with the needed services.

The concept of a regional hospital coordination system includes many lines of affiliation and sharing among hospitals. For example, such a system envisions intern and resident physician services on a rotating basis to hospitals which otherwise would not have the advantage of such services (interns for small hospitals are a rare commodity today); the provision of consultation and part-time specialists services, including radiology, pathology, and other diagnostic services to small institutions; clinical conferences in small community hospitals; educational courses for all classes of hospital personnel; postgraduate training of physicians from small communities, provision for the search for knowledge related to modern hospital practice in administration and clinical services; stimulation and exchange of information on improved hospital administrative methods; group purchasing; uniform medical records and bookkeeping systems; joint planning of hospital and public-health programs. All these are directed toward better patient care and when combined with adequate hospital licensure programs are effective in achieving that goal. Coordination of facilities and services indicates the

need for a regional planning committee composed of representatives from each of the community planning bodies.

Out-patient departments may be used as a means of alleviating hospitalization in communities where the demand for beds exceeds the supply. Home-care programs have aided in this regard. Out-patient service provides one of the best means for hospital participation in preventive medicine, particularly in the fields of mental illness, venereal disease, and tuberculosis. Rehabilitation services started early and adequately conducted shortens hospital stay and permits return of the individual to an economically competent status. The results of this type of service pay big dividends especially in State and other governmentally supported institutions.

Fourth, interpret the findings to the public. Constant efforts should be made to increase public participation in planning. In this way valuable health education may be accomplished relative to the proper use of existing services and facilities.

Fifth, develop methods of effective implementation of the plan. The best method to assure this is through education of all the people in the community of the need for it. Planned publicity of the educational type, combined with planned public relations of a high order, are of great value.

The objective of community planning should be to make available to every individual the curative and preventive benefits of medical science at its best. Preventive medicine is a function of every physician and every hospital. Diagnosis, treatment, restoration to health, rehabilitation, prevention of disease and health promotion, and health maintenance are the obligations assumed by every physician. The hospital should be the health center of the community. It is the mobilization depot of modern medical science. The practice of medicine should not be confused with the business of medicine by the physician or the hospital administrator; however, the relationships must be understood.

A community health program which combines curative and preventive aspects to attain health promotion and health maintenance will be not only of inestimable value to the defense effort but also pay two great dividends to the sick and the well at any time. The accomplishment of this objective will require dynamic leadership, imagination and cooperative effort of the highest order.

In closing I think it is appropriate to recall the official motto of this great industrial and agricultural State: "United we stand, divided we fall."

Two Hundred and Fiftieth Anniversary of Yale University

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. KEFAUVER. Mr. President, as an alumnus of Yale University I ask unanimous consent to have inserted in the Appendix of the RECORD a short statement on the achievements of this great educational institution on the two hundred and fiftieth anniversary of its establishment.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEFAUVER

Yale University is 250 years old today.

This great university grew from a little school founded 250 years ago in a farmhouse at Branford, Conn., and it descends in a direct line from such ancient seats of learning as the University of Paris, from Cambridge and Oxford.

The whole ideal of the university is rooted deeply in Western civilization—older than parliaments, older than the modern state itself—and over the centuries it has assumed many functions. It has been a refuge for scholars, a treasure house of facts, an incubator of new ideas and ideals. It has been the preserver, propagator and perpetuator of human wisdom.

The proper function of the university, wrote Newman, is "teaching universal knowledge." United States universities have sometimes gotten away from that maxim, but the return to the teaching of universal knowledge is well under way, and nowhere is it more visible than in Yale. It is most obvious in Yale's imposing facilities—toplight schools of law, medicine, divinity, the Nation's oldest forestry school, the world's second largest university library.

Universities such as Yale, of which I am an alumnus, perform a special function, it seems to me, in trying times such as today. They keep alive the spirit of free inquiry into fact and of free discussion of fact. Academic freedom is preserved at Yale—at a time when the free expression of opinion is being curtailed for many, even in America.

We are fortunate that such citadels of freedom as will be found at Yale still exist. And we must resolve that this always will be so.

The Government In Medicine

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article by Dr. Max Seham, which appeared in a recent issue of the Reporter on the Government in Medicine, be printed in the Appendix of the RECORD. Dr. Seham, who has an outstanding reputation as a pediatrician, is associated with the University of Minnesota Medical School and is an outstanding citizen of our State.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GOVERNMENT IN MEDICINE

(By Max Seham, M. D.)

Over the air, in newspapers, magazines, and political speeches, the American people are incessantly warned about Government interference with the private practice of medicine. It is menacing, they are told—incompatible with the "American way of life," the first step toward the "welfare state." The President's program for national health is "Kremlin-inspired," "socialistic and communistic," "inciting to revolution."

Is all this true? Would the President's program "enslave the medical profession and

cause a deterioration in the quality of medical care"? The American Medical Association, from whose literature these quotations are taken, thinks so.

Many Americans, whatever their motivations, close their eyes to the true reasons for Government participation in promoting the health of the people. No administration, Republican or Democratic, has ever attempted to "enslave the medical profession." Except in war or depression, the Government has "encroached" upon private practice only when a local community or a State has been too short of funds, personnel, or enthusiasm to cope with a situation. We Americans have short memories indeed if we have forgotten what happened during the depression. Who can forget the idle factories, the millions of unemployed, and the poverty which produced widespread deficiencies in diet, neglect of teeth, and the postponement of necessary treatment of disease? Without Government cooperation, private physicians and voluntary health agencies would have reached an impasse, and the foundations of this country's health might have been destroyed.

Thousands of farmers, unemployed workers, and their families were furnished free medical care out of general taxation. In spite of all dire predictions, when the emergency was over the Government withdrew and the status quo was restored.

PARTNERSHIP

The partnership between Government and the medical profession began in 1798, when Congress enacted a law protecting the health of merchant mariners. This first system of compulsory health insurance arose from the provision of the Constitution giving the Congress power "to lay and collect taxes, duties, imposts, and excises, to . . . provide for the . . . general welfare. . . ." It was based upon the principle that the Federal Government could provide medical services and hospitalization, financed by a payroll tax and general taxation, for certain classes of self-supporting citizens.

In the next 50 years the line of demarcation between public and private medicine was sharp. The attitude was "The business of the public-health officer is to prevent disease, the business of the private physician is to cure it." Public-health agencies—first Federal, then State—limited their activities to quarantine, sanitation, and the prevention of epidemics.

INDUSTRIAL MEDICINE

In frontier days more than two-thirds of the people lived in rural areas. With the Industrial Revolution tremendous changes took place in the social and economic status of the majority of the citizens. Overcrowded living quarters became disease-producing slums; great factories were foci of many preventable diseases and occupational hazards. Workers in mines, in smelters, and on railroads demanded more adequate protection from industrial accidents. The medical resources of industry were insufficient, and the medical needs of the families of employees were neglected. The health conditions of thousands of workers became so flagrantly bad that for its own protection management hired medical personnel to establish what is now known as industrial medicine.

Survey after survey by disinterested experts revealed that illness hit hardest among the groups least able to meet the cost of medical care. The poorer the family the less care it received. Chronic disabilities, particularly hernia, tuberculosis, varicose veins, blindness, and deafness, were much more prevalent in the low-income groups. Disparities in the infant-mortality rates between Negroes and whites and between the Southern and Northern States reflected the differences in the amount and quality of medical care.

In the first decades of this century, militant action brought about a number of health reforms. Public opinion, lay and pro-

fessional, became more acutely aware of the fact that poverty and disease were tandem evils: that poverty was responsible for sickness, and that sickness in turn produced poverty. Health organizations, national and local, public and voluntary, medical and lay, were formed in large numbers, especially in the big cities. Churches rendered invaluable services by building and maintaining non-sectarian hospitals. Venereal diseases, blindness, deafness, physical handicaps, polio, and mental illnesses soon became focal points of attack. Practically all these voluntary health activities had nothing to do with the Government at the beginning. It soon became clear, however, that only with Government help, either through general taxation or grants-in-aid to the States, could there be any hope of solving such national problems as tuberculosis, infant and maternal mortality, immunization against contagious diseases, and old-age and mental diseases.

WHERE DO WE GO FROM HERE?

There can be no doubt that national and local voluntary foundations and agencies, either alone or with the cooperation of Federal and State public-health agencies, prevent much suffering and illness. But there is no standardization of techniques and services. Administration is largely in the hands of amateurs. These volunteer efforts arise in a blaze of glory and collapse because of loss of interest or lack of funds. The trend is toward more Government participation, not less.

The real issue today, political sophistry and propaganda aside, is not whether the Government should help fight those diseases labeled "hands off" by the medical guild, but how far it should go. The American medical system today is a mixture of what may be called limited state medicine—or socialization through Government financing and/or control—and private practice. Each is indispensable to the other. Both are responsible for the splendid progress this country has made in the science and art of medicine during the last half century.

In 1949 America spent nearly \$9,500,000,000 for medical care. Of this more than \$7,000,000,000 was spent for private care and more than \$2,000,000,000 for Government medicine out of general taxation.

The accomplishments of Government in the field of health are too many and too far reaching to record in detail. The United States Public Health Service in Washington alone is responsible for 40 health units. It furnishes emergency health services to Federal employees, including Senators and Congressmen. Its research covers a multitude of subjects, among them cancer, spotted fever, typhus, mumps, yellow fever, and, more recently, diabetes, heart disease, and arthritis. This Federal bureau has the approval of the most rabid "free enterprisers."

Over 19,000,000 veterans have access to Federal medical care, which is a joint enterprise of full-time Army physicians and part-time civilian physicians. About 78 percent of all the hospital beds in the country are controlled or financed by Federal, State, or local governments. In New York City alone about 50 percent of the people get their medical services through Federal, State, or municipal funds. In more recent years Federal participation has extended the care of the chronically ill—those suffering from tuberculosis, mental diseases, leprosy, heart disease, infantile paralysis, or cancer. Thanks to workmen's compensation insurance, workers who are victims of occupational diseases and accidents are now freed of the worry of becoming public charges.

PUBLIC RESPONSIBILITY

Opposition to this trend has precipitated the question: When does any health program become the responsibility of the Government? There is no disagreement whatsoever about the role of Government as re-

gards sanitation, the control of communicable diseases, and the like. Nor is there much dispute about the principle of public responsibility for adequate medical care. But there are wide differences of opinion as to the extent to which the principle should be applied, and as to the forms of organization that would best serve the purpose.

Twenty-five years ago the armamentarium of a physician was his bag of drugs, his prescription pad, and his stethoscope. Today he needs nurses, technicians, and secretaries to function efficiently. He must call freely on a variety of specialists. The use of laboratories, X-ray, expensive new drugs, and many other diagnostic and therapeutic aids is also reflected in the patient's bill. It is not that physicians overcharge or that the services are not worth the price; it is merely that the purchasing power of the patient has not increased as fast as the cost of medical care.

THE MEDICALLY INDIGENT

In 1946 about 13 percent of all families, representing 18,000,000 people, had an annual money income of less than a thousand dollars. It is extremely unlikely that any of these families could pay for all necessary medical care.

Another 15 percent, or about 22,000,000, had incomes between one and two thousand dollars. This group might be able, with hardship, to pay for some medical care through the reduction of charges by their physicians and with the help of some prepaid voluntary insurance plans.

Nearly 20 percent, or 28,000,000, had incomes in 1946 of between two and three thousand dollars, and 31 percent between three and five thousand. In other words, about 79 percent of all families recorded in the 1946 survey had incomes below \$5,000. When we say that people in the \$2,000-\$5,000 bracket can afford voluntary prepaid health insurance, we must understand that this is not total coverage. It is limited to hospitalization, surgery, and obstetrical care. The insured receive no home or office visits, which obviously have the first call on the family budgets. Only one conclusion can be drawn from the above figures: that 40,000,000 people in families with an annual income below \$2,000 are certainly medically indigent. Probably another twenty medically indigent. Probably another 20,000,000 with incomes of \$2,000 to \$3,000 a year will have a great difficulty paying for medical care.

Even with the rise in dollar income since 1946, the possibility of heavy expense for hospital and medical care is a source of great insecurity and anxiety to about 75 percent of the American people. Under such circumstances society owes it to itself to take organized action in behalf of the sick individual and the community. If the individual cannot meet his health needs, the local community should; if the local community cannot, the State should; and if the State cannot, the Federal Government should and must.

CHILD HEALTH

Another controversial phase of this question centers around the health of our children. A generation ago it was the consensus of health departments and medical societies that only the children of the indigent should be furnished services for the prevention of contagious diseases with State or Federal aid. For many years the problem of mass immunization was left to the private physician. Because of the dollar barrier and because the private physicians were unable to reach a sufficiently large part of the population, especially in rural areas, the community as a whole was not protected, and many children were sacrificed.

In 1932, fewer than 20 percent of the school children in a midwestern city had been immunized against smallpox. Overnight, smallpox struck. Within a month, more than

2,000 adults and children were down with it. As usual, people clamored for a padlock after the horse was stolen.

Today any child, rich or poor, not only has access to free vaccination but also to free immunization against all the contagious diseases whose prevention is known. This service is paid for from public funds. All families have the free choice between their private doctors and the public clinic. In such a situation, no hard and fast lines can be drawn between preventive and curative care, between public and private medicine. Wherever public health has joined hands with private medicine the former has furnished the funds and the facilities, and private physicians have administered care unhampered and for remuneration. The Government or the State limits its role to financing, and to seeing that the patient gets the service. There has never been any attempt to dictate to the doctor how he should practice his art. Nor has the fear of loss of income proved a problem. Because of public education and exhortation, people get to know more about health needs and more people come to the private doctors to fulfill those needs. Today the private doctor takes care of a much larger number of well infants and examines many more school children in his office than ever before.

The best authorities are of the opinion that dependence upon the private doctor alone to diagnose and treat defects in school children resulted in the large number of draft rejections during the last war. To quote former Surg. Gen. Thomas Parran of the United States Public Health Service: "There has been almost no progress during the last 25 years in the decrease of incidence of physical defects amongst school children." The present system of medical inspection in our public schools is woefully inadequate, particularly in small towns and rural areas, a fact brought sharply to light in the 1938-1940 survey by the United States Office of Education. Of 487 cities ranging in population from 10,000 to 30,000, only 73 percent employed full-time nurses and 36 percent had no school physicians. In the majority of the schools the inspections were found to be superficial and casual, frequently over the clothing. With few exceptions, the services were found to be limited to first-aid diagnosis, and advice on nutrition and health habits.

For over 50 years there has been the same laying on of hands, the same recording of defects on cards, the same finding and re-finding of defects. Obviously there is little use in inspecting without correcting. Why diagnose defective vision and not furnish glasses? Why record diseased tonsils and not have them taken out? The incidence of physical and mental defects will never be decreased without the assistance of State or Federal programs.

THE PHYSICIAN SPEAKS

Thus far I have spoken as a citizen. I also have a vested interest in this matter as a physician. In this capacity I have no fear whatsoever that the Government will swallow me "lock, stock, and barrel." As a practitioner of medicine for 40 years I have learned to regard Uncle Sam, M. D. as a fair and ethical consultant rather than as an aggressive competitor. Many a time during my four decades of observation, Uncle Sam has given life-saving transfusions to citizens en masse. I see no reason why we of the medical profession should consider the Government agencies and the voluntary agencies to be opposing and hostile forces.

Although it must be admitted that the majority of the medical profession, as represented by organized medicine, distrust and resist Government efforts in behalf of the sick individual, the rank and file, especially the more recent graduates, are becoming less resistant to "Government interference" with private practice. They are beginning to

realize that public clinics and health centers will benefit them professionally and financially. Many physicians now receive a considerable part of their income from public sources.

HEALTH: A NATIONAL RESOURCE

In this day of world crisis, the waste of our manpower through illness and death is a threat to our very existence. A national health program on a long-term basis to supply adequate medical care for the bulk of our population is a national concern. It cannot be accomplished by advertising campaigns, slogans of hate, and threats against the Government. Nor can we reach our goal by using horse-and-buggy methods of medical distribution. It is imperative that we dedicate ourselves to the search for what is best for the Nation as a whole, rather than for ourselves as individuals or groups. It is time that we surrendered our hates and our prejudices against the Government and approached this urgent domestic problem of the Nation's health in the spirit of the scientist—objectively, and in search of the facts.

In the words of Dr. Charles-Edward Avery Winslow, an eminent public-health officer, "Is it not possible that politics and polemics and paid propaganda may be laid aside and that the statesmanship of competent experts may establish a sound policy of directed gradualism leading to ultimate solution of this most urgent problem of midcentury public health?"

Conservation of Our Water and Land Resources

EXTENSION OF REMARKS OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. SHORT. Mr. Speaker, having served as a member of the Committees of the House of Representatives on Flood Control, Rivers and Harbors, and Irrigation and Reclamation, and having served as president and chairman of the board of the National Rivers and Harbors Congress, a nonprofit, nonpartisan organization, I am tremendously interested in conservation and utilization of all our water and land resources.

With our increasing population and increasing demands, not only in the domestic consumption, but in foreign commitments, I know that we must do everything in our power to make our Nation strong. No war can be successfully waged without a sound economy at home. While wanting the good will and friendship of all nations we know we cannot become strong by giving away everything that we have.

America is a broad and diversified land with many requirements. We must consider not only our domestic water supply, irrigation, land drainage, navigation, flood control, development of hydroelectric power, conservation of our timber, grazing lands, crop production, soil conservation, and stream pollution control, but all other aspects related to the conservation and utilization of all our land and water resources.

It is to be hoped that the many benefits that shall be derived in the future

will be for our own citizens first, before scattering our hard-earned earnings all over the world.

Early in 1950, President Truman appointed the Water Resources Policy Commission. That Commission was made up of very outstanding engineers and educators who studied the problem extensively and intensively for over a year.

On last May 11, Samuel B. Morris, general manager and chief engineer, Department of Water and Power of Los Angeles, Calif., delivered an address before the National Rivers and Harbors Congress giving us the essence of that commission's report.

Let it be thoroughly understood, sir, that I do not agree with everything in the speech delivered by Mr. Morris, or the report by the commission, but I do think that so much valuable information is given in the address by Mr. Morris that it should receive the careful consideration of every Member of Congress. Whether one agrees or disagrees he will certainly appreciate the fund of information revealed, and will want to carefully consider the suggestions made.

The above-mentioned follows:

THE REPORT OF THE PRESIDENT'S WATER RESOURCES POLICY COMMISSION

(By Samuel B. Morris)

The National Rivers and Harbors Congress has long been primarily interested in the historic policy of the United States in developing and maintaining its waterways in order to promote its commerce and industry and its military strength and defenses.

Economically developed navigable waterways, accompanied by low-cost shore handling facilities, frequently offer the cheapest mode of transportation of bulk raw materials and heavy commodities basic to agricultural and industrial production. Of course, both water and land transportation are vital to the maintenance and growth of the Nation's commerce and defense. Sound national transportation policy as well as sound national water policy require that our navigable water resources be developed and used to the fullest economic extent.

Continuing Federal interest is shown by total Federal expenditures for the improvement of rivers and harbors. From the beginning in 1824 through June 30, 1948, these expenditures amounted to \$3,400,000,000, of which construction cost was \$2,200,000,000 and maintenance and operation \$1,200,000,000. Of these expenditures, nearly \$1,200,000,000 was for construction of inland and intercoastal waterways, requiring about half this sum for operation and maintenance. These figures in themselves amply indicate that the public should be interested in the Federal Government's program for river and harbor improvements.

Historically the Corps of Engineers of the United States Army has had jurisdiction over rivers and harbors. Though Congress established the Mississippi River Commission in 1879, it was not until after the major floods of 1915-16 that funds were appropriated for the construction of a levy system in the lower Mississippi River Valley. The 1917 act provided for an expenditure of \$45,000,000. Prior to the 1930's major expenditures for flood control were made by the United States only on the Mississippi River, the Sacramento River in California, and Lake Okechobee in Florida.

Under the direction of Congress in 1925, and beginning with the authorization and appropriations in the 1927 River and Harbor Act, the Army engineers have prosecuted extensive surveys of those navigable streams

and their tributaries where power development appears feasible and practicable. The objective was the formulation of general plans for improvement of navigation and the carrying out of such improvement in combination with the efficient development of potential water power, the control of floods and provision for the needs of irrigation. By June 30, 1949, 191 streams had been surveyed and reported upon, leaving only 3 percent of the work to be completed.

With this adoption of the 1936 Flood Control Act, the United States embarked upon a broad flood control policy and program, including construction of reservoirs and treatment of watersheds, provided that local agencies furnished the rights of way, agreed to save the United States harmless against damage, and agreed to maintain the works. In 1938 Congress broadened these provisions and, under certain conditions, permitted the United States to make the total expenditures for reservoir regulation and to maintain the works.

Between July 1, 1936 and June 30, 1949, the expenditures by the Army engineers for flood control exceeded \$1,750,000,000, over one-half the amount spent in the preceding period of more than a century in Federal navigation improvements. These projects included the installation of 1½ million kilowatts of hydroelectric power. These heavy expenditures indicate the interest of the United States and of the public in flood control as well as navigation.

While the membership of the National Rivers and Harbors Congress has been mostly interested in navigation, flood control, and incidental power development, it will be helpful to appraise the economic development of water resources for all uses, and to consider an entire river and its drainage area and all needs for water with related land uses within that area.

Water falls on the forests and pasture land of the mountainous areas, and on the hills and valleys, and runs off the land to the streams and rivers. With rainfall and runoff there is some erosion. It has been so throughout geologic time. The physiography of the country as we see and know it is largely the result of erosion of the high lands and the filling of the fertile valleys. Forest growth, pasture land, and farm land affect the quantity, distribution, and quality of the water which enters the soil or runs off to the rivers for later use by man.

Constructing works on a river, diverting water to cities and to industries, or turning it onto lands, and the subsequent return of much of this water to the river, affects not only the river itself but the economy, health, and welfare of the entire population within the drainage area and adjacent to the river. The river thus has a vital effect upon all the people and the economy within the basin in much the same manner that the blood supply and vascular system affects all activities of the human body, including life itself.

The problems of the interdependence of water and related land uses on the river systems and within the drainage basins of the United States, are now recognized as being of deepest import to this Nation. Indeed they are fundamental, for upon their proper solution, millions of Americans of the future must depend for actual survival.

To give the broadest consideration to these problems, Mr. Truman in January 1950 appointed the President's Water Resources Policy Commission. This Commission's studies, extending over a period of a year, have sought to correlate the experiences of this Nation in the uses of its land and water resources, and on the basis of present and future needs to make recommendations for a national policy to guide the actions of Government from this point on.

Perhaps it will be helpful first to view quantitatively the picture for the Nation as

a whole. Upon the area of the continental United States of about 1,935,000,000 acres falls an annual average of 30 inches of precipitation. Of this amount, 21 inches is lost to the atmosphere by evaporation and transpiration. The remainder, about 9 inches in depth, runs off to the sea, in the average amounting to 1,300,000,000 gallons of water per day, about a third of which has penetrated the soil to appear again in the form of ground water. Domestic uses constitute about 1 percent of the available water supply. All uses, including those of industry and irrigation, total about 10 percent of the average annual runoff, as nearly as is known. Unfortunately, there is no national agency that collects and publishes all data on use and consumption of water, in the manner that the Federal Power Commission accounts for total power capacity and kilowatt hours sold for various uses. It is something of a paradox that electricity, the rather mysterious form of energy which we cannot see, can be measured more accurately and be more fully accounted for than the very tangible elemental substance, water.

To speak of average annual rainfall or runoff, however, omits from discussion the important factors of unequal areal distribution, and the great variations through the seasons, from year to year, and for long cycles of years. Much of the United States west of the ninety-seventh meridian constituting the 17 western States, receives less than 20 inches of rainfall. West of the Rockies there is generally 6 months of summer with almost no rainfall, requiring the irrigation of crops. There are, however, some areas of the Far West with more than 100 inches of rainfall, still others with less than 5 inches, some with 100-inch depth of runoff, some with none. Problems of storage, regulation and long-distance transportation of water from areas of surplus to areas of need are usual not only in the arid West but frequent in the humid East, particularly where there are large aggregations of population in cities and metropolitan areas.

In the rapid growth of our Nation, we have been profligate with its natural resources. Timber, gas, oil, fertile topsoil, iron, copper, and other metals and minerals have been exploited with all too little thought of conservation. Water, land, and air are the continuously renewable resources required by human, animal, and vegetable life. The continuing increase in population of the Nation results in ever increasing need for these natural resources. War and national defense make for increased requirements and demands. It is, therefore, not untimely for the Nation to give renewed interest and consideration to its water and related land uses.

Our Nation has led in production by the efficiency of the private enterprise system. It is the province of government, however, to provide the plans and means under which there will be continuously available water and land to provide adequate forests for our timber, grazing lands for cattle and sheep, and fertile lands to produce food and fiber for ever-increasing populations and we hope for ever-increasing standards of living. In time of national emergency this responsibility is greatly increased in order to make our Nation strong enough to resist enemy attack and to wage war when it becomes necessary. Private enterprise must have these fundamental natural resources in abundance and at reasonable cost in order to produce.

At the present time we are intensely engaged in increasing our armament. The pressure to make the best use of time, materials, and financing to advance the defense effort will undoubtedly lessen the immediate construction budget for Federal water projects. But this same period should give us the "creative pause" we need for collection of more adequate data, and for more thorough planning and consideration of water and

land-use policies for projects best designed to meet the new conceptions of expanding population and industries, which we may expect in the immediate decades to come.

The development of the Nation's water and land-use policies began on the individual-project basis. These individual projects have been for domestic water supply, for irrigation, for land drainage, for navigation, for flood control, for hydroelectric power, for timber, grazing, and crop production, for soil conservation, and for stream-pollution control. Such developments have been by individuals, by corporations, municipalities, and other local government, and by the United States. Such development has frequently produced dual-purpose projects such as domestic water supply with incidental power development. Projects of this kind were effected by San Francisco and Los Angeles with their great aqueducts conveying water from the High Sierras to these cities and producing power through aqueduct hydroelectric plants. Many irrigation projects have also provided for incidental power development. Many flood-control and navigation projects similarly have been combined in dual purposes.

The Boulder Canyon project was, however, the first great multiple-purpose water-resource development, combining most of these objectives into a single program. Construction of this project, of which the Hoover Dam is the major structure, began only 20 years ago. This dam storing nearly 2 years' flow of the Colorado River, provides flood control and silt control to the irrigated lands adjacent to the lower river. It provides irrigation for a million acres of land and hydroelectric power of more than 1,000,000 kilowatts, and an average of about 5,000,000 kilowatt-hours per year. Though construction of the Colorado River aqueduct by the metropolitan water district of southern California water is being conveyed to 32 cities from Los Angeles to San Diego with a population of more than 3,500,000. While this aqueduct is at present being used only to about 20 percent of its capacity, the full capacity of a billion gallons per day will ultimately provide water supply for more than 5,000,000 people. This supply added to local water and waters imported from the Sierras will provide for a population of not less than 8,000,000 on the coastal plain of southern California. Truly the benefits of the great multiple-purpose Boulder Canyon water project, built by the Federal Bureau of Reclamation and being paid for in full by water and power users of the area served, is still one of the best examples of multiple-purpose water developments.

Beginning in the early thirties, and urged on by the depression, a large number of multiple-purpose water projects were conceived, designed, and constructed or under construction by the United States, including such well-known works as Bonneville, Grand Coulee, McNary, and Chief Joseph Dams on the Columbia River, and Fort Peck and the many dams under construction on the Missouri River. These projects have been divided between the Bureau of Reclamation and the Corps of Engineers as constructing agencies. The Tennessee Valley Authority and the conception, planning, and management of its coordinated river development have developed the Tennessee River in a truly great single coordinated enterprise, approaching a billion dollars in expenditures for flood control, navigation, hydroelectric power, and improved land use practices.

The basic laws under which the several Federal agencies operate are dissimilar, and have been fundamentally drafted upon the single-purpose rather than multiple-purpose project basis. The fiscal requirements for authorization and repayment have varied greatly under Federal authorizations depending, in part, upon the construction agency selected. In general, domestic and industrial water projects and hydroelectric projects

have met their full costs returnable with interest in 40 to 50 years; however, there have been several domestic water projects authorized which are to return to the United States the capital cost in 40 years without interest.

The Reclamation Law of 1902 with its many amendments now provides that projects may be authorized if the cost allocated to irrigation is returned without interest in 40 years plus a 10-year development period. In general, low-cost irrigation projects able to meet the above standards cannot now be found. To meet increased costs beyond the ability of the irrigator to pay, the general taxpayer has been called upon to subsidize these irrigation projects largely through foregoing the so-called interest component and applying this interest to the retirement of irrigation capital by increased power rates and other means. Many bills providing for specific projects have also provided for longer periods of repayment without interest, in some cases as long as 75 years or more. While the opportunities of land drainage are comparable to the opportunities for irrigation, little has been done under national policy. Land drainage has largely been accomplished by local districts.

Prior to 1936, the Federal Government participated in flood control only on the lower Mississippi River, the Sacramento River, and Lake Okechobee in Florida. In that year the first flood control act was adopted under which the United States would carry the entire cost of flood control construction, provided that local agencies procured the rights-of-way, agreed to operate the works, and to save the Government harmless against damages. Only 2 years later, in 1938, the act was further amended to enable the United States, under certain conditions connected with flood control storage projects, to carry the entire costs without any local assessment or contributions.

Improvement of navigation, the preservation of fish and wildlife, and provision for public recreation have also received the consideration of the Federal Government in the planning and development of water projects. Navigation of inland waterways has been supported by the Federal Government ever since 1824 and the improved waterways are free from toll. Under an amendment to the reclamation law, Federal expenditures for fish and wildlife have been declared non-reimbursable. Effort has also been made to declare expenditures for recreational purposes, silt control, general salinity control, transportation, national defense as non-reimbursable, but no general act has so far made such provisions. In a number of special acts authorizing particular projects, recreation has been included as a non-reimbursable expenditure.

The dense industrialized population in such areas as the Ohio River Valley where almost 50 percent of the total flow of the river at low flow has been through industrial processes or sewers has intensified the problems of stream pollution control. The 1948 Water Pollution Control Act declares it a congressional policy to recognize the primary responsibilities and rights of the States in controlling water pollution. A program of financial assistance by the Federal Government, however, is provided through loan of money to local governmental agencies at low rates of interest, and through the appropriation of funds allocated to States for conducting investigations, research, and studies related to the control of water pollution caused by industrial wastes.

Confronted with these conflicting provisions of individual statutes providing for piecemeal plans of water development in the United States, the President's Water Resources Policy Commission early in 1950 began its work. President Truman named seven men to serve on this Commission.

Morris L. Cooke, consulting engineer of Philadelphia was named Chairman. Others appointed on the Commission were Dr. Paul S. Burgess, dean, college of agriculture, University of Arizona, a biochemist, Dr. Lewis Webster Jones, president, University of Arkansas, an economist; Leland Olds, former member of the Federal Power Commission; Dr. Roland R. Renne, president of Montana State College, a land economist; Dr. Gilbert F. White, president of Haverford College, a geographer, and Samuel B. Morris, general manager, Los Angeles Department of Water and Power, an engineer.

The Commission was asked to make recommendations for a comprehensive policy of water resources and related land-use development, giving particular consideration to (1) The extent and character of Federal Government participation in major water resources programs, (2) An appraisal of water-resources priority program from the standpoint of economic and social needs; (3) criteria and standards for evaluating the feasibility of such projects, (4) desirable legislation, or changes in existing legislation.

The Commission immediately met in Washington in January of 1950 and organized a staff of about 50. The staff, largely gathered from Federal departments and bureaus, and universities, was organized into a series of committees in each major field, such as, basic data, coordination of planning and projects, water resources policies involving land use, economics of inland water navigation, etc. One of the committees was on the evaluation of selected typical water-resources projects already constructed, to furnish experience of successes and failures as guides to future project selection policy. One of the very important committees was on water law. In nearly every instance the chairman of the committee was a staff member of the Commission.

At its first meeting the Commission decided to open the doors of its discussions to every available angle of public and private opinion. The Commission sought to tap technical, economic, and social knowledge by establishing relations with a great variety of sources. Questionnaires were sent to faculties of many colleges and universities, to each of the 48 governors, to departments and bureaus of the Federal Government, to engineering, economic, and scientific societies.

Eight field conferences were held in widely separated areas: Sioux City, Iowa, Spokane, Wash., Berkeley, Calif., Denver, Colo., Fayetteville, Ark., Columbus, Ohio, Springfield, Mass., and Atlanta, Ga. More than 2,000 people attended the regional conferences, and 500 individuals expressed themselves on various phases of water resources development programs and policies.

In recommending a basis for action in dealing with the country's water resources, the Commission sought to look into the needs of a selected region, and to examine the possible effects of proposed policies upon that region and its communities. This was done by studying 10 river basins selected for diversity of size, hydrology, economic needs, and water-development possibilities. The basins selected were the Columbia, Central Valley of California, Colorado, Rio Grande, Missouri, Ohio, Tennessee, Alabama-Coosa, Potomac, and Connecticut. For each of these basins, representing all the major sections of the United States, the interested Federal agencies were asked to pool their information and experience in stating the problems of the basin and in suggesting outlines of program which might be expected to contribute most helpfully to its future development. In these cooperative appraisals the Commission brought to bear all of the accumulated findings, the hundreds of State and Federal surveys. From these have come a series of 10 portraits which are printed in the second volume of the Commission's report.

The first volume of the report of the Commission was filed December 1, 1950, under the title "A Water Policy for the American People" and consisted of 445 pages. A summary of recommendations in the form of a 24-page pamphlet was released with the first volume on December 17. Volume 2, entitled "Ten Rivers in America's Future," 801 pages, and volume 3, "Water Resources Law," 777 pages, were both released during February 1951. The Commission has completed its work, including the draft of a proposed Water Resources Act but which has not yet been released. The Commission considers itself discharged.

The Water Resources Policy Commission early came to the conclusion that the river basin should be the fundamental unit for comprehensive planning of water and related land uses. It recommended that a uniform policy be applied to all water and land-use development irrespective of the Federal agency which may have jurisdiction. This, of course, would be simplified if the recommendations of the Hoover Commission should be adopted. It will be recalled that the Hoover Commission task force recommended the creation of a new natural resources department and that all water resource agencies be placed in the new department under a secretary member of the President's Cabinet. The Hoover Commission itself recommended that all Federal water resource agencies be placed in the Department of the Interior.

President Truman's instructions to the Water Resources Policy Commission asked that it confine its studies and recommendations to matters of policy and not to organization, as the Hoover Commission had reported on organization. However, the Water Resources Policy Commission did find it necessary to make some recommendations involving organization, without necessarily changing the existing structure of Federal agencies having to do with water-resources development. One recommendation calls for the creation of river basin commissions under the guidance of an independent chairman appointed by the President, with membership on these commissions representing the affected States and the Federal agencies in the field of water-resource development. These commissions would be responsible for Federal, State, and local cooperation in comprehensive plans for best utilization of water and land resources of each river basin. The commissions would coordinate the work of all Federal agencies operating in the basins.

Another recommendation proposes a Federal Board of Review to coordinate the functions of the river-basin commissions and prescribe uniform standards of evaluation, authorization, and reimbursement, and to assure carrying out of the single, uniform national water-resources policy. The Board of Review would study and evaluate all requests for authorization of surveys, plans, projects, or programs before submission to the President for transmission to Congress. Projects would only be authorized by acts of Congress.

Each river-basin commission would prepare estimates of cost of projects and estimated benefits, both direct and indirect. In addition to a statement of all monetary costs and benefits, each commission would describe such other costs, detriments, and benefits as are not subject to monetary evaluation for transmission to the Board of Review.

The Board would submit annual reports consolidating basin-committee requests. It would continually survey all Federal legislation and functions relating to water-resource development, with a view toward seeking legislative changes to eliminate conflicts and inconsistencies and to continually improve the Nation's water and land resources.

Another recommendation is for a standard uniform system of accounting which

would show at the project level, the river-basin level, and the national level, capital, operation, and maintenance costs, and allocations of cost to the various uses, such as irrigation, domestic water supply, power, flood control, etc. All capital, operation, and maintenance, and interest costs would thus be clearly shown by projects, and would be aggregated by basins. The recommendation emphasizes financial accountability and stresses local and State participation not only in the planning and administration of projects but in contribution toward their cost.

I have briefly related earlier in this paper existing policies regarding repayment. The Water Resources Policy Commission recommends that the following principles govern repayment to the United States on new water-resources projects:

Domestic and industrial water supply: Essentially a matter of local concern and responsibility, but where construction is by the United States, the beneficiaries should repay the United States the entire allocation of cost to these uses within 50 years, with interest equal to that paid by the United States on long-time borrowings.

Power: Beneficiaries should repay with interest in 50 years, the same as in the case of domestic and industrial water supply.

Reclamation: Reclamation by either irrigation or drainage should be on an equal basis, and the beneficiaries should repay the United States, without interest and within their maximum ability to pay, the cost allocated to irrigation or drainage. The benefited States and local areas should make payments for reimbursement to the United States through the organization of conservation districts or other means by which States and local agencies may share in the cost of irrigation development and flood control.

Flood control: The present policy under which the United States carries all flood-control costs is not endorsed. The cost of flood control should be borne in part by the States and local government through the formation of flood control and conservation districts and payments should be made to the United States without interest, within the ability to pay, as in the case of provisions for reclamation.

Navigation: The Federal Government should not improve rivers merely as a means of reducing railroad rates. The Water Resources Policy Commission believes that waterways are important additions to transportation facilities. As such they should be built and improved when and where such action is economically desirable, and where waterways can properly carry their costs and haul goods at lower rates than the railroads they should do so. Railroad rates should not be lowered on rail lines paralleling waterways, and correspondingly increased on rail lines which do not parallel waterways. If and when water and rail transportation can be fixed on a cost basis, the Commission believes that tolls should be charged on inland waterways, in order that water traffic may bear its just portion of the cost of river improvements allocated to navigation.

Recreation—fish and wildlife: The Commission believes that multiple-purpose water projects providing, in part, for recreation, fish and wildlife, should have their capital allocations to these fields met out of general Government taxes except to the extent that revenues are derived from fees and charges. An exception also seems justified in cases where recreation facilities are primarily of local significance and the cost should therefore be borne by the local interests benefiting.

Stream-pollution control: The Commission believes that the 1948 pollution control law should be continued, keeping pollution control as a responsibility of State and local

government. The United States should loan money at a low rate of interest to permit States and local government and industry to mitigate pollution problems, and the Federal Government should lead in scientific and technical investigations to determine improved methods of pollution control, particularly against industrial contamination. After 10 years it is recommended that a re-examination be made to determine the effectiveness of the 1948 pollution-control law.

The Water Resources Policy Commission has made no estimate of the probable cost of these Nation-wide coordinated programs which it recommends. However, it is interesting to note the following figures, representing the water resources plans and proposals of existing Federal agencies. The figures are in terms of "yesterday's dollars" as reported to the Senate in 1948:

Federal construction program completed to date	\$5,000,000,000
Authorized and under construction	5,000,000,000
Planned and available for authorizations	20,000,000,000
Proposed at a later date	30,000,000,000
Grand total	60,000,000,000

Many questions are asked regarding agricultural surpluses and the heavy drains on the Federal Treasury for supporting agricultural prices, running into billions of dollars. The Commission is in full agreement that the program for bringing new lands under cultivation should be geared to the necessities of agricultural production. At the present time there are 375,000,000 acres of cropland. There are over 600,000,000 acres of forest land, of which 350,000,000 acres are grazed. The total area grazed is 1,052,000,000 acres. It requires several acres of grazing land to produce the equivalent of an acre of cropland. The Department of Agriculture estimates the present total agricultural and grazing land as equivalent to 542,000,000 acres of cropland.

There has been a reduction in acreage required for feed of draft animals from a peak of 90,000,000 acres before tractors came into common use to a present of about 30,000,000 required to support draft animals. It is expected that this area will be reduced by further substitution of machines for animals so that an ultimate reduction to 12,000,000 acres may be expected.

It is difficult to estimate the loss of acreage and loss of fertility through erosion of top soil. Observations on test plots have shown a loss of soil as great as 100 tons per acre in a single storm. In 1938 during one storm in southern California, there was a measured average erosion in the San Gabriel Mountains of the Angeles National Forest amounting to 80,000 cubic yards per square mile, with record drainages showing as much as 100,000 cubic yards per square mile. There is no adequate record of the rate of loss of crop lands through erosion.

A person flying across the United States cannot help but see how the blighting fingers of erosion are extending into farm lands, especially west of the Mississippi River. On the other hand, improved farm practices, contour plowing, terracing of slopes and better strains of seed have actually increased the yield per acre of crop lands in the past decade.

One of the highly uncertain factors in the problem is that of agricultural export, which for the past decade has been requiring the produce of 40,000,000 to 50,000,000 acres.

Estimates are that the increase in the Nation's population in the past decade will continue in the immediate decades to come. A United States population of 170,000,000 in 1960, and 190,000,000 in 1975 has been estimated as most likely. During the past dec-

ade the Pacific Coast States have grown by nearly 50 percent, and the seven far Western States from 25 to 50 percent, while the largest gains east of the Mississippi have been of the order of 15 percent. The greatest upsurge in population in history is taking place in the West where rainfall and runoff average less than in the rest of the country.

The Water Resources Policy Commission strongly urges careful continuing surveys and studies which should reveal the amount of additional crop acreage required. There are likely opportunities of securing additional acreage by land drainage at costs lower than much of the proposed irrigation. The Commission's conclusion drawn from best information available is that the increased population forecast for the immediate decades ahead, with likely increased standards of living, will require substantial additions to crop acreage and that present crop surpluses will be wiped out.

The Water Resources Policy Commission was fortunate in having a staff of legal consultants derived largely from Federal departments and under the chairmanship of Bernard A. Foster, Jr., special counsel, Federal Power Commission. This committee of lawyers has prepared volume 3 of the Water Resources Report entitled "Water Resources Law," a most useful document. This volume reviews the constitutional considerations under which the United States has engaged in water resources development under its commerce power, proprietary power, war power, and general welfare power, and under equitable apportionment and interstate and international compacts. A comprehensive study of existing legislation was developed for all water uses.

Water is a property right subject to the law of many States. The humid States adhere to the riparian doctrine and the common law of England, whereas the 17 Western States observe the appropriative principle, "First in time is first in right." However, California and to a limited extent the State of Washington have both riparian and appropriative doctrines. The legal report reviews the water law of the 17 Western States in a section prepared independently by Wells A. Hutchins, of the Department of Agriculture.

America has been richly endowed with natural resources, extensive and varied forests, fertile lands, and an abundance of minerals and fuels beneath the soil. While many projects have been constructed to conserve and utilize water and land resources, the design, operation, and financing of the present programs of Federal, State, and local agencies fall far short of the opportunities and necessities for the future.

With the continued expansion of population, much greater demands for water and land use development will occur, including the many uses for navigation, flood control, domestic and industrial water supply, irrigation, hydroelectric power, recreation, fish and wildlife, and an ever-increasing need for pollution control. As shown above in the table of costs of present and future water-resource projects, the projects planned and proposed but not yet authorized account for costs at least five times as large as the total expenditures made to date and contemplated for those under construction. Accumulated experience with Nation-wide programs offers intelligent guidance for wise planning of river development and for obtaining the basic data so essential to reaching sound conclusions. As a matter of fact, most river basins are relatively undeveloped. There is still time to make the necessary plans and develop coordinated programs. There is a sobering finality in the construction of river-basin development, and its behooves us to be sure that we are right before we go ahead.

Congressman Dollinger Reports to His District

EXTENSION OF REMARKS OF HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. DOLLINGER. Mr. Speaker, it has been my custom since I was elected to represent the Twenty-fourth District of New York, to render reports from time to time to my constituents. In the following report, I have outlined some of the results of this session of Congress, as well as my efforts toward the enactment of vitally important legislation.

CONTROLS

Due to present unsettled world conditions and the existing emergency in our country, our defense program with its many aspects was of major importance. The Defense Production Act contained among others, provisions on price controls and Federal rent control. As early as February 1951, I urged in the House of Representatives that prices be rolled back to the pre-Korean level. I pointed out that the roll-back to prices existing in January 1951 was utterly useless; that the average American family could not afford the bare necessities of life, and that many were suffering from lack of essential foods because prices were prohibitive; that further, the Director of the Office of Price Stabilization was predicting even then that prices would continue to soar, and it was the duty of Congress to halt the inflationary rise in prices.

At the time that the Defense Production Act was being considered by the House Committee on Banking and Currency, of which I am a member, I fought with every weapon at my command for strong effective controls. I was shocked by statements made by representatives of the meat industry who appeared before our committee and threatened the return of the black market if controls were established and prices rolled back. I felt that we should not be dictated to by individuals who were more interested in unconscionable profits than in the welfare of our country, and that our people should be protected against their greed. I therefore advocated that as soon as a black market appeared in the meat industry or any other industry dealing in essentials, or there was a deliberate curtailment in the production of such essential items so they would not be available in normal quantities for all to purchase at fair prices, the United States Government should seize and operate such industry in its entirety. If that were done, the producers would receive a fair price and the consumer would not be subjected to the vicious practices of black markets. I also urged the committee to include strong rent control provisions in the bill and introduced a rent-control bill in February of 1951 that would protect tenants from gouging landlords. However, my efforts

proved futile, and a weak, ineffectual, control bill was offered to the House for consideration.

I was tireless in my efforts to have the Defense Production Act amended, when it was being debated in the House, so that the average wage earner would be enabled to meet living costs and would have the protection of strong controls. Maintaining that a ruined economy meant a ruined Nation, I offered necessary amendments from the floor and did all I could to strengthen the bill. I charged that the bill as submitted to us was a betrayal of the American people; that additional roll-backs in prices of meats and other foods and commodities must be provided, as well as strong Federal rent controls if Mr. and Mrs. American were to live decently and able to obtain the essentials of life.

The enemies of the administration's control bill did all they could to kill controls, and they foisted upon the people of this country a measure which was saddled with exemptions for the special interest groups. It was a sorry imitation of what a truly effective Defense Production Act should be, and a grave disappointment to me. I shall not lessen my efforts to procure strong price and rent controls to the end that our people and our Nation may be adequately protected in these days of crisis.

CONSUMERS ADVISORY BUREAU

I feel that in this time of constantly soaring living costs, American consumers must be thrown some life-line. I introduced a bill to establish a Consumers' Advisory Bureau in the Department of Commerce which would enable purchasers to get best values for the prices paid for food and other commodities. We know that the public is being gouged on every hand in the cost of food, and we face a 5 to 8 percent increase in living costs during the coming year. Further, the American public overpays millions of dollars in the purchase of food and other commodities because it does not have complete and accurate information concerning the relative quality, utility, and abundance of commodities available on the retail market.

Millions of dollars are spent in advertising certain products, but the best-advertised product does not necessarily make it the best buy. Also, the American consumer has no way of determining for himself how other makes or brands actually compare with the products expertly advertised by press, radio, television, and other mediums. He often pays a higher price than necessary, as the little-known product can in fact be of higher grade and cheaper. I believe that it should be a function of the United States Government to procure and make such information available to the consumer, so that he may receive full value for every dollar he spends, as no other facilities or organizations can accomplish the desired results.

The Consumer's Advisory Bureau provided for in my bill would establish categories of consumers' goods based upon their uses and functions; it would investigate, analyze, test, and evaluate consumers' goods within each cate-

gory, and would make available to the consuming public, by publications and other appropriate means, full, complete, and accurate information covering the categories. Such a bureau would render invaluable service to the public and would save our people millions of dollars yearly.

HOUSING

The housing shortage remains acute in the New York City area and elsewhere. New construction has been slowed down due to the fact that materials and manpower are now being channeled to defense program activities. However, people must have decent shelter, and the Federal Government has recognized its obligation in this regard. I have done everything in my power to bring about passage of legislation to provide homes for low-income families at rentals they can afford. I was gratified when we were successful in getting an appropriation for the construction of 50,000 low rent public housing units. I shall continue my efforts to the end that every person in this country may enjoy suitable housing conditions.

DISCRIMINATION

My active campaign to wipe out discrimination has continued, and early in the session I reintroduced numerous bills to end this evil.

Of major importance is my bill providing for an FEPC. We know that discrimination is the greatest threat to individual freedom, and a menace rampant in this country. It is a disgrace that we permit persons seeking employment to be discriminated against because of their race, religion, color, national origin, or ancestry. In June of 1951, I also introduced a resolution calling upon the President to provide for and reestablish fair employment practices in Government and defense industries. President Franklin D. Roosevelt issued such an order on June 25, 1941. I pointed out that in order to assure our victory in the terrible struggle in which we are engaged it is as necessary now, as it was in 1941, that we put to use all our available manpower, resources, and talents so that our defense program can go forward.

My bill to withhold Federal aid from schools which discriminate between students by reason of their race, color, religion, ancestry, or national origin is very important, for Americans are already suffering as a result of discriminatory practices found in many of our colleges and universities. During World War II our civilians were left without sufficient doctors and dentists to care for them. These professional men are now being called to active duty and civilians again face lack of adequate medical care. Still, our colleges continue to limit the number of students allowed to study medicine and dentistry. Under quota systems used, many brilliant students are prevented from studying professions of their choice. This situation should be corrected without delay. The bill would also withhold aid from colleges which permit students to be members of student organizations which practice discrimination.

Another bill I introduced would refuse Federal funds for housing with respect to which there is any discrimination. Other vitally important bills introduced by me prohibit segregation of passengers on account of race or color; prohibit race segregation in the Armed Forces of the United States. I also introduced anti-lynching and anti-poll tax bills.

It is a sad commentary upon us that although American men are engaged in bloody battle to preserve liberty, fighting side by side, shot at with bullets which strike indiscriminately regardless of the victim's race, color, or creed—the evils of discrimination sadly affect millions in our country today. I, for one, shall not rest until they are wiped out, and I feel that the legislation I have proposed is a constructive step in that direction.

LABOR

The problems affecting labor continue to receive my attention and sincere efforts. I again introduced a bill to repeal the Taft-Hartley law and to revive the National Labor Relations Act, and shall continue to work for the repeal of this law which is so unfair to labor.

I also reintroduced my bill to establish a \$1 minimum hourly wage. The minimum of 75 cents fixed by Congress in 1949 is woefully inadequate to meet high living costs today. I took that same stand when the bill was passed. Living costs have increased tremendously since then, and are increasing daily. We all know that the average worker cannot take adequate care of the needs of his family on the pay he now receives. Persons in the lower income brackets are carrying the biggest part of the defense load. We should recognize their great contribution to our Nation as well as their great need, and it is our duty to assure them of a living wage.

PAY RAISES

I was happy to vote for the bills giving pay raises to postal and other Federal employees. This was much needed and long overdue legislation. I urged passage of the measures early in the session, as our postal and Federal workers were suffering real hardship due to the insufficient wages they received. While the raises granted will help, I feel that a greater increase should have been allowed in view of soaring living costs and high taxes.

TAXES

During the debate on the new tax bill I stated that the bill was unsatisfactory to me, as there were glaring injustices which I felt should be corrected. I urged that the bill be amended to make it more fair and equitable to all, as it favored those who could afford higher taxes and penalized those in the low-income brackets who were already taxed to the limit. Also I advocated that all persons dependent upon a small annuity or pension for their existence should be granted exemptions. Some groups are already exempt under the law, and it is only fair that all persons so dependent should have comparable exemptions.

FOREIGN AID AND ISRAEL

I advocated passage of the foreign-aid bill when it came before the House. I

felt it was the most effective contribution we could make toward world peace and a sure preventative of world war III. We know that the United States cannot singlehandedly defeat the forces now warring against the democratic ideal. We must rely upon those other nations which share our ideals for cooperation in peacetime as well as for military strength in case of a war emergency. Therefore it is to our interests that we give them the material assistance they need so that they can make themselves strong and secure against aggression.

I also emphasized the importance of assistance to Israel, our loyal friend and ally, the only democratic nation in the Near and Middle East. Against almost unsurmountable odds she has taken her place among freedom-loving countries as a power for democracy and freedom. However, this new and struggling nation needs and must have help, and I urged that Israel be given the full amount proposed in the bill, \$50,000,000. I pointed out that the help we give Israel is a sound investment. She is our staunch ally and would prove herself of inestimable value in holding the line of our defenses in the event of any world conflict.

When the question of giving wheat to India came before us, I urged that we give the wheat as a grant, free of any shackling conditions or demand for payment. I stated that to haggle and bargain with India over the wheat she needed at once to save millions from starvation, would lose us forever the prestige we have earned not only as a powerful Nation but as a generous Nation. Our wish to save lives is its own reward. There is no ground so fertile for the seeds of communism as empty stomachs. Aside from our humanitarian interest, I felt that we must grant the aid India requested to avoid the catastrophe of her succumbing to communism.

PUERTO RICO

On January 23, 1951, I introduced H. R. 1937, to enable the people of Puerto Rico to select their own form of government. During the Eighty-first Congress, a bill was passed, granting the people of Puerto Rico the right to adopt their own constitution, which was to contain certain stated rights.

However, there have been many demands that the people of Puerto Rico should be allowed to decide for themselves what form of government they wished. Without taking any sides in the controversy, I introduced a bill which would give the people the right to make their own choice. The procedure advocated in the bill is, I think, the most democratic and fair way to settle the issue. I hope that Congress will see fit to take action on the measure during the coming session.

IRELAND

I heretofore introduced a resolution which recommended that a plebiscite be held throughout Ireland so that all the people of Ireland could vote on the question of unification and how they wished

to be governed. I was happy to vote in favor of House Resolution 82 when it came before us, and regret that it met with defeat. However, the unification of Ireland has my sympathetic interest, and I shall continue to support legislation which would assist in accomplishing it.

VETERANS

Our veterans who have made such great sacrifices for our country, in preserving our liberty and safeguarding our lives, deserve all the assistance we can possibly give them. Legislation for their benefit will continue to have my active support. It came to my attention that countless veterans would suffer financial loss, and in many instances would lose their opportunity to have an education, due to the time limitation for education and training under the GI bill. I, therefore, introduced a bill to provide an extra time period within which veterans could apply for such education and training.

RESURGENCE OF NAZISM

I have been alert to the dangers of a resurgence of nazism in Germany. The reprieve by American authorities of Nazi war criminals who had been sentenced to death, and the pardoning of others, including Hitler's loyal ally, Alfred Krupp, came as a great shock to me. These reprieves, in my opinion, granted to persons who had committed the worst crimes against humanity in all history, struck a death blow at the very foundation of our American system of justice, and assured further the rise to power of former Nazi war lords.

Immediately after the reprieves were granted, I introduced a resolution calling for a complete and immediate investigation of the United States military government in Germany and the civilian administration which succeeded it, and a report as to why the mass clemency order was issued. I also reintroduced my resolution calling for a complete investigation with reference to the extent to which we have permitted or encouraged the reestablishment of cartels, the resumption of power by former Nazis and the resurgence of fascism and anti-Semitism in Germany. I am doing all I can to get action on these resolutions.

CONCLUSION

I have tried, in this report, to emphasize those topics and measures of major importance to my constituents. Space does not permit my discussion of all questions of interest; there are many others I should like to cover if it were possible.

The problems and opinions of my constituents are of great importance to me. I maintain a congressional office at 938 Simpson Street, Bronx, which is open daily. The people of the Twenty-fourth District of New York are most welcome to call there and discuss matters of interest to them. I wish to assure the people I represent that it is my earnest desire to serve them to the best of my ability, and that my efforts in their behalf will continue.

Soil Conservation

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following transcription:

RADIO ADDRESS BY REPRESENTATIVE VICTOR WICKERSHAM, OF OKLAHOMA, AND HUGH H. BENNETT, CHIEF, SOIL CONSERVATION SERVICE, UNITED STATES DEPARTMENT OF AGRICULTURE, OCTOBER 19, 1951

Mr. WICKERSHAM. This is your Congressman, VICTOR WICKERSHAM, speaking to you from the Nation's Capital in Washington, D. C. Today we are fortunate in having as our guest our good friend, Dr. Hugh H. Bennett, Chief of the United States Soil Conservation Service.

He is known variously as "the Chief" and "Big Hugh" to his coworkers and thousands of the Nation's farmers everywhere. He has worked and consulted on soil and water conservation and other land problems throughout the Americas and much of Africa and Europe. He has devoted his lifetime to the vital matter of taking care of the land. He also is personally familiar with the soils and erosion problems in any one of our western Oklahoma counties you'd care to name.

As you know, Dr. Bennett, I think conservation of our soil and water, for the fullest use of our own generation and those to come after us, is just about the most important matter there is for any of us to be concerned with. Productive land is the most important of all our basic natural resources. Whether we live in town or in the country, all of us depend on the land's ability to produce the food, fiber, timber, and other things that are essential to our good standard of living, and to our very existence. Our national welfare and security are rooted in the fertile soil of Oklahoma and the Nation.

Dr. Bennett, I recall seeing where somebody stated recently that our capacity to consume the food and other essential things that come from our farms and ranches would catch up with the land's ability to produce these necessities within another couple of hundred years. I believe it was. But whatever the time might be, it certainly is true, isn't it, that we not only have damaged or ruined a lot of our soil, but that destructive erosion is still going on?

Mr. BENNETT. It would be extremely difficult, Congressman, to set any exact time when we might run short on our land supply. In order to produce the food crops and other essentials, we must safeguard our remaining productive land through the use of adaptable conservation measures, such as we are now using on a constantly expanding scale. Our capacity for agricultural production continues to increase—through conservation farming, crop and livestock improvement, disease and pest control, bringing idle land into production, and so on. But it is a matter of plain mathematics that if we should be so foolish as not to conserve the good land we have left, we couldn't go on indefinitely producing enough to maintain the good standard of living we now enjoy.

Here are some of the facts: Census figures show that our population passed the 154,000,000 mark last summer, and that the increase is continuing at the net rate of 2,000,000 a year. At the same time, we are still losing probably not less than 500,000

acres of land every year through the ravages of uncontrolled soil erosion. We have only about four hundred and sixty to five hundred million acres of good, productive cropland left in the country, as well as can be determined. And that includes substantial acreage which would have to be cleared, drained, or irrigated before it could be brought into production.

Mr. WICKERSHAM (interrupting). And how about the land damage we had already suffered, before we started to get busy on our conservation program?

Mr. BENNETT. When we first began to carve the country into farms, the average depth of the topsoil was about 9 inches. Today, it is only about 6 inches. In other words we have—in a comparatively brief time, as the life of a Nation goes—watched roughly a third of our productive topsoil wash out or blow out of our fields—carried away to where it no longer can produce anything for anybody.

The half-million acres of land we are still losing annually through erosion—that could readily be controlled—is equivalent to 2,500 farms of 200 acres each, or 25,000 such farms washed away in the course of only one decade. I realize that while your western Oklahoma farms usually are quite large, the average American farm, however, includes only about 200 acres. As each farmer today is counted on to produce food and fiber for himself—and some 15 other people, most of them living in cities—the impact of any such soil losses on our urban population would not be comfortable to think about, should soil losses be allowed to continue.

So, getting back to your first question, Congressman WICKERSHAM, we can say this: The terrific toll we have been permitting erosion to take from our national supply of productive land has brought us to the point where we have little more than enough left to meet the needs of our growing population. What always must be kept in mind is the fact that all of our food, except a limited amount from the sea, comes from the soil and from nowhere else. Moreover, all of our wood products, wool, cotton, leather, tobacco, vegetable oils, and still other raw materials of industry come from the land, too. It is clear enough for anybody to see, I think, that every acre of productive land ruined for further cultivation, or for economic livestock production, amounts to a reduction of our source of supply for food and other products of the soil.

Mr. WICKERSHAM. Well, we folks out in my part of the country can appreciate that fact all right, Dr. Bennett. All of us were either in or mighty close to the old "Dust Bowl" of the 1930's, you know. The memory of hard-working and once prosperous western Oklahoma farmers having to pull stakes during those dark wind erosion days and move out, is still fresh in our minds. Our western Oklahoma population has dropped so much, in fact, that we've had to redistrict the State for congressional representation, losing two Congressmen in the process. As a result, my new district will take in, besides the present Seventh District, all of the Oklahoma Panhandle counties and all of the old sixth congressional district except Canadian County. I don't say that soil erosion has been entirely responsible for this, of course, but I do know that past unsafe, uneconomic use of a lot of our farm and ranch lands contributed a great deal to this situation.

What we would all like to see, I assure you, is for our population to build back up—on a sound and prosperous basis. I am glad to say that many, many farmers and other people in our western Oklahoma counties agree with me that a vigorous soil and water conservation program, carried on through the soil conservation districts, is one of the best hopes we have for a return to a stable and prosperous agriculture in our part of the country.

Mr. BENNETT. I am mighty glad to hear you say that, Congressman, because what you say holds true, in one way or another, for almost any section of the country, whether it has lived through anything like the dusty days of the 1930's or not. Our natural resources, as people are beginning to understand, represent our real wealth and strength—community by community, county by county, State by State. It is productive land—and water, plants, animals, and minerals—by which we live as the world's strongest nation.

We have been reckless in the use of all these resources in the past, but now we are, at last, doing a great deal to protect and prudently use the land, which is our most basic and utterly indispensable resource. In my opinion, one of the most important responsibilities shared by all the people of any State, county, or community is the safeguarding of our basic soil and water resources—and making wise and profitable use of all of them at all times. Such conservation, to be fully effective, must be applied on every acre of land needing protection—every acre treated according to its needs and used within its capabilities. It is a continuing task—until the basic conservation measures have all been applied to the land. Thereafter, there will be the continuing job of maintaining the work and improving on it whenever new discoveries are made.

So far, we have done part of the job only—in Oklahoma and throughout the country, but this is a very important part. Occasionally some uninformed person will say "The conservation job will never get finished at the rate we are going." But when we examine the record, it is seen that we have made really remarkable progress. This is true in western Oklahoma, in Oklahoma as a whole, and in the entire Nation.

Mr. WICKERSHAM. I can vouch for that personally, Dr. Bennett. I've been out and seen the fine conservation work the farmers and ranchers are carrying on, particularly in their soil conservation districts with the help of your service in our own Washita Valley, out in the Panhandle, and elsewhere. I've also flown over all of it—as I have flown over 44 countries and all 48 States—and you can easily tell the difference between where soil- and water-conservation measures are being used on the land down below and where there isn't any of this kind of farming yet. I'm proud to see it and we realize it has meant a lot to Oklahoma.

Mr. BENNETT. You have good reason to be proud of the way the farmers and ranchers of Oklahoma have taken hold of soil and water conservation. It was among the first States to enact a soil conservation districts enabling law. The first district was voted in back in 1937 and now the State is 98 percent covered by these farmer-organized and farmer-managed districts. The first soil erosion experiment station to be established anywhere in the world was the Red Plains Station at Guthrie, Okla., and it is still actively carrying on important conservation research.

Your own Seventh Congressional District is entirely covered by soil conservation districts, as I am sure you know. I can give you the figures showing the commendable progress which has been made in those districts in conservation surveying, farm planning, and land treatment. That is, with combinations of needed measures such as contour farming, stubble-mulch tillage, strip cropping, range and pasture improvement, conservation irrigation, and drainage.

And the work being done in the Washita Valley flood-control program has attracted national attention among the 11 such major watersheds so far authorized by Congress. I wish we had time to talk about some of the

work going on in the Sandstone Creek, Owl Creek, and other tributaries of the Washita, and to recount some of the outstanding examples of how the conservation work has proved very effective in flood reduction. I had the pleasure of taking part in the celebration as you did, near Cordell in 1948 on the occasion of the completion of the work along Cloud Creek, a tributary of the Washita.

The people of the Washita Valley are due much credit for their vision and courage in helping to make this undertaking a reality—when they gathered at Chickasha and with your assistance, perfected organization of what is now the Washita Valley Council of Soil Conservation Districts. Other interests, both business and civic, have helped also.

Among other benefits of the Washita Valley flood control work which was authorized by you and other Members of Congress will be, of course, keeping silt out of the Denison Dam.

Mr. WICKERSHAM That work in the Washita watershed certainly means a lot to Oklahoma, Dr. Bennett. It is unfortunate that a cut in funds available this year for the Washita and the other 10 flood-control projects came about and slowed up the good work there accordingly. I introduced a bill calling for \$800,000 in supplemental appropriations for your Washita work, especially needed, I understand, in the Chickasha area. People in Oklahoma are beginning to get sold on small dams, and we don't want any of this important work to be held back.

To my way of thinking, there isn't anything you are doing in your conservation program that isn't of high importance. I am thinking, for example of the fine results obtained on the land utilization project in Roger Mills County—

Mr. BENNETT (interposing). We are proud of that, too, Congressman WICKERSHAM. During the past decade, since we started converting the unsuitable cropland in the project to grass, some 11,000 acres have been seeded. All the 34,000 acres of land has been brought up to the point of profitable production. This vegetative improvement contributes to flood control on the Washita.

Mr. WICKERSHAM. Along with tree wind-breaks and shelter belts and other measures. In fact, the very first tree planted in the old shelter-belt program was on a farm near Willow Lake Creek community, in Greer County. For the country as a whole, Dr. Bennett, would you say that we have turned the tables yet on our soil erosion and land-use problems?

Mr. BENNETT. Not quite. We have not yet caught up with the rate of soil loss by erosion throughout the country as a whole. But, as well as we can determine from our own Soil Conservation Service records, the conservation job has been completed, up to the stage of maintenance and improvement, on about 21½ percent of the Nation's farm land needing protection. This does not include other conservation work that brings to at least 25 percent that part of the job which actually has been completed—and possibly somewhat more, maybe 30 percent. I am more confident than I ever have been that we are not going to pause in this vital undertaking, or slacken our pace, until the job is finished. We have too much sense and patriotism for that, especially in times of emergency like this when our best possible productive capacity is so urgently needed.

Mr. WICKERSHAM. And I am sure we're not, either, Dr. Bennett. I know the people of western Oklahoma, anyway, are not going to let the country down in regard to soil and water conservation. It means so much to our youth and to everybody, in our own country, where you, Dr. H. H. Bennett, are doing such a swell job, as well as in other countries—where our other Dr. Bennett—Dr. Henry G. Bennett, who heads up the

point 4 program, is doing such good work in promoting better agriculture and more wholesome living.

This is your Congressman, VICTOR WICKERSHAM. You have just heard Dr. Hugh H. Bennett, Chief, Soil Conservation Service, United States Department of Agriculture, and myself on the subject, Soil Conservation.

Air Power and Morality

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the Record, I include an article by Eugene E. Wilson as it appeared in Spotlight of this date. Here is one of the most significant, forward-looking documents of our time: a proposal for transforming the airplane into an instrument of peace and freedom. This article cannot be dismissed as an idealistic dream, for its author, a former naval officer and industrialist, is one of the most hard-headed realists in the aviation field. As a naval staff officer, he helped conceive and work out the idea of the carrier task force. While president of United Aircraft Corp. he helped develop the American aircraft industry. And while chairman of the board of governors of the Aircraft Industries Association, he wrote industry's air policy statement.

The above-mentioned article follows:

AIR POWER AND MORALITY
(By Eugene E. Wilson)

Some of the most brilliant minds in the Department of Defense are reported to be asking: "Is our strategy right?" They are said to question the wisdom of a military policy which places almost sole dependence upon population bombing.

Wilbur Wright died regretting that he helped to create the airplane. For he saw it used, not primarily as the dreamed-of argosy of commerce, but as the fiery chariot of war. Discovery of the principles of mechanical flight touched off a resurgence of barbarism and a return to military policies so bankrupt as to threaten the survival of civilization.

Indiscriminate bombing of civilian populations is poor strategy, false economics, bad politics, and worse morals. Stupid leadership has brought western Christian civilization to the verge of extinction. Lacking the directive force of moral precept, it has been unable to define any long-term objective, political or otherwise, or any military strategy other than that of destroying everything within its path. This was the strategy of Genghis Khan and of the Dark Ages.

Future historians may well adjudge population and strategic bombing as the classic blunder of all time. And the climax of this folly, the atomic bombing of Hiroshima, may have revealed such irrelevance for human life on our part as to have cost us the moral leadership of the world. Despite our air superiority—or, more precisely, because of its misuse—our civilization, once considered the loftiest in evolution of the human spirit, now stands on the defensive.

Our vaunted material superiority, flanked right and left and breached in the center by hordes of Asiatics, has begun to assume

some aspects of the Maginot line. Threat of an atomic stockpile dwindles as a deterrent to a barbaric enemy who refuses to oblige us with suitable tactical targets, to say nothing of the inviting strategic objectives which we offer him. A sterile air policy has infected our military and naval policy and our foreign and domestic policies as well.

Dread of such an outcome long pervaded aviation circles. Bitter controversy has raged ever since that December day in 1903 at Kittyhawk when the Wrights demonstrated mechanical flight. One school, led by the Wrights, visualized the airplane as primarily a vehicle and thus a potential boon to civilization. The other, led by the military, saw it as a revolutionary weapon.

The original prophet of population and strategic bombing was the Italian, Gen. Giulio Douhet. As early as 1909, he tried to interest his government in the potentiality of air bombardment of urban areas as a cheap short-cut to power. In 1921, he said in his book, *Command of the Air*, that "a body of troops will stand fast under intensive bombings but workers in a shop, factory, or harbor will melt away after the first losses."

This doctrine found ready acceptance among military minds of an era which produced Balbo and Mussolini, Goering and Hitler. And disciples continued to preach it even after experience proved otherwise. Citizens of London, Berlin, Tokyo, and other cities not only failed to melt away but reacted with fanatical resistance. The A-bomb at Hiroshima appeared to support the theory, but it is now known that the Japanese had already decided to surrender to pressure of sea blockade.

Sober second thought now suggests that blockade might have been more efficient in the long run. Certainly, it would have been more economical because we are still pouring out treasure to rebuild institutions we battered down. One thing is clear: neither our natural allies nor our late enemies relish the idea of being liberated by our atom bomb tactics.

The Russians exploit our lapse, claiming that their use of military aircraft is confined to tactical support of ground forces and that instead of threatening to use atomic bombs against civil populations, they apply atomic energy to the construction of public works. Thus does godless leadership exploit to its own advantage precepts of western Christianity which the west has forgotten. Grandmother Russia puts on a good act in the international Red Riding Hood drama, while we have let ourselves be cast in the role of the villain.

In placing sole dependence on the explosive force of an uncontrollable weapon, we have neglected the most potent force in our possession—the catalyst of moral principle. To get back into character, we must first reassert adherence to principles of human conduct which made us what we are. For example, we might announce our intent to ban the use of all weapons against civil populations and confine their use to legitimate military targets. This is not the usual impractical suggestion of outlawing weapons or of limiting armaments, but rather a return to their proper employment.

Such a program takes for granted maintenance of a military air force capable of effective reprisal against a potential disturber of peace. It calls for a statement of fundamental national objectives which should be publicly debated and supported. First requisite is restoration of individual freedom, especially in trade, and this implies freedom of movement to all, by land, sea, and air. Under this doctrine, the mission of armed forces would once more become that of guaranteeing the security of trade routes. Then, just as the Great Chinese Wall crumbled beneath the feet of private traders, backed by Britain's benevolent sea power, so

would the iron curtain rise one day to welcome the western ideal of a fair break for the other fellow.

Then would come the opportunity sensed by the Wrights at the dawn of this century. Just as the Berlin airlift reversed the role of the bombing blitz, so might airlift come to its own as the catalyst for a new era comparable to that which began with the geographic discoveries of the fifteenth century. Here Pax Aeronautica might replace Pax Britannica, and therein lies one example of hope in the air.

Fortieth Anniversary of Polish-American Journal

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. SHEEHAN. Mr. Speaker, tomorrow, October 20, there will roll off the presses of the Polish-American Journal the fortieth anniversary edition of this outstanding Polish-American publication. I know that many of my colleagues here in the House are well acquainted with this weekly newspaper and its editorial policies; I am sure that all of the Members have read some of its editorials and feature articles which have been inserted in this RECORD from time to time.

Forty years of continuous reporting of the news affecting the United States and Poland have been dedicated to the preservation of American freedom and the struggle for the liberation and freedom of Poland. Under the aggressive leadership of its present editors, Mr. Henry J. Dende and Mr. Leopold Dende, the Polish-American Journal has vigorously carried on the fight against the scourge of communism that has engulfed one European nation after another and which is so rapidly spreading its tentacles to every corner of the world.

As a tribute to the Polish-American Journal on this, its fortieth anniversary, I take pride in inserting in this RECORD its creed and program which will appear on the editorial page of tomorrow's issue:

OUR CREED

Today's edition marks the Polish-American Journal's fortieth year of continuous service to the Americans of Polish ancestry.

As during the past four decades, the Journal will continue its traditional policy

It will encourage persons of Polish descent to preserve their native customs, their thrift, the industriousness, their traditions, their love of music, art, and literature, their deep respect for God, church, and family, and those other Polish attributes which they have so graciously contributed and so harmoniously blended into the fiber of America. These characteristics must not be allowed to die for from them have sprung the American patriotism of Pulaski and Kosciuszko, the genius and statesmanship of Paderewski and the courage of the Polish people during the defense of Warsaw.

The Polish-American Journal will strongly support the activities of Polish organizations who fight against communism and who struggle to have Poland, the "land of the White Eagle" free from its present despotic

and cruel oppressor, namely, Communist Russia.

Hand in hand with this stated policy this paper will continue to carry on a militant and relentless campaign against communism.

The Journal believes that the democracies have conceded enough. Each concession has been met with a new demand, another encroachment, and another stalemate.

The time has come when we must take a firm stand, for we will not compromise our way of life.

The democracies prefer the conference table to the battlefield. But if the enemies of freedom will not drop their sinister scheme of world domination then we also can lay aside our diplomatic tools. If necessary we can exchange the silk hat and frock coat for the armored suit, and the portfolio for the sword.

This paper is wholeheartedly in accord with the determination of the democracies to retreat no farther. We shall continue our efforts of mediation and arbitration of world problems but we shall not sell our souls. But if the world is not to be plunged into another holocaust of war then the Soviet Union must stop its vicious practice of coming to the peace table with a glove in one hand and a dagger in the other.

This paper, then, has taken up the torch of freedom and has thrown the gauntlet into the face of communism.

On the fortieth anniversary, its mailed fist is thrust against the iron curtain.

PROGRAM AND PLATFORM OF JOURNAL HAILED BY MANY AS OUTSTANDING

In the summer of 1949, the editors of the Journal together with Adam Dunn, prominent industrialist, and Leo Nejelski, management consultant, mapped out a program and platform which was to be the guiding light of the Journal. Immediately upon its release to over 250 prominent civic, political, and religious leaders in the country, it was enthusiastically received and hailed as a great step forward in the Polish-American newspaper field.

On this, our fortieth anniversary, we are publishing it, for the benefit of our thousands of readers and friends.

This is our platform:

1 We affirm once more our allegiance to the United States. We pledge our strength to the ideals of freedom and democracy for which America stands. We are unmistakably on the side of the Americans who believe that the freedoms we find here provide the most certain road to truth, dignity and well-being for all men.

2 We take new pride in our Polish heritage. We of Polish ancestry brought to America an undying thirst for freedom, a capacity for lasting loyalty and the courage to translate our ideals into practical realities. We aim to keep Polish culture and Polish interests alive, and to encourage other groups to do likewise, because the rich variety of American life depends on the vitality of the many peoples who share the United States between them.

3. We plan to do everything in our power to strengthen the purposes and the leadership of Polish-American organizations. We will always be partial to those groups that, in addition to their specific goals, are devoted to the American ideals of democracy and freedom. We will work especially hard for the groups that add to the prestige of all American Poles.

4. We will support and encourage those Polish Americans who make the great effort to achieve distinction and success. We will applaud those who reach out to help others. Where possible, we will take initiatives to bring together those individuals and groups who can strengthen one another, whether in business, education, the professions, the arts, politics, finance, or organizations.

5 We pray to God for strength to adhere to our ideals. And we hope that we will be joined by ever-increasing numbers of Americans of Polish descent who believe with us that a great age of peace, understanding, and freedom can be ours if we work hard enough for it.

This is our program:

1. To print the news of persons of Polish ancestry everywhere, with particular emphasis on personalities and events that advance the causes of democracy and freedom.

2 To editorialize constantly on the five planks of our platform, sparing no frankness where situations become serious or where individuals are impeding or destroying the progress of their groups.

3 To encourage leaders who are devoted to the advancement of their groups, and of Polish Americans in general, while criticizing those who through self-seeking weaken the effectiveness of their groups.

4. To stimulate the ambitions of Polish Americans who are interested in business, education, politics, finance, the professions, or the arts, and to bring them in touch with individuals and groups who can counsel and assist them.

5 To search for ways whereby American Poles can realize their proportionate opportunities in business, politics, and all other walks of life.

6 To suggest methods whereby Polish-American fraternal and organizations can use their resources to advance the causes of American Poles, and to encourage methods of development that can add to the strength and stability of these organizations.

7. To honor Americans of Polish descent who are seriously interested in advancing the common good and who are doing things to accomplish this goal.

8 To keep alive the traditions of Polish arts by supporting the individuals and groups working in these fields and by providing opportunities to encourage new talents.

9 To create interest in Polish history, and to encourage studies of contributions to American development made by men and women of Polish descent.

10. To speak out against individuals and groups who are seeking to create disunity among Polish-American groups, at the same time to clarify why we are in the opposition.

11 To revitalize interest in Polish cookery and in Polish folk arts and crafts.

12. To support Polish-Americans who are active and outstanding in various sports, and thus add to the prestige of their groups.

13 To clarify the cause of American Poles for individuals and groups who are misled or misinformed.

14. To stimulate interest in group activities that increase the opportunities for Americans of Polish descent in all walks of life to achieve happiness, pride, and well-being.

15 To undertake competitions that will encourage American Poles to exercise their abilities and talents for their own accomplishment and to increase the store of prestige for the entire group.

The Need To Stop Inflation

EXTENSION OF REMARKS OF

HON. ROBERT C. HENDRICKSON

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. HENDRICKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a communication which I have received from

one of my constituents. I believe her communication to be worthy of the attention of my colleagues.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PLAINFIELD, N. J., September 9, 1951.

To the Members of the United States Senate,
Courtesy of Senator Robert C. Hendrickson.

GENTLEMEN: Please, please. Do something to stop this inflation. This plea comes from the heart of a worried wife of a young professional man. It becomes urgent as I read the registered mail notice of a rent increase; when I must pay \$1.25 per pound for necessary meat, and when I consider the cost of equipment for the baby soon to be with us. A lawyer does not benefit from union pressure on the Wage Stabilization Board, and subsequent relaxation of wage ceilings. There are no official edicts to help him ride the wave of increasing living costs. It is incomprehensible that Members of Congress individually are not frightened as I am, for most of you are yourselves professional men. But collectively, you show no evidence of fear of this horrible thing—inflation—which is without question threatening to destroy our economy and our beloved democratic way.

I'm afraid that our small family may go down before it, and to help check its force, we will willingly pay our taxes, make budget room somehow for savings bonds, and refuse to release our funds on time payments. All I ask is that you, as our chosen representatives, be aware of our fright, ignore short-sighted pressure lobbies, and make every sincere effort to crush this thing before it crushes us.

Very truly yours,

ELIZABETH H. BANGS.
Mrs. John K. Bangs.

Unemployment Compensation

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address. I shall deliver over Station WMEX, Boston, Mass., on Monday, October 22, 1951, 7:45 to 8 p. m., on the subject Federal Workers Also Deserve Jobless Pay Protection:

Friends of the radio audience, I wonder how many Americans sense the slow but far-reaching changes that are taking place within our Nation?

Not the new buildings and cars that are brightening the face of the landscape. I mean the steady income flowing into more pockets than ever before and bringing with it the confidence born of security.

Most of it is in the form of pay-checks that are the reward of productive effort, on the part of people who are actually working.

There are other types of income, such as pension, disability compensation, and unemployment checks—that have come into prominence in recent years.

On our own, and on the basis of private investment, we have for generations purchased more insurance than any other people on earth. This, however, has not been enough. A man can be in the best of health, happy, and hard-working in his job only to

be informed some day that he has been laid off through no fault of his own. That man is disabled, from the viewpoint of his ability to earn a living, just the same as if he were sick or injured.

We had to find a way to protect him against such hazards. We called upon government to do that which he could not do for himself. As a result, old-age and survivors insurance—and unemployment compensation—were conceived and legislated to save the individual and the Nation from the economic shocks that threatened us during the 1930's.

We made this beginning in social engineering. It was designed to give our people some security against the economic uncertainties of life and to do it within the framework of our Constitution. We took the middle road of compromise to build a society in which all would have the opportunity of sharing in the Nation's progress without sacrificing the precious liberties upon which the United States was founded, and through which it has prospered beyond all others.

We had to make a beginning in 1936 and we had to go slowly in order to find our way.

Step by step we have been adding to the structure of social security. Many people are now covered and the benefits have been increased, but we still have some distance to go before this national insurance is complete.

I want to speak tonight about one group that has been overlooked, namely, the 2,000,000 civilian employees of the United States Government.

The average man in the street thinks that anybody who goes to work for Uncle Sam gets a lifetime job with no "slack times" and no lay-offs. But they forget agencies such as the Veterans' Administration that was greatly enlarged to meet the needs of millions of World War II veterans and is now dismissing employees because the educational and job-training benefits under the GI bill of rights have expired for most ex-service men and women of that conflict.

Likewise, the hundreds of thousands of civilians who worked for the navy yards and Government arsenals from 1941 to 1945 were let go after the war, with no unemployment compensation to help them out while they were trying to find new jobs in private industry. The same situation prevails today. Federal payrolls are increasing. This form of employment may last for a long time, and then again, it may not. When the inevitable reduction in force comes—what then?

I believe that we should give priority—when the Congress resumes business in January 1952—to a bill amending the Social Security Act to provide unemployment insurance for Federal civilian employees.

The first point to make is that Federal employment is not as stable as most people think. During the calendar year 1950, about 450,000 separations took place, according to the United States Civil Service Commission. This amounted to one-fourth of all Federal civilian employment which is a high rate of turn-over. In 1949, they were more numerous, coming close to the 500,000 mark. Nearly 45 percent of the separations were involuntary, meaning that the employees did not give up these jobs of their own free will. The dismissals came about through reductions in force and through termination of temporary appointments. The rest were quits, retirements, deaths, and transfers to other agencies.

In such nonmanufacturing industries as banking, insurance, and transportation turn-over is always low and employment is steady. The workers in these latter industries have been covered by unemployment insurance from the start, yet Federal workers have been denied this protection.

Without it, displaced Federal workers have been forced to rely upon accrued leave and retirement fund withdrawals to keep them going until they could find other jobs. Reliance on this saved-up leave is a misuse of a system that was intended for recreation purposes. It was patterned after the vacation pay of private industry and was supposed to be used in the same manner. But many Federal workers do not take all the time off that is coming to them, thereby hoping to build up this backlog for a rainy day. During 1949, separated workers received an average of \$192 in lump-sum payments for accrued annual leave, representing an estimated 15-days pay on the basis of an average weekly salary of \$65.

Now as to refund of their contributions to the civil-service retirement fund.

During 1939, these withdrawals averaged about \$315, representing approximately 2 years of service. Nearly 230,000 separated employees received refunds in 1949, or more than four out of every five who were entitled to get back what they had paid in. They had no unemployment insurance to fall back on and so they withdrew the savings which had been deducted from their pay checks in order to provide them with old-age security. In other words, they were obliged to trade in their pension rights for a little ready cash to carry them over a present emergency. And all because they had no unemployment insurance protection.

Recent legislation, furthermore, has restricted the use of these two alternatives as a substitute for unemployment compensation.

Newly hired Federal employees are being given emergency appointments only. They are being covered by the old-age and survivors insurance program, instead of the civil-service retirement program. The former does not permit withdrawal of contributions. Other legislation requires them to use up annual leave instead of accumulating it.

So sum it up, Federal workers can no longer depend upon retirement refunds and accrued annual leave to give them some income after they have been let go by the Government. From their very first day of unemployment they get no compensation.

As long ago as June 23, 1944, Senator George, chairman of the Special Committee on Postwar Economic Policy and Planning, said, and I quote: "Government workers in arsenals and shipyards and in other Government agencies have worked and lived side by side with workers in private industry. The Government, through its war contracts, has paid the cost of the unemployment-compensation tax on those working for private war plants. The committee sees no reason why it should not pay it for those on its own payroll. Many of these men gave up accumulated benefits under the State systems in order to take places in federally operated war plants and Federal war agencies, and they should be placed in the same position that they would have enjoyed had they been engaged in war work for a private employer."

In 1944 and again in 1945, the United States Senate passed bills providing for coverage of Federal employees. When those bills came over to the House they were bottled up by the Ways and Means Committee which felt that certain discriminations would result. The effect of granting unemployment compensation to Federal employees would be to extend those benefits to seamen, for example, employed by the Federal Government, while at the same time denying benefits to seamen employed by private operators.

Legislation since enacted overcomes these objections.

In 1945, Congress extended unemployment insurance to cover Federal employees working for the Bonneville Power Administration,

so we already have Congress on record for extending coverage to one small group of United States Government workers.

In the Social Security Act Amendments of 1946, seamen employed by the Government were provided with reversion unemployment benefits. Seamen in private employment were also included under the Federal Unemployment Tax Act.

Suppose we go to the other extreme and cite that most stable of all Government agencies—the Post Office Department. It grows with the needs of the population generally and is not subject to the fluctuations which result from the rapid expansion or contraction of other United States agencies. Even here there are some separations.

The Congress has acknowledged a duty to the unemployed. It has recognized that income must be supported for a reasonable time to permit the displaced worker to find another job. The arguments for extending legislation to cover the employees of the Federal Government are just as compelling as the evidence justifying such benefits for the employees in private industry. Upward of 50,000 temporary postal employees are now on the rolls with little or no possibility that they will ever be granted permanent classified appointments. These employees are covered neither by retirement nor social security, and at their present wages cannot put anything aside to pay for rent and food during any period of involuntary unemployment.

From 1939 through 1950 there have been 4,970,000 applications for refunds from the Civil Service Retirement System. This is well over double the number of those now working for the United States Government. It proves that these employees, upon severance, desperately needed cash to carry them over the interval between jobs. That they had to forfeit their claims for old-age security in order to get immediate help is the fact that clinches their right to be protected by unemployment insurance.

This can be done in any one of three ways:

1. Federal employees would be entitled to Federal benefits with eligibility conditions and other requirements uniform for Federal workers just as the Congress has provided for railroad employees under the Railroad Unemployment Insurance Act.

2. The Congress would provide for unemployment compensation in accordance with the provisions of State laws, as was done for maritime employees subject to such terms and conditions as the Congress deems appropriate.

3. The administration of the benefits, and some other matters, would be left to State laws and procedures, subject to Federal review, as was done in the case of benefits payable to former servicemen of World War II under the Servicemen's Readjustment Act.

The President of the United States and the Secretary of Labor have endorsed the principle of unemployment compensation for Federal civilian workers.

Both the American Federation of Labor and the Congress of Industrial Organizations favor it.

The 17 distinguished members of the Advisory Council on Social Security, after studying the proposal, have come out for it unanimously.

The whole unemployment insurance program is weak as long as it protects some workers and denies that same protection to others.

It cannot be called a form of social security until all men and women in the category of employees, and that also means civilian servants of the Government of the United States, are protected by out-of-work insurance.

The next session of the Congress cannot fail to establish this right by law.

Drive on Gabrielson

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. HAYS of Ohio. Mr. Speaker, I am including, under a leave to extend my remarks, an article which appeared in the Washington Post, date of October 18, in Drew Pearson's column which goes into detail with an explanation of why certain prominent Republicans are trying to remove Guy Gabrielson as Republican National Chairman.

You will recall, Mr. Speaker, that I first exposed Mr. Gabrielson's connection with Carthage Hydrocol and his repeated successful attempts to influence the RFC to put up Government money for companies which certainly had adequate finances of their own.

Mr. Pearson reports that the Carthage Hydrocol Co. is now unsuccessful and that GOP leaders fear a Democratic charge that the blue-chip backers of the concern are trying to let Uncle Sam share in their loss. I think the Republican leaders have the grounds for such fears and I do not think there is any question but what the blue-chip backers of Carthage Hydrocol do intend to let the taxpayers share in the loss. Of course that will not concern Mr. Gabrielson who in the meantime has up to date drawn \$201,000 in fees and salary from this outfit, which is not a success, and which has \$18,500,000.00 of the taxpayers' money borrowed.

You will also remember, Mr. Speaker, that I have been critical of the Democratic National Committee under the chairmanship of Mr. Boyle so that I cannot be accused of being partisan in this matter but in all fairness to everyone concerned I would like to point out that the loan which Mr. Boyle is accused of influencing is for only \$565,000 as is pointed out in this newspaper article whereas the loan which Mr. Gabrielson influenced and I say influenced, emphatically, was for \$18,500,000.

A careful reading of the article will bring out that Mr. Gabrielson was hired when he was Republican national committeeman from New Jersey at a time when the Republicans were in control of Congress and when he was in a position being connected with the party in power to make his weight felt around the RFC.

In spite of all of Mr. Gabrielson's pious denials of influence peddling, I do not think that anyone with a little common sense can figure that there was anything else connected with it but influence peddling on his part. He got the \$201,000 only because he was able to get the eighteen and a half million from RFC.

The article referred to follows:

DRIVE ON GABRIELSON

(By Drew Pearson)

There are some interesting backstage reasons why Republican Senators are so insistent that Guy Gabrielson resign as chairman of the Republican National Committee.

One is a comparison between the two RFC loans obtained by the two chairmen of the Republican and Democratic National Committees.

Democratic Chairman Bill Boyle's loan for American Lithofold in St. Louis totaled \$565,000—a relatively small amount.

GOP Chairman Gabrielson's loan for Carthage Hydrocol was for \$18,500,000—one of the bigger loans granted by the RFC.

Gabrielson drew a salary and fees totaling \$201,000 from Carthage Hydrocol during the period that he was either Republican National Committeeman from New Jersey or Republican National Chairman. He has been president of Carthage Hydrocol since April 26, 1946, and did not resign after he became national chairman.

Boyle claimed he received a fee of only \$1,250 from the American Lithofold, though upon becoming Democratic chairman he sold his legal practice to his partner, Max Siskind, who paid him in annual installments.

The Democrats, many Republicans feel, could score some points on this comparison during a campaign.

Actually, the RFC was established for the purpose of helping companies which could not obtain loans from private banks, and American Lithofold might have been in that category. However, it was not so much the RFC loan as the way American Lithofold wangled huge printing orders from the Government and paid Government officials on the side to get those orders that made the public hold its nose.

BLUE-CHIP BACKFERS

But what worries Republican Senators about the Gabrielson loan is that Carthage Hydrocol appeared not to have needed a loan at all. Its owners include some of the most powerful companies in the United States with top credit ratings, and the ability to borrow millions from the banks, insurance companies, or the public.

Instead they used politics to get an RFC loan of \$18,500,000. They retained Gabrielson, then a rising figure in the Republican Party, just at a time when the Republicans were nearing their peak power in the 1946 election and appeared sure winners of the Presidency in 1948.

Carthage Hydrocol was organized to make gasoline out of methane gas, which is the dry part of natural gas and which never before has been used for gasoline. However, the experiment, after 4 years operation near Brownsville, Tex., is reported unsuccessful and GOP leaders now fear a Democratic charge that the blue-chip backers of the concern are trying to let Uncle Sam share in their loss—through the RFC.

Chief backer of Carthage Hydrocol is the Texas Co., one of the largest oil companies in the world with gilt-edge credit. Another owner is United Gas, a holding company controlled by Electric Bond & Share, one of the biggest power companies in the world.

Another owner is Stone & Webster, hitherto never known to have been paid up for cash. Other owners are the Niagara Share Co., the Forest Oil Corp., La Gloria Corp., the Chicago Corp., Newmont Mining (a J. P. Morgan concern), Western Natural Gas and White, Weld & Co., the Boston bankers.

Another backer is Henry L. Shattuck, Boston blue-blood financial leader, Robert Winthrop, Boston banker and insurance mogul; William A. Coolidge, another blue-chip banker, and N. C. McGowan, one of the biggest gamblers in the business.

The amazing thing is that this group, with unlimited resources not only wangled an RFC loan but when the loan's first installment was due, wanted to postpone payment. It was last month, when the first \$250,000 was due to be repaid the RFC, that Chairman Gabrielson approached Stuart Symington and asked for a postponement. Later, when Symington demurred, the installment was paid, but

this postponement move left Gabrielson open to a possible charge that his blue-chip backers wanted to let Uncle Sam hold the bag.

These are some of the background factors which have caused GOP leaders to demand the ousting of genial Guy Gabrielson.

Power Is in Congress, Not the President

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a letter received from a Wisconsin resident which is pertinent to problems confronting Congress today. I commend it to the attention of the membership. It follows:

MADISON, WIS., October 9, 1951.

Hon. LAWRENCE H. SMITH,
Washington, D. C.

DEAR CONGRESSMAN SMITH: I wonder what the people will say when Congress adjourns. Almost the unanimous comments I hear are to the effect that Congress has ruined the country. I have not met a single person who defends the astronomical appropriations Congress has made and astronomical debt that is being imposed upon the people of the country and their descendants.

I am not blaming you for I know you struggled to prevent the gross extravagance of Congress; nevertheless, I believe the enclosed clipping expresses a solemn truth, and that, about taxpaying time, the reaction of the taxpayers will be very antagonistic. Insofar as I am personally concerned, I doubt that I will be able to pay much of an income tax. I am a retired university professor, 81 years of age, and have an invalid wife. With the inflated currency, for which the Government is responsible, I will have a hard time to make both ends meet.

Let me be a little more specific; the billions that are to be spent in building military fields all over the globe will provoke war and not prevent it. Their appropriation and expenditure is a menace to a peaceful world. Suppose Russia started building military bases in Mexico, Cuba, Newfoundland, etc., how would we react? Henry J. Taylor has visited every country in Europe and reports that none of them expect a world war unless we provoke it. If we attended to our own business instead of meddling in the affairs of other peoples, there would be less likelihood of war. We cannot feed, educate, train, and fight the battles for all the peoples of the world. It would require a book to state and analyze all the shortcomings of Congress, but that is not the purpose of writing this letter.

Will you please read the article entitled "Washington Tyranny A Case Study," on page 63 of the October number of the Reader's Digest? If that article states the facts correctly, I wonder why some Congressman has not started impeachment proceedings against the President. Under the Constitution the power of the Supreme Court extends "to controversies to which the United States shall be a party." It does not give the President the power to review the decision of the Court. What is the matter with Congress? Are all decisions of the Supreme Court to be subject to a Presidential review?

Another dictatorial act is his order to Government agencies not to report or give any information to the press that might be of use to our enemy. In the first place, What

nation is our enemy? We have a Russian Ambassador and other agents in this country, and likewise we have diplomatic representatives in Russia. How is the word "enemy" defined diplomatically?

In conclusion, I apologize for trespassing on your time, but I had to get some of these things out of my mind.

Respectfully yours,

C. M. JANSKY.

"How the New York Times Lost Its Nerve"

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. BREWSTER. Mr. President, I ask unanimous consent that I may insert in the Appendix of the RECORD a statement by myself, dealing with some correspondence I have had with the New York Times, together with certain correspondence and information relative thereto.

There being no objection, the statement, together with the correspondence and information relative thereto, was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BREWSTER

HOW THE NEW YORK TIMES LOST ITS NERVE (Pt. II)

Mr. President, some months ago, on June 5, 1951, I made an address in the Senate dealing with our China policy. In this address I critically examined the New York Times Sunday reviews during the years 1945-50 of books about China.

The address provoked a correspondence between Lester Markel, Sunday editor of the Times, and myself.

On August 13, 1951, in deference to Mr. Markel's expressed wish, I asked that this correspondence be inserted in the Appendix of the CONGRESSIONAL RECORD. This was done. (See Appendix of the CONGRESSIONAL RECORD, p. A5063.)

But the matter did not stop there, Mr. President.

In my original address I cited numerous passages from New York Times Sunday book reviews that betrayed a pro-Communist bias. Mr. Markel denied that the exhibits showed such bias. His letters kept on coming and they were more and more peculiar. It was as though his first letter had been written on impulse and then, since it was discovered that the Times had been gravely compromised by many of its Sunday book reviews on China, he began to flounder.

The whole series of Markel communications is truly astonishing. It might be described under some such title as "How the New York Times Lost Its Nerve," a correspondence between Senator OWEN BREWSTER, of Maine, and Lester Markel, Sunday editor of the New York Times, June 18, 1951-October 18, 1951.

At last I wrote to Mr. Markel and said that, as an editor of the New York Times, he had access to print as well as I.

I said that, since he was so intent on the publication of the whole correspondence, it seemed to me only fair that the Sunday Times open its book review section to the complete exchange. Did not the New York Times regard itself as the standard newspaper of record? Surely I had done my part.

Was it not just and proper that the Times reciprocate?

It was here that Mr. Markel's courage began to ooze away with great rapidity. Could it be, was it possible, since his paper's motto is "All the news that's fit to print," that Mr. Markel lacked the moral fiber to submit the New York Times' dirty linen to a thorough washing in its own pages?

The charge, implied in the question, Mr. President, I find, is sad but true.

To make a long story short, Mr. President, I ask unanimous consent to have inserted in the Appendix the final, and as yet unprinted, series of letters between Mr. Markel and myself.

Mr. President, first comes Mr. Markel's letter to me dated August 22, 1951. (This is actually Mr. Markel's third letter. The first two were printed, as already stated, in the CONGRESSIONAL RECORD for August 13, 1951.)

THE NEW YORK TIMES,
Times Square, August 22, 1951

HON. OWEN BREWSTER,
United States Senate,
Washington, D. C.

DEAR SENATOR BREWSTER: This is my concluding letter in the series that has passed between us. It is obvious that there has been achieved neither a meeting of the minds nor an agreement about the facts. I am informed that you have inserted in the CONGRESSIONAL RECORD the entire correspondence up to this point. But I feel strongly that the RECORD will be neither true nor complete unless this final communication is included in it. Let us dispose first of the factual questions.

I am gratified that you corrected the error in the tables; that was indeed misleading.

As for your defense of the second inaccuracy, I am astonished. That inaccuracy was the suggestion that those who reviewed books on China for the Times "often reviewed one another's books." I demonstrated statistically that the statement was false so far as the Times was concerned. You reply that in your statement you were referring both to the Times and Herald Tribune. No fair judge would expect my answer to go beyond the Times. Do not mistake me; I have the highest regard for the Herald Tribune, but it seems to me fantastic to suggest that I should have included in my reply to you a defense of the record of any other newspaper.

Third, you question my statement that Tillman Durdin has written "both book reviews and magazine articles for the Sunday Times." You make no reference, in your answer, to the magazine; I assume, therefore, we pass your test there. But you do ask me to show you a place in your table where Mr. Durdin had a book published or reviewed one for the Sunday Times. None appears in your list but I call your attention specifically to a review by Mr. Durdin on page 6 of the Times Book Review of June 12, 1949—a review of *The Rise of Russia in Asia*, by David J. Dallin. That book and review were omitted from your list. I assume that was inadvertent, but checking reveals other omissions of this kind—I shall be glad to supply the details if you desire them.

Fourth, you keep insisting that my memorandum on the Irene Kuhn article in the American Legion magazine is meaningless so far as your speech is concerned, you assert that you have not read it. I can only say it is surprising that it has not come to your attention—especially because there is an amazing coincidence of argument and parallel of illustration between your Senate speech, the Kuhn article, and sections of the Utley book. As a matter of fact, a note in the Utley book makes specific mention and endorsement of Mrs. Kuhn's article.

These are disturbing matters but not the major issue. I now come to that.

You alleged in your speech that the tables you published demonstrated "the remarkable success of this effort to explain in glowing terms the Chinese Communist cause." You cited, in support of that charge, only a review by Nathaniel Peffer of a book by Gunther Stein.

In your letter of August 13 you again cite the Peffer review and you quote excerpts from five other reviewers who wrote for us during the past 6 years. It is interesting that, to prove your point, you quote from only 11 of the 31 reviews listed in your table and from only 6 of the 18 individuals who reviewed books on China for us during that period. It is more than interesting to note the manner in which those quotations are used by you. Let me take two examples.

Your quotation from Mr. Peffer consists of a line from the first paragraph of his review followed by a line from the final paragraph; everything in between is ignored. Yet in this same review there is this sentence: "Gunther Stein . . . appears to have got to the point where, if not actually willing to suspend critical faculties, he could not help feeling that too close an examination would be churlish." And, further, this: "What is fair to ask is whether the first criterion for a Communist China would be Russia's foreign policy or China's own national interest. That is a question that Mr. Stein did not get Mao Tse-tung to meet."

Is this, as you would have the reader believe, a complete and blind endorsement by Peffer of Stein?

You allege that John K. Fairbank's review of *Thunder Out of China* was designed to "give the reader the impression that Chinese Communists are noble liberators." How does this statement square with the following paragraph out of the identical review? "Kuomintang China contains a legion of fine modern Chinese who could develop good government, but they are not the gangster-politicians whose hold on power is confirmed by our ignorant and fearful support. Shame and chagrin will haunt the pages of our recent history in China. We have let our fears of Russia and of communism, on which the Kuomintang plays so skillfully, drive the Chinese revolution further into dependence upon Russia and upon communism. This is the road to Armageddon."

Is this the all-out statement for the Chinese Communists which your excerpt suggests?

No, Senator, this is not a fair quotation, nor are others of the excerpts you have produced.

But there is no point in continuing this debate over the meaning of words; let us look at the basic issue.

I do not assume for a moment, Senator BREWSTER, that you are acting out of any motives except loyalty to the United States and devotion to its cause. I trust you make the same assumption about me. Then let us examine, honestly and unemotionally, the fundamental question raised in this debate.

There was in 1945 and in the years immediately following a sharp division of opinion over what course we should pursue with China. There were, in the main, two groups. The first believed that the only hope lay in giving Chiang Kai-shek all the help we could, so that he might conquer the Communists and so save China for the West. The second group believed that the Chinese Nationalist Government was so discredited that no amount of help, short of direct intervention, could salvage it; that the Communists, as a result of the misdeeds and mistakes of the Chiang government, had won a commanding following in China and that, therefore, the only course for us to pursue was to reach some kind of accommodation

with the Communists so that they might be kept out of the hands of the Russians.

There was deep thought given to the problem, for it was deeply complex. The lines were not sharply drawn. General MacArthur himself indicated that the second course should be tried. When he was asked in December 1945 for his advice about a possible coalition government between the Nationalists and the Communists, he cabled Washington:

"It is suggested that the United States assistance to China, as outlined above, be made available as a basis for the negotiations by the American Ambassador to bring together and effect a compromise between the major opposing groups in order to promote a united democratic China."

Is he, General MacArthur, to be labeled pro-Communist because in 1945 he advocated a coalition with the Communists?

In this connection, despite your insistence that I have "dragged" Tillman Durdin into this discussion, I repeat what I said in my letter of July 17: "On page 143 of the *China Story* Miss Utley refers to Mr. Durdin as 'politically one of the best-informed correspondents' and continues 'It was also Durdin who gave me what is probably the fundamental reason why so many American correspondents in China fell under the Communist spell during World War II. You must understand, he said, how easy it was to believe in the Communists. It was so utterly hopeless in Free China. The graft, the misery, the lack of will to fight any more. Even I felt that it could not be worse and must be better in Communist China.'"

So here is Miss Utley's witness saying virtually the same things as these other reviewers whom you condemn so completely.

Which of the two courses was right no one can say because neither was tried. But that is not the point. In the light of what is now happening, the only important consideration is this: that the leading advocates in both groups were actuated by a desire to help the west and therefore the United States and that the divergence was not an issue of communism or anticommunism but an honest difference of opinion based on different appraisals of the facts.

Let us, then, look at it this way, squarely and unemotionally and nonpolitically. If we do, then I think we shall be furthering the Nation's cause because we shall thereby help to stem the trend toward dangerous emotionalism which is likely to blind us to true judgment at a time when, as never before, true judgment is needed.

One final point. In my letter of July 17 I said that "the implications of your remarks seem to me obvious—that those in charge of the *Times Book Review* during this period were either fellow travelers or dupes."

You say, "I never said anything of the kind" and then you add: "But I now say this: On the basis of the record, it seems very clear that some more than casual effort, some peculiar and deliberate intent was working somewhere. On the basis of the record, I believe that some investigation, some heart searching, and some admissions are due from the *Times* rather than the sort of protest shown in your correspondence with me."

In the light of this new paragraph of yours, I say again: that you are implying that those in charge of the *Times Book Review* are either fellow travelers or dupes. How else can one read that paragraph? What kind of investigation, Senator, are you proposing? And exactly what are you suggesting that the *Times* investigate?

I am asking, therefore, that this letter be added to the exhibit you have placed in the *CONGRESSIONAL RECORD*; and that, inasmuch as you or someone else has distributed re-

prints of your original speech, you arrange that the rest of this exhibit be transmitted to those to whom the reprints were sent.

Yours, cordially,

LESTER MARKEL,
Sunday Editor.

Here is my reply, dated September 11, to Mr. Markel's August 29, 1951, letter:

SEPTEMBER 11, 1951.

Mr. LESTER MARKEL,
Sunday Editor, *New York Times*,
New York, N. Y.

DEAR MR. MARKEL: I have your letter of August 22, 1951 (in reply to my own of August 13), with your continued discussion of my Senate speech of June 5, which dealt with the China policy, Miss Utley's book, the *China Story*, and a survey of book reviews in the *Sunday Times* and *Sunday Herald Tribune* for the years 1945-50, inclusive.

I note your statement: "This is my concluding letter in the series that has passed between us."

But you go on to say: "But I feel strongly that the record will be neither true nor complete unless this final communique is included in it" (i. e., the *CONGRESSIONAL RECORD*).

In your letter of July 17, you asked that the matter be granted space in the *CONGRESSIONAL RECORD* in a position of prominence equal to that of the original allegations.

I promptly acceded to your request and on August 13, 1951, inserted the entire correspondence in the Appendix of the *RECORD* (p. A5063 ff.).

Now I have a proposal. You too, have access to print. You are the Sunday editor of the *New York Times*. If my understanding is correct, the *Times* prides itself on being a standard newspaper of record.

Are you willing to print our entire correspondence, including a detailed reply from me to your letter of August 22, in an early (say within 90 days) issue of the *New York Times Sunday Book Review*? In this way the *Times*' readers would be fully apprised of the whole discussion. That they would find it of interest, I have no doubt. Furthermore, since the *Times* publishes a separate index, the correspondence would be made the more easily accessible to journalists, researchers, investigators, and the like.

I feel that my proposal is fair and just for at least two reasons:

1. Up to the time of your most recent letter (August 22), I have acceded to your every wish in placing the discussion in the *CONGRESSIONAL RECORD*.

2. Your August 22 letter raises numerous fresh points that I would like to pursue. For example, your insistence on dragging in Tillman Durdin and his review of Dallin's *The Rise of Russia in Asia*. In my original speech I tried, and said as much, to confine the list of books and reviews as closely as I could to nonfiction works on China. Had I wished to move completely at large outside this bound, I could have listed numerous books where the reviews displayed the most flagrant bias. You chide me for ignoring the review of Dallin's book, which is primarily focused on Russia. I can imagine your sentiments if I had included Nathaniel Peffer's review of George Creel's *Russia's Race for Asia*, a prime example of butchering an anti-Communist book. Creel's book was, like Dallin's primarily focused on Russia and so was omitted. Your whole discussion of this Durdin review strikes me as more than devious. It raises still another point, in relation to the reviews in the period covered, that I would like to examine.

I have striven to cooperate with you, Mr. Markel, and sincerely hope you will provide the readers of the *Times* an opportunity to review the entire correspondence. After all,

the Soviet Government conceded the publication of not only Herbert Morrison's criticisms, but also the Senate resolution of friendship. Don't you think that you might do at least as well?

Cordially yours,

OWEN BREWSTER,
United States Senator.

Here, dated September 27, 1951, is Mr. Markel's reply to my suggestion that the Sunday Times Book Review publish the correspondence. This is where Mr. Markel throws in the towel:

THE NEW YORK TIMES,
Times Square, September 27, 1951.

Hon. OWEN BREWSTER,
United States Senate,
Washington, D. C.

DEAR SENATOR BREWSTER: I have been hospitalized for a period and so this is my first opportunity to answer your letter of September 11.

I have discussed your proposal with some of my associates, including Mr. Sulzberger, who has had correspondence with Senator MUNDT on the same question. We believe that the charges you make against the Times are without foundation, and therefore we see no reason for giving them further currency merely for the purpose of retorting them.

You made a speech which contained what we consider inaccurate statements about the Times. I asked you to insert in the CONGRESSIONAL RECORD a memorandum in answer to that speech. When you inserted that answer in the Record you added a long communication of your own making new accusations against us. That communication was mailed to me only on the day in which it was inserted in the Record. You allowed me no opportunity to reply to it. And now again you ask for the last word, as well as the first.

Our position is quite simple. The exchange was started by you in the CONGRESSIONAL RECORD and we feel that it should be completed there. We cannot understand why you hesitate about taking that course.

Yours sincerely,

LESTER MARKEL,
Sunday Editor.

Finally, Mr. President, here is my last letter to Mr. Markel. I must say that the total effect of Mr. Markel's performance as a gladiator is feeble. He advances into the arena, grinding his teeth in imposing rage. Then he falters, wobbles, and sags until, terror-stricken, he flings away his net and trident and beats it at a dead run.

Goodbye, Mr. Markel. Communists and fellow travelers are dangerous playfellows. One of their mottoes is "never give a sucker an even break." But by now, of course—or rather, I trust—you have learned this bitter truth.

OCTOBER 17, 1951.

MR. LESTER MARKEL,
Sunday Editor, New York Times,
New York, N. Y.

DEAR MR. MARKEL: I have your letter of September 27 in which you decline my proposal that our correspondence be published entire in the New York Times Sunday Book Review.

It is not an edifying spectacle to see an editor of the New York Times undertake a defense of his paper (for it was you and not I who initiated this correspondence) and then make a panic-stricken retreat with his tail between his legs. But as Hamlet says, "Thus conscience does make cowards of us all."

I shall indeed see to it that the whole of this correspondence is inserted in the CONGRESSIONAL RECORD.

Cordially yours,

OWEN BREWSTER,
United States Senator.

Muscular Dystrophy—A Few Sobering Facts About It

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

MR. DOYLE. Mr. Speaker, while you and all of my distinguished colleagues of this Congress know that I am not a doctor of medicine nor an authority on health, but instead an attorney at law by practice and profession; nevertheless, the facts and information which had come to me from sources I believe to be reliable on this important subject are, in my judgment, such facts and information as are of importance and so impressive that I am pleased to present them for your attention and consideration.

It has always been one of the great and inspiring characteristics of the American people that, when they realize the form and magnitude of any killing danger that threatens them or their loved ones, they face this danger. They use their brains and resources against it, and they never give up trying to conquer it.

Now there is once again need to alert our American people to the devastation wrought by a killing agency in our midst. It has become necessary for us to pause in the midst of other pressing activities and to plan how we can beat back this killer and stamp out its deadliness.

In the year 1951, the great scientific and medical centers of the United States tell us that this killer has put the brand of death upon 200,000 of our countrymen. To our great dismay, those among us who have to face this deadly visitation in their own families, and who know that no one has yet won the battle for a human life against this killer, have come to realize that even the Nation's great founts of learning, and even our wonderful multimillion-dollar research centers in the United States, enjoy only sparse and partial knowledge about the existence and the nature of this mortal affliction of which we must all be warned.

Now there are 200,000 lives at stake. The grim precedent of the past has made it positive that every one of these 200,000 persons of whom I speak is doomed to die. They all must die unless research in the laboratories by a handful of devoted men can save them. None has a chance to survive his normal span of life unless efforts of leadership are exerted from the halls of the United States Congress to save these victims of a most malignant danger, of which only too few amongst us are aware.

The killer which has been striking down our people with such stealth is the disease of muscular dystrophy. Let me present a few very sobering facts.

A generation ago, there were less than 20,000 persons known to be sufferers from muscular dystrophy. Now there are 200,000 victims, and like the 20,000 of a generation ago, they all face a hopeless bat-

tle to live out their lives, unless some new agency of research and scientific study can find a control for the disease. At the present time, there is no known effective treatment for this affliction. There is no known cure.

More than 50 percent of the muscular dystrophy victims in the United States are children between 3 and 13 years of age. Few of these children will ever reach adolescence. Almost every one of them dies before maturity. Little boys outnumber the little girls who are victims of this disease in its childhood stage by almost 5 to 1.

These stricken little boys, often from the Nation's best families, and often among the brightest and most promising of our country's children, are victims of a disease whose cause and whose nature are both unknown. It is a disease which brings about complete degeneration of the muscles of the human body. The disease is a progressive disease.

It attacks the voluntary muscles, being chiefly noticeable in the inability of little boys to walk properly, to keep their balance, to learn to climb stairs, to get up when they fall down. The disease attacks the voluntary muscles of the body, one group at a time, and generally first depriving the legs of power, until motor paralysis of the body is complete.

The anguish and horror of an American family when it comes to realization that this cruel and sneaking disease has clutched some tow-headed little boy who was just starting to school, and who does not know that his inability to run and jump and slide and hold his own in a physical way against the other boys, is but the start of a long, drawn-out heart-break, is a pitiful matter in this day and age.

Most pitiful is the fact that, until now, because of the lack of knowledge on the part of the public, and on the part of those leaders of the public who include the bulk of the country's physicians, and on the part of the bulk of the country's elected leadership in such eminent positions as those of the United States Congress, it was not known that muscular dystrophy has actually marked off 200,000 of our living fellows for a lingering decline toward death.

Now is the time of America in the warmth of its heart, and the magnitude of its humanity, to make its fellow feeling manifest for the benefit of these hundreds of thousands of sufferers who go slowly down the dark path before the bereft gaze of their own fathers and mothers, sisters and brothers, neighbors and companions.

The history of this disease, now beginning for the first time in human experience, to be appreciated in its fearful immensity, is that of a complete lack of knowledge and neglect, until in recent years and in a few scattered centers of the United States and Paris, there has been an effort to ferret out the cause, and a panicky haste to devise a treatment.

So far both cause and treatment have eluded the limited efforts that have been possible, and the innocent little victims, not knowing what is the matter with themselves, have gone on in an unending procession of suffering and mortality.

Where there are 400,000 victims of cancer in the United States today, there have been research funds of \$90,000,000 raised to help these victims.

Where there were 32,500 persons stricken with polio in 1950, the money spent in polio research has amounted to \$9,000,000 since 1941.

But with 200,000 victims of muscular dystrophy estimated to be fighting their inevitably losing fight in the United States today, the pitiful sum of \$50,000 was spent during 1950 on research against this killer.

There happens to be two agencies in the United States fighting muscular dystrophy. Each of them is characteristically American. One is a movement which started with the private efforts of two girls, Texas sisters, who have been wasting from the disease. The other is the grouping of family members who first joined together in New York City to learn as much as possible of the obscure blight that was weakening their little boys, and who then pooled their efforts to back the research effort of one devoted and unselfish research physician who, much ahead of most of the others, had recognized the disease, charted symptoms, and launched out into a one-man research effort to take the deadliness out of it, in a hospital in New York.

Both these organizations of private citizens, that of the Texas sisters, and that of the New York group, have spread their word of alarm and education as much as they have been able to do so, in the good, old word-of-mouth manner.

But no private resources have been adequate to keep the little boys, and the adults who contract muscular dystrophy from dying. And it is felt that a fund of at least \$250,000 must be gathered from someone or many interested sources in 1951 in order to conduct a minimum research program, if there is to be any hope for the victims of this dread and mysterious affliction.

In a description of the nature of this disease which came to me, as a Congressman and an interested inquirer to the National Institute of Health at Bethesda, Md., this autumn, Dr. James V. Lowry, acting director of the National Institute of Mental Health, makes these explanations:

Progressive muscular dystrophy is a disease characterized by increasing weakness which results from degeneration of voluntary muscle fibers. The degenerated muscles are replaced to some extent by fat and connective tissue.

The physiologic disturbance underlying the muscular wasting is not known.

It is estimated that there are some 200,000 persons in the United States suffering from this disease. Males are affected more frequently than females. The onset of the disease usually occurs in childhood, more than half the sufferers being children between 3 and 13 years of age. In some cases, however, the onset is delayed until late in middle life.

There is evidence that hereditary factors may play a role in the illness. The course of the disease is progressive, usually leading to complete incapacitation within a few years, although in some cases the disease progresses so slowly that the patient is not incapacitated until middle life.

There is no known treatment of value at the present time for progressive muscular dystrophy.

The main source of encouragement in this illness lies in the fact that in an effort to determine the nature, causes, and treatment of the illness, research studies have been going on in various medical centers in this country.

The Public Health Service is currently supporting two projects amounting to \$91,500 dealing specifically with muscular dystrophy. In its total grants program, the Public Health Service has studies concerned with muscular dystrophy. The two active projects mentioned are included in these seven.

It might be mentioned that the most extensive of these projects was begun in July 1945 and is continuing today. It is a study of progressive muscular dystrophy and other conditions which may be classified under the heading of degenerative or hereditary disorders, or both. The research is being done at the University of Utah, College of Medicine, by Dr. M. M. Wintrobe and his associates in other departments of the medical school.

In addition to the research in muscular disorders, 11 research fellowships have been awarded for study in this field. Public Health Service is supporting a total of 30 fellows in neurological research at a total cost of \$99,200.

There is a certain amount of intramural research, of course, being conducted at the National Institute of Health, which is related to the subject of muscular dystrophy. The National Institute of Arthritis and Metabolic Diseases is conducting basic research in enzyme chemistry which is related to growth and metabolism and may contribute to our knowledge of the muscular dystrophies.

Enzymes make possible such essential reactions as the derivation of energy from food, and enzyme studies have contributed greatly to the understanding of body functions.

Following the completion of the Clinical Center at the National Institutes of Health of the Public Health Service, additional intramural studies will be possible on progressive muscular dystrophy as well as other illnesses. Such studies may be carried out by the National Institute of Neurological Diseases and Blindness or by other institutions from time to time as their research programs develop.

In addition to the research mentioned above at the University of Utah School of Medicine, it might be well to tell of other current research programs at John Hopkins Hospital in Baltimore, where Dr. Joseph L. Lillenthal, Jr., is doing research relating to muscular dystrophy.

At the New York Hospital-Cornell Medical Center, Dr. Ade T. Milhorat has been investigating this subject for many years. At the University of Rochester School of Medicine and Dentistry in Rochester, N. Y., Dr. Karl E. Mason is working in this field also.

Mr. Speaker, in May 1950 the Muscular Dystrophy Association of America was founded and incorporated under the New York State laws as a nonprofit organization. This group is made up of parents of children suffering from the disease and of adults who have the disease. Its purpose is to raise funds for research programs, to establish fellowships, and to promote vocational guidance and adjustment to normal living of sufferers of the disease.

One of the first grants from the association for research was to Dr. Ade T. Milhorat whose work at the New York Hospital-Cornell Medical Center in New York City, has caused a feeling of hope

to enter into many of the 150,000 family circles of the afflicted.

The Muscular Dystrophy Association has produced a 5-minute sound and color film entitled "Today and Tomorrow." The film, showing the general nature of the disease, is available for showing to groups throughout the country. The Muscular Dystrophy Association also has literature available for the lay public on this disorder. The address of the Muscular Dystrophy Association of America is at 21 East Fortieth Street, New York 16, N. Y.

There was a very informative article published in the Saturday Evening Post, issue of September 29, 1951, which was titled "The People No One Can Cure." This article related the steps toward arousing attention of the Nation, and of pooling information among sufferers, their families, and physicians, which started with the unselfish and devoted efforts of two young women, Sallie and Nadine Woods, sisters who reside in the little southeast Texas city of Liberty, Tex., a place of 5,000 population. The organization which resulted from their efforts to do something for themselves and for the thousands of other sufferers of whom they became aware in their quest for facts, has the chartered title of the National Muscular Dystrophy Research Foundation. Sallie, now 30, and Nadine, 25, had the disease as children. Their efforts to get the facts, have helped them any many other in keeping up the buoyancy of spirit which characterizes a great many of the 200,000 afflicted Americans who have fallen victim to this unaccountable disease.

The board of control of the organization started by the Texas sisters, has prominent scientists from the universities of Harvard, Chicago and other noted medical faculties, trying to help in the search for the cause and the cure. But like the New York association, the big need is for funds to cover the research expense, and more funds, to cover the cost of enlightening the Nation so that the fight for a cure can have backing.

The All-American Canal

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 4, 1951

Mr. POULSON. Mr. Speaker, the misinforming statement of my esteemed colleague, JOHN MURDOCK, which appeared in the Appendix of the CONGRESSIONAL RECORD at page A6331, needs no answer. A careful perusal of his remarks will demonstrate to all concerned that the basic history of the Colorado River controversy has been distorted and the facts grotesquely misstated.

As an example of this half-truth approach to the sincere differences of opinion which exist between the sovereign States of California and Arizona, witness the misrepresentations concerning the

use of Colorado River water for the production of hydroelectric power at Pilot Knob power plant.

There is now, as everyone realizes, a considerable amount of Colorado River water that wastes into the sea. To a large extent this water represents the portion of the upper basin allotment which the upper basin States have not used to date. None of the lower basin States may construct facilities to use this water permanently, as such water legally belongs to the upper basin. Arizona twice attacked the Colorado River compact in the United States Supreme Court, unsuccessfully, because she wanted the right to establish rights to the unused portion of upper basin water.

An additional amount of water now flowing into the sea is part of the undisputed water reserved for use in Arizona. My colleague must realize that the Gila project is to use 600,000 acre-feet of Colorado River water, and the Colorado Indian Reservation an additional 400,000 acre-feet.

So, assuming there is approximately 6,000,000 acre-feet not now consumed by the various States using Colorado River water, why does my colleague object to utilizing the flow of this water for the generation of electricity? Millions of barrels of fuel oil, at the rate of over 250,000 per year, have been lost each year that Pilot Knob development has been blocked by the obstructionist tactics of the Arizona Representatives in Congress.

Yet my colleague would lead the Congress of the United States to believe that the water flowing through Pilot Knob would be consumed by California.

Water which will flow through Pilot Knob wasteway cannot be consumed in California. It is delivered to the United States section of the International Boundary and Water Commission. This is below any California point of diversion. My colleague forgets that this Congress, with California's concurrence, authorized the State Department to condemn the Andrade properties below Pilot Knob, in order to insure complete control by the United States of all water deliveries to Mexico. The Mexican water treaty was advocated by Arizona on the very ground that it would put all deliveries of water to Mexico under the control of the United States State Department.

My colleague hints that water used for the production of power at Pilot Knob will be sold to Mexico, at a profit. If such is the case, he had better investigate the State Department. California agencies are on record with a proposition in which they agree to deliver to the State Department, for delivery to Mexico under the Mexican Water Treaty, free of charge. Arizona has objected to this California offer.

The waters of the Colorado which are not presently utilized by the upper basin States can be permitted to flow down the bed of the Colorado and waste into the sea without developing the power potential available. That is what my colleague demands. On the other hand, the same water may be diverted through the All-American canal, allowed to pass through Pilot Knob power plant, and

out at the precise point where it would arrive if it flowed in the river channel instead of the All-American canal. At this point, called Rockwood Gate-Hanlon Heading, the American section of the International Boundary and Water Commission receives the water into its custody and determines the amount which will flow to Mexico through the headworks of the Alamo canal, also acquired by the United States Government from California agencies under the Mexican Water Treaty, and how much will pass to Mexico via the main stream. Obviously all the water that reaches this point on the border has to flow on to Mexico; there is no place else for it to go.

Pilot Knob power plant will consume no water, nor will the water which is allowed to flow through this plant be delivered to Mexico by any California agency at a profit. It is all delivered to the State Department of the United States, not to Mexico. Instead, development of power, vitally needed power, will be made possible by utilizing these surplus waters when available. California can acquire no right to the use of the water for irrigation purposes merely by developing the power potential.

Moreover, all the water passing through the power plant passes out of California's reach; it goes instantly beyond California's last point of diversion, bypassing that portion of the canal which turns west to carry irrigation water to California, and plunging down instead into the Rockwood pool, owned by the United States Government and controlled by the State Department under the treaty.

My colleague has attempted to mislead the Members of this Congress by his remarks. He has charged California with the total consumption of the surplus waters in the river merely because he assumes all unused portions of the river will flow through Pilot Knob power plant. Such an absurd conclusion is not only unconscionable, it insults the intelligence of Congress.

California seeks only the share of Colorado River water available to her under the Colorado River compact and related laws, statutes, and documents. California will continue to fight the central Arizona project as an attempt to destroy reclamation in the West through unwarranted extensions of doctrines of feasibility and an unauthorized grab at the Federal Treasury. These vindictive attacks on California are merely repeated attempts to cloud the issue and throw in red herrings so Congress cannot grasp the true intent of the pork-barrel central Arizona project.

remarks in the Appendix of the RECORD, I am including a very important editorial which appeared in the Evening Star, Washington, D. C., Thursday, October 18, 1951.

It is most important that attention be given in our defense programming to the necessary and urgent needs of school construction. This important phase of our national life must not lag.

The editorial is as follows:

A PRICE WE SHOULD NOT PAY

If the defense program means that we are arming ourselves and the rest of the anti-Communist world at the expense of failing to provide necessary school facilities for millions of American children, we need some new evaluation of the net losses involved in saving democracy.

There were about 28,230,000 children enrolled in schools throughout the Nation (through the twelfth grade) in 1940. By next year that total will have increased by 2,400,000. By 1960 the total will have grown to 37,138,000. There were many shortages of school buildings in 1940. But with the unavailability of building material during World War II, which postponed so much construction, and with the new shortages threatened now by the defense program and the great increase of school population, we are not providing either for current needs or for those that lie ahead.

For the first quarter of 1952, communities throughout the Nation have made requests for 255,400 tons of steel for school building construction. The National Production Authority has allotted, in the face of that demand, only 81,000 tons. The demand, and the allocations, cover all types of construction in the field of education. But the greatest need for school construction is in the primary grades. Unless this need is more adequately met, there are going to be millions of young children who will be forced to use makeshift schoolrooms, on part-time schedules, throughout all of their school days. Some way should be found to increase the allocation of steel in this field particularly. The communities affected are paying for the construction. What they need is the steel. The allocations must be increased, regardless of where they come from. We can get along without many things. But adequate school construction is not one of them.

Soviet Peace Terms

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's New York Times:

SOVIET PEACE TERMS

The latest exchange of views between Moscow and Washington has produced a mixed reaction throughout the world. The State Department is, of course, right in regarding the new Soviet note primarily as another propaganda blast, amounting to a rebuff of the American effort to enlist Soviet aid in the truce negotiations in Korea. And President Truman is equally right in standing by his statement that, under present circumstances, any agreement with the Soviet Union is not worth the paper it is written on.

A Price We Should Not Pay

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. BOGGS of Delaware. Mr. Speaker, under leave granted to extend my

But this attitude has been always subject to the important qualification that agreements with the Soviet Union will be welcome and necessary as soon as we have created positions of strength adequate to negotiate with the Soviets on a basis which the free world can accept and firm enough to compel the Soviets to keep the agreements made; and that we must therefore continue to explore the possibilities for agreement against the day when the Soviets come to the same conclusions. In that sense the latest American approach was another test of Soviet temperature, and the Kremlin's reiteration of its professed desire to discuss measures for the improvement of international relations including relations between the Soviet Union and the United States, coupled with the Communist reverses in Korea and the rising strength of the free nations, gives added interest to the Soviet reaction. In any case, the Western Powers contemplate new discussions with the Soviets during the United Nations Assembly meeting in Paris next month. And Mr. Churchill is proposing another big power meeting on the highest level, which he would be bound to press if he should become the next British Prime Minister.

This makes it pertinent to examine the latest reading of the Soviet thermometer. Unfortunately, the results are not encouraging. For the new Soviet note is not only negative on Korea, but couples the Korean question with all other outstanding issues, the listing of which, read in the light of the familiar Soviet stand on each issue, amounts to a presentation of the Soviet terms for peace.

These terms may be summarized as follows:

1. Withdrawal of all foreign troops from Korea, beginning with a "reciprocal" withdrawal from the thirty-eighth parallel as a condition for a cease-fire, to be followed by a peace settlement which, by creating a vacuum of power, would leave all Korea open to a Communist conquest.

2. A "unified, peaceful, democratic and independent Germany," which in Soviet terms clearly means a neutralized, demilitarized and undefended Western Germany attached to the militarized Soviet zone and open to both Communist penetration and to the pressure of Soviet armies on the Oder.

3. A new peace settlement with Japan, assuring its permanent demilitarization and defenselessness against Soviet pressure.

4. Dissolution of the "aggressive" North Atlantic Alliance and elimination of all American military bases abroad—with the inevitable result that no European or Asiatic nation would be in a position to defend itself.

5. Unenforceable prohibition of atomic weapons and the same percentage-wise reduction of the armed forces of the big powers—steps which would preserve and, in view of the growth of the satellite forces, even enhance Soviet military predominance under a spurious international control which the Soviets could nullify by iron curtain secrecy.

6. Conclusion of a "peace pact" between the big powers, which would leave the Soviets free to attack countries not in the pact while keeping the Western Powers from interfering in Soviet designs—until their own turn had come.

7. Prohibition of war propaganda, which in Soviet terms means suppression of any opposition to either Soviet or Communist aggression.

It goes without saying, of course, that these terms also imply recognition and sanction of all Soviet conquests made thus far, and therefore abandonment of all the nations and peoples already under Soviet domination.

We doubt that any responsible official in the Western World is ready to talk agreement with the Soviets on such terms as these.

Railroad Retirement Act Amended To Increase Benefits to Retired Railroad Workers and Their Families

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WOLVERTON. Mr. Speaker, it is with pleasure that I realize after months of effort that Congress has passed the necessary legislation to increase benefits to retired railroad workers and their families, and, otherwise improve their welfare.

NEED FOR INCREASING BENEFITS

The need for increasing the amount of monthly benefits paid to retired railroad employees and to survivors of deceased employees is urgent. The necessary relief must be given at the earliest possible day.

For several years now the scale of the benefits to retired railway workers and their families has lagged far behind the steadily rising cost of living. This has produced a situation that could not be ignored any longer. The condition of some of these retired workers and their families, whom we seek to aid by increased benefits, is desperate. They need help and they need it now without further delay. This bill which we have passed does the all-important thing, namely, increases benefits to all beneficiaries now under the railroad retirement system and thereby grants immediate relief to enable them to live more in accord with what they are entitled to have as a result of long years of service and the high rate of taxes that have been paid into the retirement fund. The increase also applies to future beneficiaries. This bill provides additional aid in an easy and effectual manner by providing an across-the-board increase of 15 percent to annuitants and pensioners and 33 1/2 percent to survivors, over and above the amounts they now receive. This will be effective immediately upon enactment of the bill.

SUMMARY OF BENEFITS AND OTHER IMPROVEMENTS

In order that there may be a full understanding of all that has been done to improve the welfare of retired railroad workers and their families, I wish to set forth a list of the worth-while things that have been done, as follows:

First. Increase of pensions and annuities 15 percent.

Second. Increase in survivor annuities 33 1/2 percent.

Third. Increase in lump-sum benefits 25 percent.

Fourth. A wife's annuity with a maximum of \$40 at 65 years of age.

Fifth. Integration and correlation by adjustments between Railroad Retirement Act and the old-age and survivor insurance trust fund. This it is estimated will strengthen the stability of the railroad-retirement fund by \$95,000,000.

Sixth. The taxable base remains the same as under present law, \$300 per month. There is no increase in the taxes to be paid to the fund by increasing the taxable base.

Seventh. There will be a \$300-a-month credit in computing annuities instead of the \$250 limit in existing law.

Eighth. Credit for service after 65.

Ninth. Increase in annuity benefits for the individual who elected a joint- and-survivor annuity and whose wife has died.

Tenth. Increase in time limit for filing application for annuities from 60 days to 6 months.

Eleventh. Guaranty for employees with more than 10 years of service of benefits under railroad retirement would not be less than what they would have received under social security.

Twelfth. Revocation of joint and survivor elections, that is, any joint and survivor elections would be automatically revoked if the wife in whose favor the election was made should have predeceased the individual or employee making the election, together with right to cancel before death if so desired.

Thirteenth. Adjustment of benefits applicable to the case of an individual entitled to two or more benefits under the Railroad Retirement Act alone or under it and the Social Security Act.

Fourteenth. An annuity for a widower after 65 if at least one-half of his support was provided by wife employee at the time of her retirement or death.

Fifteenth. There is no \$50 work-limitation clause provision. A retired worker can continue to earn whatever is possible without losing his or her annuity.

I assure you that it has been very gratifying to me to have had a part in bringing about these important and worth-while amendments.

I am also pleased that the Congress has adopted a resolution to provide a further study of the entire Railroad Retirement Act, to the end that ways and means may be found to still further increase benefits and improve condition of retired workers and their families, and, at the same time, strengthen the stability of the retirement fund without increasing the taxes to be paid by the workers.

I give assurance of my continuing interest and desire at all times to be of every possible assistance in promoting the welfare of all classes of retired workers and their families.

Mr. Grant's Message to the People of Albania

EXTENSION OF REMARKS

OF

HON. LAURIE C. BATTLE

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BATTLE. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include a message of the Honorable Hugh G. Grant to

the Albanian people over Radio Free Europe, New York, N. Y., recently.

Mr. Speaker, the Honorable Hugh G. Grant was appointed United States Minister to Albania by the late President Franklin D. Roosevelt on August 9, 1935. Mr. Grant served in Albania until September 27, 1939, when he closed the American Legation, pursuant to instructions from his Government, following the Italian occupation of Albania which began in April 1939. Mr. Grant, who was the last American Minister to Albania, has retired from the Government service and is now engaged in lecturing and radio commentary on international events. Now, here is Mr. Grant's message:

When I was appointed United States Minister to Albania by President Roosevelt in August 1935, I was serving as political officer in the Division of Western European Affairs of the State Department in Washington. Since Albania was included in another geographical division of the State Department I had no first-hand knowledge of the country or its people. I immediately began an intensive study of Albania. The study was fascinating and proved to be even more so following my arrival in the country with my wife. Mrs. Grant and I were destined to reside in Albania for 4 years, and to witness much material development and progress of the country, and finally, unfortunately, Albania's destruction as a sovereign nation in April 1939, the result of Mussolini's invasion and occupation.

From the moment of our arrival at the port of Durazzo, early in November 1935, Mrs. Grant and I felt that we were in an atmosphere of friendliness and hospitality. The Director of Protocol of the Albanian Government met us at the port, gave us a very cordial greeting, and escorted us to the capital, Tirana. Within a few days of our arrival I was invited to present my credentials as the American Minister to His Majesty King Zog. The King, together with high civil and military officers, also received me most cordially. I then began my long period of service as the American Chief of Mission.

Having been born and reared in the southern section of my own country, which has a reputation for the open door to visitors, I decided to see something of the life and customs of the Albanian people. To accomplish this it was necessary to go into the towns and small villages of the country, and so I adopted the plan of taking time out from my regular diplomatic duties in order to make extensive tours throughout the country as often as possible. Since I did not speak the Albanian language I was always accompanied by an Albanian interpreter, enabling me to talk directly with the people in their homes. I also visited many of the schools and religious institutions of the country, and I am happy to state that among my warm friends, made during these visits, were leaders and laymen of the three great religious orders in Albania in addition to Albania's educational leaders. Moslem, Orthodox, and Roman Catholic leaders were my friends. And these friends honored me by visiting the American legation in Tirana as guests of the American Government. And I want to say here that I was greatly impressed with the splendid spirit of religious tolerance among the Albanian religious leaders and people. Moslems, Orthodox, and Catholics lived and worked side by side in Albania without those violent religious animosities which are so prevalent in many other sections of the world. Among my good religious friends also were two members of the American Protestant Church, Dr. and Mrs. Phineas B. Kennedy, who resided for 28 years in the city of Korca.

Whenever I visited the principal cities and towns of Albania I always called upon the civil, military, and religious leaders of the community. Among these officials were the prefect, the subprefect, the mayor, the military officers of the Government, and the chief muftis, bishops, and other high officials of the three religious orders. I would frequently spend 2 or 3 days in the larger cities, including Scutary, Korca, Durazzo, Argiro-castro, Berat, Valona, Alessio, Elbassan, and many other towns and villages. Mrs. Grant frequently accompanied me on these tours, and she, too, was always cordially received by the Albanian officials and people.

I also visited the high and rugged mountains of Albania, going into tiny villages which were inaccessible by automobile. I, therefore, traveled from time to time on foot and on horseback. In the course of these tours into the high mountains of Albania, I came to have full appreciation and understanding of the real name of the Albanian people, Shqipetar. Many times, Mrs. Grant and I visited the picturesque village of Kroya, perched high on the side of one of Albania's majestic mountains. This quaint village was the home of the immortal Scanderbeg, the great Albanian national hero. It was Scanderbeg who, on November 28, 1443, raised the red banner with the double-headed black eagle as the Albanian national emblem. It was Scanderbeg who kept the invading Turkish armies out of the country for more than 20 years. The friendly Albanian people invariably expressed to me their gratitude to the American poet, Henry W. Longfellow, who wrote a poem, entitled, "Scanderbeg."

I wish to say in all sincerity, that, in all of my travels in many parts of the world, I have never witnessed a deeper feeling on the part of a people for a national leader than that exhibited by the Albanian people toward the great Scanderbeg. It reminded me of our American attitude toward George Washington, leader of the American Revolution and first President of the American Republic. Scanderbeg and Washington had many similarities of character, of leadership, and splendid accomplishment. The attitude of the Albanian people toward Scanderbeg is indicative of the intense patriotism of the people. This love of country has existed throughout the long history of the Albanian people who are believed to be the oldest race in southeastern Europe. Despite numerous invasions and military conquests of foreign armies through centuries of time, the sturdy people of Albania have retained their national language, their customs, and their intense love of individual freedom. They were patriotic Shqipetars many centuries ago. They are patriotic Shqipetars today in this modern twentieth century of ours.

Albanians, we Americans who know you and who know the Albanians who reside in America, have great respect for you and your country. And, we have faith in your ability to carry on under great adversity and to throw off the yoke of tyranny which today grips your picturesque land through the rule of Soviet Russia, aided by a little group of Communist agents. Your ancestors established the reputation, and you have carried it on, of patience and tenacity of purpose in the face of great obstacles. You have a long-range view of life. You look ahead. These attributes of character will surely bear fruit in Albania in the coming days, as they have in the past. Without a doubt, you will regain your individual freedom and the political integrity of Albania from the Communist tyranny. The Albanian flag, the red banner with the double-headed black eagle, and the golden helmet of Scanderbeg, will fly again at the mastheads of your Government buildings. Albania will take her rightful place among the freedom-loving nations of the world.

Shqipetars, I salute you.

United Nations Day

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MANSFIELD. Mr. Speaker, the great faith which our people have in the United Nations is demonstrated each year in the local celebrations of United Nations Day which occur in cities, towns and villages throughout the length and breadth of our land.

This year, on October 24, United Nations Day will mark the sixth anniversary of the signing of the United Nations Charter.

With the assistance of the Citizens Committee for United Nations Day, which coordinates the efforts of 85 national organizations, local committees are now planning meetings, ceremonies, entertainments and other civic events in communities in every State of the Union.

Perhaps the keynote of the entire event is a statement which was written for the 1951 United Nations Day by Oscar Hammerstein II, a great writer and public-spirited citizen who has so often been able to express the feelings of the American people in his immortal songs. It is being reprinted in a million copies, for distribution by the Citizens Committee and other groups. Because it is so short and is so effective a summary of the work of the United Nations, unanimous consent heretofore granted, I insert it in the Appendix of the CONGRESSIONAL RECORD, in the hope that Members will call attention of educators and community leaders to this simple but eloquent profession of confidence in the United Nations:

MORE THAN A DREAM

(By Oscar Hammerstein II)

More than a wish, more than a pretty ideal of well-meaning philosophers, the United Nations is a going concern. It is 6 years old. It has not attained permanent world peace, or freed every part of the world from hunger, or accomplished perfect international understanding—not in 6 years. But in this time it has taken longer steps toward the realization of these aims than any other agency in the history of mankind.

In Palestine, Kashmir, Indonesia, Iran, Syria, Lebanon, Berlin, Greece, and Korea—wherever international conflict has threatened the peace of the world the United Nations has explored every method for preventing war: by active mediation; by orders to stop fighting; by persuading disputing nations to negotiate directly; and finally, in the case of Korea, by calling upon the armed forces of its member states to combine and halt an aggressor. This great and growing congress of nations has fought flood, famine, and sickness. It has sent missions of experts around the globe to provide technical assistance to countries that needed it. It has taken steps to curtail illegal production and distribution of narcotics. It has sent food and relief to distressed children. Its Charter provides the best hope for a future worldwide unity of nations and people.

The United Nations is now costing each American about 60 cents a year. Do you think it's worth the money? It needs your 60 cents. But above all else it needs your

faith. Believe in it with all your heart. Work for it, talk for it, give to it. Nothing will repay you more. The health and progress and peace of the world are the richest dividends you can reap. No other dividends are worth anything without these.

A Message From Bishop Klonowski

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter published in the Polish-American Journal of October 20, 1951:

A MESSAGE FROM BISHOP KLONOWSKI

DEAR MR. DENDE: May I extend to you my sincere congratulations of the fortieth anniversary of the Polish-American Journal.

To serve the public in the field of journalism is a responsibility at once neither light nor inconsequential. For people depend upon it regularly and widely to a great extent as a source of much of their information; many look to it for the shaping of their opinions, because it is difficult to think and they leave others do their thinking for them; and, furthermore, many are prone to accept unquestioningly whatever they read just because they see it "black on white." Hence it is that, together with the home, the school, the church, and one may add today the radio and the television, the press is regarded as one of the greatest formative influences of society.

We are fortunate in the United States to enjoy the freedom of the press by virtue of the very first amendment to the Constitution, which states that, "Congress shall make no law . . . abridging the freedom . . . of the press," and by reason as well of the attitude of the public mind on this question. Evidently the only way to preserve this freedom—a freedom which makes possible so many opportunities to do good—is to adhere carefully, discriminatingly and unflinchingly to the principles of truth, and justice and charity, by wholehearted devotion to high and noble standards, and by espousing the common good without injustice to the individual.

In congratulating, then, the Polish-American Journal for the good it has accomplished during the past four decades, we wish it every blessing for the future.

Sincerely yours in Christ,

HENRY T. KLONOWSKI, S. T. D.
Auxiliary Bishop, Scranton.

The Proposed Aluminum Project for Montana—VI

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MANSFIELD. Mr. Speaker, over a month ago I requested explanation from various Government departments about allegations made over the radio and in the press by Mr. Drew Pearson and in the Appendix of the RECORD by

Hon. JOHN SAYLOR of Pennsylvania. I also requested investigations by the Department of Justice and the Hardy Subcommittee on Government Operations. I have received answers to all my requests and these answers have been placed in the RECORD. I had hoped the Hardy committee would have made its report before Congress adjourned. As this has not been done I am inserting with my remarks at this point a letter I wrote to the Honorable PORTER HARDY on October 18. If the Hardy committee does not today submit a report based on its investigation, I hope to at least receive an answer to this communication:

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., October 18, 1951.

Hon. PORTER HARDY,
Chairman, Subcommittee on Government Operations, Committee on Expenditures in the Executive Departments, House of Representatives.

DEAR PORTER: You will recall on September 19, 1951, I requested your committee to investigate the allegations made against the Harvey Machine Co., by Mr. Drew Pearson in his radio broadcast on Sunday, September 17, and in his newspaper columns of September 18 and 19, 1951. I also requested your committee to investigate allegations made by the Honorable JOHN SAYLOR, of Pennsylvania, in his statement which he put into the Appendix of the CONGRESSIONAL RECORD of September 18, 1951. As almost a month has passed since I made this request and as Congress will be adjourning shortly, I am writing to you to ask that your committee make known its findings at the earliest moment, and if possible, before this session of the Congress adjourns.

I feel very strongly that an answer to the charges made should be forthcoming and as you know, I have done my very best to have the questions raised looked into by the Department of Interior, by Mr. Stuart Symington of RFC, by Mr. Manly Fleischmann of DPA, by the Department of Justice, and by your committee. I have received replies from all the Government agencies and I have also sent copies of these replies to your committee for its consideration. The establishment of an aluminum plant in the Flathead Valley of Montana is vitally important to the people of my State. With Hungry Horse beginning to generate power next fall, it is imperative that a decision be reached just as soon as possible so that these allegations can be proved or disproved and so that a permanent aluminum industry can be brought into the Flathead Valley to start construction of the needed facilities to take advantage of the power which will be forthcoming in 1952. I know that you and your committee appreciate the importance of this matter to the people of the State of Montana, and I would be deeply grateful if a decision could be arrived at and a decision made known to the Congress and the people of Montana at the earliest opportunity.

May I take this means of thanking you for the wholehearted cooperation you have shown in granting my request for this investigation because I know that in the rush of the adjournment of this session of Congress it has put an added strain on you and your committee. I sincerely hope that this report will be forthcoming shortly so that the people of Montana will know where we stand and so that we may go ahead with the development of an aluminum industry in the Flathead Valley of Montana.

Must close now, but with best personal wishes, I am

Sincerely yours,

MIKE MANSFIELD.

Letter Concerning Peanut Allotments

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter concerning peanut allotments:

GORMAN, TEX.,
October 15, 1951.

Hon. LINDLEY BECKWORTH,
Congressman, Washington, D. C.

DEAR SIR: I read with interest your article in the Sunday Dallas News in regard to the acreage allotments on peanuts. This is a bitter pill to me and a lot of other farmers in this section of Texas.

Here is the case history of my farm. In 1936 I purchased a tract of 160 acres in this county of Eastland. I put this out in a commercial peach and apple orchard. In 1949 a tornado ruined this orchard. And to make a long story short orchards in this country are not successful from the standpoint of making one a living. This farm carries a 3½-acre peanut allotment. This is all I can get and you know that will not make a living. I have had the old trees removed and have tried to get an increase in allotted acres but instead the allotment has been cut each year until this 3½ acres is the net result in 1951.

As a result of this allotment business I have been forced to stop farming and try to make a living otherwise. In Eastland County where my land is located, peanuts is the only cash crop one has. I have tried to sell the farm and cannot do so on account of this little peanut allotment. The only way I can sell the farm is to take a big reduction in the price, as to what I could get if there was a decent allotment, in comparison to the other farms in this community. I have 123 acres in cultivation and that amount of acres around me carries somewhere from 25 to 50 acres of allotment for peanuts.

In other words, this has practically confiscated my farm, has forced me to stop farming, has reduced my property from 40 to 60 percent in value. I sometimes wonder if this is democracy. Every time you go to a PMA office they tell you they can't do anything, that so and so is the law as set out in Washington.

I would like to see something done to even up the acreage and as in my case where I have been forced to change from one crop to another, give a man an even break on acreage so he can at least make a living.

If anything can be done to get this matter righted it would be appreciated by people all over Texas. So far as I have been able to determine you are the only one up there that has taken any interest in this deal handed out on allotments.

If the Agricultural Department does not intend to make any adjustments in allotments on peanuts, then I think they should set up some provision whereby they should be permitted or forced to pay a person for his land, where reduced allotments have confiscated the land, or forced the value down, to the point of a sacrifice.

I would appreciate it very much if you could find out from the Agricultural Department if there is any way I can secure a fair allotment. They will not tell you anything or help you any way locally, so just what can we country boys do in cases like this.

We hear every day over the radio and from the newspapers about economic aid to the foreign countries and everyone else,

But I was told that charity begins at home. Yet here they force you to stop farming and stack your equipment that you have spent your life accumulating and get off the farm and try to make a living.

In case they will not increase the allotment, maybe they will build an airfield next door where I can sell out and go buy a farm that has some allotment where I can make a living. Guess you are tired of reading by now but there are a lot of us boys back in the country that are tired of the red tape and the unfair practices that are forced upon us by men in the PMA and those agencies. It is time that something is being done for people that these rules and unfair things have driven from homes they have struggled to pay for and are now being forced to hunt jobs.

Yours very truly,

J. LLOYD BROWNING

Mining Laws Abused

EXTENSION OF REMARKS

OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD four articles and an editorial, all appearing in the Denver Post. These articles point out how the provisions of the mining law are being abused and through this abuse permit the acquisition of public lands contrary to the real intent and purpose intended when Congress authorized the filing of mining claims.

I am calling these abuses to the attention of the Members of Congress with the hope that the appropriate committees will make the proper study and recommend laws adequate to remove these abuses.

The articles are as follows:

[From the Denver Post of October 11, 1951]

**MINING LAWS ABUSED—PRIVATE OPERATORS
FILL POCKETS FROM PUBLIC LAND**

(By Robert W. Lucas)

Public timber, grazing, and recreation lands in the vast public lands States of the West are being converted to private occupancy and use without proper compensation to the Public Treasury and contrary to the public's interests, a Denver Post investigation has revealed.

Millions of board feet of public-owned saw and pulp timber may fall under the ax to the profit of people who have neither bid for it nor will pay for it, but may pocket the proceeds, from its barter or sale.

Mountain cabins, tourist resorts, filling stations, and other private facilities have been built and are arising on public lands without permits and free of rental obligations and requirements of safety and sanitation normally required by governmental agencies.

Grazing permits are being withdrawn or reduced because the management of grazing lands is being interfered with by private individuals who are encroaching, willy-nilly, on the grazing domain of national forests.

Mile after mile of the western playgrounds' most abundant fishing streams are being withheld from public enjoyment by the simple act of posting against trespass—an

act done by people who have learned a legal way to squat on public property.

How has all of this been permitted to come about? Are these shadows of another Teapot Dome scandal? Are the laws of the United States being set aside by an alliance of powerful interests and corrupt public officials?

SPRING FROM MINING LAWS

No, these raids upon the public domain are sanctified by customs and laws that have been in effect for almost 75 years. They are the mining laws that date back to the basic law of 1872. One tiny section in those laws fails to distinguish between surface and subsurface rights in the establishment of a mining claim. That is opening the door to the situation outlined above.

This has been going on since 1911. Why is the situation coming to light only now?

The answer is fourfold: (1) High timber prices in recent years; (2) the fantastic growth of the recreation industry; (3) the enlarged part that fun and travel play in the lives of modern Americans; (4) the inundation of the frontier west by the great western migration of the last decade.

WHERE'S REMEDY

Does the remedy lie in dislodging claimants and occupants of public lands? Does adequate but reasonable protection of the public domain conflict with the legitimate interests of the great American mining industry, or weaken incentives to necessary prospecting, discovery, and development of the Nation's mineral wealth?

Among those who have given the problem closest study the answer to both questions is "No." But whether the National Forest Service in the Department of Agriculture and the mining industry can agree upon the necessary remedial legislation is another question.

The mining industry, legitimate miners or their use of the mining laws are not at issue. The trouble, investigation shows, has arisen from practices by interests who are subverting the mining laws for purposes other than mining. Bona fide mining men do not wish to take up claims for an unlawful or disguised purpose.

PRODUCT OF MANY YEARS

Still, the mining laws are the product of many years of judicial interpretation, during which much time, money, and effort have been spent in perfecting them and in understanding both the rights and obligations under law. Anything that would bid to disturb the mining laws or disorder the precedents and court decisions that give them force and meaning would be eyed skeptically, if not opposed strongly, by the mining fraternity.

But those who are confronted with present difficulties in the management of public lands insist the record demands some compromise. In cases where mining claims have been protested successfully, on the grounds that the claimant really had something besides mining in mind for the land in his claim, rather liberal tenure permits have been granted for continued occupancy.

And the National Forest Service insists that a separation of surface rights from subsurface rights in claims need not hamper mining in any essential detail, even though it might require more negotiation than at present.

Meanwhile, what has actually been happening under the mining laws as they now stand?

[From the Denver Post of October 12, 1951]

MINING LAWS ABUSED—UNITED STATES VIRTUALLY HELPLESS TO PROTECT PUBLIC LAND

Public lands belong to all the people of the United States, to be managed for maximum benefit of all the people. Yet in Colo-

rado some persons have legally claimed use and possession of certain lands, at highly nominal cost, and have profited in enterprises wholly foreign to that implied in their claims.

The misuse of mining claims in Colorado and throughout the West is revealed in this second of a Denver Post series on what amounts to a steal of public lands under the guise of law.

The law recognizing mining claims is complex. A claim may be established by the performance of a few simple acts such as doing \$100 worth of work on it each year. To establish a claim and to patent it, Federal law requires that the locator must have made a discovery of valuable minerals. There are other provisions, all of them simple and also inexpensive by today's standards.

LAWS FAVOR CLAIMANT

The quality and kinds of material that are recognized in law by court decisions as minimum to the assertion of either a temporary claim or a permanent patent make it possible, however, to file a claim almost anywhere, anytime. But the burden of proof that a claim is invalid rests with the Government. And the laws are stocked in behalf of the claimant.

Even though a mining claim is successfully challenged by the Federal Forest Service of the Bureau of Land Management, another claim, with only minor changes in metes and bounds, can immediately be filed. And the time-consuming and costly process of examination must be undertaken all over again.

What does this all mean to the people of Colorado and to the United States?

It means that through a loophole in a body of law devised to protect and promote the great mining industry of the United States, certain proprietary functions granted to the Government are being hamstrung or bypassed entirely.

It means that the forest service in Colorado could not prevent a syndicate of men from obtaining clear patent to the surface of 10 times the land needed to dig out a single material, then sell the grazing lands for private use at a profit of \$1,500.

It means that an individual was permitted to obtain title to valuable gravel and a commercial site at an intersection of major highways in Colorado, as part of a 145-acre tract, merely by filing a piece of paper at the county courthouse. His costs of "prospecting" the claim to meet the requirements of law were more than repaid from the sale of gravel to the State, which formerly obtained it free from Uncle Sam. Having established patent on the claim, he now owns it, to develop, sell or barter it as he will.

The people of the United States, in whom this land was supposed to be held in trust, will realize nothing from this claim. Having passed from public to private ownership, virtually without compensation, the tract is taken from public supervision and control. The claimant himself is blameless. He enjoys knowledge of the law and how to use it.

MINER BUILDS RESORT

There is a spot in Colorado where a veteran miner, wise to the laws and possibilities thereunder, has systematically built a mountain resort of great value on his own land and contiguous mining claims. He is not only exempt from the payment of Federal permits and fees. He is free of regulations with respect to fire and sanitation, rules established by the Forest Service for other licensed tenants on public lands in this country.

The Izaak Walton League has struck out against a rising tide of posted fishing streams, some of which are known to be on tracts obtained through mining claims by persons who had no honest intention of mining them.

Such abuse of mining laws has been bitterly protested on the world-famous Rogue River in Western Oregon.

FEAR WORST TO COME

Those most concerned about the trend toward private exploitation of public lands say it is only the beginning. They say that as the knowledge of how to take advantage of the weakness in the mining laws spreads, along with the pressure for timber, grazing or recreation lands and sites, the problem will become wholly unmanageable.

At present the minerals examiners for Uncle Sam are literally years behind in their work, and are falling behind farther by the month. The conditions detailed here as existing in Colorado are duplicated elsewhere in playgrounds of the West.

[From the Denver Post of October 14, 1951]
SIXTY MILLION DOLLARS OF PUBLIC'S TIMBER
HELD PRIVATELY

(By Robert W. Lucas)

More than 7,000,000,000 board feet of the public's timber is in the hands of persons holding mining claims in the 12 Western States.

That timber has not been bid in from Uncle Sam through the United States Forest Service, which acts as custodian for the people's timber resources. Yet it is held, in some cases temporarily, and in others in complete ownership, without compensation to the Public Treasury. It is worth something like \$60,000,000.

This timber is one gigantic item of exploitation that is frustrating the conservation and management laws that are under current exploration of the Denver Post. What will happen to it is paradoxically beyond the ken of the Federal agency charged with responsibility for it. Why? Because of a soft spot in the United States mining laws.

TWO MILLION ACRES COVERED

Because a mining claim may include up to 160 acres of surface rights, some 73,000 such mining locations cover almost 2,000,000 acres of the national forests in the West. Less than 3 percent of all these locations is producing minerals in commercial quantities.

The percentage of production is highest in Utah, Nevada, southern Idaho and western Wyoming. But in California where more than \$36,000,000 worth of timber is tied up in 17,000 mining claims, only 1 percent of them is grinding out minerals.

A high official of the United States Forest Service recently said:

"As long as it is possible, under the mining laws to acquire a possessory right to the surface and timber of a mining claim, by making a discovery of mineral sufficient to justify a prudent man in doing development work, we are going to be seriously hampered in our administration of the timber and land resources of the national forests."

He pointed out further that "it is easy to find a 20-acre claim in the Douglas fir country of Oregon or Washington with \$20,000 worth of timber standing on it, and anyone familiar with that region could locate claims with over \$50,000 worth of timber."

PUBLIC PAYS OTHER WAY

Does this mean that this enormous timber value is being harvested at will by persons who have acquired it for virtually a song? Not quite. But the existence of vast acreages of vaguely located and isolated mining claim timber costs the public money in ways other than losses from its direct sale.

The reports from regional foresters covering many national forests tell the story.

Here is a tract of ripe and merchantable timber that cannot be sold, although there is a willing buyer, because a mining claim

blocks the right-of-way for a logging road. The timber on the claim contains snags that should be felled as a precaution against fire—fire that wipes out millions of board feet in a flash.

But the claimant is adamant. He might be willing to sell right-of-way—which means he is selling something that belongs to the people, but over which he has legal control.

On one lot of 70 mining claims in one Oregon forest, 1,400 acres carry 35 million board feet of timber. A road through it is kept under lock and key. This timber belongs to the people of the United States. Until and unless the mining claims upon which it is located are patented, that vast stand of timber can be used only to develop the claim on which it grows.

In a national forest of Idaho mining claims are precluding the logical development of summer homes and public recreation on the shores of Priest Lake, Upper Priest Lake, and Lake Pend Oreille.

CALIFORNIA EXAMPLE

Mining claim locations scattered throughout the Payette forest's heavy stands of commercial timber are causing loss of time and are piling up costs of administration neces-

Region	Mining location	Acres	Percent producing minerals in commercial quantity	Timber on claims	
				Volume (board feet)	1940 value
(1) Montana, north Idaho.....	15,395	307,530	3.0	972,000,000	\$4,226,000

[From the Denver Post of October 15, 1951]
MINING LAWS ABUSED—MINERAL VALUE
PRIORITY HELD AID TO LAND GRABS

(By Robert W. Lucas)

United States mining laws give an arbitrary priority to mineral values on national-forest land, regardless of whatever other public values are involved. That simple statement of fact is dropping the bars to a grab of timber, recreation, and grazing lands which those who wrote the mining laws never contemplated.

But an investigation by the Denver Post has put a spotlight on innocent abuse—innocent in that it is legal, but abuse nonetheless—of basic tenets of the conservation and protection of natural resources.

The peculiar liberality attached to the filing and patenting of mining claims is described by United States Forest Service officials as an obstacle to the proper management of public lands.

Forest Service objections are not directed against the framers of mining laws or the mining industry. Indeed, there are illustrations of close cooperation between the two, as in the Big Horn National Forest near Sheridan, Wyo.

There a 5,000-acre mining exploration is tearing up the range as prospectors search for a strategic material known as monazite, a rare earth element that is going into the defense effort.

There are many examples of close and effective cooperation between custodians of public lands and legitimate miners who are carrying on widespread and important industrial activity.

REWARD TO FINDER

A Forest Service minerals examiner, addressing a rangers' training camp at Woodland Park, Colo., not long ago, recognized the

sary to run lines and mark claim boundaries so that timber sales and management may be carried on.

There are 860 acres of timber in one group of unpatented mining claims in a national forest of California. The mining claimant refuses to permit cutting by a purchaser who is harvesting surrounding Government timber. And 12,000,000 board feet of the public's trees stand in custody of persons who have not paid a dime for it.

The same story is true, though in terms of less value, among the forests of Colorado and in the Black Hills of South Dakota. The loss to the people from hamstringing forest and grazing land management in claim-studded national forests and open public domain is enormous. And the source of difficulty, a hitch in mining laws, is far removed from the legitimate interests of the actual needs of miners and mining.

The following table is from reports of national forests in 12 western States. Not included is the fact that the forest service considers valid 14 percent of the mining claims filed. The figures were taken from conditions existing at about Jan. 1, 1950. Estimates of timber values involved have increased substantially since that time.

logical and necessary development of laws and safeguards for mining in these words:

"Wherever and whenever in the course of human history there have been free men the search, the element of chance, and the ultimate discovery have almost universally been conceded to convey some measure of proprietorship to the discoverer. When this has not been so, men were not free."

The problem that has arisen over adapting mining laws and precedents to modern conditions of land management is one of qualifying proprietorship to harmonize governmental practice with the clear intent in conserving and wisely using natural resources.

Those closest to this problem and most profoundly aware of it say its solution is "touchy". They hesitate to advocate corrective legislation lest they start a political war. The question has been discussed "among individuals." Tentative legislation, containing a simple change in what constitutes a surface mining claim, has been kicked around. It would include a "right to occupy and use so much of the surface of the land covered by the location as may be reasonably necessary to carry on prospecting and mining."

In the case of timber it would provide "that any person entering said lands shall not acquire title, possessory or otherwise, to the timber now or hereafter growing thereon, which timber may be managed and disposed of as provided by law."

But the remedy, which must come from Congress, is another story. And it is a long way off, in the opinion of students of mining law and public policy. Meanwhile special reports have been made in recent months for the Secretary of Agriculture through the Forest Service. These reports spell out incidents of interference in timber and range management and utilization, resulting from ill-defined and widely scattered mining claims.

LEGISLATION NEEDED

Unless some legislation is devised soon, with the endorsement and support of mining interests as well as the National Forest Service and the Bureau of Land Management, mining claims will continue to—

Hold up timber sales; hold open the possibility that valuable public timber may be converted for private profit without adequate compensation and through poor harvesting practices, interfere with range use; block road locations and permit the exacting of tolls for rights-of-way; prevent recreation development on public lands and give mining claimants unfair advantages over permittees in national forests.

Roy M. Robbins, in the book *Our Landed Heritage*, wrote "Not until the nineteenth century, almost coincident with the passing of the American frontier, did a few thinking men begin to realize that the Nation's natural resources were being exploited in such an alarming fashion that the time was near when these vast resources of wealth would be completely under the control of a few individuals who had no regard for their proper utilization and little respect for laws which would attempt to regulate their disposition."

What would appear to be defects and conflicts in laws governing use of public lands is reopening the question of their conservation and protection at the midcentury point.

[From the Denver Post of October 13, 1951]

PHONY MINING CLAIMS ROB THE PUBLIC

A revision of United States mining laws, to plug a loophole which is permitting the filing of bogus mining claims, was recommended by the Hoover commission task force's report on natural resources, dated January 1949.

On page 54, under point 4 of recommended revisions, the report says:

"The liberal provisions of the mineral laws which permit the acquisition of surface rights in addition to subsurface mineral rights have opened the way to the filing of numerous claims to secure valuable surface rights under the guise of mineral claims."

Later in the report, under section (a), "Changes in laws pertaining to mining locations and patents," the report recommends in point 11:

"Recognize the presumptive right of the holder of a mineral claim to the surface but restrict surface uses, prior to patenting, to those necessary in connection with exploration activities. Grazing and cutting of timber shall be in accordance with regulations of the forest and range service and should be limited to the needs of the proposed operation."

Point 6 under the same section says: "Give the geological survey the right to cancel new unpatented claims at any time, if it is requested to examine the ground by the agency administering the land, and if it finds the prospective value of the ground too slight to warrant further expenditure of money or effort on its exploration."

Efforts of the bureau of land management and the United States Forest Service to obtain changes in the mining laws in line with the Hoover recommendations are viewed with great suspicion by important elements of the mining industry. The bureaucrats, it is felt, are attempting to freeze free private enterprise out of the public lands.

The feeling is entertained by some that the Department of Interior really wants to change existing law so that instead of a prospector being able to get a clear title to mineral lands, he may have title only to mineral deposits, but may otherwise have

only a lease. The Department of Interior has denied such intent.

The facts indicate, however, that there is more of a problem here than that presented only by the ambitions of bureaucrats. The Hoover Commission task force which took cognizance of bogus mining claims included some eminent men who should have understood relative rights in land law and the problems of the mining industry as well as those of administrative agencies. The special committee included the former governors of Wyoming, New Mexico, and Colorado, and the president of the Homestake Mining Corp., Dr. Donald H. McLaughlin.

Parties most interested in correcting what they allege to be defects in the mining laws—and those include the Forest Service and the Bureau of Land Management—should be encouraged to press for amendments as needed. If there is a phony case, set forth only to disguise unwarranted encroachment upon the legitimate interests of private enterprise by power-hungry officials of Government, that should be brought out, too.

Some leaders of the mining industry oppose revision of the laws and insist that administrative officers in the Forest Service and Bureau of Lands have ample authority to prevent location upon or the patenting of forest lands under the guise of their being mineral lands.

Whether revision or enforcement of the laws is the answer, certainly inaction will not put a stop to the robbing of the public and the obstruction of lands management by the filing of bogus mining claims.

Federal Employees Pay Raise Bill

EXTENSION OF REMARKS

OF

HON. ALLAN OAKLEY HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HUNTER. Mr. Speaker, yesterday on the roll-call vote on the conference report accompanying S. 622, a bill to increase the rates of compensation of certain officers and employees of the Federal Government, I was recorded as not voting. I want to explain that the reason I did not vote on this bill was because I was called from the House Chamber shortly before the vote was taken to participate in a conference concerning the matter of obtaining more materials for school construction. This is a matter of extremely vital concern to the people of my district and one on which I have been working for many months. Nevertheless, I would not have done anything which would have caused me to miss a roll-call vote on this conference report if I had any doubts about its being approved. This is borne out by the fact that it was overwhelmingly approved by a vote of 315 to 26. However, I want the record to be clear that I favored the conference report accompanying S. 622 and would have voted in favor of it if I had been present when the roll was called. I also want to point out that when this legislation was first considered by the House earlier in the session, I voted for it.

The Seaway Issue Today

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the St. Paul Pioneer Press on October 1, 1951:

THE SEAWAY ISSUE TODAY

Congressmen who have smugly blocked construction of the Great Lakes-St. Lawrence seaway for years past are due for some soul-searching reappraisals of their position. Now that Canada has announced she is going to turn the project into an all-Canadian undertaking and build it for her own benefit, the position of those American interests opposing the seaway becomes more untenable than ever before.

It was one thing for short-sighted Senators and Representatives to say, "We are blocking construction of this seaway because it would help the development of inland United States, and we don't want that part of the country developed any further." They had selfish regional support for such a stand.

Now, faced with the fact that a foreign country is going to build and operate this seaway alone if we still hang back, the new question before these Congressmen is this: Can we afford to be held politically responsible for letting a foreign power acquire control of a border navigation project which will affect the national security and defense of the United States and all its people?

Of course, Canada is a friend and ally. That makes small difference in the basic, long-range considerations. It is elementary that the United States should have a direct voice in the planning, building, and operation of waterways upon which a large amount of its commerce will be dependent for ingress and egress. Yet this voice will be denied us if we stubbornly force Canada to go it alone on the vital lower reaches of the seaway.

The St. Lawrence issue has resolved itself into the simple question of whether the Congress of the United States is to protect the national interest by becoming a partner in a development which is going ahead regardless of whether or not we participate.

St. Lawrence Project

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include three excellent editorials relative to the pending St. Lawrence project. One editorial entitled "Reviving St. Lawrence," appeared in the October 6 edition of the Providence (R. I.) Journal; and the second editorial entitled "Seaway Stalemate," was published in the October 3 edition of the

Decatur Herald at Decatur, Ill. The third editorial entitled "New Confidence in the St. Lawrence Waterway," appeared in the October 11 edition of the American Metal Market.

The editorials follow as above-mentioned:

REVIVING ST. LAWRENCE

Representative BLATNIK, of Minnesota, and Senator WILEY, of Wisconsin, have revived the issue of construction of the St. Lawrence waterway probably too late to get positive action this session. Several months ago General Marshall and Defense Mobilizer Wilson greatly altered the complexion of this ancient controversy by declaring that construction of a seaway through the St. Lawrence is essential to national defense. Mr. Wilson went so far as to label it a "vital" and "urgent" project.

Two important considerations prompted Mr. Wilson to reverse his long-held critical view of the proposed St. Lawrence undertaking. One is the increasing importance of foreign iron ore in American defense. If we are to achieve our objective of producing annually 130,000,000 ingot tons of steel by 1960, we must have ore from such outside sources as Labrador, Venezuela, and Brazil. The St. Lawrence River is not only the natural but indispensable transportation artery for delivery of this foreign ore to the steel mills in the Great Lakes area.

The second consideration is the possibility that enemy attack, either directly or through sabotage, might suddenly wreck the Sault Ste. Marie locks through which passes the entire output of the Mesabi Range iron ore. Such a blow would cripple our steel industry. Hence not only the wisdom but the urgency of having an alternative source of vital supply. The St. Lawrence development project is the key to this source. More than 7 months have elapsed since Marshall and Wilson urgently advocated positive action. Meanwhile the Canadian Government has indicated its impatience with American dilatoriness. If it is now too late for Congress to take affirmative authorization action this session, clearly in the name of defense the St. Lawrence seaway should be given high priority when the next session begins.

SEAWAY STALEMATE

The United States has fumbled plans for the construction of a St. Lawrence seaway until Canada in desperation has volunteered to foot the \$219,000,000 bill, and do the work alone.

To which President Truman protests that the United States would prefer joint development of the seaway by the two countries. The President is reasonable, however, to the extent that if Congress cannot be prodded into some sort of action soon on the seaway, he would approve the Canadian plan as second best.

One would not suspect it from the manner in which Congress has handled previous plans for the St. Lawrence River project, but the seaway and power project is immensely important to the neighboring nations. In the beginning there was long controversy over whether the seaway should be built at all. That has been decided, and the issue now is whether it would be better to let Canada build and own the project or share it with the United States.

Since the seaway would be of mutual advantage, it seems obvious that the United States owes Canada fullest cooperation in the project. Contemplated is the dredging of the St. Lawrence River to open the way for large ocean-going vessels as far west as Detroit, to insure a steady flow of iron ore to the midland steel mills of the United

States from new-found deposits in northern Quebec and Labrador.

If this project is completed—and engineers say it is a possibility by 1956—it is easy to envision the opening of a navigable channel from Detroit to Lake Huron, which would allow large ocean freighters to reach Chicago and Duluth. The prospect of ocean-going ships at Chicago docks is most attractive.

Canada has offered the United States a proposal as near an ultimatum as can be exchanged between two friendly neighbors. It is this: Help us build the seaway, or give us permission to do it alone.

The obligation of the United States is obvious.

NEW CONFIDENCE IN THE ST. LAWRENCE WATERWAY

Two developments have taken place in the past fortnight which direct new attention to the St. Lawrence seaway and power project. At an official conference in the White House, Prime Minister St. Laurent, of Canada, presented to President Truman a plan under which the waterway would be constructed by Canada alone. Several days later a new bill to build the project, with both the United States and Canada participating, was introduced by Representative JOHN A. BLATNIK, of Minnesota.

The President and the Prime Minister agreed on the vital importance of the seaway to the economy and defense of the two countries, and also that cooperative construction is most desirable, but if Congress does not soon act, then the Canadian plan would be "second best." No one can deny that there has been lengthy dilly-dallying over the program and a considerable amount of confusion, especially since numerous groups opposing the waterway have disseminated large amounts of literature in many directions. Canada has grown weary of waiting with the result that her plan to build it alone has been tentatively submitted to the Parliament in Ottawa, which reconvened on October 9. We believe that our good neighbor is taking the logical step and will work out the matter of electric power with New York State, assuming that reasonable time first will be given for Congress to take up the Blatnik proposal.

Despite the importance of the project as a transportation system for Labrador-Quebec ore to the Middle West for coal, aluminum and many other goods and as a potential source of perhaps 3,000,000 horsepower of cheap electricity, the House Ways and Means Committee shelved the matter in July. The margin held by the opponents on the committee is understood to have been small. But new hopes are now arising and these must not be considered as lacking significance or weight. The construction would not place an excessive strain on the supply of manpower and materials because the needs would be spread out over about 6 years.

Mr. BLATNIK has designed a bill with a new approach which was developed after careful consideration of the numerous criticisms presented at the protracted hearings held in the House this spring and which are recorded in two thick volumes. Briefly, his resolution recommends: (1) complete exchange of information between the two countries on costs, rates, overhead, etc.; (2) assurance of United States-Canadian agreement on tolls to make the program self-liquidating and self-supporting; (3) a bipartisan commission to study and supervise construction along with Canada; (4) mutual agreement on the retirement of the investment within 50 years; (5) the Secretary of the Army to keep an accurate check on costs, amortization, operations, and fiscal performance; and (6) setting up of a special St. Law-

rence fund in the Treasury and issuance of bonds to facilitate accurate accounting.

While the new bill will not reconcile all the objections previously presented by the railroads, barge, and coal interests, chambers of commerce, port groups, electric utilities, and some unions, it definitely does appear to meet their views by much more than halfway. Obviously specific tolls for specific commodities cannot be definitely set until all the construction and operational cost factors are known. The cost of building is estimated at about \$900,000,000, but the proponents are gaining new confidence in that they can now present to Congress a program that apparently will work as a business enterprise without subsidization. It would not be adopted until after substantiating economic and engineering studies were made.

The seaway is a highly important undeveloped asset which seems destined inevitably to be carried through to promote new trade and in turn will spread out more traffic to the railroads. It would not only aid the steel and aluminum industries but also many others. The House committee is holding hearings on the plan and is expected to take a vote this week. The Blatnik resolution deserves approval; for then it will have a chance to reach the floor in January. If its provisions are followed through we will not be taking on a costly venture until we see where we are going in a very business-like way. Since it would be best for the United States and Canada to share the benefits and burdens it is to be hoped that Canada will not rush in to do the thing independently. If the Blatnik measure should receive the committee's green light, and there are pretty good chances that it will, then we may be quite sure that our neighbor will hold off and cooperate fully on the new plan as projected. If Congress again sidetracks the seaway, Canada's initiative will be most welcome.

Ambassador to the Vatican

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. GORDON. Mr. Speaker, the President today announced the appointment of Gen. Mark Clark as United States Ambassador to the Vatican. This is a historic step. It will be the first time that our Government will have had an accredited ambassador at the Vatican. The Honorable Myron Taylor was the President's personal representative. Until 1867 we had a legation there, but provision for its continuation was stricken from the appropriation bill in that year.

The establishment of full diplomatic relations with the Vatican marks an important step in our network of foreign contacts. The church is a world-wide organization with loyal followers in all parts of the world. Its members come from every strata of society. From all corners of the globe messages pour into the Holy See that gives a coverage no other post provides. This makes the Vatican one of the most important listening posts in the world.

Under the leadership of His Holiness the Catholic Church has fought the forces of hate of bigotry, tyranny and dictatorship wherever they have appeared. I am happy, as are millions of Americans, that our Government and the Vatican are regularizing their relations and joining their strength in the common fight against communism.

The Friendly Baker

EXTENSION OF REMARKS OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WEICHEL. Mr. Speaker, up in my district there is a living example of what a poor boy can do in the United States by application, hard work, and the desire to accomplish, and I am including the story from the Toledo Blade covering Tony Szymanowski, the boy who has made a great success of the bakery business throughout northwest, ern Ohio and is called the friendly baker:

TONY'S THE FRIENDLY BAKERY

Back in 1918, Anthony (Tony) Szymanowski was baking what his neighbors called "the world's finest doughnuts" in a little backyard shed in Fremont. The first day's production was a modest eight dozen, two dozen of which were sold for 40 cents. As the months passed, Tony, riding his bicycle with a basket of hot doughnuts perched on its handlebars, became a familiar sight to Fremont housewives. Today Tony's original doughnut machine has given way to a modern miracle that rolls out an unbelievable 200 dozen doughnuts per hour. In addition, Tony's Bakery produces a million loaves of bread each month, as well as cakes, cookies, sweet rolls, biscuits, and coffee cakes.

A happy combination of baking skill and friendly salesmanship have prospered Tony's Bakery to the point where 90 bakery trucks now carry a complete line of baked goods all over northwestern Ohio. Sprawled over 2 acres, Tony's Bakery is one of the top industries in this part of the State. Yet, in spite of its phenomenal growth, a good 80 percent of Tony's sales are still made on a house-to-house basis, using the same friendly, personal approach begun by Tony in the days when the man, the bicycle, and the basket of doughnuts were a familiar and welcome sight to Fremont housewives.

National Security and Hemisphere Solidarity Are Paramount in the Consideration of Oil Imports Under the Trade Agreements Act

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MANSFIELD. Mr. Speaker, on October 9, 1951, Mr. Elmer Patman, of

Austin, Tex., appeared before the Inter-departmental Committee for Reciprocity Information in a hearing incident to the renegotiation of the trade agreement with Venezuela. Mr. Patman appeared as a representative of an independent petroleum producer, the Superior Oil Co., which has production in some 15 States in the United States.

In the Eighty-first Congress the House Small Business Committee, of which I am a member, conducted an extensive investigation on the effects of foreign oil imports on independent domestic producers. I was a member of the subcommittee which conducted the investigation and, needless to say, my interest in the subject of petroleum continues unabated. This is true not only because of my intense interest in the adequacy of petroleum supplies during our present national emergency but because of my membership on the Committee on Foreign Affairs and the House Small Business Committee. Moreover, I should like to point out that the production and refining of petroleum is vitally important to my own State of Montana.

I have read Mr. Patman's statement with a great deal of interest and I commend his careful analysis of the oil imports situation to my colleagues in the House. Mr. Patman's statement follows:

STATEMENT ON BEHALF OF SUPERIOR OIL CO., BEFORE COMMITTEE FOR RECIPROCITY INFORMATION

(By Elmer Patman)

My name is Elmer Patman. I am a lawyer. I live in Austin, Tex., and represent the Superior Oil Co., an independent producing company with production in some 15 States of this Nation.

Throughout the years we have concerned ourselves, as have many others similarly situated in the industry, with the economic impact of imports of crude oil and its products into this country, particularly, as to the possible adverse effect thereof upon what we believe to be a competitive, virile domestic industry, vitally important to the security and welfare of our country. As Americans we are interested first in the security of our Nation and its ability to have available adequate quantities of petroleum and petroleum products, particularly in times of emergency. We recognize that petroleum is the largest single item that moves in foreign commerce and its importance to the economy of the United States as well as to other nations of the world cannot be minimized.

During recent years there have been many statements made by various officials of our Government, in both the legislative and executive branches, concerning the necessity of Western Hemisphere solidarity. Defense of this hemisphere is a part of our national policy. It is clear that a partnership in fact in the Western Hemisphere is absolutely essential, and it is important that we take all possible action to assure the solidarity of that partnership.

NATIONAL SECURITY AND HEMISPHERE SOLIDARITY ARE PARAMOUNT CONSIDERATIONS

In the beginning, we would like to advise this Committee, though it might not be material or pertinent to the inquiry, that while we have no production in Venezuela and own no concessions to produce, we have, in the last several years, done considerable geological and geophysical exploratory work in Venezuela with, I might add, the full cooperation of the Venezuelan governmental authorities. We, of course, are interested

in an opportunity to translate this exploratory work into actual attempts to bring into production as yet probable undiscovered reserves in that country so that they may be added to the reserve producing capacity of the Western Hemisphere and made available in whatever emergency might face the Western Hemisphere. We know of many other independents that are in this position.

The Independent Petroleum Association of America is authority for statistics disclosing that three companies in Venezuela produce in excess of 90 percent of its total production, which currently approximates some 1,750,000 barrels daily. On the other hand, the producing segment of the United States domestic oil industry is composed of some 20,000 to 30,000 individuals and companies.

THE POLICY ADOPTED IN 1949 BY THE NATIONAL PETROLEUM COUNCIL IS SOUND

We have never opposed the importation of crude oil or products thereof into this country within supplementary requirements. We have never believed, and do not now believe, that the importation of crude oil and products thereof into this country should occur in supplanting quantities. We thoroughly subscribe to the statement of a desirable national oil policy adopted by the National Petroleum Council in January 1949:

"1. The Nation's economic welfare and security require a policy on petroleum imports which will encourage exploration and development efforts in the domestic industry and which will make available a maximum supply of domestic oil to meet the needs of this Nation.

"The availability of petroleum from domestic fields produced under sound conservation practices, together with other pertinent factors, provides the means for determining if imports are necessary and the extent to which imports are desirable to supplement our oil supplies on a basis which will be sound in terms of the national economy and in terms of conservation.

"The implementation of an import policy therefore should be flexible so that adjustments may readily be made from time to time.

"Imports in excess of our economic needs, after taking into account domestic production in conformance with good conservation practices and within the limits of maximum efficient rates of production, will retard domestic exploration and development of new oil fields and the technological progress in all branches of the industry, which is essential to the Nation's economic welfare and security (p. 19 of NPC Policy)."

"Oil from abroad should be available to the United States to the extent that it may be needed to supplement our domestic supplies. The availability of oil outside of the United States, in places well situated to supply our off-shore requirements in time of emergency, is of importance to our national security (p. 17 of NPC Policy)."

CONGRESSIONAL STUDIES HAVE BEEN VALUABLE

About 2½ years ago the trend of steadily increasing imports from the Middle East, as well as the Western Hemisphere, with a sharply compensating decline in domestic production and development, reached beyond supplementary requirements to the point of actually supplanting domestic production and was the cause for serious alarm. We are familiar with the conditions and circumstances that brought about the creation of the Subcommittee on Oil Imports of the Select Committee on Small Business of the United States House of Representatives in June 1949. We followed the work of this subcommittee as well as the whole committee, and are familiar with its report. We commend the work of this committee, and be-

lieve that it performed a useful public service. This committee pointed up for the first time, to my knowledge, the relation and meaning of imports in supplementing and supplanting quantities. We find no fault with the report of this committee and commend it to this committee. The tremendous work that went into it undoubtedly would be of aid and assistance to you. The conditions that existed in the first half of 1949 that brought about the creation of this congressional committee do not exist today. Whether these conditions will return or not we do not know. We believe, however, that in the event they do there is now adequate machinery provided by the Congress to meet the problem head-on if the law is administered in accordance with its apparent intent.

IMPORTS ARE WELL WITHIN SUPPLEMENTARY QUANTITIES

We believe that the importation of crude and products into the United States at the present time is, and for some time past has been, well within supplementary quantities. Let us take a look at today's supply-and-demand picture. As of September 22, it is estimated that the average daily crude-oil production in the United States approximated some 6,222,000 barrels per day, compared with a daily average of 6,129,000 barrels in June 1951. This is against an estimated total demand second quarter 1951 of 7,063,000 barrels daily; some 934,000 barrels daily on the short side. This demand is up 10.8 percent over the same period of 1950, and forecasts showed a demand for the third quarter of 1951 of 7,239,000 barrels daily, and for the fourth quarter of 7,761,000 barrels daily. Thus, current domestic daily demand (including military) exceeds current domestic daily production by over 1,000,000 barrels. All these figures are roughly 11 percent higher than for comparable periods in 1950.

Against these production-and-demand figures, as of September 15, 1951, crude stocks (above ground) amounted to some 250,490,000 barrels; gasoline stocks 114,318,000; kerosene stocks 32,945,000; distilled stocks of 92,528,000; and residual stocks of 47,972,000. All of these product stocks, except residuals, are somewhat higher than they were in the previous year. On the other hand, taking into consideration the increased demand in 1951 compared to 1950, as evidenced by actual consuming experience, we fail to see how anyone could find that these stocks are too high. The best qualified opinion in the industry, including the judgment of the Texas Railroad Commission, as publicly stated, would indicate that anything up to 280,000,000 barrels of crude stocks would not be too high.

On the question of imports, we find importation of refined products into this country in June 1951 approximated 300,000 barrels per day from the Western Hemisphere and 16,000 barrels per day from the Eastern Hemisphere. On the crude side, we find that imports into this country in June 1951 approximated 380,000 barrels per day from the Western Hemisphere, and 200,000 barrels per day from the Eastern Hemisphere. Since the Iranian crisis, we understand that, under an agreement approved by the Attorney General of the United States, world-wide oil companies have generally agreed that Eastern Hemispheric oil will be left to supply the needs of the Eastern Hemisphere, leaving Western Hemispheric oil for the Western Hemisphere. We have not the information nor are we prepared to make a valid appraisal of what the future holds with reference to the relation of Eastern and Western Hemispheric oil and where it will go in the international channels of commerce. This will have to be factually examined under any changed condition.

DOMESTIC RESERVE CAPACITY IS INADEQUATE

We do know that our reserve-producing capacity is dwindling at an alarming rate. According to the August 1951 estimate of the Independent Petroleum Association of America, the United States reserve capacity of all oil, as of January 1951, was 835,000 barrels per day. However, increased production since then, occasioned in part by the increased demand to fill the vacuum created by the Iranian situation, has materially depleted this admittedly inadequate reserve. Today the estimated reserve is not over 300,000 barrels per day. Furthermore, even when the reserve figure stood at 835,000 barrels per day, the Defense Department announced that an additional 1,000,000 barrels per day of available oil was necessary to meet the reserve requirements of the present emergency.

Thus, with a steadily increasing world wide consumption; unprecedented military requirements; demand created by the Iranian situation; plus a shortage of tubular goods in this country for domestic exploration and development, it is simple arithmetic to conclude that our requirements today must be supplemented from outside sources.

THE SEARCH FOR NEW RESERVES IN THIS HEMISPHERE SHOULD BE ENCOURAGED

The Defense Department has stated very recently that this additional available oil should come first from the United States and second from the other producing areas in the Western Hemisphere. My company is trying every day to make a contribution to this objective. In 1950 we were credited with one of the major discoveries in the United States—a field on the Texas Gulf coast. We are in the business of an ever increasing and constant search for new reserves and proper development of existing reserves.

In the light of the realities of these times, it seems clear that these objectives cannot be realized without full consideration of the needs of all the Western Hemisphere countries who are concerned. In his testimony before the Subcommittee on Oil Imports to the House Small Business Committee, June 15, 1949, Rear Adm. Burton B. Bridges, executive secretary of Munitions Board Petroleum Committee, stated:

"The potential productive capacity of the United States alone would be seriously inadequate in event of a major war. Therefore, it is necessary to look to the other areas which would appear to be freely accessible during war. These areas are located in the Western Hemisphere. Considerations of national security, whether of an economic, political, or military nature, should clearly recognize the essentiality of Western Hemisphere oil in event of war.

"Under the current concepts of the problem, should there be a war in the near future, and with present estimates, all the oil production of the Western Hemisphere would be required to meet the requirements of the United States military forces and essential civilian demand of the hemisphere, with some allowances for the allies. There would be none to spare; and the rationing, at best, would need be extremely close."

In commenting on Admiral Biggs' statement, the report concluded:

"In the absence of any better authority, the subcommittee accepts this statement. Would it not follow that if we imposed overly stringent restrictions on oil imports, we might find these Western Hemisphere sources unavailable to us in time of war? The production from wells in these foreign areas, if they are to be made available to us in time of emergency, should receive reasonable treatment in entering our market places."

We strongly favor carrying on a vigilant search for more reserves in this country but,

at the same time, believe it would be sound policy to encourage actively the development of additional reserve-producing capacity in Venezuela, the nation involved with the United States in these hearings. In addition to its producing areas, Venezuela has a vast potential reserve area which has been more or less extensively explored geologically but has never been thrown open for competitive development.

We have never advocated but, indeed, have always opposed proration on the basis of reserves; or, stated another way, division of the markets of the world on the relative basis of the calculated reserves of the world. There are many reasons why this is not sound. There are many reasons why this will stymie and retard technological advancement. Technological advancement has never occurred in the history of mankind without an opportunity for application. On the other hand, we recognize and admit that, in Venezuela, and probably in other areas of the world not the subject of this hearing, there probably exist large quantities of undiscovered oil reserves that need to be developed and should be developed under the security appraisal by the United States Defense Department and in the light of current conditions. In this connection I want it emphatically understood that I am not one of those that believe that we are running out of oil in this country; neither do I believe that we have discovered all of the oil in this country that will be discovered. We are only talking about supplementing oil and domestic efforts; not supplanting them.

PRESENT TARIFFS DO NOT EXCLUDE OIL IMPORTS; THEY ONLY INCREASE IMPORTED COSTS

In our opinion, the present tariff on the importation of crude oil into the United States does not keep a single barrel out. We do not believe that under present conditions a continuation of this amount will keep any oil out. It follows that, if under a valid appraisal of our needs for hemispheric solidarity and security, reduction of existing tariff becomes necessary in our negotiations with Venezuela, such action ought to be taken.

We do not advocate keeping oil from being imported into the United States within supplementary requirements. We think imports are undoubtedly now within supplementary requirements and that at the same time we are probably a little on the high side in this country on production considering the present condition of our reserve producing capacity, as well as from a conservation standpoint.

We have no information nor any experience with reference to cost of production in foreign and domestic areas. We do know that costs of production in the United States have materially increased in the last 12 months. Everything that it takes to find and produce a barrel of crude oil in the United States costs more today than it did 1 year ago, while the price of oil has remained constant. Likewise, we agree that Venezuela is undoubtedly experiencing the same trend in relation to what they buy from us as compared to what they sell to us since the price of their oil is pegged with ours. In this connection, I heard Secretary Chapman of the United States Department of the Interior just last month in Caracas, Venezuela, state that Venezuela purchased some \$400,000,000 worth of various commodities from the United States annually and in turn sold to the United States \$300,000,000 annually worth of petroleum and petroleum products.

CONCLUSION

The views that we express here are specifically limited to conditions as they are

today, and are not to be construed as any attempt by us to forecast the uncertainties of the future. We are living in a world of ever and constantly changing conditions. It may well be that in the future the facts upon which this committee will necessarily base its decision pursuant to these hearings, with reference to crude petroleum and products thereof, will change to the extent that a reappraisal will not only be desirable, but will be necessary. The Trade Agreements Act as passed by the Eighty-second Congress and signed by the President provides adequate safeguards and machinery to meet these changed conditions when and if they occur. If the peril point and escape clause provisions of this act are applied and administered with the rule of reason, the domestic petroleum industry will be adequately protected from expressed fears of what might happen in the future, which no one here can forecast with any degree of accuracy.

Underground Liberation Movement in Communist Countries May Be Jeopardized by UN Action

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, the Mutual Security Act which recently was passed and signed by the President provides a method whereby the United States can render aid for underground liberation movements in the Communist countries. This provision is contained in an amendment which was offered by me in the House and accepted.

It now appears that on the agenda of the United Nations Assembly, scheduled to meet on November 6 in Paris, is a draft code of Offenses Against the Peace and Security of Mankind. Section 5 of article 1 of this proposed code would outlaw "the undertaking or encouragement, by the authorities of a state, of terrorist activities in another state, or the tolerance by the authorities of a state, of organized activities calculated to carry out terrorist acts in another state."

You will note from the wording of this section that it might be possible for someone to misconstrue this section to outlaw outside aid to any liberation movements in Communist countries on the grounds that they were "terrorist acts." And not only would the United States or any other country be prohibited from aiding any such liberation movements, if they were defined as "terrorist acts," but no country could permit any private groups or individuals, on their own initiative, to help in the liberation of their Communist-dominated countries.

I therefore strongly urge that the United States delegation in the steering committee of the United Nations Assembly oppose the inclusion of this draft

code from the agenda at Paris. There has been very little time for a thorough discussion of this proposed draft code in the United States. This is contrary to article 16 of the Statutes of the U. N. International Law Commission which provides:

When the General Assembly refers to the Commission a proposal for the progressive development of international law, the Commission shall follow a procedure on the following lines:

(a) The Commission shall appoint one of its members to be Rapporteur;

(b) The Commission shall formulate a plan of work;

(c) The Commission shall circulate a questionnaire to the governments, and shall invite them to supply within a fixed period of time data and information relevant to items included in the plan of work;

(d) The Commission may appoint some of its members to work with the Rapporteur on the preparation of drafts pending receipt of replies to this questionnaire;

(e) The Commission may consult with scientific institutions and individual experts; these experts need not necessarily be nationals of members of the United Nations. The Secretary-General will provide, when necessary and within the limits of the budget, for the expenses of these consultations of experts.

(f) The Commission shall consider the drafts proposed by the Rapporteur.

(g) When the Commission considers a draft to be satisfactory, it shall request the Secretary-General to issue it as a Commission document. The Secretariat shall give all necessary publicity to this document which shall be accompanied by such explanations and supporting material as the Commission considers appropriate. The publication shall include any information supplied to the Commission in reply to the questionnaire referred to in subsection (c) above;

(h) The Commission shall invite the Governments to submit their comments on this document within a reasonable time;

(i) The Rapporteur and the members appointed for that purpose shall reconsider the draft taking into consideration these comments and shall prepare a final draft and explanatory report which they shall submit for consideration and adoption by the Commission.

(j) The Commission shall submit the draft so adopted with its recommendations through the Secretary-General to the General Assembly.

If this code is removed from the agenda at Paris, it will give us here in Congress and in the executive branch of the Government time to study over section 5 and many other detailed provisions of the proposed code in accordance with provisions of article 16.

My concern over this section 5 prompted me to write to Mr. Warren R. Austin, our United States Representative to the United Nations. Mr. Austin responded and stated that he did not think that extending a helping hand to the enslaved people of Eastern Europe could be classified as terrorist acts. Wrote Mr. Austin:

To attempt to restore a people's freedom does not seem to merit the characterization of "terrorist" to such activity.

I do not share Mr. Austin's optimism as to how such underground liberation activities would be characterized.

To say that terror would play no part in a liberation movement in Eastern Europe is to be utterly unconvulsant with what constitutes a liberation movement. One of the main objectives of a real liberation movement is to strike terror into the hearts of the Communist tyrants. Liberation will not be achieved merely by propaganda and parliamentary maneuvers; it will require strong action at the proper time.

Communists themselves are much more realistic in their understanding of the nature of the conflict between the Communist and anti-Communist world. Here is how they express their views on the struggle for supremacy in the world:

The bourgeoisie resorts to every means of violence and terror to safeguard and strengthen its predatory property and its political domination. Hence the violence of the bourgeoisie can be suppressed only by the stern violence of the proletariat (p. 36, Program of Communist International, 1936).

Is it merely a unique coincidence that the word "terror" is used both in section 5 of the proposed draft code and in the program of the Communist International of 1936?

It should be mentioned that one of those charged by the Lithuanian-American Council and the Polish-American Congress with having a hand in drafting of this section 5 is Vespasian V. Pella, who, I am informed, was formerly a subordinate of the ruthless Communist leader of Rumania, Anna Pauker.

We are clearly forewarned by this Communist International program that the acts of bourgeoisie in opposing their domination will be characterized as "terrorist acts" and hence prohibited under this section 5. Thus, if the draft code is ratified we may reasonably expect that the Communists will charge the United States or any other country endeavoring to aid in the liberation of Eastern Europe with an offense against the peace and security of mankind. The Crusade for Freedom, now raising funds throughout the United States, could not be tolerated and the United States Government would be obliged to abolish it—so the Communists could charge.

Not only is this proposed draft code fraught with danger, but it appears that our own United States delegation itself intends to support this code. I infer this from Mr. Austin's letter to me in which he stated:

The purpose was clearly to prevent the type of subversive tactics presently used by Communist Russia to carry forward its stated purpose of dominating the world.

It is to be hoped that our delegation will become convinced of the real danger of this draft code before the U. N. Assembly convenes on November 6.

Still another danger lies ahead in the consideration of the proposed code of offenses against the peace and security of mankind. If the code is adopted in the form of a convention treaty and ratified by the United States Senate it might be binding on the American Government and the American people.

Formal action taken by the United Nations cannot be dismissed lightly as being of any legal significance here in the United States. This precise point has not been determined by our Supreme Court yet and no doubt it will be argued by some people that actions of the United Nations Assembly are binding on the United States. The Second District Court of Appeals of California on April 24, 1950, in the case of *Sei Fujii v. the State* (217 Pac. 2d 481) stated that the United Nations Charter has become the supreme law of the land and is binding on the Government and the citizens of the United States, notwithstanding the provisions of the United States Constitution. Although this is a decision of a lower court and not a final judgment by an appellate court, it serves to warn those people who think that actions of the United Nations are not of significance. We in the United States should watch carefully the actions of the United Nations and be sure that none of our rights and privileges are in any way complicated by U. N. actions. I am strongly opposed to the idea that any U. N. action can ever override the Constitution of the United States.

I include herewith an editorial which appeared in the American magazine, October 8, 1951, a copy of my letter to Mr. Warren R. Austin, and Mr. Austin's reply:

THE REDS COULD ENTRAP US AT PARIS

Just a year ago we expressed our concern over a draft code of "Offenses against the Peace and Security of Mankind" prepared but kept restricted by the U. N. International Law Commission. How large, we asked, was the part played by Communists and Communist sympathizers in its drafting? We inquired because, 2 years previously, the Soviets had tried to have the crime of genocide in just such a code, instead of in a separate convention. If they had succeeded, they would not have been liable under the code for their own patented form of genocide, which they perpetrated in times of peace. But they failed (Am., November 4, 1950, p. 126), and on December 9, 1948, the U. N. Assembly adopted a separate Genocide Convention at Paris. It has since been ratified by 32 nations, but not by the United States.

Meanwhile, 12 members of the International Law Commission completed the final draft of their code of offenses. Remarkably enough, though no iron curtain experts participated, the crime of genocide is included in the code. It deals, besides, with such touchy matters as incitement to war, preparations for war, arms, military training, location of armed forces, and fortifications. The document has already been placed on the agenda of the U. N. Assembly, which begins November 6 at Paris.

Normally, such legal drafts are submitted to member governments for 1 year of study. This has not been done in the case of the completed code. Why this reluctance to let the governments study the code before submission to the Assembly?

The Lithuanian-American Council and the Polish-American Congress think they have one answer. They charge that section 5 of article 1 was deliberately designed to outlaw their efforts to assist the Lithuanian and Polish undergrounds. They likewise charge that Vespasian V. Pella, mysterious ex-envoy

of Rumania's notorious Anna Pauker, inspired this section.

A. M. Rosenthal, for the New York Times, and Peter Kihss, for the Herald Tribune, interviewed Mr. Pella September 21 about his part in drafting the questionable code. Mr. Pella bitterly denied that the code was meant as a blow at liberation movements. He also declared that the code was not based on his opinions but was largely the work of a Greek expert, Prof. J. Spiropoulos.

Let us see. Section 5 of the completed code outlaws "the undertaking or encouragement, by the authorities of a state, of terrorist activities in another state, or the toleration by the authorities of a state, of organized activities calculated to carry out terrorist acts in another state."

The Lithuanian-Americans and the Polish-Americans proudly admit their guilt under this section, and claim that if the code were adopted, the United States could be found guilty of tolerating their activities.

What of Mr. Pella's assertion that the code was not based on his opinions? On November 24, 1950, the U. N. published a 216-page basic memorandum on this code by Vespasian V. Pella. No. 122, page 157, reads:

"Acts of terrorism affecting international relations: Under the code it should be a punishable act to incite, encourage or tolerate activities designed to spread terror among the population in the territory of another state."

The give-away is the presence in both drafts of the key word tolerate. Why such modesty, Mr. Pella?

The Lithuanian-Americans and the Polish-Americans demand that the draft code be taken off the agenda of the Paris Assembly in order to give the United States and its allies time to study its provisions, which, they claim, touch upon many phases of Western security. That study may even reveal that, except for the section on genocide, the code remarkably resembles a legal formulation of Vishinsky's famous speech against warmongering delivered at the U. N. Assembly on September 18, 1947.

OCTOBER 9, 1951.

HON. WARREN AUSTIN,
United States Delegate to the United Nations, New York N. Y.

DEAR MR. AUSTIN: I noticed an article in the American Magazine of October 6th entitled "The Reds Could Entrap Us at Paris." In the article reference is made to section 5 of the completed code drafted by 12 members of the International Law Commission, which quoted section outlaws "the undertaking or encouragement, by the authorities of a state, of terrorist activities in another state, or the toleration by the authorities of a state, of organized activities calculated to carry out terrorist acts in another state."

The import of the article in America is that such a section, if adopted, might prevent groups in this country, as well as our government, from assisting in the liberation of the peoples of the Eastern European countries and other countries presently enslaved by the Communist tyranny.

If this is the fact, it would appear that the Communists are being very clever in preventing any attack upon their slave state system. It certainly would have prevented the French in our Revolutionary War from aiding the American colonists. It might also prevent the implementation of that portion of the Mutual Security Act of 1951, which is nearing final action which provides for \$100,000,000 for aid to underground organizations in Communist-dominated countries.

I would be pleased, Mr. Austin, if you could advise me as to the possibility of the accept-

ance of such a section as above referred to and if it is accepted what your idea would be of its interpretation with particular regard to assistance to the enslaved peoples in order that they might ultimately be liberated.

Yours very truly,

CHARLES J. KERSTEN,
Member of Congress

UNITED STATES REPRESENTATIVE
TO THE UNITED NATIONS,
New York City, October 10, 1951.
The Honorable CHARLES J. KERSTEN,
*Congress of the United States,
House of Representatives,
Washington, D. C.*

DEAR CONGRESSMAN KERSTEN: The draft code referred to in your letter was drawn up in their expert capacity by representatives of free countries. Its purpose was quite the opposite of the interpretation referred to in the article from America magazine. The purpose was clearly to prevent the type of subversive tactics presently used by Communist Russia to carry forward its stated purpose of dominating the world.

I agree that, as it reads, section 5, alone, does seem to militate against the efforts currently afoot in the free world to rescue the peoples of satellite countries from Russian bondage. As you know from our experience as a legislator, however, much depends upon the interpretation of key words. The key words seem to me to be "terrorist activities" and "terrorist acts." The intention, I am sure, was to give meaning to these words which would apply descriptively to the activities of Communist and Communist-front organizations which are bent on furthering the domain of the U. S. S. R.

While I do not know the exact type of activities, other than those of the Voice of America, currently used by our Government, or contemplated by it in the Mutual Security Act provision you refer to, by which we extend a helping hand and hope for the future to the enslaved peoples of eastern Europe, I feel certain that the broad objectives could not be classified as "terroristic." To attempt to restore a people's freedom does not seem to merit the characterization of "terrorist" to such an activity.

The aid given the Colonies by the French during the Revolutionary War is, perhaps, another matter. After all, we were at war, whether it be called rebellion or revolution. One must admit that the condition of the world today calls for something a little different from the ancient rules of international law.

Among recent changes in international law is that wrought by the United Nations Charter. France in the last quarter of the eighteenth century was supposed, by the international law of the day, to remain a neutral. She chose rather to aid the cause of freedom. In retrospect, can anyone raise a finger of protest? Only the ghost of George III.

The law of neutrality must come up for serious consideration in view of the new general obligations of the Charter upon all members of the United Nations. In the undeclared war against tyranny and the oppressors of human freedom, there is no room for neutrality. One must be either for or against. Any code worthy of the label of the United Nations could not fail to recognize such a fact of life today. Viewed in this light, I see no danger from this section of the code to whatever activities our Government undertakes in behalf of human freedom.

With kind regards, I am,
Sincerely yours,

WARREN R. AUSTIN.

How to Help the Largest Number of People Most

EXTENSION OF REMARKS

OF
HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WEICHEL. Mr. Speaker, the title of these remarks is suggested as a motto which might be framed and put on the wall of every city and village council chamber and might well be a motto on the walls of Congress. It is the subject of an article written to the American City, by C. S. Hunsinger, coordinator of the Rural-Urban Coordination Service, Flat Rock, Ohio, and is as follows:

In order to get public projects accomplished it is usually necessary to dramatize them in some way to stir the public to favorable action. Why not include this feature at the start of a project instead of fighting an extended battle against powerful minority groups?

As a community coordinator, I have found it best to consider carefully the viewpoints of those who will naturally be opposed to a project and to give them an opportunity to present their side at the start of a campaign. This will help them to explode their anger—to get it out of their systems and thus reveal any selfish viewpoints to the public.

Then, after a reasonable cooling-off period, again bring the project to attention, with answers to the arguments and emphasizing the viewpoint: How will it help the largest number of people—most? This viewpoint—and much depends upon viewpoints—builds an unselfish public spirit which is so essential for favorable action.

A simple, practical, and effective plan for communities to handle the most crucial projects is for the mayor to invite the heads of four leading groups—educational, religious, economic, and social—to meet informally to discuss the project. He will thus have a powerful coordinating council—a cooperation of real public spirit.

The Interstate Commerce Commission: Past, Present, and Future

EXTENSION OF REMARKS

OF
HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. PRIEST. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by Commissioner Hugh W. Cross, of the Interstate Commerce Commission, delivered at Chicago, October 4, 1951, at the twenty-second annual meeting of Interstate Commerce Commission Practitioners:

THE INTERSTATE COMMERCE COMMISSION:
PAST, PRESENT, AND FUTURE

The most recent of the perennial Washington taxi driver jokes coming to my attention is as follows: Two visitors to the Nation's Capital were seeing the sights by taxicab. Passing the National Archives Building they noticed on the base of one of the statues the

inscription: "What is past is prologue." One of them asked the driver what it meant. "That," said the driver, "is Government language, and what it means is 'You ain't seen nothin' yet.'" If this incident is true, I think you will agree that the driver succeeded admirably in viewing the very prevalent mood that today concerns us all as to the future of our Nation, free enterprise, and the security of our individual lives.

In that context I shall talk about the Interstate Commerce Commission, its past, present, and future. Within the next 6 months the Commission will have completed its sixty-fifth year. In this span of time the Commission has succeeded in establishing itself as a so-called independent regulatory agency with at least a fairly good reputation for ability and integrity. Attainment of that status has not been easy. Agencies of its type always have been disturbing to those who make a fetish of the tripartite distribution of governmental functions. In the first 20 years of the Commission's life the judicial branch seemed intent on preventing any important exercise of power by this upstart agency. Only through the sagacity and vision of Commission members and leaders in Congress was the Commission perpetuated. In its last 20 years people advocating more and more centralization of authority and power in the executive branch have taken over the job of finding ways to curb the Commission and similar agencies, for which it has served to a considerable degree as a prototype.

Since the close of the last war it has been said that even the Congress, determined as it is upon preserving the free competitive system of private enterprise among the several types of carriers, often looks upon its own Commission as a stepchild. When billions for national defense, billions for Europe, taxes and more taxes, inflation, Korea, atomic warfare, the threat of world war III are but some of the issues demanding the utmost in ability and statesmanship of the elected representatives of our people, who can wonder, much less criticize, the neglect of the parent in ameliorating the distressed condition of an agency whose duties are merely to administer the national transportation policy and to preserve a transportation service adequate to meet the needs of the commerce of the United States and the national defense.

In citing this reputation of the Commission for integrity, I do not want to bemoan a theme of self-praise, but I do believe that at this particular time we are entitled to the satisfaction of reminding ourselves that the Commission is in no way responsible for the fact that the Congress is considering the formulation of a code of ethics to govern the relations between governmental agencies and private individuals who profit by the actions of those agencies.

In seeking the reason for the Commission's good reputation we may well turn to the last address of my distinguished predecessor, the late Joseph B. Eastman. Perhaps you can recall the following passage in that address:

"The statutes which the tribunal administers should be well, simply and carefully formulated, but the personnel which does the administering is more important than the wording of the statute. Good men can produce better results with a poor law than poor men produce with a good law."

Also the following:

"In any large administrative tribunal, like the Interstate Commerce Commission, a vast amount of the real work must necessarily be done by the staff. It is a difficult problem to give the individual members of the staff the proper recognition for work well done—recognition on the outside as well as the inside."

This brings me down to the present time. You are aware of the fact that the most pressing immediate problem before the Com-

mission is how it shall live within its income and perform its duties during the present fiscal year. The Commission, of course, is not unique in having to wrestle with this problem, but we should consider nevertheless some of the implications.

For the sake of comparison, our agency, which regulates all forms of land and inland water interstate transportation, is not a large agency so far as the number of its employees is concerned. The 1950 average employment for the Civil Aeronautics Administration was 17,208 employees; for the Federal Maritime Board and Maritime Administration, 4,502; the Bureau of Public Roads, 3,615; the Railroad Retirement Board, 2,459, and the Interstate Commerce Commission, 2,161. So restricted has the Commission been in the number of its employees that since 1940 its personnel has actually shrunk from 2,649 to 1,911 on September 1, 1951, despite many new duties added by acts of Congress, including parts III and IV of the act, the Mahaffie Act, and the Reed-Bulwinkle Act. This shrinkage has been accelerated since 1948 by successive appropriation curtailments.

For the fiscal year beginning July 1, 1941, the Commission's total appropriation was \$9,322,750, for the fiscal year beginning July 1, 1951, it was \$10,474,535, a total increase of but 12 percent. I ask you how long a trucking company or railroad could avoid bankruptcy with but a 12 percent increase in its budget or how long any labor union would tolerate a wage increase of but 12 percent when the cost of living index has almost doubled?

The effort to comply with the wishes of Congress in making adjustments necessary to conform to our reduced funds involves complications. For example, the reduction seems to have reflected the feeling of some that we have been spending too much money in the Bureau of Valuation and the Bureau of Transport Economics and Statistics and in the Section of Safety in the Bureau of Motor Carriers. The Bureau of Valuation has long been used as a whipping post by those who have questioned our administrative policies. Since 1937 its staff has shrunk from 242 persons to 83, and there is very little room for further contraction unless we are to abandon the bare minimum work now being done by it in compliance with the valuation statute which Congress has not seen fit to repeal or amend. Our duties with regard to motor carrier safety are likewise prescribed by statute, and, despite the belief held by some persons, these duties do not overlap or duplicate the duties of the States in policing and protecting the highways. If we interpret the congressional mandate as calling for curtailments equivalent to the abandonment of this duty, will we be blamed by the public for official negligence in case of some shocking accident, the explosion of a truck carrying high octane gasoline or explosives? As for statistics, some years ago you will recall the Commission embarked upon a modest research project which seemed to be desirable in order to keep up with the trend of the times. On this score we were complimented by the task force of the Hoover Commission.

While baring our weaknesses is distasteful and to some degree humiliating, I feel that within this family of friends here assembled I should cite two other examples.

After the war it was foreseen that motor-carrier work for a period of time would increase and then might taper off. However, this leveling trend has not been reached, as filings are still upwards. Since I have been on the Commission a very concerted effort has been made to speed up the handling and processing of motor-carrier cases. In order that Division 5, of which I am a member, may currently know of the cases under its jurisdiction and thereby spur the work, detailed tabulations of application cases are made twice each month. It is noteworthy

that for the year ending August 31, 1951, through the Section of Complaints in the Bureau of Motor Carriers, 3,988 cases were disposed of, covering applications for operating authority, finance, rate, and other matters. Considering the growing complexity and increasingly huge records in many of these cases, no one can gainsay this was a formidable showing. Nevertheless, during the year our backlog increased over 11 percent, with nearly 3,000 matters pending. How can we convince our critics in the motor-carrier field, as well as the Congress, that we are not lagging and have not permitted cobwebs to grow around our activities?

I feel duty bound to present one other picture in somber shades. The Bureau of Formal Cases has the primary duty of hearing formal complaint cases and conducting investigations on motion of the Commission, functioning until the final disposition of these cases. As of August 31, 1951, there were 921 cases pending, as compared to 463 on the docket on August 31, 1946. In 1951 there were 72 examiners as compared with 78 in 1946.

The Traffic World in a recent issue commenting on the exceedingly complex issues raised in *Ex parte 175* commended the Commission for having produced such an exhaustive report in such a comparatively short space of time, pointing out that the public participation in the proceeding did not end until 3 weeks before the promulgation of the order. The view was expressed that "It would take considerable imagination to assume that any other of our Federal bureaus could have done so well. Indeed, we can think of some specially constituted bodies for transportation investigation that work much longer and spend a lot more money without bringing forth anything half as helpful and rational."

To examiners in the Bureau of Formal Cases must go a large share of the credit for this expeditious and judicial report. At all times in the difficult rate controversies the Commission, because of the magnitude of its duties and functions, must lean heavily upon this Bureau. Here we must confess a further weakness. Of the 72 examiners in the bureau 29 have passed the age of 60 and 15 more are in the 55-60 age group with voluntary retirement rights, over one-half of the total staff. A serious recruitment project for this bureau is long overdue and cannot be undertaken too soon.

These examples of our deficiencies through lack of funds might be augmented by many others covering every bureau within the Commission. The threat of dismissals and payless furloughs is having its effect upon the morale of our staff, and to me this is most disturbing. Just before leaving Washington, I learned that since January 1, 1951, 305 separations from the Commission have occurred, 111 of these were occasioned by employees transferring to other Federal agencies at increased pay.

I now come to the future. In the various studies intended to promote more efficiency and economy in Government the Commission has not escaped notice, and, of course, it has no right to expect immunity from consideration. Certain modifications of our internal organization have been suggested and will be considered in this convention. I shall refer to them briefly.

One is that the Commission lengthen the term of its Chairman and broaden his responsibilities, as recommended by the Hoover Commission. You are familiar with all of the reasons which have been advanced for and against the proposal. The plan was tried from 1939 to 1941. I assure you that I have an open mind on the question whether this plan should be revived.

It has been suggested that we need an executive officer or general manager to do our housekeeping, as it were, working with and

at the direction of the commissioner in charge. A recent attempt by the Commission to create such a top-grade position was turned down, and it is doubtful whether we could now secure a person of the requisite competence who would be willing to serve for the salary which the Commission would be permitted to pay.

The Commission has been told repeatedly by its friends that it does not know how to make a case for itself before Congress and that we have been backward in the presentation of the matters which I am called upon here to detail to you. We have been chided for not having someone to whom this responsibility is delegated and for failing to keep abreast of the times, when other agencies and departments of government consider this part of their necessary responsibility. It has been pointed out, and I have no reason to question the statement, that the Department of Defense has a larger staff handling public relations than the entire staff of the Commission. If public relations becomes part of the responsibility and duty of the Commission in order to function, then we must confess error, because we have never had one single person on the payroll to handle this work.

It is of the utmost importance that we do our very best in our reduced circumstances to prevent any lowering of our performance standards which would be immediately seized upon by those who would like to do away with an independent agency of Congress in the regulation of transportation. The suggestion has been made that efficiency would be served by the transfer of some of our activities to the Department of Commerce. To this I would say that these activities, such as safety, statistics and car service, are more or less closely tied in with rate regulation and other matters and should be retained, for the time being at least. I question whether those activities could be administered for any less money than we would require for a good job. I venture the assertion that it would take much more, and I doubt whether the results would be as good as we have been able to accomplish, even with our limited personnel. The ultimate responsibility for successful performance, now vested in 11 Commissioners, would be lodged in a cabinet officer whose tenure, dependent upon political fortunes, would necessarily be limited and uncertain and whose decisions might be tinged with political expediency.

In this day and age when people have learned to lean more and more heavily upon government, we have heard repeated many times the slogan, "Let's make a law." Those who adhere to concentration of power in the executive branch of Government are perhaps the most severe critics of our independent agencies and no doubt they would join in that refrain. They believe in more and more centralization of power.

I would like to give you one example of how this has worked out. In an analysis of the Federal budget for the year starting July 1, 1951, prepared for the board of directors of the Illinois Chamber of Commerce by a leading accountant in the United States, it was estimated that the expenditures in the regulation and services to transportation and communications would be \$51,000,000 as compared to \$28,000,000 for the 3-year average of 1946-48, or an increase of over 82 percent, whereas the estimated increase to the Interstate Commerce Commission for 1952 over 1948 was but 8 percent. Parenthetically, I might add that in the bill finally approved the amount appropriated to our Commission was actually less than for 1948, despite increased duties, increased costs, and mandatory wage increases.

Such a transfer of our powers might result in inefficiencies, friction, and jealousy growing out of the division of responsibility, as has resulted in similar situations in the

past. The house divided against itself argument of Abraham Lincoln still holds good. Eventually there would come a proposal that an executive department take over from this agency of Congress the complete regulation of land transportation.

Let those who may think that the usefulness of an independent regulatory commission in the field of transportation is passing remember that the weakening of such an agency may well undermine the foundation of private ownership upon which such transportation has always rested. It would be hailed as a great victory for those who believe in the nationalization of transportation and who would follow in the footsteps of Great Britain in her present struggle for national socialization of industry.

What is the relation of the practitioners to what I have been talking about? First, be patient with us, if our efforts to deal with the omnipresent problem of procedural delays seem slow and unproductive. We know you are much interested in the progress of our work, and we shall welcome suggestions, but please bear in mind, for example, that we suffer from the chronic shortage of examiners and stenographers, and that difficulty is at present beyond our control.

You can help us by exercising care in the preparation and trial of your cases, avoiding needlessly lengthy evidence, by writing briefs which clearly present your position and do not distort the facts established by the evidence, as well as by adjusting yourselves to hearing assignments that must be scheduled to the best use of our curtailed examiner staff and economy in travel costs.

As advocates you can do a public relations job for us that we cannot do for ourselves. You can make it your business to help us in our business. You can help to develop a better public understanding of our duties and bring about a better appreciation of the necessity for the preservation of a strong independent, nonpolitical agency capable of discharging its duties. We hope it may be understood, and I here emphasize again, that we have no desire to build up a large staff of employees and that we are only dedicated to the faithful performance of the duties which Congress has seen fit to delegate.

I would not have you think that I am gloomy as to the future. Economy in government must ever be the watchword. In these perilous times there is often a lack of opportunity for thoughtful evaluations. We are all likely to have many more dilemmas, disappointments, and frustrations. This situation will inevitably affect the Commission and its work. We will try to do what is right as we see it under all circumstances. We are content to rest our case on the record that has been made through the years.

Protest Against Organized Crime

EXTENSION OF REMARKS

OF

HON. JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. RILEY. Mr. Speaker, under leave to extend my remarks in the Record, I beg to include herein a paper written by Hon. Hunter A. Gibbs, of Columbia, S. C., a very prominent lawyer in my district, on the subject of crime engaged in by newcomers to this country, who, apparently, have not and do not subscribe to the high ideals of our American Government and the law and order which

make such a great country as ours possible.

This country gets a great many excellent citizens from other countries each year. It is most regrettable that some of those who are given an opportunity to come to this country do not subscribe to our high ideals of citizenship and by so doing are making it difficult for others to have the opportunity to transfer from their present countries to America.

Mr. Gibbs' statement is as follows:

The Senate investigation of crime in the United States, and the resulting well-written book entitled "Crime in America," by Senator ESTES KFFAUVER, should receive serious attention of the people, and definite remedial legislation by the Congress.

It appears that an appalling wave of lawlessness started during national prohibition days and has continued to grow through the years. It is big business of the underworld and permeates local, State, and National politics and the industrial life and business of practically every important city of the United States. It involves unlawful gambling, robbery, murder, hijacking, bribery of public officials, prostitution, sale of narcotics, racketeering in labor organizations, and evasion of income taxes.

It is interesting, and even alarming, to note that the investigation and the book above-mentioned show that a large majority of the names involved in crimes of the underworld are foreign. Most of them are Italian. Many of these persons of Italian names came from Sicily, notorious in the world of crime for centuries. Some are ex-convicts. Not a few are evidently members of the Mafia, a secret organization based on crime. Here are some of the names shown in the book, *Crime in America*, and in magazine articles: Salvatore, Moretti (recently murdered), Longano, Anthony D'Anna, Balestrere, Osadchey Garretta, Luciano, Adonis, Carl Carromisra, Profaci, Louis Crusco, Benito Binlon, Loooco, Capone, Vincent Mangano, Tony Lippino, Binaggio, Phillip Mangano, Tony Trombino, Tono Braucato, Dan Seritfullo, Tony Arcado, Greasy Thumb Guzik, Jim Colossimo, John Vitali, Thomas Buffo, Sebastiano Naul, Tony Gri'zo, James Licavali, Santo Perroni, Gasper Peronne, Mafiosi, Mike Caserta, Bugsy Siegel, Torrio, Anastasia, Frank Liversi, John Orusouti, Paul Ricca, Frank Nitti, Louis Campagna, Charles Gioe (alias Joy), Catina, G and J. Bacolla, Cusano, Catena, Armando Flores, Jimmy Call, Salvatore Italiano. Judging by pictures, crime is written so plainly on the faces of most of them to the extent that he who runs may read.

Here are a few names apparently not so Italian in origin: Mickey Cohen, Moe Kleinman, Louis Rothkoff, Moe Dalitz, Glessey, McGinty, Zwillman, Lansky, Reinfeld, Wexler, Tiplitz.

Several of the persons represented by names above set forth have been murdered, apparently by mobsters of rival gangs. Not one of the murderers has been tried and convicted. The police have been in "caboot" with the underworld, or else the mobsters are more clever than the forces of law and order. If the latter be true, then perhaps we should reform some of the underworld and hire them as policemen.

Some of the persons above mentioned are aliens, and should be ejected from the country. The ancient law of banishment provides that we owe no duty to aliens who fail to meet the obligations of decent citizenship. Efforts should also be made to expel those who are naturalized citizens. For the most part the Italians deserving deportation are from Sicily. The continental Italian seems to be of a superior breed. Yet continental Italy sends us also many lawless people. We

have many who qualify as good material for American citizenship. The notorious organization for crime known as Mafia originated in Sicily. Its members should be hunted down and deported.

In the past we have been entirely too complacent in the matter of admitting foreigners of an unworthy type and breed. On account of the bane of politics and foreign influences we have unwittingly added to the growing list of members of the underworld. In some respects these people are more powerful than the forces of law and order. They are a menace to government, just as much so as Communists. On account of a fundamental lack of loyalty, in case of war, they would be potential traitors.

The right of banishment is a fundamental law of Government dating back more than 6,000 years. It is based on the principle that government has the right to protect itself. It should be, and is, a right of law higher than the binding force of a written constitution. In times of war this principle is recognized by frequently ignoring the Constitution. In peace time there are occasions likewise when the mandates of the Constitution should be disregarded for the protection of government and the Constitution itself. The time may come when the Supreme Court will be compelled to take this view as a measure of protection from the influences of lawless aliens and traitorous Communists and spies who now invoke the Constitution to protect themselves in their plans to wreck the country and destroy the Constitution.

It is all very well to eliminate the evils of a Pendergraftian democracy such as muckraking, deep freezism, bribery in the tax system, irregularities in the RFC but the grave menace of foreign criminals and Communists should not be neglected.

Senators, Congressmen Hail Polish-American Journal

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Polish-American Journal of October 20, 1951:

SENATORS, CONGRESSMEN HAIL POLISH-AMERICAN JOURNAL

Senator JAMES H. DUFF, Republican of Pennsylvania: "It is a real pleasure for me to congratulate the Polish-American Journal upon the occasion of its fortieth birthday.

"In recent years I have been a frequent reader of the Journal and I feel that this newspaper plays a very important role in the lives of many Americans who maintain historic ties with Poland.

"If the Journal could be circulated in the Poland of today, I believe that the cause of freedom in that oppressed nation would be greatly advanced.

"It is my sincere hope that the Polish-American Journal will serve a growing number of readers in the years ahead."

HARRY P. O'NEILL, Congressman from Lackawanna County, Pa.: "Congratulations on your fortieth anniversary. Your newspaper is a spearhead in the fight against Soviet tyranny and a champion of a free Poland.

"I feel proud that this newspaper is published in my congressional district, for many

of my colleagues in Washington are ardent readers of your fine publication."

Senator BATES MCMAHON, Democrat of Connecticut: "The need for maintaining firm bonds of friendship linking the people of the United States and the people of Poland is greater now than it ever was before.

"The Polish-American Journal is splendidly equipped to inform its American readers about the heroic struggle of the Polish people against Soviet enslavement. It also serves the good purpose of letting the people of Poland know that we have not forgotten them.

"On this fortieth birthday, I sincerely hope that the Polish-American Journal may enjoy many more years in which to advance the cause of genuine Americanism and to continue the fight against Soviet tyranny."

Representative RAY J. MADDER, Democrat of Indiana: "I wish to extend my hearty congratulations to the Polish-American Journal on your fortieth anniversary.

"Your newspaper has contributed greatly to the welfare of the people of Polish descent and also to the cause of Free Poland. Your publication has also made a great contribution to your State and Nation, both in war and peace.

"Congratulations and many years of success in the future."

Representative DANIEL J. FLOOD, Democrat of Pennsylvania: "I hope you will permit me to use this means of expressing to you my compliments on the fortieth anniversary of your distinguished paper as a Polish-language newspaper.

"It is interesting to observe that during the last three years the Polish-American Journal has been published in English—the only Polish-American weekly of international circulation which is printed in English. I say international circulation because on my recent world tour I saw the Polish-American Journal on desks of the most distinguished Polish leaders in Rome, Paris, and London.

"As you know, I have the honor of representing Luzerne County, Pa., where resides one of the greatest populations in the country of Americans in whose veins flows the proud blood of Polish ancestry. Having been born and raised among these good people, I am in a position to say to you and to the world at large that no more loyal, patriotic, energetic and God-fearing American citizens exist.

"I feel there is a great need for such a publication as the Polish-American Journal and I wish you many more years of prosperity."

Senator HERBERT H. IEHMAN, Democrat, of New York: "The fortieth birthday of the Polish-American Journal is an occasion for real pride on your part and on the part of the Polish-American community your publication has served so long.

"As the only English language weekly devoted to Polish-American matters, your paper has performed, from all that I have ever heard, fine and notable service. Your paper has served in the good traditions of American journalism without losing touch with the noble, libertarian traditions which the people of Polish origin and descent have brought to this country. The Journal, along with the Polish-American community generally, has been in the forefront of the fighters against tyranny and repression wherever it has occurred.

"I know that, as the Polish-American Journal enters its forty-first year, it looks forward to the day, as we all do, when the people of Poland can again enjoy the liberties which we in America prize and cherish so highly."

Representative ANTONI N. SADLAK, Republican of Connecticut: "I am happy to participate in observing the fortieth anniversary of the Polish-American Journal.

"Your 40 years of outstanding achievements in the field of newspaper publishing prompts me to convey to you, your staff, and readers most sincere congratulations. Your patriotism in combating the evils of communism is particularly worthy of commendation.

"I believe the Polish-American Journal fills a gap which would otherwise deprive the subscribers of many informative and interesting articles and special features which I feel is most important to Americans of Polish heritage. The fact that the Polish-American Journal is publishing this anniversary edition confirms its excellence, its service, its Nation-wide appeal and interest.

"My heartiest wishes for the continued success of the Polish-American Journal."

Representative CHARLES J. KERSTEN, Republican of Wisconsin: "The Polish-American Journal performs a great service to the Americans of Polish descent by keeping alive their traditions and their interest in their homeland.

"Poland's long sorrowful history of repeated invasions and suppressions makes the active support of the Polish people in America most necessary. Today it is the Poles living in America and other countries outside of Poland who can keep alive the hope of liberation in Poland.

"The Polish-American Journal serves as an excellent medium for this purpose and I wish them continued success. Some day I hope that we Americans who are not of Polish descent may again rejoice with those who are when the day of real freedom again returns to Poland."

Church, State, and Freedom

EXTENSION OF REMARKS

OF

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. STEED. Mr. Speaker, under leave to extend my remarks, I include herewith excerpts from a speech recently delivered by Glenn L. Archer, executive director of Protestants and Others United for Separation of Church and State. His views present the pertinent arguments on one side of perhaps the most controversial question on the American domestic scene. In view of continuous inroads against our traditional law of separation of church and state, I think it is well to have this viewpoint again presented.

Realizing quite well the tactics of those who desire to break down this traditional American law, and in full appreciation of the usual charges that are heaped upon those who dare present the concepts contained herein, I still believe this is a subject that needs to be brought constantly into the open and presented to the American people in its true light. Those who differ cannot fairly and honestly object to a full presentation of the views of those who desire to retain the one constitutional concept of government which has made America greater than any other nation—separation of church and state.

The excerpts follow:

The question of human freedom is the supreme question which the church and state have in common. Indeed, the crucial question in church-state relations in the world of today centers around the interpretation and expression of freedom. Religious liberty in the United States and throughout the world is conditioned by what interpretation is given to human freedom and what expression is made of it.

The real issue in this country is not whether we shall yield to Communist totalitarianism—we are well aware of its dangers to freedom and are prepared to resist them—but the chief single issue is whether we shall compromise with a clerical totalitarianism which parades as the only enemy of communism, and is now selfishly exploiting America's fear of Communism with evil results to freedom.

In a time when contemporary events thrust this whole question into the focal point of church and state concern, it is natural that we at this significant gathering should concentrate our attention upon it. I am profoundly grateful to Baptists for their singular leadership in the march of freedom. If I were to engage in a purely historical inquiry, I would find a host of trail blazers of religious liberty among Baptists. We are all proud beneficiaries of this tradition, unique to, if not created by Baptists. It is, however, more important for us, their successors inspired and oriented by what these notable reformers said and did in their generation, to make a fresh study of their deeds that we may be challenged to meet the great onslaught against freedom which confronts us today. I am grieved to state that the streams of human freedom in many parts of the world have dried up. In the United States the ocean of freedom we once knew is at low tide.

A GLIMPSE OF THE WORLD PICTURE

Brave, indeed, is the man who can look at today's newspaper headlines without flinching. These headlines tell of totalitarian forces on the march across the world, of communism engulfing Asia, of war in Korea, of Peronism in Argentina, of religious persecution in Spain and Portugal, and of large masses of humanity suffering from poverty, ignorance, degradation, disease, and persecution. Dr. John A. Mackay, president of Princeton Theological Seminary, points to causes when he states, "In countries which have come under the complete control of Roman clericalism or Soviet imperialism, countries such as Spain or Rumania, freedom is dead."

Regardless of time or place, the real reason for the eclipse of freedom is the formation of a vacuum at the heart of liberty. In Russia, the vacuum began with the corruption of the Tsars. It continued as the Communists fought fire with fire in an effort to survive and overcome the unjust rule of a decadent ruling class. In China, exploiting feudal war lords brought ruin to themselves and to their people. History teaches that a starving, desperate people will embrace any change that offers hope, however slight. It is a bit of irony that many who now complain of Communism in China set the stage for it. In Italy, Spain, Portugal, and in the Balkan States, the light of religious liberty burns low for all except members of the state church, and even for them economic liberty was dead until resurrected by aid from the United States. The church which boasts of control and dominance of a nation for centuries, which has crowned and deposed kings at will, and which is today the real voice in Italy is hard put to absolve itself of the responsibility for creating a vacuum at the heart of

liberty. Praying for peace in public, however commendable, does not alter the fact that 10,000,000 citizens in Italy, the center of Roman Catholicism, voted Communist.

The same great American newspaper (New York Times, August 2, 1951) that tells of Communist repressions in Indochina relates the contents of a repressive pastoral letter issued by the Roman bishops of Argentina, denying Catholics the right to vote for any candidate who favors church-state separation, and freedom of worship to all creeds. Cardinal Copello, who heads the hierarchy in Argentina, has been an ardent supporter of the Peron dictatorship.

In Czechoslovakia, Roman Catholics who supported the Communist regime have been excommunicated by the Pope, and now (RNS, July 28, 1951) Roman Catholic priests who have gone over to the Communist side are "excommunicating" Vatican agents. This is not the first instance that the Communists have copied from the church a technique for denying freedom to people.

Religious leaders are also grieved over reports of the denial of religious liberty in many other lands. A leading correspondent of the New York Times shocked Americans with a series of articles on Roman Catholic persecution of religious minorities in Spain, Colombia, a land once known for liberal and democratic policy, lies under a cloud as a state-favored church constantly harasses Protestants in the smaller rural areas. Witness the situation in Argentina, where one of the world's outstanding newspapers (La Prensa) has been denied freedom of the press and closed down entirely, while other papers (La Nacion) are in danger of being closed.

A Religious News Service dispatch tells of a 50-year struggle to build a Protestant hospital in Naples, Italy, which ended in failure, it is charged, because a Roman Catholic mayor swore he would never sign a permit for any Protestant hospital. The very same week, the Roman Catholic lobby in Washington, helped secure the passage in the House of Representatives of a bill providing outright grants to denominational hospitals in the District of Columbia, with approximately \$4,000,000 slated to be used for the construction of a new Roman Catholic hospital in the Nation's capital.

I digress to say that I fear that all who take a complacent view of the allocation of public money for sectarian institutions are impairing their own liberties. Historians may record that the great traditions of a Protestant Southland died when their leaders signed the Hill-Burton hospital-aid bill. Today, religious liberty is being stifled under a mass of defective social welfare bills.

To a large extent, the world today credits the claim of the Roman Catholic Church that it is the principal enemy of Communism. But the Roman Catholic Church itself must share the blame for this monstrous evil of communism. Thoughtful scholars who have studied the origin of the evil have pointed out that at the time Marxist communism was born, the Roman Church was conventional and dead. The people, embittered and anguished by corrupt priests and politicians working under church-state union, had lost faith in the religion imposed upon them. John MacMurray states, "There would be nothing paradoxical in the discovery that a religion that had lost its faith in God must be overwhelmed by a faith which had rejected religion." The Communists have found dialectical materialism an equivalent to Deity largely because the trappings of a pagan ceremonial church had obscured the real Deity. I must observe that Communism has made little progress in Protestant countries. An understanding of the history of Communism should teach free

Americans their paramount duty to live closer to God in order that they may keep their faith alive and strong.

What distresses me most concerning church-state relations in the United States is the moral bankruptcy of both the state and the church. Emerging from this sad condition are forces—strong, mighty forces—which, in an effort to salvage lost prestige of both state and church, drive in the direction of the union of the two. Witness the close alliance of the Roman hierarchy and the corrupt city political machines; witness the lack of moral fiber in government officials who weakly yield to gamblers. Public apathy and moral breakdown are twin enemies of church-state separation. A spiritual church does not need state support. A moral state does not require its deeds to be sanctified by the church. Baptists, mindful of your glorious tradition, I do not hesitate to exhort you to hold fast to your ideology of church-state separation. Implement that ideology with proper action; but above all, look well to your spiritual moorings. Herein lies a mighty fortress for free worship.

TWO SCHOOLS OF THOUGHT

These coercive practices which strike at the heart of the American Bill of Rights are perfectly logical consequences of a philosophy which condemns church-state separation, regards itself as the sole custodian of all truth, and ruthlessly seeks to achieve at all costs its goal of cultural domination.

Pope Pius IX, in the Syllabus of Errors, proposition 55, condemned the theory that the church must be separated from the state and the state from the church. Leo XIII, in the Christian Constitution of States, wrote, "The ideal secular state is bound to profess the Roman Catholic religion." Gregory XVI, in his *Mirari vos* of August 15, 1832, stated, "nor can we hope for happier results either for religion or for the civil government from the wishes of those who desire that the church be separated from the state, and the concord between the secular and ecclesiastical authority, be dissolved. It is clear that these men, who yearn for a shameless liberty, live in dread of an agreement which has always been fraught with good, and advantageous alike to sacred and civil interests."

But, you may say, these are outmoded pronouncements, more fitting to the darkness of the Middle Ages. Let us see. On November 20, 1948, the modern view of church-state separation entertained by the Roman Catholic hierarchy was expressed in the *Christian in Action*. Here, the American constitutional principle of separation of church and state, the legal framework under which the Roman Church has flourished without precedent, was denounced as a mere shibboleth and with it the United States Supreme Court was attacked for holding that public funds should not be used to aid sectarian schools.

Again, you may say, this is only a point of view, an ideological presentation. Why have any concern over it? Our concern grows out of our knowledge of history, both past and present—our knowledge that the Roman Church has been highly successful in forcing its will upon other nations with disastrous results to freedom. * * *

PUBLIC SCHOOLS

The Roman Catholic philosophy concerning public schools is probably well known to you, but it is useful to refresh our memories by quoting authoritative statements.

Pope Leo XIII, attacking the religious neutrality of public schools (1885), complained that in such schools: "Religious questions are held to be wholly a matter of private judgment; the judgment of the individual conscience is deemed independent of all law;

any opinions about worship may be publicly expressed; everyone has unbounded license to think whatever he chooses and to publish abroad whatever he thinks" * * * "To Leo XIII, this democratic state of affairs was intolerable.

The Jesuit weekly, *America*, in an editorial, October 3, 1925, declared: "That the Catholic and non-Catholic school systems are absolutely irreconcilable is an indisputable fact."

Bishop John F. Noll of Indiana (editor of *Our Sunday Visitor*), published a pamphlet called *Our National Enemy No. 1*, and identified the "enemy" as the public school.

Canon 1374 of Canon Law, "Catholic children shall not attend non-Catholic, indifferent schools, schools that are mixed, that is to say, schools open to Catholics and non-Catholics alike. The bishop of the diocese only has the right, in harmony with the instructions of the Holy See, to decide under what circumstances, and with what safeguards to prevent loss of faith, it may be tolerated that Catholic children go to such schools."

Father Paul L. Blakely, S. J., in a pamphlet entitled "May an American Oppose the Public School?" published in 1937 under the imprimatur of Patrick Cardinal Hayes, proclaimed: "Our first duty, to the public school is not to pay taxes for its maintenance."

* * * The first duty of every Catholic father to the public school is to keep his children out of it. * * * "Every Catholic child in a Catholic school" is the command of the church. * * * Discussion is at an end. The obligations imposed by obedience are alone to be considered."

What is the dialectical approach to the realization of this ideology? Leaders in the National Education Association assert that the Roman hierarchy has stacked the Committee on Education in the House of Representatives against Federal aid for 25 years.

It is generally known who attacks the public schools as "godless," and "secular." The purpose is to discredit public education and deprive it of needed support. We live too close to Mexico and Quebec not to realize the disastrous results of these tactics to both education and morality. A new feature has been injected into the campaign against public schools. Now, it is asserted that every little red school house has a little red teacher. As they behold this vicious assault on the public schools, thinking Americans must oppose the payment of tax funds to support a school system whose educational policy emanates, not from this country, but from an "infallible" divine who sits on a throne in Rome.

PROGRAM OF ACTION

Free Americans desire to preserve the concept of separation of church and state in the United States, as championed by Madison, Jefferson, and Mason, and as interpreted by the United States Supreme Court. The Roman Catholic hierarchy calls this a bigoted and fanatical endeavor.

Free Americans believe that religious instruction should be handled primarily in the home, church, and denominational schools, rather than in the public educational system. The Roman Catholic hierarchy scorns such a view as atheistic.

Free Americans believe that the American public school system must be preserved; that public funds must not be used to support parochial schools; and that those who wish to send their children to such schools must bear the burden of the cost. The Roman Catholic hierarchy says that this is tantamount to double taxation, and to denying their children equal opportunity, even though the public schools are open to their children as well as to others.

Free Americans disapprove boycotts of newspapers, magazines, books, movies, and

businessmen to suppress free discussion. The Roman hierarchy uses the boycott as a means of controlling the press, the radio, and free speech.

Free Americans view with alarm persecution of non-Catholics in predominantly Catholic countries. The Roman hierarchy condones the situation by pointing to the "overwhelming majority" of Roman Catholics in the populations of those countries. In other words, they preach the doctrine that majorities have the right to oppress minorities. If we were to apply that doctrine over here, Catholics would be persecuted. But we reject this doctrine wholeheartedly—fortunately for Catholics as well as non-Catholics. * * *

CONCLUSION

At no time in history has it been of such life-and-death urgency to appreciate, proclaim, and stand firmly for that view of freedom which has been enshrined in the life of Baptists and in the history of this Nation since the dawn of the Republic. We stand for freedom to worship God according to a free conscience. We stand for complete separation of church and state. We stand for freedom to propagate our religious faith. We stand for freedom to educate our children in our faith. We stand for the right to change our faith. We stand for a free press and free speech. Because these great principles are dear to our hearts and our lives, we must stand in opposition to any and all forces, institutions, and agencies which would deny to us our free heritage. Critical times call for men of stout hearts and brave souls. Thank God, among Baptists, America has men—men and women, courageous and unflinching, who, in the face of all the pressure, will proclaim, "I will stand firm. I will be true to American principles."

The Fight Against Cancer

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. SMITH of New Jersey. Mr. President, I ask unanimous consent that I may speak briefly at this time.

The VICE PRESIDENT. Is there objection? Without objection, the Senator from New Jersey is recognized.

Mr. SMITH of New Jersey. Mr. President, I wish to call attention to the fight against cancer, which yearly takes a toll of more than 200,000 lives. At the same time I wish to pay tribute to the thousands of volunteers, both men and women, who are giving freely of their time and money in New Jersey and elsewhere in an effort to control the upward trend of this disease.

Our own Federal Government through the National Cancer Institute, is contributing millions of dollars for research into the causes of the disease. The fund is increased through contributions to the American Cancer Society by the people of every State in the Union. More than \$15,000,000 was added this year in this manner to the funds to fight cancer, and in New Jersey alone more than \$700,000 was contributed to the programs of education, service, and research.

Campaigns urging the necessity of periodic health examinations and the need to look for the "Seven Danger Signals" are being carried on throughout the country. Clinics have been opened. In New Jersey there are 39 where patients may have access to the latest equipment to fight the disease; and, in addition, medications, dressings and many other services are made available to those who are medically indigent.

In New Jersey, my own State, the achievements of the New Jersey Division of the American Cancer Society have been outstanding. Organized 5 years ago by George E. Stringfellow, who served as president 2 years, and was succeeded by J. Wesley Goldthorp, of Camden, the division is now under the direction of William C. Cope, D. C. S., of Newark. To these men I wish to pay tribute for the fine way in which the programs are being carried on in my State.

One of the high lights of the activities is the annual editorial contest which is carried on during April, which is Cancer Control Month. Three judges select the winners, and they are given the George E. Stringfellow plaques.

The winners in 1951 were the *Elizabeth Daily Journal*, in the daily field, for an editorial written by John T. Hall; and the *Bergen Herald*, of Waldwick, in the weekly field, for an editorial written by Mrs. Nella Bradbury.

Mr. President, I ask unanimous consent that these two winning editorials on the important subject of cancer control be inserted in the Appendix of the *RECORD*, as part of my remarks.

There being no objection, the editorials were ordered to be printed in the *RECORD*, as follows:

[From the *Elizabeth Daily Journal* of April 24, 1951]

HOW CANCER CAN BE CURED

The blockade of cancer is getting tighter. When it grows tight enough, cancer will be whipped. A blockade that can't be penetrated will win any war. The blockade that cuts off the source of supply for a killing disease will stop the killing.

Cancer is a disease, a ruthless destroyer that knows no rules and plays no favorites in its choice of victims. But the blockade is tightening. How can it miss as more and more people harken to the pleas of the American Cancer Society, not so much for help as to help in establishing an impenetrable blockade?

This is cancer month—the last few days of cancer month that deserves unique standing. For untold generations the mere thought of cancer has been enough to make people quake and pale. The Kefauver exposé made adult people shiver and blanch. But behind the shivering and the blanching, back of the quaking and the paling, there was a cause, an ugly root that went unnoticed until the horrible harvest was at hand.

When detected early, cancer can be cured. Remember that. That is the warning and the lesson the American Cancer Society has taken onto the highways and into the byways. Don't wait for the root to become a tree. To chop it down then will still leave the roots intact. See your doctor at the first sign of a root.

This has been the emphasis of cancer month—an emphasis not to frighten, but to reassure. And the persuasive stress attend-

ing the emphasis is reflected in the result that finds cooperation eddy out to include all ages and all groups. We read of the Cranford High School youngsters who found in the death of a beloved teacher a command to take up arms, and we hear of a Junior Cancer Society of Roselle, the first to be formed. Then we turn to the men and women of the Simmons plant raising a fund with their own minstrel show—an appreciated fund that will help yet not help as much as the contribution they have made by focusing the attention of so very many people on the aims of the blockade.

Getting dollars is important. More important is getting people to understand and to look to their own welfare. The help that the American Cancer Society is giving is beyond measurement. Help it to help

[From the *Bergen Herald*]

HE WAS MY FRIEND

Yesterday I passed the house of a man I used to know. It is a neat, white house with a well-tended lawn in which my friend took a lot of pride. In the middle of the lawn, facing the sidewalk, he had placed a sign with his name on it in plain, black letters. I remember the spring evening when he drove the supporting stake into the ground.

"There," he said, "that's me. All this is mine." The sign was a symbol of achievement. At last he owned a home. Inside were his pretty wife, his healthy son, and his big, devoted dog. It had taken a good many years to be able to set up this monument. He was very proud.

When I went by that house yesterday, a strange man was carrying away the sign. He carted it off to the back yard and threw it on a pile of other bits of lumber, old plaster, and a few broken bricks. A little girl I didn't know sat on the steps and watched him. A woman was busy washing the windows. There was no dog in the yard.

That's right, reader. The man is dead and the child and the wife and the big friendly dog are gone. Cancer, the swift and deadly enemy, had come suddenly over the carefully tended lawn and driven them from the house.

A greater knowledge of the ways of the attacker might have stopped it ere it could have passed into that house. Science had done its best but not even the doctors knew enough to halt the swift advance.

This is just one of thousands of such simple tragedies happening in your town, on your street, maybe in the house next door. It can happen in your house, too. Do you want to stop it?

Give to the American Cancer Society's fund when you are asked within the next few days. One quarter of every dollar goes for research so that doctors can learn more about the dreaded scourge. Part is used in service to cancer patients and their families and part goes for public education. You'll want your share in helping science to help you keep the sign of ownership in front of homes everywhere.

Article by Former Senator Albert Wahl Hawkes

EXTENSION OF REMARKS OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. BREWSTER. Mr. President, I ask unanimous consent for permission to

insert in the Appendix of the *RECORD* an article by former Senator Albert Wahl Hawkes. This may involve an estimated cost. The printer was unable to furnish me the estimate until tomorrow morning. I do not expect to be here, and I want to know whether I may have unanimous consent for its insertion, if there is no objection, with the appended estimate of cost?

The PRESIDING OFFICER (Mr. MONROE in the chair). Without objection, the matter will be inserted in the Appendix of the *RECORD* upon receipt of the estimated cost from the Public Printer.

(Subsequently an estimate was received from the Government Printing Office, indicating that the article would exceed by three-fourths of a page the two printed pages allowed under the rule without a statement of cost, and that the cost would be \$307.50.)

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

EQUITY FOR LABOR AND CAPITAL

(By Albert W. Hawkes)

I have chosen for my subject Equity for Labor and Capital. I purposely put labor before capital, as it is very easily proved that capital or property is the fruit of labor. It might be properly called the stored-up or canned-fruit of labor—something that is available for use at times when required to build jobs and keep the human endeavors for life and progress going.

The brand of canned capital fruit, known as surplus in corporations, is something that makes available fruit out of season, when the trees of industry are not producing profits. Labor comes first, the same as the tree comes before the fruit—in fact, the tree is responsible for the fruit.

Before I get into my subject I wish to state that I am a believer in our American form of representative government—the Constitution of the United States, with its included powers of amendment by certain prescribed processes—and in the free-enterprise system of economics, which has made this country the greatest place on earth to live. Nothing that I say herein should be construed by anyone as not squaring with sound economics and our American system and way of living.

I believe that the usefulness and happiness of human beings in this country is in the inverse ratio to the amount of paternalism that is shown to people physically able to work and earn a living. The aged, the sick, and the incapacitated are recognized by all right-thinking people as being our charge, and I do not believe this country will ever deny that the fit and capable are their brother's keeper. But I believe in the last analysis the people of this country will resent part of the fit taking care of another part of the fit through any system invoked by any agency along the lines of paternalism.

I am not going to deal with wages or hours, working conditions, wage incentives, bonuses, group, life, and health insurance, vacations with pay, or even some of the fine plans of forward-thinking companies which have devised or are endeavoring to devise plans that give the workers a participation in profits after the payment to the stockholders of a reasonably sound dividend. Those things will be taken care of by other speakers.

A DOUBLE PROBLEM

It has been said that labor is the No. 1 problem of industry and business. I might be permitted to make an amendment to this statement by saying that labor and capital

combined are the No. 1 problem in industry and business, because, after all, industry is made up of two distinct factors, namely, labor, on the one hand, and capital and management, on the other. Labor, under our economic system, can do little in establishing a business or making jobs for itself without capital. Capital can do little in establishing a business and making returns for itself without labor. Therefore, labor and capital must find a way to cooperate wholeheartedly and sincerely to produce satisfactory benefits.

Every man and woman of legal working age in this country is a potential laborer. Some labor with their hands, some with their brains; and some a combination of brains and body.

Many men in industry say they never had any real labor problems. They mean they never had labor problems which they were unable to solve through a fair and honest discussion.

I recall the story concerning a United States Supreme Court Justice, who had just celebrated his fiftieth wedding anniversary. He met a Senator and Congressman just after the celebration and one of them said, "Good afternoon, Judge. You are certainly looking fine." And the Justice replied, "I am feeling fine, gentlemen. This is my fiftieth wedding anniversary and we have just had a few very dear friends to luncheon with us. I am a most fortunate man because my wife and I have lived together 50 years in complete harmony, without a cross word." The Senator then said, "Judge, it is wonderful for you to be able to say that. I wish I could." Whereupon the Congressman interposed and said, "Go ahead, Senator. Why don't you?" The Judge said it.

Now the Justice did not mean by his remark there never had been any differences of opinion or problems, because problems and differences of opinion come to all people in every human relationship in life. The Justice meant that he and his wife had established a relationship based on faith, confidence, and equity, and when problems and differences of opinion arose they were promptly settled and not permitted to grow into a breach.

If labor and capital could deal on the same basis as the Justice and his wife, there would be no need of laws attempting to control their actions. Such laws usually breed class hatred and bitterness—and class hatred and bitterness have never successfully solved a single important problem in the history of the world.

THE RULE OF EQUITY

Common law in itself is crystallized common sense, resulting from the experience of the majority of human beings from time immemorial. The administration of common law is sometimes bounded by hard and fast rules; and statutory law is still less flexible. Equity is more flexible—it is the soul and spirit of righteousness. Equity has been described as "the spirit and the habit of fairness, justice and right dealing, which should regulate the intercourse of men with men." Justinian, the great Roman emperor, described equity, "To live honestly, to harm nobody, to render every man his just due." Perhaps the best definition of all is in the words of the Man of Galilee, "Whatsoever ye would that men should do to you, do ye even so to them."

Equity must come from within labor and capital—it must be born, it cannot be legislated. It is born of right thinking and a good conscience. Equity, the child of these two, should serve as the keystone of cooperative efforts of labor and capital—thereby bringing happiness and satisfaction to those invoking its aid.

Equity must rule human acts so far as humanly possible in this world. This means many new decrees of equity (public opinion) will appear as humanity develops. For instance, humanity has yet to decree that a woman doing a given piece of work as well as a man, should get the same pay. Sex should not determine the rate of pay.

The important thing in the procedure of equity is that humanity cannot absorb great changes too rapidly without damaging many of the good things it has accomplished.

Hence, the "tempo" of each change is quite as important as the change itself—as related to the successful system we have produced.

MAKING THINGS WORK

The paramount problem confronting capital, management, and labor today is the same as has confronted human beings through all recorded history—namely, to make things work and to give every man his "just due." The signers of the Declaration of Independence and the makers of the Constitution of the United States, had this in view when they summarized in the Declaration of Independence the inalienable rights of men as "life, liberty and the pursuit of happiness." They then endeavored to so frame the Constitution as to carry this announced principle into effect.

If this great principle of equity is abandoned, human relationships—small or great—fall to pieces, with the result that misery and suffering and chaos are brought, not only to those who destroyed this great principle, but to all who live within the boundaries where the destruction takes place.

The world has been looking at the United States of America for more than 150 years, watching the experiment of the American system of representative government. Undoubtedly there have been many who have wished it failure. Many nations have been born and have perished. Dictators have risen and fallen and risen again—but our great country has successfully gone on with its progress in making things work, because the American people have tried to hold fast to the cardinal principle of equity, upon which our country is founded, and I believe the great majority of American citizens are interested in giving every man his "just due."

The genius of America has always been to make things work. The steam engine, telegraph, telephone, automobile, radio, airplane, and a thousand other important developments, have been brought into existence for the benefit, comfort, and happiness of mankind.

It is our responsibility now to make things work in human relationship. Just as the engineer is called upon to find out why the engine or machine will not work when it ceases to operate and then to reappraise stresses and strains, considering the particular nature of the work of the machine is called upon to do—so we at this time are called upon to make human relationship work satisfactorily.

Labor and capital and management should carefully examine the delicate and intangible thing that holds them together and makes them work, because we are living in a new world era where changes require constant examination and reexamination of those human relationships.

This is our job today—the job of labor and capital and management, as engineers of the human industrial machine of America. Capital cannot function successfully without labor, and labor cannot function successfully without capital. Hence the indispensable cooperation between the two.

WHAT IS A MAN'S JUST DUE?

The first thing management should do is to ascertain as far as humanly possible,

what is the just due of each grade of manpower employed in an industry? This is a difficult job and all human minds could never be expected to reach precisely the same conclusion. However, if the great majority of men charged with directing the affairs of industry, business, and agriculture will seek earnestly and in the proper spirit for the truth of what is every man's just due—I feel that we can develop sufficient patience and tolerance to enable us to proceed in a cooperative way on a basis of mutuality while we are moving steadily in the direction of the objective, namely, equity for labor and capital.

We all have a very heavy responsibility resting upon us right at this period of our lives—and history will record whether we are equal to the task. We must realize that the price of failure will be disaster to all of us and our country. But I say we shall not fail because I have absolute confidence in the desire of the great majority of those in the industrial and business arena to solve this problem as promptly as possible in a way that is satisfactory to the great mass of the American people. We must and will solve this problem the same as we have solved other problems in the past—the American way for the common good of all.

No man in this country can successfully act in disregard of public opinion. After all, public opinion creates governments and the form of governments, and it changes them at will when it is sufficiently crystallized.

THE CHARACTER OF LABOR

As I consider the many representatives of capital and management whom I know, and the many laboring men whom I also know—I am sure that a cross section of all human beings is pretty much the same. There is just about as much selfishness in one quarter as another. There is just about as much good in one quarter as another. There is just about as much love of country and our form of living in one quarter as another.

I believe the intelligent working man who has been taught the story of this country and our enterprise system is strongly in favor of it, and that he recognizes the fact that in every country where the system of free enterprise has been destroyed, the rights of "life, liberty, and the pursuit of happiness," have been endangered or taken away. If we can proceed on the basis that the laboring man is just as good a citizen as the capitalist or those engaged in management (and I believe he is), we will make tremendous progress. After all, the court of equity in this case of cooperation between capital, management and labor, is nothing else than the great American people, who—after hearing the case—form public opinion, which is the decree of equity. Public opinion, with the power of the American public back of it, can and will enforce its decrees upon any group of people.

THE IMPORTANCE OF LABOR

"He who comes into equity must do so with clean hands"—which means to me that neither capital and management, on the one hand, nor labor, on the other, can expect to get into equity unless its hands are clean. Then when capital and management and labor find themselves before the court of equity they must follow another cardinal rule, which is that "He who asks equity, must do equity."

I believe a small portion of labor and a small portion of capital have been wrong most of the time. But I also believe most of labor and most of capital have endeavored to cooperate most of the time. There is no reason why most of labor and most of capital should not cooperate all the time, if they understand each other thoroughly and com-

pletely and each knows that the other is thinking straight, playing the game on the square, and only wants equity—its just due.

That labor is a dignified and honorable calling will not be disputed by any fair-thinking person. Our great President, Abraham Lincoln, accepted honorary membership in the Workingmen's Association of New York on March 21, 1864, and stated to the committee: "The honorary membership in your association, as generously tendered, is gratefully accepted."

Then this great man of humility, with malice toward none and charity for all, gave labor a rating of honor and dignity in his speech to them, partly as follows:

"Labor is prior to, and independent of, capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. * * * Capital has its rights, which are as worthy of protection as any other rights. Nor is it denied that there is, and probably always will be, a relation between capital and labor, producing mutual benefits. * * * Again, as has already been said, there is not, of necessity, any such thing as the free hired laborer being fixed to that condition for life. Many independent men everywhere in these States, a few years back in their lives, were hired laborers. The prudent penniless beginner in the world labors for wages for a while, saves his surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him. This is the just and generous and prosperous system which opens the way to all—gives hope to all, and consequent energy and progress, and improvement of condition to all. No men living are more worthy to be trusted than those who toil up from poverty—none less inclined to take or touch aught which they have not honestly earned. * * * The strongest bond of human sympathy, outside of the family relation, should be one uniting all working people. * * * Nor should this lead to a war upon property of the owners of the property."

And still quoting Lincoln in the same speech to labor:

"Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

CAPITAL AND MANAGEMENT

Now so much in commendation of labor, and we can turn to a little commendation of capital and management—because, after all, there are thousands of men called captains of industry, who, by their life's work, have demonstrated their love of their fellow men and a square deal in their behalf. We must remember that our American justice is presumed to rest on the theory that it is better that a hundred guilty men should escape than that one innocent man should be punished.

So why should all of labor or all of capital be punished for the sins of a few?

Man can only be custodian of funds. He can only eat so much a day and sleep in a single place at one time, and all of those who have accumulated wealth through our free-enterprise system have found that the very plan of life—brief as it is—makes them custodians of funds in an involuntary trusteeship or stewardship. Hundreds of them have spent a large part of their lifetimes trying to make comfortable jobs that give a satisfactory living standard to the men working for them or for the company they represent.

The Rockefeller interests have spent hundreds of millions of dollars in creating jobs for and to benefit mankind through research and other fields. Endicott Johnson have created thousands of good jobs and used their money wisely for the benefit of the people. George Eastman, and many others, gave a substantial part of their wealth to the benefit of mankind. B. Altman, right in this city of New York, gave his store to those who helped him build his business.

I could go on with hundreds of others who have done likewise—but there are so many known cases it seems unnecessary to cite them to prove my conviction that most successful men recognize they can only be custodians of funds in the interest of others.

If this be true, as I believe the records prove, then both sides have much to be said in their favor and little to be said against them. Jobs must either come from the use of private capital or from the use of public funds—and from what I know of the history of the world, I have no hesitation in saying I would rather see funds to create jobs handled by private individuals who created the funds, than by politicians who frequently use funds for a short period of time without the responsibility of having created those funds themselves. The individual who created the funds lives with the job he is doing until he gets his final summons. The politician frequently has a short tenure of office and regardless of his sincerity, does not have that continuing responsibility.

A MUTUALITY OF INTEREST

This means to me that the important problem lying in front of both sides of industry is adopting a policy that is founded upon true mutuality and then working to create the patience and tolerance that are necessary to find the truth and solve the problem on the basis of equity for all. The interested parties in this discussion are so interwoven in their relationship that their objectives must be the same, if either or both are to be satisfied with the results achieved.

I believe capital and management have been wrong many times in assuming that labor in the past has been happy, when it was dissatisfied. This reminds me of a little story of a Negro circuit preacher who was just closing his year with the congregation. He liked his pulpit and his comfortable little home, and the only way he could remain there another year as the pastor of the church was by having the congregation vote that they wished to keep him. So on the last Sunday of the year he said:

"Brethren and sisters, dis am the last Sabbath in the year, and I must move on unless you vote that you wants me as your parson for another year. All those in favor of me remaining for another year, please raise their right hand."

Not a hand went up.

"All right, brethren and sisters, all those in favor of me remaining another year will signify by saying 'Aye'."

Not an "aye" was heard. Whereupon the parson said:

"Thank you all, very much, brethren and sisters. Is your parson for another year, because silence gives consent."

SOME RECOMMENDATIONS FOR MANAGEMENT

I believe a great many of the troubles of the past have come through the assumption that silence gives consent. Therefore, I recommend that every manufacturer who is interested in the continuance of our enterprise system and our form of government make it his business in the future to do the following things:

1. Regardless of fine wages, working hours, and other conditions—wherever the size of the company permits, see that at least once a year all the employees of the company have

a chance to look at you or some of the upper officers to see that you do not have horns. In large companies, I recommend the heads of the subsidiaries or plant divisions carry this policy into effect.

In our company we feel this contact—meeting the men face to face and showing them we are human beings—is one of the important contributing factors to the fine understanding between the management and the employees. This is illustrated by comments individually made by workmen in one of our plants following a meeting at which several of the officers of our company attended. Here are some of those comments:

J. H. said: "Enjoyed the talk and can see that he (Mr. Hawkes) is as interested in the workman as in the rich man. Every man I spoke to enjoyed the talk and the party. These men came to us as perfect strangers and in no time at all we saw they were just one of us."

T. H. said: "I was afraid to meet Mr. Hawkes and the other officials. I thought Mr. Hawkes was very tall and fat. After I saw them I enjoyed being around them. They are just regular men like you and me."

E. M. said: "I figured he would come down, say his speech, hello, and get the hell out. Sure surprised me."

J. R. said: "Would like to have his salary (referring to Mr. Hawkes), but not his job. Guys like him work too hard."

These remarks show that the men had a fine, friendly feeling toward the management after a personal visit and enjoyable little party.

2. If your company policies do not square with the progress of human relationship in this country, then square them as far as is possible, based on sound economics, and make it your business to see that your men understand them.

3. Don't mislead your employees by bidding for popularity through doing the unusual or economically unsound thing which cannot last and which damages not only the company that tries it but all industry, because human beings still relate and compare what happens to their neighbors with what happens to them.

4. Be sure that no superintendent, foreman, subforeman, or supervisor attempts to be sharp or shrewd in dealing with the manpower of the company.

5. Be certain that no man between you and the men down the line breaks the chain because he misunderstands the company's policy or fails to carry through the instructions of management.

6. The definition of a corporation in the past has been "An invisible, intangible being, existing only in contemplation of law, without heart and without soul." We must prove that a corporation can have the equivalent of a heart and soul and that the representatives employed to direct its affairs serve as an agency of human beings—if it is to remain a useful agency for the conduct of business.

7. Have your men in the plant understand that the laborer of today is the potential capitalist of tomorrow. That his interests of tomorrow may be identical with others of today, and his acts of today should be so measured that he will be willing to have similar acts from others tomorrow.

One of the most interesting experiences the management of our company has had was when we raised wages at a crucial time, the men—of their own volition—sent a committee to the superintendent to inquire if the company could afford to raise wages, in view of competition, low prices, and lesser volume of business.

Think of this interest in the welfare of the company of which they were a part.

WHERE INDUSTRY CAN SERVE

Industrial management should support the fine movements for the dissemination of correct information regarding our free-enterprise system, to the youth of America. The Junior Achievement Movement I believe justifies our support. The plan back of the Institute for Industrial Progress was most excellent. The general educational plans of intelligent, far-sighted business managements in training and educating superintendents, foremen, and the men in their plants, all contribute a great deal toward this end.

The fine women of this country can play a most important part in backing up industry and business if they (the women) are convinced industry and business are operating along fair and sound lines. Most of those who know about the businesses in which their husbands are engaged believe in the fairness of those particular institutions—whereas, not knowing about other businesses, they frequently are in doubt about them—and being in doubt, are not good sponsors for them.

This avenue, I believe, offers one of the most valuable and hopeful opportunities available to us to bring the truth home to a very large percentage of the population. Women train the minds of youth, and youth of today will be our industry and business of tomorrow.

To keep the Government from stepping into business further than necessary or desired, men must be able to do things by themselves as well as or better than the Government can do those things for them. If men can do the job and labor and capital will cooperate, understand and respect each other—their combined power will keep Government where its founders deemed it could serve its people best. And further, their combined strength will remove from the statute books any bad laws that have been put there and will keep from enactment further bad laws that are incubated in the minds of politicians.

POINTS TO REMEMBER

Remember, next to wages, labor is interested in regular work on a permanent job. Management should endeavor to work out such a system to accomplish this—but that system must square with sound economics or it will fail.

Remember, giving labor its just due in wages and working conditions, will increase labor's determination to work, rather than to be satisfied with relief or relief work.

Remember, workmen standing with the management, will resent the acts of any outside agency or laws that injure business, because they will understand such things injure their interests also. When such understanding arrives, bad laws will be promptly corrected or repealed.

Remember, your men should thoroughly understand your company policies, principles, and objectives—don't leave anything to silence.

Remember, the local community should understand your company principles, policies, and objectives—and, understanding them, should vote the company a good citizen.

Remember, faith, confidence, and mutual respect must be in the picture with good practices. "Faith begets faith"—and confidence begets confidence. Both lead to mutual respect.

Remember, sharp practice anywhere along the line helps destroy faith, confidence, and equity.

Remember, the public is equity's court and public opinion is equity's decree.

Remember, labor and capital make industry, and with either one removed there is no industry.

Remember, Government only derives its just power from the consent of the governed—and, after all, it is nothing but a creature of the people, unless it gets out of hand and through force becomes the master of the people.

SIGHT BEING RESTORED

Two verses from the Bible are at this time worthy of consideration by both labor and capital—quoting from St. Luke's, chapter 8: "And why beholdest thou the mote that is in thy brother's eye, but perceivest not the beam that is in thine own eye?"

And then again this great question: "Can the blind lead the blind? Shall they not both fall into the ditch?"

My answer is, the blind on both sides are coming into sight and have already begun to read the decrees of equity on the wall of public opinion. Hence, each with sight and patience can help both to keep out of the ditch. The National Association of Manufacturers and other vital organizations are helping tremendously to restore this sight, and labor and capital are showing daily evidence of their appreciation of the necessity of choosing good leaders who believe in law and order.

"He who comes into equity, must do so with clean hands," and "he who asks equity, must do equity." If understanding cooperation is accomplished between labor and capital, I predict both labor and capital will appreciate that no one-sided law can long bring benefits to the side it favors, because that is not equity.

If the President of the United States believes that the great majority of labor is understanding and trying to do equity, and that the great majority of the captains of industry are cooperating and trying to do equity—then I believe a definite and direct word from him to this effect would be most helpful to the country right now.

In closing let me urge that, in true Christmas spirit, we all join in fervently expressing the hope that the days to come will justify man's faith in his fellow-being. That his intelligence, industry, and goodness of heart will prevail over the destructive forces that have threatened his civilization. That he will come to the realization that but one heart beats for all, and that mutual love, respect, and understanding will make "life, liberty, and the pursuit of happiness" a glowing reality.

Gen. Harry Schmidt, United States Marine Corps

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. BUTLER of Nebraska. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement I have prepared regarding a Nebraska native son of whom we are unusually proud, Gen. Harry Schmidt, commanding general of the glorious victory of Iwo Jima.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GEN. HARRY SCHMIDT

September 25, on future calendars, may well be marked as the birthday of Gen. Harry Schmidt, of the United States Marine

Corps, a native son of Nebraska. General Schmidt's lengthy record of distinguished service to his country and corps may, however, be lost sight of by Americans anxious to honor him for a triumph that climaxed rather than established his fame. This climatic point was reached when General Schmidt, commanding the largest landing force of marines in the entire battle-studded history of this world-renowned fighting corps, led it to its smashing victory over the stout Japanese defenders of a compact little volcanic ash and rock island with the never-to-be-forgotten name of Iwo Jima. Nebraskans are doubly proud of the fact that General Schmidt's impressive victory at Iwo Jima was not gained accidentally as evidenced by the solid base of mounting important achievements marking his prior service. The often unheralded, sometimes tedious, and more frequently less spectacular service of more than 35 years which prepared General Schmidt to achieve his great victory at Iwo Jima provides much of inspirational value for present and future Americans desirous of serving their country.

The obscuring importance attached to the triumph of American arms at Iwo Jima is attested by many sources. Dr. Douglas Southall Freeman, noted military biographer, has publicly reiterated that whenever he has been asked to comment upon the performance of the United States Marine Corps in World War II, he has felt that his pride in the Corps' many achievements could be embodied in two brief words: "Iwo Jima."

Similarly, Gen. Alexander A. Vandegrift, then commandant of the Corps, who had led our forces at Guadalcanal in our first successful major offensive in the Pacific, has since characterized the battle for Iwo Jima as "that operation in which more than 80,000 Marines, under Marine leadership, overran the toughest objective in Marine Corps history."

Princeton history professors Isely and Crowl in their definitive book *The United States Marines and Amphibious War*, refer to Iwo Jima as "The Supreme Test," "Acme of Amphibious Assault," and further state "The capture of Iwo is the classical amphibious assault of recorded history. . . ."

Finally, few will ever forget Admiral Nimitz's famous tribute to the Americans who fought on Iwo Jima: "On Iwo Island uncommon valor was a common virtue."

From these and numerous other tributes, it is easier to understand how General Schmidt's other, somewhat less spectacular achievements have come to be overlooked by Americans held captive by the drama of Iwo Jima.

With the passage of time, historians will undoubtedly broaden the niche that has been accorded General Schmidt as the conqueror of Iwo Jima. Americans may then find it profitable to study the path that General Schmidt trod which ultimately led to the summit of Mount Suribachi.

Paradoxically, perhaps, the land-locked territory of the great State of Nebraska provided the first home of this famous "soldier of the sea." General Schmidt was born in Holdrege on September 25, 1886. In his youth, the general's family also resided in Kearney and Stapleton, other typical Nebraska towns.

After graduation from high school, General Schmidt enrolled at Nebraska State Normal School. About this time he enlisted in the Nebraska National Guard and by diligent application shortly rose to commissioned rank. His service in the Nebraska National Guard proved very stimulating and encouraged General Schmidt to seek a full-time military career. Accordingly, he became an applicant for a commission in the United States Marine Corps. When his application was accepted, he was appointed a

second lieutenant of marines on August 17, 1909.

When he had accepted the proffered commission, General Schmidt was ordered for indoctrinational training to report to the Marine Officers' School at Port Royal, S. C.

When he was subsequently graduated from marine officers' school, where he ranked in the upper half of his class, General Schmidt was ordered to report for duty at the Marine Barracks, Guam, Marianas Islands. While he could hardly have guessed it then, General Schmidt was destined to play an important role in our reconquest of Guam some 30 years later. However, when he reported for duty in Guam in January 1911, Saipan and Tinian were merely names of some islands in the Marianas somewhere north of Guam.

Trouble developed in China about 1 year after General Schmidt's arrival on Guam. He was about to make the first of many visits to this country. He was assigned to command a detachment of Guam marines which formed an American expeditionary force unit assigned to protect American interests at Chefoo, China.

When this China duty was completed, General Schmidt was transferred to the Philippine Islands in October 1912. He remained on duty in the Philippines until he was detached in April 1913 and ordered to return to the United States for duty.

Upon his arrival in the United States, General Schmidt was ordered to recruiting duty in Minnesota. He discharged this less glamorous but very important task with characteristic application. When it was over he was glad to return to the Marine Corps. He was ordered to report to the Marine Barracks, New Orleans, La.

General Schmidt's tour at New Orleans was interrupted when he was ordered to go aboard the U. S. S. *Kearsage* and sailed for Vera Cruz, Mexico, in 1915. More sea duty followed. In May 1916 he was ordered to the U. S. S. *Oklahoma*. The next year found him assigned to the U. S. S. *Montana*. His tour aboard the *Montana* was interrupted by duty ashore in Cuba when he landed with the ship's Landing Force at Guantanamo Bay. He was ashore at Guantanamo from February 25 to March 22, 1917. His seagoing duties kept him afloat on convoy and escort duty with the fleet throughout most of World War I.

General Schmidt was detached from the *Montana* in September of 1918 and ordered to duty at the Marine Barracks, Norfolk, Va. Not quite 2 years later, in June 1920 he was again ordered to sea duty, this time as Commanding Officer of the Marine Detachment, U. S. S. *Tennessee*.

When he had completed a 2-year tour of duty aboard the *Tennessee*, General Schmidt was ordered to duty under instruction in the Marine Corps schools. Upon graduation, he was subsequently detailed as an instructor. He spent about 3 years in this exacting task.

General Schmidt's stint of duty as an instructor ended when he was again ordered back to recruiting duty; once again this assignment took him to Minnesota. Troublous times in China intervened to shorten his recruiting tour. He returned to China for a 6-month tour with the famous Sixth Regiment.

American interest in stabilizing the Central American governments next brought General Schmidt to Nicaragua in February of 1928. Until he was relieved in June 1929, General Schmidt served as intelligence and operations officer of the Second Marine Brigade in Nicaragua. His duties provided him with excellent experience in what has been characterized by the Marines as Small Wars operations. In addition, his duties gave him

an early appreciation of the utilization and application of marine air power—a talent which was to stand him in good stead in future battles in the Pacific.

General Schmidt's duties in Nicaragua made it requisite for him to have a sound knowledge of this country. He soon found this information could best be obtained first hand by making frequent aerial flights. In many instances, these flights had to be made over disputed territory, in aircraft that were a far cry from the present day's, and while subject to hostile ground fire. When aircraft were shot down or failed to return from missions, aviation personnel who were captured by dissident elements were invariably tortured to death. It was understandable therefore when his services were subsequently recognized by the award of the Navy Cross.

When he had completed his arduous duties in Nicaragua, General Schmidt was detached and assigned to duty under instruction at the Command and General Staff School, Fort Leavenworth, Kans. He arrived at Fort Leavenworth in July 1929, a critical time in his career.

Students at Fort Leavenworth were required to make tactical horseback rides in connection with field problems. On one of his first rides, General Schmidt was thoroughly drenched by rain. His duty in the tropics had served to lessen his resistance to exposure in the more temperate climes. He contracted rheumatic fever which required skilled treatment and individual perseverance to pull him through before he could resume his studies. His perseverance was rewarded when he was graduated June 18, 1932.

Ahead lay a test of his versatility—a byword for which the Marines are celebrated. General Schmidt had to relegate much of the knowledge he had acquired at Fort Leavenworth, until a later date. His next assignment was to duty with the paymaster department of the Marine Corps. Undismayed by an immediate requirement for still more learning in a branch with which he was totally unfamiliar, he nevertheless applied himself assiduously. His subsequent duties with the paymaster department took him successively to headquarters at Washington, D. C., then to the department of the Pacific, San Francisco, Calif., to the Fourth Marine Regiment at Shanghai—his third tour in the Orient—thence back again to San Francisco. How well he applied himself to these tasks for the paymaster department can best be judged by the fact that he was later selected to be the commanding general of this department.

In June 1937 General Schmidt was detached from duty with the Paymaster Department and ordered from San Francisco to duty as Chief of Staff of the Second Marine Brigade then stationed at the Marine Barracks, San Diego, Calif. Shortly after his arrival in San Diego, trouble once again broke out in China. This time the Japanese were to blame. The Japanese invasion of China involved American interests, particularly in Shanghai. The Second Marine Brigade was shortly ordered to sail for Shanghai and on arrival to absorb and assume command over the Fourth Marine Regiment permanently stationed there. General Schmidt sailed with the brigade aboard the U. S. S. *Chaumont* bound for Shanghai in August 1937.

Upon his arrival in Shanghai, which marked his fourth visit to China, General Schmidt found himself in a diplomatic tinder box which required all his skill to prevent an international conflagration. The Japanese, bent on conquest, proved very difficult to deal with. Incidents were a daily occurrence and in December 1937 culminated in the Japanese bombing and sinking of the

U. S. S. *Panay*. Despite repeated aggravation, the marines under General Schmidt's coordinating efforts managed to maintain American prestige without becoming the cause of any serious international dispute.

When the brigade was ordered to return to the United States without the Fourth Regiment, General Schmidt complied with the Commandant's personal request that he return to headquarters and assist in straightening out the affairs of the Paymaster Department.

In Washington, he became personnel officer and executive officer of the Paymaster Department. In accepting this assignment it was generally believed that he had lessened his chances materially of ever being selected to become a general officer of the line of the Marine Corps. His loyalty, zeal, and professional ability in serving the Paymaster Department were recognized in 1938, by his selection to become the Paymaster General of the Marine Corps with the rank of brigadier general, which office he was to assume upon the retirement of the incumbent. However, long before the incumbent retired, and in the face of this selection, General Schmidt was shortly selected to become a brigadier general of the line of the Marine Corps.

After his promotion to brigadier general, General Schmidt became an assistant to the Commandant of the Marine Corps, Gen. Thomas Holcomb. In April 1942 General Schmidt became the Assistant Commandant of the Marine Corps and was appointed a major general. He remained in this capacity until he was directed to assume command of the Fourth Marine Division upon its activation.

General Schmidt assumed command of the Fourth Marine Division at a ceremony at Camp Pendleton, Calif., on August 18, 1943. While it was a new division, it had a nucleus of trained professionals and it was to be given just 4 months to get ready for its first battle—Roi-Namur, Kwajalein.

Organization and training proceeded apace. General Schmidt took full advantage of the forthcoming battle for Tarawa to send observers along. Upon their return, the lessons they had learned were quickly assimilated. New techniques and equipment that promised to lessen the pain of seizing a beachhead were adopted. Weather mitigated against a full-dress rehearsal. The division made the rigid time schedule and was the first to embark directly from the United States for an amphibious assault on a hostile shore.

General Schmidt was assigned to command the northern landing force with the mission of seizing, occupying and defending Roi-Namur, which with its adjacent islands formed part of the largest atoll in the world: Kwajalein, Marshall Islands.

For its first blooding, the Fourth Marine Division under General Schmidt's leadership, acquitted itself with creditable distinction. All organized resistance was overcome within 3 days after the initial landings. Marine casualties were some of the lightest of the war thanks to improved tactics, techniques and equipment so quickly put to use after the lessons of Tarawa had been learned. General Schmidt requested permission to be allowed to seize Eniwetok, the next target, before rehabilitating. When permission was denied, the division continued to mop up the atoll islands south of Roi-Namur at such a rate that before it was stopped by orders of higher authority, it had succeeded in capturing more than 70 percent of the territory comprising the world's largest atoll.

The Fourth Marine Division was subsequently withdrawn from Kwajalein to the Hawaiian Islands for rehabilitation and training for a sterner test. The new lessons

that it had learned in battle for itself, were now quickly put to practice. Once again a scant 4 months remained before the division was scheduled to do battle again.

On June 15, 1944, General Schmidt led the Fourth Marine Division in the assault landing against Saipan, Marianas Islands, this time on the right of the Second Marine Division. The Second had been responsible for many of the lessons learned by the Fourth's observers at Tarawa. Its more experienced Marines placed the Fourth on its mettle to match its efforts.

The importance of Japan's hold on the Marianas, particularly Saipan, to the Empire was immediately apparent when the Japanese Fleet put to sea to interfere with our landings. The famous "turkey shoot" ensued bringing victory to our naval forces in the battle of the Philippine Sea.

Twenty-six days of hard fighting were required to overcome stubborn Japanese resistance and the Fourth Marine Division managed to match the fighting qualities of the famous Second Division despite its relative inexperience, because of its able leaders. When organized resistance had been overcome, General Schmidt was directed to relinquish command of the Fourth to Gen. Clifton B. Cates, the present Commandant, and to assume command of the Fifth Amphibious Corps which included both divisions, for the forthcoming amphibious assault of nearby Tinian Island.

Rehabilitation and mopping up went forward simultaneously on Saipan in easy view of the Japanese on Tinian, so did planning for the forthcoming amphibious assault on the latter. Within 12 days after he had assumed command of the Fifth Amphibious Corps, General Schmidt led it ashore on the narrow northern beaches of Tinian. The enemy was completely surprised as to the location of the main landings. The assault on Tinian has since come to be regarded by many professionals as "amphibious perfection." Within 10 days all organized enemy resistance had been overcome.

General Schmidt's services in the Marshalls and Marianas were recognized upon his return to the Hawaiian Islands after the conquest of Tinian, by the award of the Distinguished Service Medal and a Gold Star in lieu of a second award. The citations accompanying these awards were similar in that they made mention of the fact that during the critical period of the landings "he fearlessly moved ashore with his men, establishing his headquarters within 300 yards (NAMUR) of the Japanese lines, continually exposing himself to intense, hostile sniper fire" while directing his troops "with such aggressive determination and brilliant tactical skill that his intrepid forces captured the island" in the surprisingly short period of time previously mentioned.

Now, once again, General Schmidt was left with about 4 months to ready his Fifth Amphibious Corps for its "supreme test." Much new battle experience had been acquired and the lessons had to be assimilated. Furthermore, except for the now famous Fourth, newly acquired divisions made up the corps.

On February 19, 1945, right on schedule to the minute, General Schmidt, as commanding general of the Iwo Jima landing force, led his newly composed Fifth Amphibious Corps across the beaches and against the dug-in defenders of that tight little island. Within 4 days after the first waves landed our flag was hoisted over Mount Suribachi, and there it remained for the next 20-odd days until our conquest was completed by the annihilation of the defenders. Our fighter aircraft were provided with a base from which they could support our long-range bombers making attacks on the Japanese homeland, our crippled bombers re-

turning from these strikes found a new haven to rest on.

Admiral Nimitz himself presented General Schmidt with a second Gold Star in lieu of a third award of the Distinguished Service Medal following his return from Iwo Jima. The citation accompanying the award read: "Major General Schmidt landed his troops on D-day against a fanatical enemy delivering a merciless rain of fire from incomparable natural defenses. Disposing the units under his command for maximum strength, he advanced them inch by inch over difficult, uneven terrain through adverse weather to blast the defending garrison and drive the Japanese from their deeply entrenched positions. A dynamic leader and brilliant strategist, he consistently maintained close control of his assaulting elements against terrific opposition, and after 26 days of bitter fighting succeeded in securing this vital enemy stronghold. His undaunted valor, resolute fortitude, and decisive conduct were essential factors in the success of our forces in extending United States control toward the shores of Japan, and his stout-hearted devotion to duty reflects the highest credit upon Major General Schmidt, his intrepid officers and men, and the United States naval service."

In January 1946 General Schmidt was ordered back to the United States and in March was promoted to the rank of lieutenant general. In the interim between this date and the battle of Iwo Jima, however, General Schmidt had not been idle. He had taken his depleted, famous Fifth Amphibious Corps to Japan to participate in the occupation of the homeland. For his service in Japan in command of the Corps he was subsequently awarded the Legion of Merit by the United States Army.

Upon his return to the United States, General Schmidt had been given command of Camp Pendleton, effective in May 1946. In June 1947, he was relieved of the Pendleton command to assume command of the San Diego area as Commanding General, Marine Training and Replacement Command. He continued in this latter capacity until his retirement for physical disability incident to duty. On July 1, 1948, he was retired with the four-star rank of general having been commended by executive order while in actual battle with an enemy of the United States.

General Schmidt's health has dictated his retirement in San Diego, Calif., where he resides at 3105 Elliott Street, today. The general was 65 on September 25, 1951, and the entire Nation has ample cause to wish him many more years of health and happiness.

A perusal of General Schmidt's record reveals that he has earned the right to wear the following decorations of this Nation and Nicaragua as well as the below listed medals: Navy Cross, Distinguished Service Medal with two Gold Stars, Legion of Merit (Army), Bronze Star, Presidential Unit Citation with one Bronze Star, Navy Unit Commendation, Expeditionary Medal with two Bronze Stars, World War I Victory Medal with Convoy and Escort Clasp, Yangtze Service Medal, Second Nicaraguan Campaign Medal, China Service Medal, American Defense Service Medal, American Campaign Medal, Asiatic-Pacific Campaign Medal, World War II Victory Medal, Occupation Medal, Japan, Nicaraguan Medal of Distinction with Diploma, Nicaraguan Medal of Merit with Silver Star.

Nebraska is particularly proud of Gen. Harry Schmidt, one of her many illustrious native sons, but the first one in Nebraskan history to attain the rank of a four-star general. The Nebraska National Guard can take just pride in and credit for having inspired and launched the career that led Gen. Harry Schmidt, of Nebraska, to the top of that world famous fighting aggregation, the United States Marine Corps.

National Association, or Federation, of Citizens Crime Commissions

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an extension of my remarks concerning the proposal to create a National Association, or Federation, of Citizens Crime Commissions.

There being no objection, the statement was ordered to be placed in the RECORD, as follows:

STATEMENT OF SENATOR KEFAUVER

Mr. President, I have just been informed of a very important step in the field of crime detection and prevention.
